The Nation.

NEW YORK, THURSDAY, JANUARY 7, 1892.

The Week.

THE *Times's* correspondent at Washington, whose war with Chili has shown signs of slackening lately, made a reconnoissance in force on New Year's eve, with somewhat brilliant results. He found that an order had been issued for the shipment of 45,000 pounds of powder to San Francisco for big guns. Moreover, this powder was to go "from the Dupont Powder Works direct" —a fact which implied haste. At all events, the blatherskite who prepared the headlines understood it so, for he labelled it "Hurrying Powder West." Is it customary, when ordering the Dupont Company's powder to San Francisco, to send it by the roundabout road instead of sending it direct? The Committee on Expenditures in the Navy Department ought to look into this matter. At the same time that the shipment of powder direct was going on, there was a shipment of 2,200 pounds of gun-cotton from Newport to San Francisco. "These shipments," says the blatherskite, "following close upon the large shipments of powder a few days ago, cannot be explained on the ground that they are merely to replenish the stores depleted by target practice, for it is known that every vessel on the Pacific station has already a full supply of powder and projectiles, and the present shipments are, in fact, intended to form a reserve supply, to be drawn upon in case of hostilities." This bustle with powder and gun-cotton took place, he tells us, on a day of "holiday calm" at the Navy Department, a day on which "there was less talk than for some weeks about preparations for war." What, in Heaven's name, then, might happen on a day of ordinary ferocity at the Navy Department?

In the book just published by the man who was the London *Times's* correspondent in Chili until recalled for his ridiculous infatuation with Balmaceda, there are two passages bearing upon the question of American neutrality. The first is:

"I went on to have a look at the American cruiser *Baltimore*, which had recently arrived. I found the officers, from the Captain downwards, very distinctly partisans of the Government. They regarded the alleged causes of the revolution as mere flimsy pretexts, and believed that the whole affair had been worked up by agitators on behalf of the European nitrate syndicates."

The other reads:

"The Americans had heretofore stood well-nigh alone in evincing sympathy with the cause of the President. . . . They had, indeed, been almost as avowedly partisans of Balmaceda as the British war-ships had been of Congress; and had they been represented by any other living man than Mr. Patrick Egan, as Resident Minister, their moral support would have carried far more weight than it did."

The correspondent himself was a hot friend of Balmaceda's, and knew at least when he found a fellow-feeling, however untrustworthy his book may be in other particulars.

The discharge of more than 200 workmen from the Government service at Sandy Hook, without payment of their wages for two months' work already done, points to financial straits at Washington. According to the newspaper accounts, every sort of excuse for withholding the pay of these men has been resorted to. "Red tape" is made responsible by some people, while the workmen themselves are imbued with the notion that the money appropriated by Congress to pay them has been "diverted to politics." Red tape means simply the formality prescribed by law or regulation for drawing money from the Treasury. It is not hurtful nor even dilatory when the money is on hand to pay the bills as they become due. But if the money is not there, then red tape becomes very helpful to the delinquent debtor. It enables him to push ahead the claims that are least pressing in order to meet those that are most pressing. In such cases forms become very important. It is to be remarked that red tape has not given much trouble in this particular since the close of the war, although it was complained of more or less during the war, particularly in reference to the pay of the soldiers. The reason why obligations of the Government have been promptly paid heretofore is that the Treasury has had the money to pay them. If red tape multiplies now, the presumption is that the bottom of the Treasury is in sight, and that the Secretary is holding back every dollar that he can. We know of one case where the rent of a building hired by the Government, although due and payable monthly, has not been paid for four months. We hope that the claimants, whether stone-cutters or others, will make their wrongs known to their respective members of Congress. Let us have an early investigation in order to learn what the Government owes—what is the amount of its honest debts that it cannot pay. Then let us have a temporary loan bill to clear them off, accompanied by a tax bill to pay the loan.

Mr. McKinley's letter to Mr. Blaine, acquitting the latter of having desired to put a duty on hides, may have an important bearing on Cabinet dissensions at the present time, and may add to the number of Mr. Blaine's New England delegates in the next Republican Convention; but as settling what he actually did want, or say he wanted, in respect to hides, it is of slight value. He doubtless was on record on both sides, as usual, particularly on the side that came out ahead. It is not known what he told the Republican members on the 10th of February, 1890, when he made the visit to them which they took such pains to keep secret, but which he revealed to the public through his man, Mr. W. E. Curtis. But whatever may have been the case at that time, it is certain that he is now explicitly committed to a tax on hides. He has over and over again expressed his approval of the Aldrich amendment, which authorizes the President to lay a tax on hides after January 1. Moreover, Mr. Blaine's own proposition was to tax "all the products of any nation of the American hemisphere" — including hides, of course—unless those nations would admit free to their ports a specified list of our exports. This was his suggestion in his letter to the President of June 4, laid before the Senate on June 19.

There has been a great deal of falsehood about Mr. Blaine's attitude towards the Aldrich amendment, as a plain statement of the facts will show. As we just said, Mr. Blaine's letter embodying his own views was transmitted by the President to the Senate on June 19. Immediately after its reading, Senator Hale offered an amendment to the Tariff Bill couched in almost the exact language used by Mr. Blaine in his letter, so that the *Tribune* said that "his [Mr. Blaine's] proposition" was brought before the Senate by Mr. Hale. Referred to the Committee on Finance, it came out on August 28 in the totally different shape of the Aldrich amendment. Was Mr. Blaine satisfied with that shape? Not at all; and so he got Senator Hale to urge his amendment again on September 2. Even after the Senate had defeated that Blaine measure and adopted the Aldrich plan, it was uncertain how the Secretary stood until his letter to Editor Clapp of September 15, in which he characteristically claimed the whole result as his own. Thereupon the faithful *Tribune* heaved a sigh of relief, and said the letter showed that "Mr. Blaine accepts the Aldrich amendment, and the Republican party will be united." As if this legerdemain were not enough, Mr. Blaine indulged in the following bit of tergiversation. He wrote to Editor Clapp: "Every free-trader in the Senate voted against the reciprocity provision." Now, it is an historical fact that Senator Gray offered Blaine's own amendment, in Blaine's own words, with the exception that he said "the President . . . is directed," instead of "authorized," and that every Democrat in the Senate voted for it, while every Republican voted against it.

The Omaha *Bee* publishes an interview with Senator Carlisle on a variety of topics

of national interest. Being asked whether he considered Mr. Blaine or Mr. Harrison the stronger candidate in a Presidential campaign, he replied that he considered Mr. Harrison the stronger. Upon this point he said:

"The nomination of Mr. Blaine might create more enthusiasm than the nomination of Mr. Harrison, but I do not believe he would get as many votes as Mr. Harrison. Many of the conservative business men of the Republican party are afraid of the erratic elements of Mr. Blaine's nature, which have led him at times to imprudent acts and speeches on public matters. Blaine is a remarkable man as a party leader, and he has been compared by some to Henry Clay. His legislative career has been much like that of Mr. Clay. Clay was one of the greatest partisan leaders of his time, but you can find upon our statute-books no act of great value which originated with him. His greatest speeches have passed away, and his reputation is more of a tradition than anything else. Still, for half a century almost he was the leader of a great party and the idol of the people."

Statistics will sustain Mr. Carlisle's views on this subject, whether the comparison be made with the vote for Garfield before Blaine was nominated, or with the vote for Harrison afterwards. If Mr. Blaine is nominated this year, he will be strongest on the day of his nomination. There will be "storms of applause" in the convention-hall, a thundering of cannon out-of-doors, a tremendous fizzing of Roman candles, serpents, wheels, and other pyrotechnics in the evening, and from that time forward to the election a slow but steady loss of votes.

Ex-Gov. Hill signalized his retirement from office at Albany by making a speech explanatory of his Elmira speech. He complained that no Republican or Mugwump paper had published his Elmira speech, while all had denounced it with misrepresentations which the text of it would have exposed. We do not recall any complaint like this from any public man who uses good English. Nor do we recall any other case where a second speech was necessary within two weeks to explain the first one. If Mr. Hill's Elmira speech was misrepresented, it was because it was composed in an involved and foggy diction, signs of which are abundant also in the Albany speech. His twofold modest attempt to signalize his belated entry into the United States Senate by mapping out a tariff and currency programme for the Democratic party in the nation, does not appear to have commanded enthusiastic approval in the press of his own party. Three Democratic journals, all of prominence in the party, have repudiated his suggestions without much ceremony. One of these, the *World* of this city, has been Mr. Hill's most unswerving defender during the closing months of his career as Governor, and its disapproval is therefore of considerable significance. It says that Mr. Hill's programme "is not one that ought to commend itself to Congress," and that "it would commit the party to doctrines and policies which the party has condemned, and upon its condemnation of which the great victory of 1890 was won." The Buffalo *Courier* is no less emphatic, declaring it "amazing that Gov. Hill should seriously seek to commit the Democratic party to a policy that would kill its hopes of success this year dead as a door-nail," and pronouncing his tariff programme "distinctly reactionary," with a tendency to confuse and embarrass the issue and put the Democratic party on the defensive. The Indianapolis *Sentinel*, which is one of the highest authorities in the Democratic party in the West, likewise makes short work of Mr. Hill's "programme of cowardice, dishonesty, and partisan imbecility."

We think it will be entirely safe, in view of these utterances, to leave to the Democratic party of the nation the task of disposing of Mr. Hill's claims to be its economic guide and teacher. No opponent of the Senator and his kind of politics can wish for anything better calculated to injure him in the estimation of his own party than the two speeches in which he has made his first appearance as a national leader. He has revealed his mental and moral equipment much more clearly and accurately in them than his critics have been able to do in years of analysis. The more those speeches are examined, the worse will be the light in which Mr. Hill will stand. We find, for example, in the Ithaca *Democrat*, an analysis of one statement in the first speech, contributed by Prof. J. Laurence Laughlin of Cornell University, which shows the slender equipment that Mr. Hill had upon which to set himself up as an authority on the silver question. He asked in his Elmira speech why it was that from 1792 to 1873 silver abided every test, and he answered his own question by asking another: "Did ever free bimetallic coinage, down to 1873, for one hour fail to make the silver dollar equal to the gold dollar, whether at mint or crucible, or in any market in the wide world?" Prof. Laughlin gives a careful historical survey of the experience of the silver dollar in the United States during the period, and comes to the conclusion, fully sustained by citations from the records, that Mr. Hill's question is an "idle" one, since the "silver dollar was often, and for decades, either above or below the gold dollar in value."

The late Senator Plumb is generally admitted to have read aright the sentiment of his party and the people in Kansas, and to have strengthened himself politically by his opposition to the McKinley Bill. His successor, ex-Congressman Perkins, is not a man of the same stamp of independence. Even in the matter of lead-ore imports from Mexico, he allowed party discipline to get the better of the interests of his constituents, although two other Republican Congressmen from Kansas voted for the amendment to admit the ores free of duty for the sake of the smelters in Kansas. On the financial question he adds one more to the list of Western Republican Senators who declare the demonetization of silver to have been "a crime." On the whole, he promises to increase the public regret at the untimely death of his predecessor.

What has become of the expert investigation of the books of the Keystone Bank in Philadelphia? Was it stopped by the election? The last that was heard of it before election was about the middle of September, when the experts were ordered by Secretary Foster to discontinue their labors because the Government appropriation for such work had been exhausted. Soon afterwards the Citizens' Committee of Philadelphia offered to defray the expense of continuing the examination, and the offer was accepted by Mr. Foster. Since that time no sound has come from the experts, so far as we have been able to discover. They said, when they were stopped, that they had just reached the most interesting point of their examination. Have they ever passed it? There was also a local squad of experts engaged in the same work, but we believe that they were called off some time ago. Did the triumph of the Republican party in the election mean that the robbery and ruin of the Keystone Bank were proper proceedings, and that the attempts which were made to find out the responsible persons were all mistakes?

The free-pass question has come before the Inter-State Commerce Commission, which has rendered a decision holding that it is unlawful to grant free transportation to public officers or private citizens on the ground that their good will is important to the corporation. This ground has been advanced as the justification or excuse for granting passes by railroad companies, and it is, of course, the only ground for the policy. When a company charges $5 for transporting an unknown passenger a certain distance, it cannot carry an official or a "prominent citizen" for nothing except on the plea that the latter's good will is important to it and will be secured by the favor. But the Commission holds that such persons can have no rights in this respect over ordinary travellers by reason of their social or official positions, and consequently that it is an unjust discrimination to carry them without payment of usual fare. The Commission, however, does not prohibit the granting of passes to newspaper men, hotel proprietors, or agents of companies doing business with the corporation, taking the position that these classes stand in a different light under the law, and may not unreasonably claim to be rendering a fair return for the favor. It would have been more consistent if the Commission had made a ruling which would cover all cases, as it must often happen that another man in a certain town than a hotel

proprietor or an editor may be as able to render a fair return for a pass, and consequently as well entitled to it in all justice. As regards public officials, there can be no dispute as to the soundness of the decision. It is a reproach to the community that so many men in such a position are ready to use such passes, and the law should be invoked to end the abuse, if nothing else will serve. It is a waste of time to argue that a judge or a legislator is not affected by a pass. Human nature being what it is, he is influenced, consciously or unconsciously. The proof of this is that the railroad managers grant passes to such officials, for they would not do it if they were not convinced that, in the long run, it pays by inclining the officials to take a more favorable view of the corporations than they would hold otherwise. Of course, the Inter-State Commerce Commission has no authority in this matter except over lines which run through more than one State, and action by the Legislatures will be required to put an end to the abuse.

The low price of cotton revives the discussion in the South of schemes to restrict production in future. Alliance lodges say that the farmers should curtail their cotton acreage, and attempts are making to secure the adoption of concerted methods looking to that end. But the great trouble with all such efforts is that every farmer wants other people to do the cutting-down while he keeps on as before, and that 99 out of every 100 are pretty sure to "trust to luck." Indeed, the Mobile *Register* considers all this discussion a waste of time, because nothing will ever come of it. It points out that the population of the South is increasing, and that the production of cotton will naturally keep pace with it; that the use of commercial fertilizers has brought into cultivation vast tracts of land heretofore regarded as valueless; that the pine lands of the South are now more productive than the alluvial lands, because more easily worked, more healthy, cheaper, and less liable to casualties; and that the area of cotton lands has widened in every direction, running up into North Carolina and Mississippi, and covering a new empire in Texas. The real trouble, in the *Register's* opinion, is, not that more cotton is produced than the world could consume, but that there are not proper facilities for converting the raw material into cloth and transporting it to possible buyers. Every year spreads civilization further into the realm of barbarism, and "every savage is learning to wear a shirt." China and Japan will consume an immense quantity of cotton as soon as they can get it cheaply and conveniently. What ought to be done, therefore, is not to attempt the hopeless task of restricting production, but to erect cotton factories all over the South, so as to spin as much cotton as possible at home, and then to "demand of Congress freer trade, so that people of new countries may be induced to exchange their commodities for our cotton."

Again does English law come forward with a decision calculated to develop the bump of caution in publishers. A firm in Sydney issued a subscription work in two volumes, entitled 'Australian Men of Mark.' A certain subscriber declined to take the books, on the ground that his own biography did not appear therein, although the promise had been made him that it should so appear. The publishers brought suit to compel performance of contract, but the Chief Justice of New South Wales, Sir Frederick Darley, threw them out of court. His decision took a wider range than the contention of the defendant that a private understanding had been violated, and was based upon the broad ground that the contents of the book did not correspond to its title. He declared that the biographies it contained were of merely local celebrities, who had no right to be considered as Australian men of mark. In view of this fact, the Chief Justice decided not only that the defendant should be acquitted, but that, in general, all contracts entered into on account of the book were null and void. This certainly adds a new difficulty to the traditional ones of an author in choosing a title for his writings. Of what avail to select a taking name, when it may only result in a prosecution for obtaining money under false pretences? Particularly ominous is this decision for the publishers of such works as 'The Best Books' or 'The Greatest Thing in the World.' A buyer with a different standard of judgment from the author's may hereafter throw such books back on the publishers with a demand for a refund. The principle must apply to sub-titles also, and this suggests the danger of appending "a poem" or "a farce" to an otherwise legally unobjectionable title.

Experiments in agricultural coöperation on a large scale must be exceedingly rare in France, owing to the repeated subdivision of landed property under the operation of the French law of inheritance, and much interest thus attaches to an undertaking of the sort which has been on trial for the past ten years in Brittany. In that province the Comte de Lariboisière is the proprietor of eighty farms, covering some 1,600 hectares (about 4,000 acres). At the time of the severe agricultural depression in 1880, many of his tenants were far behind in their rents, and were abandoning their leases in despair. Thereupon the Count proposed an arrangement by which they were to continue to work the farms under his direction, he to assume all financial responsibility, to guarantee them their living, and to give them the half of all profits derived from their labor. Then he secured a competent manager who proceeded to make a specialty of dairy farming, steadily improving the breed of cows, and perfecting the processes of manufacture of butter and cheese, with the result of soon securing a reputation for superior products and the highest prices in the market. Both owner and farmer have prospered highly under the new plan. From the accounts which have been published in the case of each farm, it appears that the returns have been greatly increased. Thus one farm which used to rent for $454—a sum which the tenant was unable to realize from the year's farming operations—yielded $1,174 in 1886–'87 and $1,710 in 1889–'90. In the last instance the farmer received, besides his living, $613, and the owner, $1,028, while the balance went to hired laborers as their share of the profits.

The Famine Committee in Russia is said to be making serious efforts to relieve the misery of the peasants, 800,000 of whom are to be employed in paving streets in various towns and in the cleansing of rivers. These works, however, it is added, cannot be begun before spring, and in the meantime the Government will grapple in its own fashion with the problem of transporting grain to the afflicted districts. An illustration of the inability of the officials to move supplies even where railroad facilities abound, is the fact that in Odessa alone there are 8,000,000 bushels of grain which might be shipped to the distressed regions in Poland. In Riga, according to a well-informed correspondent of the Munich *Allgemeine Zeitung*, 11,000,000 bushels of oats are doomed to rot because no purchaser can be found in the interior of Russia, the Minister of War having refused to buy any before spring, until which time the supply cannot be kept without being damaged. Similar conditions prevail at Libau, Revel, and other Baltic ports. In remoter parts of the empire, as in the Government of Yeniseisk, grain is an absolute drug in the market, and brings only nominal prices, but there, as elsewhere, means of transportation are totally wanting. The few Russian journals which are allowed to speak even a part of the truth paint the situation in dark colors. Thus the *Vyestnik Yevropy*, a conservative monthly, takes to task the "newspaper patriots" who, like the *Novosti* and the *Novoye Vremya*, flatter the national vanity instead of doing penance for national sins. "The entire mismanagement," says the *Vyestnik*, "is thoroughly Russian in its lack of foresight, of unity of action, of calm consideration of necessary measures, as well as in the habit of doing things at hap-hazard and in the lax sense of duty and responsibility on the part of those charged with authority." Moreover, those who are directly answerable for the extent of the famine and who profit by it, the speculators and usurers, says the *Vyestnik*, are not foreigners, but men with genuine Russian names and of orthodox Russian ancestry.

THE RIGHTS OF MINORITIES.

THE question of the Speaker's rights and duties seems to have a great fascination for ex-Speaker Reed. He is at it again in the last number of the *North American Review*, in combination with Mr. Mills, the well-known member of Congress. Mr. Mills, however, devotes himself mainly to a defence of the individual member's right to refrain from voting at a division, while Mr. Reed, in spite of his present position in the House as the leader of a small minority, makes a savage attack on the rights of minorities, whom he seems to regard with great contempt. Mr. Mills twits him with his change of front on this matter since 1880, when he joined Mr. Blaine in denouncing the very line of action in the Speaker's chair which he himself followed when occupying that place last winter. But evidently nothing is gained by convicting Mr. Reed of inconsistency. He considers it now the main duty of the politician to get what he wants, and apparently has as much scorn as ex-Senator Ingalls for the man who falters or hesitates about the means.

The gist of his contention in his last article is contained in the following, and criticism of this one passage covers his whole case:

> "Among the most cherished so-called rights of minorities is the right of debate. But is that in any sense a right of minorities as such? What is debate, and what is it for? It is not merely a display of the vocabularies of orators. It is not a sacred privilege of talk for no purpose. It is permitted solely to guide the whole assembly to right conclusions. Men join in debate, when they fulfil honestly its mission, for the purpose of pointing out the advantages of the thing proposed or the objections which exist against it. Debate is intended to throw light on the subject from all directions, so that there may be no delusions arising from the shadows. Now, what is all this for? For the benefit of those who in the result turn out to be the fewer in number? By no manner of means. All this light is thrown, not to enable the minority to prevent conclusions, but to enable the majority to come to right conclusions. It hardly needs more than this statement to show that any right of debate which prevents results by obstruction instead of guiding to correct results by enlightenment, is a perversion of honest purpose which ought to receive condemnation and repression."

It is quite true that debate is, in a legislative body, in theory intended to act on the majority in that body—that is, the party in power—and induce them to change or modify their purposes. But it is also true that even if the purpose of the majority were known, and publicly announced to be unalterable, even if it were as certain as that the sun shines at noon that nothing the minority could say would change a single vote, the right of the minority to talk would, under the immemorial principles and traditions of the Anglo-Saxon jurisprudence, remain unshaken. Speaker Reed's theory that the House is not a deliberative but an executive body would make the House a ridiculous body, for a worse organ for the despatch of business could hardly be devised. The "work of the nation," as Mr. Reed looks at it, would be vastly better done by a good bureaucracy presided over by a well-meaning despot like, say, Mr. Reed himself. The reason why talking bodies like the House are tolerated in America and England is, that the Anglo-Saxon race has, from time out of memory, determined to have not military government, but government by *discussion*—that is, government under which all action shall be preceded by a considerable amount of public talk, even if useless or idle talk. It is to this determination that we owe the existence of the American Constitution and those of the several States. Government by discussion has been ridiculed a good deal, but always hitherto by Cæsars and cavalry officers, never until now by the Speaker of a parliamentary body; which shows what an extraordinary thing tariff fanaticism is.

This is not all, however. It is a maxim of Anglo-Saxon jurisprudence governing all proceedings, civil and criminal, legislative and judicial, that the other side must be "heard"—that is, that no action shall be taken by one man affecting another man's interests in mind, body, or estate without hearing what he has to say, and hearing it fully. This may be a mere form. It may be well known that nothing that he can say will have any influence on the result, and that his talk will only impede the despatch of business; but his claim to be heard has become imbedded in Anglo-Saxon jurisprudence, not merely as a personal right, but as an inevitable accompaniment and consequence of the system of government by discussion.

The minority in a legislature, moreover, does not merely talk for itself. It talks as counsel for its constituents out of doors. The minority in the last House of Representatives practically represented—taking the Presidential vote as the test—5,536,242 voters; the majority, led by Mr. Reed, 5,440,708. In other words, the country was about equally divided between the two parties. The line of division in the House was a mechanical or legal, not a moral one. The assumption of the leader of the majority, under these circumstances, to treat the minority with such contempt as to consider their say not worth listening to, was a preposterous one.

It is quite true, however, that debate, even under a government of discussion, must have limits if discussion is not to defeat the object of all government. These limits, too, must be fixed by rules, and the rules must be interpreted and put in force by somebody. That somebody is in all parliamentary countries the speaker or presiding-officer. But this officer must be a *judicial* officer. He must not be a party leader. He must not head either the majority or the minority. He must not be charged with the carriage of party measures. It must be infamous for him to have private or personal interests in pending legislation. The reason of this is that the questions, Has the matter in hand been sufficiently debated? Have the minority been sufficiently heard? Have they had their full rights under law and custom? must come up every day under the rules. To intrust the decision of these questions to their opponents, or to one of their opponents, is a violation of what is, rightly or wrongly, called and popularly accepted as the principles of "natural justice."

Nevertheless, this is what Mr. Reed contends for, and what he actually put in force when he was in the Speaker's chair. He has already described the Speaker as in truth the leader of the majority, charged, just as the Prime Minister is in England, with seeing that such measures as he approves of are put through without what he may consider unnecessary delay. He has repudiated completely for the Speaker the character of a judicial officer charged with the duty of seeing fair play and protecting the rights of the weaker party. Under his rulings, in fact, the presence of a minority in the House is wholly unnecessary, and he might himself now go home to Maine and have his salary sent to him in Portland without fear or reproach. But if his theories were adopted and put in practice for any great length of time by his successors, they would destroy parliamentary government in Washington, and lead to a radical constitutional definition of the Speaker's office, so as to correct his manners and excesses and surround him with judicial proprieties. We trust Mr. Crisp has adopted none of Mr. Reed's fantastic absurdities.

THE IMMIGRATION PROBLEM.

THE opening of a new Congress has revived the discussion of the question of restricting immigration. Among the flood of bills which poured in before the holiday recess was a large number of propositions bearing upon this subject. The feeling has been widespread through the country during the past year that "something ought to be done," and of course Senators and Representatives have been prompt in suggestions as to how it ought to be done.

But it is much easier to propose a "plan" than it will be to secure the enactment of any measure which will essentially change the present situation. A striking illustration of the difficulties of the problem is presented by the experience of New England with a class of immigrants who have been looked upon with the greatest aversion by a large proportion of the people among whom they came. Some years ago the drift of French Canadians across the border grew into a flood, which swept into the manufacturing cities of New England until in some cases this class became the largest element in the foreign-born population. Great was the alarm among the descendants of the original settlers. It was urged that the new comers were ignorant, poor, and degraded; that they would lower the rate of wages and raise the proportion of criminals; that they did not show any disposition to become Americans, but really owed allegiance to another country, while most of them were also in subjection to the priesthood—in

short, that they constituted a most dangerous class in the community.

Ten years ago a strong element in New England would have been ready to support any measure which promised to arrest what was then considered a most alarming evil. But since then a marked change has come about in the attitude of the public towards these immigrants. Maine has had the longest and fullest experience with them, and a Maine journal, the Bangor *News*, recently made an interesting and valuable summary of the results of this experience. It referred to the fact that the people of Maine, and particularly the old Puritan Yankee families, looked askance upon the "Montreal invasion," as it used to be called, of French Canadians who came to the State to better their condition; that "all sorts of ugly stories were circulated about the new comers when they first began to arrive, and many gloomy presages were made about the outcome of a society into which so much of a foreign nature had been mingled." The *News* proceeds:

> "They came and went to work, doing whatever they could find that yielded any pay, and now, after an experience of twenty years or more, these same people who foretold ill are convinced that the French Canadian makes a good citizen and is a valuable addition to the community. He works the year round, and not by jumps and starts. His wages are small, but he saves what he gets, and as early as possible he makes a home for himself, becomes a taxpayer, and helps to support the schools and keep the community prosperous. He believes in education, morality, decency, and progress. He seldom becomes chargeable to the town or city where he lives, and his name is very rare upon the criminal record. Not a politician or an office-seeker, he believes in good government, and casts his vote in favor of economy and reform. As years go on he will grow more and more in favor, his peculiarities will blend with those of the Yankees, and in twenty years more nobody can tell the English stock from the French."

There is probably a somewhat optimistic tone about this judgment, but its substantial truth receives confirmation from a recent deliverance on the same subject in a Montreal newspaper. A certain Abbé Dugas writes a letter to *La Minerve*, in which he protests most earnestly against the emigration of French Canadians to the United States, and his chief reason is that they soon become thoroughly Americanized. Upon this point he says:

> "What is the fatality that pushes us towards that great republic where, soon or late, whatever may be said to the contrary, our nationality will be absorbed? Let the generation born in Canada disappear, that generation which still preserves roots in which the sap taken from the old Canadian soil is still running, and you will then see what will be the feelings in the new stems impregnated with the ideas of American progress. The attachment for Canada will vanish by degrees; nothing will be left to call to mind the fatherland, and the descendants of the old Canadian will be Americans purely and simply. One must be very optimistic or very simple to imagine that the generation born and brought up in the United States will preserve deep sympathies for Canada."

Here is a substantial agreement between the Roman Catholic priest of Montreal and the Protestant editor of Maine, that our Canadian immigrants are sure to become good Americans as regards nationality, while the Yankee observer testifies that they also turn out good citizens. In short, while it would perhaps be too hasty a conclusion to assume that New England is better off for their presence, it would obviously be quite impossible now to organize any effective sentiment against their further coming.

An argument, therefore, against all these projects to restrict immigration, is the fact that the evils threatened from the coming of any particular race may not prove so serious as is at first supposed. If the French Canadians turn out so much better than was anticipated, it may be that we shall not suffer so much harm as some people have feared from the invasion of some other nationality. But a still more serious obstacle to any rigorous law restricting immigration is the politician's fear of offending some "element" among the voters. It may be true, as the Bangor *News* says, that the French Canadian is "not a politician or an office-seeker," but there is not a politician or office-seeker in all New England who would say anything to offend "the French-Canadian vote." And there is a "vote" in this country now of almost every race on the globe—except "the heathen Chinee."

WOOL AND WOOLLENS.

THE *American Wool and Cotton Reporter* considers it pretty certain that the wool and woollens tariff will be overhauled by the present House of Representatives, because "it is difficult for a party to restrain itself from acting according to its controlling principles." The prospect being what it is, and the avowed intention of the Democratic party being to put wool on the free list anyhow, the *Reporter* discusses the question of the compensating duties on woollens. The duties on woollens are made up of two parts: first, ad-valorem duties for protection to the manufacturers; second, specific (or pound) duties to compensate the manufacturer for the duties on wool. For example, paragraph 397 of the McKinley Act provides that on women's and children's woollen cloaks or other outside garments the duty per pound shall be four and one-half times the duty imposed on a pound of unwashed wool of the first class, and in addition thereto 60 per cent. ad valorem. The duty on a pound of unwashed wool of the first class is 11 cents, and the theory is that it takes four-and-a-half pounds of such wool to make one pound of cloth. Consequently, the rate of duty on the goods mentioned is 49½ cents per pound and 60 per cent. ad valorem. The rate before McKinley gave it a lift was 45 cents per pound and 40 per cent. ad valorem. If wool were put on the free list and only the compensating duties repealed, the rate on women's and children's cloaks would be just 60 per cent., which appears to be sufficiently oppressive.

It seems probable that the only controversy in the Democratic ranks when Mr. Springer introduces his free-wool bill will be over these compensating duties. It becomes important, therefore, to know what the manufacturers said would be sufficient protection for them at the time when the high-tariff policy on wool and woollens was adopted. The tariff of 1867, relating to wool and woollens exclusively, was prepared by a joint committee of the National Association of Wool-Manufacturers and of the National Wool-Growers' Association. Their resolutions are embraced in the report of Stephen Colwell, a member of the United States Revenue Commission, published in the Commission's general report for 1865-66 (page 340). The second resolution is as follows:

> "(2.) All manufactures composed wholly or in part of wool or worsted shall be subjected to a duty which shall be equal to 25 per cent. net; that is to say, 25 per cent. after reimbursing the amount paid on account of duties on wool, dyestuffs, and other imported materials used in such manufactures, and also the amount paid for the internal-revenue tax imposed on manufactures and upon the supplies and materials used therefor."

This report was signed by the chiefs of the woollen-manufacturing industry of that day, viz.: E. B. Bigelow, T. S. Foxton, Edw. Harris, J. Wiley Edmands, S. W. Cattell, H. Kingsbury, and Theodore Pomeroy. It was signed also by John L. Hayes as Secretary of the Joint Committee. Twenty-five per cent. was all that they wanted over and above the compensating duties, notwithstanding which self-denial a generous Congress voted that it should be 35 per cent. The Tariff Commission of 1883 took their stand on 35 per cent. over and above the compensating duties, and quoted with approval a speech of Gen. Garfield showing how fair that arrangement was. Again did a liberal-minded Congress go beyond any demands that the manufacturers had presented publicly. The protection over and above compensation was raised in many cases to 40 and even 50 per cent., and McKinley gave it another hitch of about 10 per cent.

Now the *Wool and Cotton Reporter* lets a cat out of the bag by saying that the pound duties are protective to the manufacturer, and the ones which can least be spared by him. "The compensating duties," it says, "are not generally regarded as protective—they are designed and intended to equalize and offset the duties upon the raw wool; yet, in point of fact, the greater strength of the protective policy, so far as pertains to the woollen schedule, lies in these duties, and were it not for the pound duty there would be far greater disturbance in the goods market, coming from importations of low-grade goods. Those woollen manufacturers who place stress upon the ad-valorem duties upon goods are not wholly ingenuous. The main reliance is upon the weight duty." We do not pretend to be skilled in this matter, but we have long suspected that the compensating duties were a good deal more than compensatory—that, for example, four and a half pounds of unwashed wool were not required

to make one pound of the kind of cloth that enters into women's cloaks. If there has been some cheating here in the framing of the tariff, we can understand why the proposition to repeal the so-called compensating duties on woollens is so little liked by the manufacturers. It would probably repeal something which was not compensatory, but clear gain. The *Wool and Cotton Reporter* embraces the occasion to give the Wool-Manufacturers' Association a little lecture on their share in the McKinley legislation. It considers the doubt and uncertainty which hangs over the industry very harmful, and says:

"For this the framers of the McKinley Bill have themselves to blame, since it was possible for them to have so used their great opportunity of a friendly majority in both houses of Congress in 1890 as to have framed a bill which, while sufficiently protective, would have been approved by the average common sense of the American people, and would have been enough of a finality to relieve the woollen industry from the evils of tariff agitation for a decade. Indeed, if the McKinley Bill had never been passed, it is not at all certain that the lower house of Congress would now be Democratic. The woollen industry is unfortunate in serving as the vehicle in which both political parties are disposed to give their tariff policy a constant airing."

THE NEW YORK CONTESTED ELECTION CASES.

THE Republicans have lost control of the State Senate, and have thereby given the Democrats complete control of the Legislature, by their own folly. If they had not persisted in running Mr. Sherwood as their candidate for the Senate in the Twenty-seventh District, after they had been made aware of his ineligibility, they would not be in a minority in the Senate today. Then, too, if the Republican County Clerk in the Twenty-fifth District had exercised proper care in his work of distributing ballots, there would have been no question as to the election of a Republican Senator in that district. The decisions of the Court of Appeals on these two cases are of themselves sufficient to take the control of the Senate from the Republicans, and we are unable to see how the Republicans could have anticipated any other conclusion.

These two decisions are upon questions of great interest as regards the interpretation of our election laws. Mr. Sherwood was at the time of his election a Park Commissioner of Hornellsville. The Constitution declares that "no person shall be eligible to the Legislature who, at the time of his election, is, or within 100 days previous thereto has been, a member of Congress, a civil or military officer under the United States, or an officer under any city government." The Court of Appeals decides that Mr. Sherwood was not eligible, that he violated the Constitution in seeking the votes of electors, that electors violated it in voting for him, and that, as a matter of constitutional law, any certificate which a canvassing board might issue to him would be an absolute nullity, since the "only use he could make of it would be to violate the Constitution, and do wrong by intrusion to an office which he has no right for one moment to hold." Finally, the Court says:

"Sherwood and his competitor may both present their cases to the Senate without either of them having a certificate of election, and that body will have jurisdiction to determine all the questions of fact and law involved in the matter. If it shall agree with this court that the relator was ineligible, and also find that his competitor was not elected, the result will be that a new election will have to be ordered in that district; and the electors there can then choose a person qualified to hold the office, and then they can be properly represented in the Senate. It is far better that they should be called upon to vote again than that the Constitution should be violated."

The decision in the case of the erroneously distributed ballots in the Twenty-fifth District is equally clear and important. Ballots officially marked and signed by the County Clerk for the First District in one town were distributed and voted in the Second District, and those for the First and Second Districts in another town were transposed and thus used in the election. The question before the court was whether or not this irregular use invalidated the votes cast with such ballots. The law plainly requires that the designation or number of the election-district endorsement shall be precisely the same; and in all cases that designation or number shall be that of the polling-place or election district where the vote is offered, and no other. The Court holds that the ballots in question "were cast in utter disregard of this important provision of the statute," that "the endorsement upon them differed from the regular endorsement on all the other ballots used or voted at the same polling-place; and, as they were used or voted by but one of the parties that had made nominations, or, in other words, in behalf of but one candidate or set of candidates, the voters who used them necessarily disclosed to such bystanders as could or desired to observe, the candidates voted for." This the Court declares to be a violation of the secrecy of the ballot. Upon the question as to whether ballots thus cast shall be counted, the Court cites the provision of the law which says that "no ballot that has not the printed official endorsement shall be counted," and decides:

"We are unable to construe this language when applied to the facts of this case in any other way than as the clear and positive mandate of the Legislature to the canvassers to reject and treat as void all ballots found in the box, prepared for and bearing the designation and number of another and a different polling-place or election district than the one where the ballot was cast. The Legislature has forbidden the elector to cast such a ballot. It has prohibited the inspectors from placing it in the box, and the canvassers from counting it. But it is said this result will disfranchise the electors who cast these ballots in good faith, believing that they were the proper official ballots. The answer is, that when an elector attempts to express his will at an election by the use through either design or accident of ballots which the law declares shall not be counted, the courts have no power to help him."

In view of these decisions, which strike us as eminently sound both in law and in common sense, we do not see how the State Canvassers could pursue any other course in these cases than they did in their subsequent meeting. They declared Sherwood not elected, and referred the question of whether his opponent was elected or not to the Senate for decision, and issued a certificate of election to the Democratic contestant in the Twenty-fifth District by rejecting the transposed ballots cast for his opponent. The effect of both decisions, and of the Canvassing Board's action in accordance therewith, will be to make nominating conventions and county clerks more careful hereafter to keep within the letter of the law. The Republicans of this State, especially in reference to their conduct in the Senate, have got into the habit of looking upon themselves as rather above the law—that is, regarding the law as something to be twisted and tortured this way and that to suit their convenience. They have received a lesson now which they will not soon forget.

We wish that we could commend the action of the Canvassing Board in the case of the Fifteenth Senatorial District as unreservedly as in the other cases. This is the district in which Mr. Deane, the Republican candidate, died soon after the election. There has never been any doubt that he was legally elected. The County Canvassers refused to count a certain number of votes which had been cast for him because the Inspectors of Election had written his name incorrectly on the blanks containing their returns. There was no question about the correctness of the ballots. The clerk refused to sign the canvassers' certificate for the Democratic candidate, and a mandamus was issued ordering the canvassers to send the returns back to the inspectors for correction. In the meantime the certificate, unsigned by the clerk, got to Albany and to the State Canvassing Board. The Court afterwards ordered a certificate, based on the corrected returns, to be issued to Mr. Deane. No sooner was this certificate issued than the Democrats, under the guidance of Gov. Hill, began to resort to all possible methods to prevent its reaching Albany. It was mandamused and countermandamused repeatedly, got to Albany once by mail, and was taken from the hands of the postal messenger before it could reach the Canvassing Board.

The only questions before the Court of Appeals were as to the validity of the first certificate, which had not been signed by the clerk, and the right of the lower court to issue an order to the State Canvassers not to canvass an illegal return. The substance of the Court's decision was the following:

"Upon these facts, standing uncontradicted, we think the court below, in its proper branch, would have the power to command the State Canvassers to canvass without regard to such a return. As it contained the result of an illegal and erroneous canvass by the Board of Canvassers in excess of its jurisdiction, and which thereby would alter the result of an election, the court should not permit it to be canvassed. As to the allegations of the manner of the making of the return by the County Board, the State Board could not itself inquire into them. If another return should be sent to the Board, properly authenticated and containing the re-

sult of the legal action of the Board of County Canvassers, the State Board could canvass it."

When the Board met last week, the illegal return was presented, but the corrected return was not produced, though it was known to have been sent in accordance with the Court's orders, and was believed to be in Albany. The Secretary of State, Mr. Rice, who was acting as Chairman, declined to make any reply whatever when he was asked if he had received it, and the Board issued a certificate to the Democratic contestant upon the basis of the only county return that was visibly before it. This was a purely partisan proceeding, and one of which the Canvassing Board ought to be ashamed. The fair course would have been to declare that there was no candidate elected from the district, and thus make necessary a new election.

On general principles, the result is a cause for congratulation. The Democrats are entitled to the control of the Legislature, and they would have secured it by a large majority if the election had been held under a fair apportionment. They will now authorize a redistricting of the State, and will possibly see the wisdom of making it as fair as possible. In the meantime, they will be entirely responsible for the administration of the State Government, and that will be a gain over the former condition of things. No one who remembers the partisan manner in which the Republican majority in the Senate has used its power to prevent the Governor from exercising his constitutional power of appointment, will regard the loss of the Senate to that party as in any sense a public calamity.

BURLESQUE IN THEOLOGY.

A LITTLE pamphlet or tract has just been published in this city, and is said to be circulating in large numbers, entitled 'The New Theology in the Nursery.' No name either of author or of publisher appears upon it, yet it is carefully printed, is ornamented with an ancient cut which looks as if it might have come out of the stores of the Tract Society of fifty years ago, and is evidently intended for wide distribution and reading. It is an attempt to make the views of Prof. Briggs and his sympathizers ridiculous by putting them, or a burlesque of them, into the mouth of a mother instructing her child.

We subjoin a fair specimen of the talk that goes on between "Mrs. Martineau Kuenen" and her precocious son "Johnny":

"Tell me, Johnny, what is it which teaches us how to be saved, and about Heaven and God?"

"The Bible."

"Yes; but there is something else."

"I don't know of anything else."

"There is the Church, you know; and the Reason."

"Do you mean the Presbyterian Church, mamma?"

"Well, not exactly. You see, the Presbyterian Church sometimes disapproves of my good friend Professor Barkis."

"But suppose you can't find God in the Bible or in the Church, then what do you do?"

"I am glad you have asked that question, my child. You can find God through the Reason, and become a representative Christian."

"What is the Reason, mamma?"

"Oh, I don't know exactly. It embraces the Metaphysical Categories."

. . . . . .

"I thought you said just now that the Bible was infallible."

"Only as a rule of faith and practice. It is not infallible when it contains fibs" (laughing to herself).

We have consistently refrained from taking sides in the theological debate raging about Prof. Briggs as a centre, and we do not now mean to consider directly the value of this latest argument of his opponents. It is said to meet with high favor among them, and to be thought by them a very convincing presentation of their case against him. We know nothing about that, and have no wish to examine their argument on its merits—conceding that it has any. But upon the method they have followed—a method most surprising, considering the persons and cause employing and endorsing it—it is entirely proper for us to comment.

The first thing to be remarked is, that this resort to burlesque in theological argument is had by those who have uniformly condemned it in others. Indeed, one of the most serious causes of offence which they found in Prof. Briggs's famous Inaugural Address was its unseemly levity in a certain part. He affirmed that the Bible was no better than a mass-book to stop a bullet, and not half as good as holy water for putting out a fire. Hands of holy horror rose on all sides at that deliverance, but one pair of them at least has now dropped, to lay hold of a pen and write in a vein beside which the most flippant saying of Prof. Briggs's becomes reverence itself. In fact, the whole tone of this pamphlet reminds us strikingly of some of Col. Ingersoll's parodies of the Westminster Confession. Those not very witty or delicate effusions have won for their author the reputation of a blasphemer among those very persons who now applaud a production conceived in precisely the same spirit.

They seem unaware that it is an edged tool they are grasping. If it is a question of reducing to the absurd, the undiluted Westminster is much more open to it than the views attacked in this pamphlet. The "Metaphysical Categories" and "Christian Consciousness" and "Institutional Christianity" are not very easy themes to crack jokes upon. The more racy language of the Catechism, in what it has to say about such subjects as "reprobation" and "elect infants" and the damnation of all the heathen, is far more capable of being burlesqued, and, especially when put into the mouth of a mother talking with her child, made to appear monstrous. The wit in that case might appear more ghastly, but it would certainly seem less labored than it does in 'The New Theology in the Nursery.' If the latter's method is to be accepted as a proper one in theological discussion, then there is no longer any reason to object to Carlyle's audacious characterization of the Westminster divines, or Heine's most crackling epigram against theology, or Burns's "Holy Willie's Prayer."

Leaving this question of consistency with those whom it concerns, we should say, for our own part, that a real sense of humor is one of the greatest needs of theologians. Luther's shaking sides and hearty laugh give his personality and words a warmth and carrying-power which one does not find in his severe contemporary of Geneva. Nor can there be any doubt that his type of character is steadily gaining the upper hand in the modern ministry. Some of the stiffest Calvinists the world has ever known have, of course, been fellows of infinite jest in private life. But nowadays Calvinists more and more venture on a smile in the pulpit itself. Whatever may be said about that and its propriety, we think that the growing tendency to light up the professionally solemn debates of theologians on their technical subjects by the introduction of a laugh is by no means a bad thing. Nothing else so quickly exposes absurdity or pretence, and often the real *dicere verum*, even in theology, has come from one *quamquam ridentem*.

THE POPE AND THE POOR.

THE Pope issued the Encyclical known as *Rerum Novarum* some months ago, taking up the cause of Labor, urging employers to be more benevolent, and workingmen to be more faithful and to respect property as of divine institution, and directing the Catholic clergy to occupy themselves more than heretofore with economical and social questions. It attracted very little attention either from Labor or from the clergy. It was read in all the Catholic churches, but we believe no attempt to act on it or under it has yet been made by priests or bishops in any Catholic country. There were two reasons for this. One was that it promulgated nothing new either in religion or in political economy. The morality of it was the old morality which has been preached, and to a greater or less extent practised, in all Christian countries ever since the emancipation of labor and the substitution of wages for stripes. Nobody who goes to church, or looks up to the Pope as the supreme Doctor on earth, found in it any new light on any of the troublesome social questions of the day.

The second reason was, that the clergy were unable to see how the study of political and social economy was to profit them in the discharge of their functions as Christian ministers. The duties of a Catholic priest are to teach religion and morality either from the pulpit or in the confessional, and to administer the sacraments. How is he to attack the labor question through either of these instrumentalities? He has nothing new to say about the relation of employer and employed. He cannot, without a complete

knowledge of the facts and of the business, declare which side is right in any particular labor dispute. Much less can he inflict ecclesiastical punishment on an employer for not paying more wages, or on a laborer for not laying more bricks or heaving more coal. Moreover, the labor question as a source of social disturbance may be said to exist only in cities, and, as a rule, the laborers who raise it there pay no attention to the authority of the Church, and the employers resent bitterly clerical interference. In the rural districts, in which the clergy are, in some countries, still powerful, there is no labor question. England may at first sight seem to be an exception, because there is there considerable discontent among the agricultural laborers, but it is not showing itself in quarrels with employers. It is showing itself in the quiet desertion of the country for the city by the able-bodied men; and the clergyman of the parish, as the representative of the old authoritative régime, is the person of all to whose advice the departing laborers pay least attention. Great discredit, too, has been brought on the clergy as social economists by the interference of a number of them, headed by Cardinal Manning, on behalf of the strikers at the London docks. It produced confusion worse confounded. The "reconciliation" it brought about lasted a month and made business impossible. The dock companies had to do at last what they ought to have done at first—settle their business in their own way, on principles of human nature.

Curiously enough, however, one of the hardest-headed economists in Europe, one of the least sentimental, M. Leroy-Beaulieu, the editor of the *Économiste Français*, considers the Encyclical a most important document, and devotes a long article in the last *Revue des Deux Mondes* to the discussion of it as the sign of a new era. What magnifies it in his eyes is, that it is an announcement on the part of the Pope that the Church has definitively broken with the Princes and Potentates with whom it has associated and acted for 1,200 years, and has recognized Democracy as the new power which is hereafter to govern the world, and with which, and not with thrones and dynasties, the Papacy must hereafter make concordats and treaties. This alliance fully effected, he thinks the Pope likely to a considerable extent to resume his old place as the teacher and arbitrator and Custos Morum of the Western world. It has been brought about mainly or in part by the way in which he has been treated in the matter of the temporal power by his brother rulers. The day the Italian troops were allowed to enter Rome through the Porta Pia, the Papacy dissolved its old alliance with the kings of the West and fell back on the poor laity, whose champion and protector and guide it is now to be.

M. Leroy-Beaulieu is very likely right in saying that the Papacy has adopted a new policy and is making terms with the Democracy, and that the Encyclical *Rerum Novarum* is a virtual repudiation of the Syllabus of Pius IX.; but how a man who looks at modern society as coolly as our Frenchman does, can believe that the Papacy can win back its old prestige by adopting the new Socialistic gospel as part and parcel of the old Christian Gospel, it is hard to see. What sustained the Papacy in the Middle Ages, and gave importance to the Pope's utterances, was the popular belief—not that of Kings and nobles only—that the history of the Papacy, as told by the Popes, was strictly and literally true; that the Pope, in short, owed his moral authority to the occurrence of certain undoubted events, part in Judea and part in Rome, in the first 500 years of the Christian era. Without this faith there never could have been any Pope at all. Without it the Pope cannot now last as an authority on any subject more than any other Christian minister.

Does modern Democracy hold this faith? Every one knows it does not. To the mass of the working classes in the great towns of Europe and America, the Pope's account of himself is, we venture to assert, looked on as either an amiable delusion or an absurd fable. The beliefs which built up the Papacy are, in fact, to-day almost as shadowy as the beliefs which built up the Roman Empire. The Pope is still surrounded with the respect due to a blameless life and a great tradition, but the willingness to take him as a guide in the transaction of mundane affairs is very like the loyalty which surrounds the Queen of England. It finds expression in the ceremonies, speeches, articles, poetry, and painting, of those who cultivate the sentimental side of life as a protest against the materialism of the age; but a serious proposal that the Pope should be allowed to settle the manner in which the products of labor and capital should be divided, would probably be received with laughter in every Trades Union in the world. And this is "the labor problem." There is and can be no other. The earth produces under human industry a certain amount of good things every year. The man who makes a rule of distribution which everybody concerned will accept and work under cheerfully, will have solved this problem. But who is this man? By what sign shall we know him? It is easy enough to bestow the blessing of the Church on Henry George and Karl Marx and Terence V. Powderly, but the acceptable rule of distribution is still wanting.

THOMAS PAINE AND MADAME BONNEVILLE.

New York, January 1, 1892.

In June, 1791, Thomas Paine founded the first Republican Society in Europe, and wrote its manifesto, which, on July 1, placarded Paris, being even nailed on the door of the National Assembly. Royalist rage swelled the Society to vast dimensions, and it was only some years later that Paine made known the fact that this formidable Club had consisted of five members. He did not mention their names, but two certainly were Condorcet and Achille Duchâtelet. There is reason to believe that the others were Brissot and Nicolas Bonneville. Bonneville, then in his thirty-first year, had written some striking poems, and translated into French parts of Shakspeare and several German stories. He may have translated into French Paine's republican appeal to France. He edited *La Bouche de Fer*, a journal which did much to defeat the scheme for making Marat dictator after the King's flight.

When the Reign of Terror was past, and Paine emerged from his long imprisonment, he and Bonneville were almost the only republicans of the "philosophical" school whom the guillotine had left. Bonneville was now editing the *Bien Informé*, and kept a sort of bookstore for progressive publications at his residence, 4 Rue du Théâtre-Français. Paine, though ill and feeble, occasionally wrote for Bonneville's journal, and when Monroe, at whose house he was nursed back into life, was recalled, the Bonnevilles invited him to take up his abode in their home. There he remained from 1797 to his return to America in 1802. It was not without remuneration, as Rickman, friend of all the parties, attests. The Bonnevilles had been married about three years, and their second child was named after Paine, his godfather. There was not much money among them, but they were attached to each other, and held the same political views. No doubt Bonneville was a member of the Society of Theophilanthropists which Paine founded in Paris. While Paine was here, Bonaparte, as yet professing republicanism, consulted him on a proposal for liberating the English and Irish people by a descent on England. Bonaparte told Paine that he slept with the 'Rights of Man' under his pillow, and that he (Paine) ought to have a statue of gold in every city; but he presently suppressed Bonneville's paper, that *littérateur* being thus reduced to utter poverty.

Nevertheless, these old comrades through the Reign of Terror clung together. The chief room in the humble house was given up to Paine, who in it wrote pamphlets and carried on his inventions. He had daily visitors, and means had to be adopted for defending him against the merely curious. But there were visitors worth seeing, among them Fulton, Walter Savage Landor, and Henry Redhead Yorke, of whom the latter two have left records of Paine's conversation. "A jolly-looking woman," in whom we recognize Mme. Bonneville, opened the door for Yorke, and "believed Mr. Paine was not at home," until she learned that the visitor was an old friend from England. Then she was all smiles. Paine's room, orderly for himself, was wild disorder to Yorke:

"Three shelves were filled with pasteboard boxes, each labelled after the manner of a Minister of Foreign Affairs, *Correspondance Américaine, Britannique, Française; Notices politiques; Le Citoyen Français, etc.* In one corner of the room stood several huge bars of iron and two large trunks; opposite the fireplace a board covered with pamphlets and journals, having more the appearance of a dresser in a scullery than a sideboard. Such was the wretched habitation of Thomas Paine, one of the founders of American Independence."

When Paine was about to return to America, he urged the Bonnevilles to go with him and take up their abode in this country. About a year after Paine's arrival here, Madame Bonneville did come with her three children (sons), her husband remaining in Paris. Paine supported them all and sent the boys to

good schools. At his death Margaret Brazier Bonneville was his chief legatee and an executor, her husband and children also receiving bequests.

Here were all the materials for scandal, and Paine's religious opponents could not be expected to forego such an exemplification of the practical tendencies of 'The Age of Reason.' The Federalists, just then collecting certificates of Jefferson's alleged laxities, were holding up "the two Toms" as illustrations of the French morals to be introduced in America. Paine wrote in the *American Citizen* a defence of Jefferson against such charges, little knowing that in the year of his death the editor of that paper, James Cheetham, would brand him in the same way. "Paine," wrote Cheetham, "brought with him from Paris, and from her husband in whose house he had lived, Margaret Brazier Bonneville and her three sons. *Thomas* has the features, countenance, and temper of Paine." Madame successfully sued Cheetham for slander. The trial was argued on June 19, 1810, and I am indebted to our industrious collector of *causes célèbres*, Mr. Edmund B. Wynn of Watertown, N. Y., for a perusal of Counsellor Sampson's tremendous invective, which caused Cheetham to claim protection of the Court and hint at a duel. The Recorder (Hoffman), a bitter foe of "the two Toms," summed up in Cheetham's favor, and when he was brought up for sentence highly commended his 'Life of Paine,' declaring that "it tended to serve the cause of religion." He imposed a fine of only $150, from which the costs were to be deducted.

Mme. Bonneville had eminent friends in court to testify to her character—Thomas Addis Emmett, Fulton, and ladies whose children she had taught French. The only important witness against her, William Carver, confessed that he used to take his wife to call on the plaintiff. It appeared that Carver, an Englishman in whose house Paine boarded for some months and was maltreated, had been taken out of Paine's will, which enraged him against the legatee. Probably when Cheetham saw the plaintiff, whose youthful appearance and refined manners are still remembered, he saw with the jury that any illicit relation between her and the prematurely aged invalid was preposterous. But his slander seems immortal, having found its way into important encyclopædias. That of McClintock and Strong, for instance, says: "One of the women he supported [in France] followed him to this country." Nay, long years after his mother's vindication, rumors followed the late Gen. Bonneville, and whispered that he was the illegitimate son of Thomas Paine.

The sentence of Cheetham had not explained why Nicolas Bonneville did not join his family in this country. On this point Paine's friendly biographers have been silent. He did come after Paine's death, and Washington Irving, in his account of Gen. Bonneville, has left us a picturesque description of the venerable Nicolas seated beneath the trees at the Battery, absorbed in his book. I have hitherto been of the opinion that Nicolas, after hearing from his wife that Paine had less means than they supposed, and having no hope of being able to support himself in America, concluded not to add himself to Paine's burdens, though he believed his pauperized family had claims on the man they had so long sheltered and nursed in Paris. But I have just come into possession of an unpublished letter written by Paine to Bonneville, which casts a ray of light on the subject. It is not dated, but the personal allusions make out the year to be 1807. The italics are in the original:

"My Dear Bonneville: I received your letter by Mr. Champlin, and also the letter for Mrs. Bonneville, and one from her sister. I have written to the American Minister in Paris, Mr. Armstrong, desiring him to interest himself to have your *surveillance* taken off *on condition of your coming to join your family in the United States.*

"This letter, with Mrs. Bonneville's, come together under cover to the American Minister from Mr. Madison, Secretary of State. As soon as you receive it I advise you to call on General Armstrong and inform him of the proper method to have your surveillance taken off. Mr. Champagny, who succeeds Talleyrand, is, I suppose, the same who was Minister of the Interior, from whom I received a handsome friendly letter respecting the Iron Bridge. I think you once went with me to see him.

"Call on Mr. Skipwith with my compliments. He will inform you what vessels sail for New York and where from. Bordeaux will be the best place to sail from. I believe Mr. Lee is American Consul at Bordeaux. When you arrive there, call on him with my compliments. You may contrive to arrive at New York in April or May. The passages in the spring are generally short—seldom more than five weeks, and often less.

"Present my respects to Mercier, Bernardin St. Pierre, Dupuis, Grégoire. When you come I intend publishing all my works, and those I have in manuscript, by subscription. They will make four or five volumes 4to, or five vols. 8vo, about 400 pages each.

"Yours in friendship,
"T. P."

Thus not only had Napoleon suppressed Bonneville's publications, but placed him under surveillance. This was not, indeed, the reason for his not sailing to America with his wife in 1803. A note of Madame Bonneville says he was then detained by "some affairs of great consequence; but foreseeing a new revolution, that would strike, even personally, many of the Republicans, it was resolved, soon after the departure of Mr. Paine for America, that I should go thither with my children, relying fully on the good faith of Mr. Paine, whose conduct in America justified that reliance." In those years radicals lived as they could. The wild political and social tempests of ten years had thrown thousands of families into such complications, and so familiarized revolutionists with situations and relations that would be misunderstood in peaceful communities, that it evidently did not occur to any of these parties that Madame's coming hither and her support by Paine might be a subject of gossip. She was at this time thirty-five and Paine sixty-six years of age. She sailed for America in the autumn of 1803, which was the time of the secret attempt by French Royalists in England to form an alliance with the Republican revolutionists in France against Bonaparte. This, perhaps, was the "revolution" foreseen by Bonneville, which made him anxious to get his family out of France. In the spring of 1804 hostilities became active between France and England. All Englishmen in France between eighteen and sixty years of age were arrested. Bonneville, being a fluent speaker of English and German, and always much sought by foreigners, was also an old friend of Gen. Moreau, afterwards tried for participation in the conspiracy against Bonaparte, and banished to America. It may have been then that Bonneville came under surveillance, and it would surely have continued through 1806, when Bonaparte was imperializing literature and religion. The above letter to Bonneville shows his circle, in which we find the learned free-thinker Dupuis and the indomitable Abbé Grégoire, a man whom Bonaparte especially feared. It was Grégoire who introduced Paine into the French Convention (September, 1792); he sympathized with Paine's plea for the life of Louis XVI., and remained his friend through life.

Of the three sons of Nicolas and Madame Bonneville, Louis seems to have returned to his father in France. Thomas entered the United States Navy in boyhood, and, it is said, was slain in the last war with England, after winning distinction by some exploit associated with a sword preserved by his elder brother, Gen. Benjamin Bonneville. Madame Bonneville finally left France in 1830, and passed the rest of her days near her remaining son, in St. Louis. Her tomb is there, in Bellefontaine Cemetery: "To my Mother, Margaret B., relict of Nicholas de Bonneville, Député de 1789, France. She departed this life October 30, 1846. Aged 79 years." Beside her tomb are those of Gen. Bonneville and his family. The General's epitaph is: "In Memory of Gen. B. L. E. Bonneville, U. S. A. Born April 14, 1796; died June 12, 1878, at Fort Smith, Ark."

"Here lies one who e noble deeds
Have not escaped the page of fame,
The generations y et unborn
Shall know the Records of his honored name."
"May he rest in Peace."

Although by some vexation caused the General about his mother's burial, as I am told, these graves are not in the Catholic cemetery, Mme. Bonneville, in her later years, became a devout Catholic, as was her son the General. It may have been due to that fact, and in part to fear of reviving a miserable scandal, that their lips were always sealed concerning Thomas Paine, to whom, however, the Bonnevilles owed their rescue from poverty and the early education of their children.

Correspondence.

CUTTING BOTH WAYS.

To the Editor of The Nation:

Sir: A notable illustration of the way in which forms come to substitute themselves for things is found in our modes of separation of Executive and Legislature. Instead of that which alone has any real significance, a just balance of executive and legislative *powers*, the separation has come to mean shutting up those who represent the Executive in one building or set of buildings, and those who represent the Legislature in another, with every precaution being taken against any public communication between them. The evil of this is apparent in two directions. In the first place, it turns the Legislature into a mob, by depriving it of that official guidance which is just as much Executive work as the administration of the Post-office and the Mint. Of this the examples are of daily occurrence. But, on the other hand, it shields the Executive from that public and enforced responsibility which is the only real safeguard against abuse. A perfect example of this is found in our relations with Chili.

Could there be anything in the world more monstrous or more disgraceful than that we should make war upon that unhappy country? After a long period of constitutional government which placed it at the head of South American republics, it has just been through a revolution, brought on by an unscrupulous adventurer seeking to establish despotism, which has shaken it to its foundations. It may suit a Napoleon or a Bismarck to take advantage of such a state of things to plunder his neighbors, but there is no evidence to show that the people

of the United States desire either glory or plunder to be had from crushing a weaker sister. Yet, because a so-called Minister and a naval captain choose to take fire at a supposed insult, which it is at least doubtful if they were not themselves instrumental in bringing about, and because there is a man at the head of the State Department whose whole connection with foreign affairs has been to "meddle and muddle," therefore we may at any moment, while neither Congress nor the country has any information as to the facts, be thrust into a situation from which, according to army and navy ideas of honor, there will be no issue short of war.

If the Secretary of State and the Secretary of the Navy had to stand up daily in Congress and encounter cross-examination from individual members, the country might learn something of the real proceedings of Minister Egan and Captain Schley, and so have a wider chance of escaping from this miserable pitfall.

G. B.

Boston, January 2, 1892.

THE HISTORICAL STUDY OF RELIGIONS.

To the Editor of The Nation:

Sir: There is perhaps no field of work which has yielded such fruitful results as has the new science of the historical study of religions. It is still in its infancy, for in its early growth it has had to fight its way against heavier odds than ever beset a young science. It has had to combat the prejudice of those who wrongly thought that it bore agnosticism and atheism in its train, and its own votaries too often impaired its scientific character by wild deductions and unfounded generalizations. In spite of all this, it has asserted itself. It has shown what an all-important factor it is in the study of anthropology and history. Its aim is simply an historical and thoroughly unprejudiced study of the forms of belief and of practice as shown in all the religious systems of the world; not only of the savage and half-civilized races, but also of those nations whose religious beliefs have been dominant factors in forming the civilization of our day. In France this new science has called forth a special organ, the *Revue de l'Histoire des Religions*, edited by the talented Jean Réville. In Holland and Belgium the Universities have separate chairs for its study. In England the Hibbert and Gifford lectureships have brought the subject prominently before the English-speaking world. Our museums are beginning to pay special attention to this work: the Musée Guimet in Paris—established in 1885 by the munificence of M. Émile Guimet, a Lyons manufacturer—is given up exclusively to an historical representation of religious ceremonials and ideas.

It is a matter for congratulation that here in America attention has also been directed to this study. In Boston and Cambridge a circle has been formed, under the direction of Prof. Toy, for the study of religions. In the University of Pennsylvania, a part of the lectures delivered under the auspices of the University Lecture Association are devoted to this subject. The University of the City of New York has a lectureship in comparative religions, and it is purposed by the Oriental section of the Brooklyn Institute to have a course of lectures this winter on the temples and forms of worship in the East. At the Plymouth School of Ethics last summer, representatives of different faiths were invited to present their systems before the school.

It has occurred to many who are interested in the work, that if a series of lectures—at once scientific and popular in form—were established here in America to present to the public the results of the scientific study of religions, it would go far towards interesting a large number of people in the subject. For this purpose a meeting was held here in the rooms of the Historical Society, pursuant to a call signed by Dr. Edward Bartlett, Dr. George Dana Boardman, Dr. Daniel G. Brinton, Prof. Morris Jastrow, Dr. William Pepper, Mrs. Sara Yorke Stevenson of Philadelphia, Prof. Paul Haupt of Baltimore, Prof. D. G. Lyon and Prof. C. H. Toy of Boston, Prof. Frederick W. Hooper of Brooklyn, Prof. W. R. Harper and Dr. Emil G. Hirsch of Chicago, Prof. C. F. Briggs, Dr. W. Hayes Ward, and Prof. John P. Peters of New York.

The general plan, as given to a special committee for a detailed report, contemplated a series of six lectures each year, to be delivered by the most eminent specialists in the different subjects—both American and European. In order to give these lectures as wide a prominence as possible, it is intended that they shall be delivered in Boston, New York, Brooklyn, Philadelphia, Baltimore, and Chicago. In these different cities special committees or existing lecture associations are to be in charge. It is hoped that in Boston the Lowell Institute, in Brooklyn the Brooklyn Institute, in Philadelphia the Lecture Association of the University of Pennsylvania, in Baltimore the Peabody Institute, and in Chicago the new University will make all necessary arrangements. Some of the most eminent specialists have been corresponded with, and have shown great willingness to meet the wishes of the Committee. It is also intended to publish the lectures in book form; and, in time, perhaps we may have an American Series of Hibbert Lectures which shall be worthy of standing on the same shelf as those which bear the names of Thiele, Kuenen, Pfleiderer, Hatch, Sayce, and Max Müller.

Philadelphia, December 30, 1891.

"ADVOCATE," THE VERBS.

To the Editor of The Nation:

Sir: Having chanced on a parcel of notes, long ago mislaid, I find that, taken with some recent memorandums, they enable me to supplement, on several points, and those not unimportant, the details given, under these words, in the *New English Dictionary*.

Advocate, as derived from the Latin participial stem *advocat-*, is there assigned two senses.

By possibility, however, it has been tentatively saddled with a third sense. This appears from the subjoined quotation, of the year 1592, occurring in Bp. Andrewes's *Sermons*, vol. v., p. 533 (ed. 1843), but, at least in its wording, of uncertain authorship:

"We are to think upon the name of God as of a heavy and weighty thing, that is not upon small occasion to be taken up and removed. We are not to account it as a feather that we may lightly toss up and down at our pleasure: and even so are we to esteem of the mercy of God. It is not to be *advocated* [signifying, if not misreported for, *invocated*, 'invoked'] upon every vain trifle. For that were to use God as we are wont to use our jugglers. 'Come on; let us see what you can do; shew us a miracle,' say they [? we]."

In the next place, as denoting 'call to a higher tribunal,' it does not exclusively belong to the phraseology of Scotch Law; and it was established considerably before 1629. Here are the proofs:

"For, in case the Pope, as God forbydde, shulde *advocate* the said cause," etc. Steven Gardyner (?1529), in Sir Henry Ellis's *Original Letters*, Third Series, vol. ii., p. 157 (ed. 1846).

"The Queen made her protestation, . . . alleging the cause to be *advocated* by the Pope's holiness." Dr. Nicholas Harpsfield, *Treatise on the Pretended Divorce of Henry VIII.* (*c.* 1555), p. 181 (Camden Society, 1878).

"Afterward, we having intelligence that the Vice-chancellor proceeded not to the execution of our said commission, we revoked the same, and *advocated* the said cause to our own examination." Abp. Parker and others (1569), in Abp. Parker's *Correspondence* (1853), p. 344.

I now pass to the verb *advocate* which was suggested by the substantive *advocate*.

That Milton, as adduced by Dr. Murray, used it intransitively in 1641 is questionable. But the Rev. Peter Heylyn certainly so used it in 1637:

"The Minister *advocates for* the Arians, and will not have them be the Authors of sitting at the holy Sacrament." *Antidotum Lincolniense*, Part iii., p. 34.

Also, in the last century, it was so used by De Foe:

"But, when I have thus far *advocated for* the enemies, I must be very free to state the crimes of this bloody war, by the events of it." *Memoirs of a Cavalier* (1720), p. 308 (ed. 1840).

To return to the quotation from Milton above referred to, "It had been *advocated* and moved for by," etc., rendered familiar by Archdeacon Todd and Dr. Richardson, Dr. Murray assumes that its "for" has a twofold connexion. Dr. Worcester, being of a different mind, follows Archdeacon Todd in connecting the "for" with "moved" only, and in taking "advocated" to be, consequently, transitive. It may be that he is right in so doing; but he ought not to have garbled Milton, making him write, "It has been *advocated by*," etc.

For the verb transitive, as now current, Dr. Murray's earliest quotation is from Edmund Burke, and is dated "? 1767," in correction of which we are to read "1782." Yet Burke's use was not wholly unknown in the sixteenth and seventeenth centuries:

"Too inconsiderate headlong rashnesse this may be censured in me, in being thus prodigall in advantaging my adversaries; but my case is now smoothred secret, and, with light cost of rough cast rhetoricke, it may be tolerably playstered over, if, under the pardon and priviledge of incensed higher powers, it were lawfully indulgenst me freely to *advocate* my owne astrology." Thomas Nashe, *Lenten Stuffe* (1599), in the *Harleian Miscellany* (ed. 1808–1813), vol. vi., p. 146.

"Commest thou hither, fourthly, to *advocate* the cause of thy Clyent, who flyeth to thy learning, experience, and authority, for succour against his adversary, and commendeth his state and suit to thy care and trust?" Bp. Saunderson (1624), *Twelve Sermons* (1637), p. 175.

"It has been said that this word," namely, the *advocate* under consideration, "is an improvement on the English language, which has been discovered by the United States of North America, since their separation from Great Britain." So, perhaps about 1804, writes the Rev. Jonathan Boucher, who, however, does not particularize the person or persons by whom the opinion which he mentions was maintained, and, moreover,—though on wrong grounds, from mistaking the meaning of the older English and Scotch "*advocate* a cause,"—goes on to deny its tenability. Nevertheless, Archdeacon Todd, in 1814, at the same time that he misapprehends the signification of the phrase just cited, comments as follows on his

fellow-cleric: "Mr. Boucher has been misled in this literary concession which he has made to the Americans; for it is also an old English word, employed by one of our finest and most manly writers; and, if the Americans affect to plume themselves on *this pretended improvement of our language*, let them, as well as their abettors, withdraw the unfounded claim to discovery, in [*sic*] turning to the prose-writings of Milton." The disingenuousness of this is palpable, and so is its animus. For what "literary concession" has Mr. Boucher "made to the Americans"? And why should it be gratuitously intimated that "Americans affect to plume themselves," etc., especially since Archdeacon Todd might have informed himself that Dr. Franklin, thinking the verb *advocate* to be of American birth, condemned it in 1789? Besides this, the opinion recorded by Mr. Boucher was hardly a species of felony, or the like, that the epithet "abettors" should be applied to its upholders. Writing in 1816, Mr. John Pickering, while "not aware that the Americans did 'plume themselves' upon this word," *advocate*, pertinently observes that "they may justly claim the merit (if there is any in the case) of *reviving* it." Yet the Archdeacon, in 1827, saw fit to reproduce, without the slightest alteration, the passage which has here been animadverted on.

I would add that any one who enjoys access to a large library would satisfy a rational curiosity by producing anew, with dates attached, the quotations for the verb transitive *advocate* which are found in Mr. Pickering's *Vocabulary*, and in Dr. Webster's *Dictionary*, ed. 1848.

"Half the Anglo-Americans went over red-hot from the conventicle, the other half flagrant from Bridewell; the *tertium quid* was the roguery of the one side superinduced upon the hard vulgarity of the other." This summation of our forefathers, strictly accordant with orthodox British mythology, is from the pen of that highly imaginative Americanophobist, Robert Southey. And, as were, with him, our forefathers, so, by the logic of antipathy, were their descendants, down to the latest. No good was to originate from them. The English language, like everything else that they had to do with, they could only corrupt; and, among their supposed corruptions of it, the *advocate* which I am discussing is sneeringly introduced, by Southey, in one of his latest works, to exemplify, with the verb *test*, those greatly misunderstood phenomena, "Americanisms." Their demonstrated acceptableness was no counterpoise to the stigma of their fancied transatlantic nativity.

Inasmuch as Dr. Murray quotes, for this *advocate*, only a brace of authorities, Burke and William Taylor, prior to 1850, it seems worth while to show, by references to citations which I have at hand, that, throughout the greater part of the first half of our century, it was freely employed, and by writers of the highest respectability. Among such are, for instance, Coleridge (1800, 1818, 1824), Bentham (1807, 1821, 1823), Rev. Sydney Smith (1808, 1824), Lord Byron (1812), Bp. Bathurst (1812), Rev. G. S. Faber (1816, 1817, 1818, 1819, 1824, 1827), Thomas Love Peacock (1817), Rev. James Gilchrist (1817, 1826), Sir John Cam Hobhouse (1818), Rev. Thomas Belsham (1819), William Hazlitt (1819, 1825), Henry Matthews (1820), George Grote (1822), Rev. Dr. Christopher Wordsworth (1824), James Mill (1824), Albany W. Fonblanque (1825, 1827), John Stuart Mill (1825), Prof. H. H. Wilson (1827), Lord Macaulay (1829), Rev. Dr. Thomas Arnold (1829), Bp. Monk (1830), Rev. S. R. Maitland (1830), Rev. J. C. Hare (1832), Sir J. F. W. Herschel (1833), Bp. Thirlwall (1833, 1834), William Godwin (1834), Miss Harriet Martineau (1837), Bp. Samuel Wilberforce (1840), Rev. F. E. Paget (1842), Rev. William Palmer (1843), Rev. Dr. J. W. Donaldson (1847), Prof. F. W. Newman (1847), Cardinal Newman (1848).

Your obedient servant, F. H.

MARLESFORD, ENGLAND. December 10, 1891.

Notes.

THE third volume of Prof. McMaster's 'History of the United States' is issued by the Messrs. Appleton this week. It comes down to the beginning of the war of 1812.

Harper & Bros. have nearly ready two new novels, 'Mrs. Dines's Jewels,' by W. Clark Russell, and 'The Baroness,' by Frances Mary Peard.

Saxon & Co., London, will bring out in March an English edition of Félix Régamey's 'Japon Pratique,' an explanation of the Japanese modes of working in wood, metal, lacquer, porcelain, and stuffs, accompanied by more than 100 designs.

The new two-volume edition of 'Uncle Tom's Cabin' (Houghton, Mifflin & Co.) is tasteful and handy, and may lay claim to the most truthful illustrations of the colored *dramatis personæ* yet made. These have been produced by Mr. E. W. Kemble, well known for his delineations of the negro race. They are mostly pen-drawings inserted in the text; but there are also more ambitious full-page wash-drawings, which as a whole, however, are not more successful. Mr. Kemble's art does not go much below the surface, and while he can imitate types, he cannot deal with character or passion. He has prudently confined himself mostly to his black subjects; his Eva is vague and disappointing enough. Perhaps a new edition does not demand a new portrait of the author, but we should be glad to see Richmond's absurdly idealized head of Mrs. Stowe permanently withdrawn from circulation.

A. C. McClurg & Co., Chicago, send us two more volumes in their comely series of "Laurel-Crowned Verse," viz., Tennyson's 'Idylls of the King' and Moore's 'Lalla Rookh.' The type employed in the 'Idylls' is small, but shows very clear in the excellent press-work.

The several papers on Ocean Steamships, since united in book form, are the main connecting link between vols. x. and xi. of *Scribner's Magazine*, which now lie bound on our table. Japan, too, has been a theme in both, with foretaste of Sir Edwin Arnold's 'Japonica.' For the rest we need hardly go over our monthly report, yet we will recall as among the more curious papers Prof. Dwight's on Right-handedness, and that illustrated with the highly interesting photographs from luminous objects.

Japan is also a topic in vol. xlii. of the *Century Magazine*, in the continued "artist's letters" of Mr. John La Farge. The Californian papers have gone on, and Mr. Kennan's Siberian have come to an end and are now before the public in another shape. The partnership between Mr. Cole and Mr. Stillman in illustrating the old masters is still undissolved. Most salient of the other features are the discussion of aerial navigation by Prof. Langley and Mr. Maxim, and Greeley's lecture (as it seems to have been) on Lincoln, to which we made reference last week.

It is not easy to summarize vol. xviii. of the *Overland Monthly*, but its distinction from our Eastern magazines lies in the attention which it properly bestows on Pacific Coast scenery and manners. Its "process" and other unpretentious illustrations are most abundant and most useful in this department.

The lasting value of the *Green Bag*, the "useless but entertaining magazine for lawyers" (Boston Book Co.), is as a biographical treasure-house. In the third volume the Supreme Courts of New Jersey, Pennsylvania, Illinois, Missouri, and Louisiana are treated historically, with the aid of numerous portraits; and there are besides sketches of James T. Brady, Lord Coleridge, Nathan Dane, D. D. Field, and many other legal luminaries both British and American. The list of portraits numbers 124. Mr. Irving Browne's rhymed and annotated statements of decisions are an unfailing source of amusement and instruction.

A tiny 'Abstract of New York State Laws Affecting the Rights and Property of Women,' compiled by Mrs. Mary L. Rice, has been prepared for the Women's Educational and Industrial Union of Buffalo, N. Y., and may be had in any quantity at a low price by addressing the secretary of the Protective Committee, Mrs. Adelbert Moot, No. 25 Niagara Square.

Dr. Constantine Stauder, a London teacher of Latin by colloquial methods, has conceived the idea of a tract illustrating the ease with which the language may be thus acquired. It is called 'Post Prandium: Pleasantries in Colloquial Latin,' and consists principally of pictorial humors from the American comic journals with the legends translated into Latin. As space allows, a little Latin drill is thrown in. The effect is droll, and "head masters of schools" may well feel disposed to order copies of this unconventional aid in teaching Latin. The publishers are David Nutt, London, and Westermann, New York.

From Westermann & Co. we receive also the new *Almanach de Gotha* for 1892. The four portraits are of minor yet not unimportant personages—the Queen Dowager and Regent of Holland, the new Grand Duke and Duchess of Luxembourg, and Charles, Prince of Isenberg-Birstein; the selection of this group having been determined by the death of the King of Holland, William III. In the ceaseless overhauling of this ancient annual, what is to be particularly noticed this year is the extension of the information as to consulates. In addition to the names and stations of consuls-general and consuls, the places at which vice-consuls and consular agents are established are completely given. In bulk, the *Almanach* is larger than ever before.

'My Lady Legend,' by Albert Segerstedt (D. Lothrop Co.), is a pretty collection of Swedish fairy tales, which have been cleverly translated into English by Anna von Rydingsvärd. Many of the stories bear a more or less close resemblance to Hans Christian Andersen's wonder tales, while others remind one of the English and German folk tales. The author is possessed of a great deal of quiet humor, some of which is unavoidably lost in the translation. The binding of the book deserves special notice: the colors are those of the Swedish flag, blue and yellow; in the upper corner is the Swedish coat of arms, and, in the lower, that of the translator, presumably.

The first part of Salomonsen's 'Scandinavian Encyclopædia,' a preliminary notice of which was published in these columns last summer, appeared some weeks ago, and will after January be followed regularly by two parts every

month. This part contains forty-eight well-printed two-column pages of reading matter, and two large illustrations, together with a number of small woodcuts, taken, most of them, from Meyer's German work. All the articles are signed, and among the names are some of the best known specialists in Denmark and Norway. In many cases the subject is divided between two writers, the one a Dane, the other a Norwegian, as with usury (*Aager*). The treatment of the letter A is especially full and satisfactory, its several functions being discussed separately. Its linguistic consideration is by the distinguished dialectician, P. K. Thorsen, who has contributed several other phonetic articles. Of special value are the descriptions of Danish and Norwegian towns, two of the former being accompanied by large charts in black and red. Their separate treatment, however, from the historical and the geographical standpoint, is undesirable, leading as it does to frequent repetitions. Among the distinctively Scandinavian articles may be mentioned Dr. Verner Dahlerup's account of the Aarkirkeby font, with an excellent reproduction from Prof. Wimmer's recent work. The majority of the Swedish biographical sketches are by Dr. Blomberg of Stockholm. While for foreign readers the work derives its chief interest and value from the full treatment of Scandinavian subjects not otherwise accessible, it is not by any means confined to these, but furnishes the latest information in all branches of knowledge.

We heartily welcome an adaptation of Prof. Behaghel's 'Die Deutsche Sprache,' which has just been published by Dr. Emil Trechmann of the University of Sydney, under the title 'A Short Historical Grammar of the German Language' (Macmillan). Behaghel's book is known as the most successful attempt hitherto made to give in small compass and in popular form the results of modern philological study as applied to German. It consists of an "Allgemeiner Teil," containing a rapid sketch of the principal changes, both external and internal, of the language from the Pre-Teutonic down to the New High German Period, and a "Besonderer Teil," dealing systematically with the present aspect of the language as affected by the former stages of its development. It is impossible here to give any idea of the wealth of information which this little book contains. Suffice it to say that there could be no better guide to a proper understanding of the burning questions of modern philology, such as the laws of accentuation, the principles of phonetic changes, the influence of analogy, etc., than is offered in this modest primer. Dr. Trechmann's adaptation is in the main well done. The larger space given to examples and the constant reference to English forms and usages are most welcome. The index, which is also an addition, would be more of an improvement if it had been done less hastily. We confess not to see the reason why the chapter on the influence of foreign languages upon German has been transferred from the historical to the systematic part.

The 'D. K. E. Catalogue' (New York: Council Publishing Co.), an octavo volume of over 1,700 pages, gives a complete list of the chapters and members of the fraternity from its foundation in 1844 to the present time. There are 35 active chapters and over 4,000 living members. A succinct biography of each member is given from the time he entered the fraternity, and tables are added showing the collegiate institutions mentioned in the catalogue, and the present geographical distribution of the membership. The book is thus a contribution to the history of college men, and its value would have been increased by tables giving the occupations of the members after leaving college. The professional distribution of college-bred men is a statistical point of no little interest, on which light may be thrown by the various society catalogues. Another point which might be touched on in them is the character of the exercises in the various chapters.

The *Electrical Engineer* begins with the new year a serial narrative of the work of Joseph Henry, by his daughter, Mary Henry, with annotations by Franklin Leonard Pope. It will incidentally vindicate for our countryman the discovery of magneto-electricity associated with the name of Faraday.

The Chicago *Open Court* for December 24, 1891, gives a shadowy "process" cut of the new monument erected over the grave of Theodore Parker in Florence. In the same number Mr. Theodore Stanton, the leader in this pious work, relates the steps taken to bring it about.

Mr. P. G. Hamerton concludes in the December *Portfolio* his series of papers on the "Present State of the Fine Arts in France," the last being on Engraving. The general result, in his opinion, is, that there is no lack of vitality in French art, but that it is "in a condition of the most complete anarchy, and is no more a school, in the sense of any common purpose, than the business association of individual artists in England can constitute a school." Doubtless we shall meet with this survey again in a volume, provided, we hope, with more adequate illustrations than the *Portfolio* has indulged in.

The first number of *Natura ed Arte* (Milan: Francesco Vallardi) has come to hand since our recent announcement of it. The illustrations are of ordinary quality, without exception of the single photogravure—a portrait of the King of Italy, whose praises are sung by A. de Gubernatis. This is the first of "illustri contemporanei." Raffaello Barbiera has a paper on the writings of Cesare Correnti; a letter from Malibran furnishes another; science and art are not neglected. Of greatest worth, perhaps, are the departments called reviews of travels, of "economia" (the state of the country), of agriculture, and of books; the last especially being promising. There is a political chronicle, and even the fashions are recorded. All this in 80 quarto pages.

Dr. Hans Meyer contributes to *Petermann's Mitteilungen* the various observations taken on his last journey from Mombassa to Mt. Kilimandjaro and return, together with notes upon them and a map. This route, though frequently travelled by Europeans, has never before been carefully surveyed. An interesting list of geographical names in Central Asia, with their situations, derivations, and definitions, is given by H. Vámbéry. In the introduction to it he remarks on the great confusion occasioned by the substitution by the Russians of *g* for *h* and *a* for *o*, as well as by the often intentionally misleading information given by the natives. A supplemental number contains a description, both scientific and historical, of the famous Adam's Bridge, the series of bold cliffs and sand-banks lying between the island of Ceylon and India, believed by the natives to have been built in five days by the Vánars for the passage of Rama.

—The January *Atlantic* is a brilliant number on the literary side; but perhaps, all things considered, the most noteworthy article it contains is an unsigned survey of "The Political Situation." This is an admirably condensed analysis of the state of parties, and in particular of the historical place of the Republican party, and the disintegration it suffered when its mission was accomplished. The author expresses his sentiments very freely with respect to reform and the attitude of the party towards it—indeed, the frankness with which he thrusts forward tariff reform into the front of current issues is, under the circumstances, very significant of the progress of the principle in Massachusetts; but the whole paper is likewise stamped with the spirit of the independent voter in Massachusetts, and is a very complete expression of the political view taken by Republicans of the educated class who have practically left their party. The writer does not favor a new organization, and gives very sound reasons against it, but he suggests a union of those voters who favor the principles of reform for work in Congressional districts, in which, of course, the independent voter has the most weight. Outside of this contribution, the most unexpected article is one by Emerson on "Boston," the flavor of which is distinctly old-fashioned, and strikingly shows how far away the age of Emerson already is in literary feeling. Mr. Henry James writes sympathetically, of course, but almost too subtly, of Lowell; the tone is personal, but not intimate, and the period is naturally that of the English mission and the later London days. He dwells most on Lowell's literary and scholarly phase, and especially on his militant Americanism; but as he does not attempt a critical portrait, neither does he succeed in making one. Some of the correspondence of John Stuart Mill, and a poetical view of the Southern cause in the civil war, are the only other noticeable pieces.

—*Harper's*, though not without features of interest, on British Columbia, the Chicago Exposition, and the London of the Restoration, is freshest in the paper of De Vogüé on what he calls "The Neo-Christian Movement in France," in which he reviews the meditative works of some young Frenchmen on the ideas, social and religious, of the present time. He finds in their books a reaction from both the Voltairean and the Positivist spirit, and thinks that the somewhat mystical and pseudo-Christian impressions they have formed herald a new movement, of which the future is as interesting as the rise was unexpected. He traces the origin of this new feeling partly to the melancholy consequent on the last war, partly to the analysis of the revolutionary illusion begun by Taine, and partly to the confession by Tolstoi of his experience under the ideals and conditions of modern life. The movement marks the resurgence of the Gothic spirit in our civilization in distinction from the Roman element—the spirit of St. Vincent de Paul, of Mirabeau, of Saint-Simon, in opposition to the limiting and rational Latin genius, which, concurrently with the former, has formed the French nation. Whatever be the justice of the writer's observations, the facts which he points out are significant, and have an illustrative bearing upon the idealistic tendency in other parts of the world, now suffering a unification, both of sentiment and of idea, unparalleled since the Roman Empire. A literary paper is furnished by Horatio Bridge, who relates the story of the college days of Hawthorne, and adds some anecdotes of his friendships which, if they throw no new light upon his genius, are interesting in his singularly barren biography. The important announcement is made that the magazine will publish immediately Lowell's six lectures on the Elizabethan dramatists.

—The *Century* devotes much space to the Jews, in two articles, one upon the Jewish question in general, the other on the Jews of New York. Another public question is treated of under the head of "The Discontent of the Farmer," with much ability and also breadth of view. Witchcraft gives Dr. Buckley opportunity for another of his remarkable papers on the border-land of human belief. He may startle the reader by the statement that "witchcraft is at the present time believed in by a majority of the citizens of the United States," but he justifies the words; and his survey of the latest legal chapters in the history of the delusion is a most convincing illustration of the slow change of popular opinions. Quite the most important paper, however, is the account of Custer's last battle by Capt. Godfrey, who was with Reno's command; the thrilling story is once more told from the point of view of those who were nearest to the unseen battle, and it seems likely that we have now reached the fullest detail of the fight which no one lived to describe; and it would appear from this sketch, and the appended comment of Gen. Fry, that the charge that Custer disobeyed orders must be finally dismissed. The portraits of the officers who died, which are given, lend a pathos to the article which every reader will feel.

—*Scribner's* has travel-sketches of Egypt, Bokhara, and Bayreuth, together with a paper on "Paris Theatres and Concerts," which may be classed with them. A literary paper containing some of Allston's correspondence is principally noticeable for two characteristic letters of Coleridge. Recorder Smyth writes of "Crime and the Law," and makes certain suggestions for legislative change in the line of that philanthropic treatment of crime which, though it has been recently much disparaged, cannot but advance under such experienced and well-supported advice. The remainder of the number does not call for comment. In the March number, we are told, will be published the last poem written by Lowell, and the only one of consequence left in manuscript. It is "On a Bust of General Grant."

—The publication by M. Henri Doniol of the documents in the French archives relating to the Treaty of 1783 supplies the last important link in the chain of evidence; for the only source of information yet unexamined is the Spanish archives, and Spain was ever a drag upon the diplomacy of the day, rarely an active factor. The 300 quarto pages of Mr. Doniol are full of information on the acts and characters of those who framed the peace; but the most positive contribution for American history is to be found in the papers relating to Rayneval's journey to London in September, 1782. Adams had long wished to lessen the influence of France in American affairs, fearing merely a change of masters; and in Jay, soured by his fruitless stay in Spain, and holding the French representative as partially responsible for his failure, he found a ready follower. Indeed, Jay's suspicions of the French Court increased so rapidly that they soon outstripped those of Adams, and he found a full confirmation of them in the intercepted despatch of Marbois, and in the sudden and secret mission of Rayneval to London in an early stage of the negotiations. It is upon these suspicions that the controversy over the Treaty of 1783 has raged. In his letter to Livingston of November 17, 1782—a studied presentation of his position some months after the events—Jay conveyed his suspicions, and, on the objects of Rayneval's mission, he "conjectured" that the French agent was (1) to inform Shelburne that the demands of America to be treated by Britain as independent previous to a treaty (Jay's own demands), were not approved by the French Court; that an acknowledgment of independence in an article of the treaty would be sufficient; (2) to sound Shelburne on a division of the fisheries between Great Britain and France, to the exclusion of all other Powers; (3) to keep America from the Mississippi, and so divide the Western Territory north of the Ohio, and (4) to make such verbal overtures as might test the sincerity of the wish for a general peace. In any case Jay thought the interests of America were to be sacrificed.

—Franklin refused to entertain Jay's views; Livingston argued against them; Sparks gave good evidence against their probability, and Lecky and Bancroft scout them. M. Doniol, in his clear and usually impartial narrative, gives the final testimony. He prints in full the instructions given to Rayneval, drawn by Vergennes himself, which were intended to sound Shelburne's attitude upon a general pacification, and so covered the interests of France and her Continental allies, as well as of America. In the same work M. Doniol summarizes Rayneval's minutes of his conversations with Shelburne and Grantham; but in the *Revue d'Histoire Diplomatique* he prints the minutes in full, comprising forty-six folio pages of MS. In the first interview, the complete independence of America was conceded, and without discussion; and in the two instances when the fisheries or boundaries were broached, the remarks were confined to the expression of a wish by Shelburne that the French King would not support the claims of the Americans, and a reply by Rayneval that the King would never give the weight of his authority to support unjust claims. Rayneval made one suggestion on the fisheries that might have figured in recent controversies, viz., that a simple rule for determining rights was to say that fish in the high sea was *res nullius;* off the coast, it belonged to the Power that held the coast. Apart from the few references to America that implied nothing but an interchange of individual opinions, given *officieusement*, the conversations related entirely to the East Indies, Africa, and the slave trade; Spain's demand for Gibraltar; Holland; and the suggested mediation by the courts of Vienna and St. Petersburg.

—Jay's suspicions, allowed free play by an attack of gout that rendered Franklin unable to take an active part, led to the completion of a treaty in such a manner as to give offence to France, assured Gibraltar to the English, and antagonized Spain. Further, the negotiations as conducted by Adams and Jay offer a curious commentary upon their mental processes. While denouncing France for secret methods, they completed and signed a treaty without communicating with their ally, in direct violation of their instructions, and with a secret article that might have renewed the war (for it was an insult to Spain), and that did prove an element of discord till the purchase of Louisiana. Franklin's tact and Vergennes's self-control and generosity smoothed over the matter. But when Adams and Jay are lauded as the makers of the Treaty of 1783, it will be well to recall that under it Adams could do little or nothing as Minister to St. James, and that in 1794 Jay himself was sent to negotiate a new treaty which should make good the defects of the old. As a diplomatic triumph the treaty was remarkable; but as a personal triumph it too strongly resembles the diplomatic "victories" of the man from Maine. In addition to the negotiations on the treaty, M. Doniol will make another valuable contribution to American history by printing the letters of Rochambeau.

—At the request of the family of the deceased Prof. Johannes Huber, the Munich publisher of 'Das Papstthum' (noticed in No. 1378 of the *Nation*) has issued a leaf to be substituted for pp. vii. and viii. of the preface of the present edition, stating with the greatest possible exactness the part taken by Prof. Huber in the collaboration of the first edition of the work. The original article, entitled "Der Papst and die Civiltà," which appeared in the Augsburg *Allgemeine Zeitung* in March, 1869, Nos. 72–74, was written entirely by Döllinger. Huber proposed that this article should be enlarged and printed in the form of a pamphlet, and promised to aid in the revision. Döllinger accepted the suggestion, and in April Huber set to work alone, although under the constant supervision of Döllinger, who, however, a few weeks later, about Whitsuntide, again took his pen in hand and developed the projected pamphlet into the good-sized volume known as 'Janus,' which was finished towards the end of July. The work belongs, therefore, in conception wholly and in literary execution essentially to Döllinger, and it is perfectly just and proper that the title-page should bear his name only, although its "authors" are spoken of in the preface to the first edition, which appeared anonymously. We may add that of the papers originally printed in the *Allgemeine Zeitung*, the concluding number, 74, which treated of the doctrine of Papal infallibility since the sixteenth century, was not embodied in 'Janus,' but has now been published as a separate essay in the volume of 'Kleinere Schriften,' pp. 405–425 (Stuttgart: Cotta). The defence of 'Janus' against the attacks of Cardinal Hergenröther was written by Huber, and not seen by Döllinger until published.

WINSOR'S COLUMBUS.

Christopher Columbus, and How He Received and Imparted the Spirit of Discovery. By Justin Winsor. Boston: Houghton, Mifflin & Co. 8vo, pp. 674. 1891.

About half a century ago Carlyle, in his 'Past and Present,' apostrophized the discoverer of the New World in these glowing words: "Brave Sea-Captain, Norse Sea-King—Columbus, my hero, royalest Sea-King of all. . . . Thou shalt be a Great Man. Yes, my World-Soldier, . . . thou wilt have to be *greater* than the tumultuous, unmeasured world around thee." Irving and Prescott had already set the key-note to this pæan of praise, and in both worlds the consensus of opinion respecting Columbus had finally culminated in a strenuous, though hitherto ineffectual, effort on the part of a certain section of the Roman Catholic Church to bring about his canonization in recognition of his instrumentality in introducing Christianity into America. Some discordant notes, however, were heard amid this general chorus of commendation. With the progress of historical criticism, scholarly inquirers were found insisting that the portrait of the man had been drawn in altogether too high colors, and that it was essentially untrue. It was with some interest, therefore, that we looked for the conclusions upon this subject that had been reached by the last to enter upon this field of inquiry,

the scholarly librarian of Harvard, who has expanded the chapter upon "Columbus and His Discoveries," contained in his 'Narrative and Critical History of America,' into the comely volume now before us. We find Mr. Winsor decidedly ranging himself among the iconoclasts in his estimate of Columbus's character. The following is the portrait as he has painted it:

"Hardly a name in profane history is more august than his. Hardly another character in the world's record has made so little of its opportunities. His discovery was a blunder; his blunder was a new world; the New World is his monument! Its discoverer might have been its father; he proved to be its despoiler. He might have given its young days such a benignity as the world likes to associate with a maker; he left it a legacy of devastation and crime. He might have been an unselfish promoter of geographical science; he proved a rabid seeker for gold and a viceroyalty. He might have won converts to the fold of Christ by the kindness of his spirit; he gained the execrations of the good angels. He might, like Las Casas, have rebuked the fiendishness of his contemporaries; he set them an example of perverted belief. The triumph of Barcelona led down to the ignominy of Valladolid, with every step in the degradation palpable and resultant."

This will not be a popular position that our author has taken upon the threshold of the fourth centenary of the discovery of this continent, but we honor the courage which proclaims the convictions to which his unprejudiced investigations have conducted him. For our own part we believe that he is essentially correct in the opinion which he has formed in regard to the character of Columbus, and that this will be the final estimate in which he will be held by mankind.

Nor does Queen Isabella fare any better at our author's hands. He pronounces her to be "an unlovely woman at the best, an obstructor of Christian charity," and he quotes with approval Helps's statement that "there is hardly any great personage whose name and authority are found in connection with so much that is strikingly evil." He finds fault with Irving and Prescott for "making her confessors responsible for her acquiescence in the expulsion of the Jews and in the horrors of the Inquisition." The familiar story of her having offered to pawn her jewels to help defray the cost of the expedition, he agrees with Harrisse in regarding as a myth, since the exigencies of the war with the Moors had already required that sacrifice of her; and he thinks the advance of money was actually made by Santangel, from his private resources.

There will, doubtless, be a luxuriant crop of popular Columbus literature to welcome the commemoration of the great discovery—in fact, a brief sketch by the Rev. Edward E. Hale has already appeared at Chicago; but it will be hard, we think, to find a rival in thoroughness, scientific method, accuracy, and impartiality for the valuable monograph which Mr. Winsor has given to students of history. For it is to them that it specially addresses itself, although the general reader who wishes to discover what is the real truth about Columbus, need not find himself repelled even by the minute technical treatment of certain details, since this is always relieved by the vigorous and incisive style of the narrative.

Mr. Winsor does not profess to have discovered any new sources of information—indeed, this would seem to be almost impossible after the labor and research resulting in the long series of volumes upon Columbus that have come from the pen of M. Henri Harrisse, during the past twenty-five years. To these, and especially to his latest work, 'Christophe Colomb' (1884), ample acknowledgments are made for the stores of material therein contained, and it is clear that the present volume could never have been written without their help; but our author has displayed a truly independent spirit in drawing his conclusions, and in many regards he sharply criticises Harrisse's views. Nor would we be understood as intimating that he has depended upon Harrisse's labors only. The whole literature pertaining to the discovery of America is at his fingers' ends, and every source of information about it has been exhausted—embracing everything known or surmised that can be found in documentary or printed sources in regard to the origin, the birthplace, and the early life of Columbus, the growth of his ideas about the shape of the earth, and the grounds of his expectations of making further discoveries. All these are traced out to the farthest hint. Finally, in an appendix of 130 pages upon the "Geographical Results," Mr. Winsor has produced a masterly treatise upon the history of early cartography, in which branch of learning he is regarded as the leading authority. Every piece of testimony has been compared and sifted with untiring industry and practised skill, and the result is a model of faithful investigation into mooted questions and of clear setting forth of results attained.

Space will not admit of our dwelling upon the manner in which the familiar incidents of Columbus's life and the well-known facts of his different voyages have been handled, and we will confine ourselves to giving some account of our author's conclusions in regard to a few points, important or curious, about which there has been much discussion and great diversity of opinion.

There is a difference of at least twenty years between the various dates that have been assigned for the birth of Columbus, and some twenty or more towns or hamlets have contended for the glory of having been his birthplace. Mr. Winsor gives the names of all of these, with special details in regard to Savona and Calvi (in Corsica), but records his assent to the right of Genoa to the honor, in accordance with Columbus's own declaration in his will. His father, Domenico, a weaver, owned and lived at the house, still standing, No. 37 Vico Dritto Ponticello, and there, in all probability, Christopher was born, some time in the years 1445–'47, according to the conclusions of our author.

A chapter is devoted to the discussion of the question, "Was Columbus in the North?" as has been inferred from a statement to be found only in the life of Columbus by his illegitimate son, Ferdinand. Now, not only have the authenticity and trustworthiness of this biographical account been much questioned, of which only an Italian version is known, published in 1571, nearly a hundred years after the event, but the date assigned for the visit, 1477, is proved to be inconsistent with the known facts of Columbus's life, while the reference to the country visited is so vague and indefinite in regard to latitude as to be irreconcilable with what might be expected of an experienced navigator. But what renders the fact of an early voyage by Columbus to high northern latitudes highly improbable is that in 1492, when he was expatiating to his sovereigns upon the advantages of the harbors in the new islands he had discovered, he laid no claim for his ability to form a judgment regarding them to his ever having been farther north than England. So also, when the Spanish crown was contesting with his heirs his rights of discovery, no reference was made to these northern experiences, which would certainly have been cited in favor of the claims of the Crown. But even if he had made such a voyage as far as to Iceland, as has been so confidently asserted, it is only by inferences of a highly imaginative character that it can be supposed that he could have gained any information about the early voyages of the Northmen to Greenland and the American continent; and it is inconceivable that on his first voyage he should have laid his course southwest from the Canaries, if he had been prompted by information gained about lands lying in the northwest. Incidentally, Mr. Winsor is led to consider at some length the arguments in favor of the early Norse voyages to America, and his conclusion is that there is "no evidence beyond a strong probability that the Norse from Greenland crossed Davis' Straits and followed south the American coast." He scouts the attempts to identify the localities of their alleged sojourn, asserting that no archæological evidence of their presence here has ever been adduced.

All the world knows the thrilling narrative of that first voyage, as recorded in the abridgment of Columbus's journal preserved by Las Casas, but exactly where he made his landfall has been a very much debated question. The various opinions are all quoted and discussed, but our author allows that there "is just enough uncertainty and contradiction respecting the data and arguments applied in the solution of this question to render it probable that men will never quite agree upon which of the Bahamas it was." Three methods of identification have been followed: first, by plotting the outward track; second, by plotting the track between the landfall and Cuba, both forward and backward; third, by applying the descriptions given of the island first seen. San Salvador, or Cat Island, the most northerly of the group, was the one originally regarded as corresponding to what the discoverer called Guanahani. This was accepted by Irving on the authority of a careful study of the problem by Capt. Alexander Slidell Mackenzie of the United States Navy. The late Capt. G. V. Fox, Assistant Secretary of our Navy, after an elaborate survey and discussion of the question for the United States Coast Survey, decided in favor of Samana, and this conclusion has the qualified approval of Harrisse. But Mr. Winsor gives in his adhesion to the claim of Watling's Island, as best answering to the description and as supported by the weight of modern authority. Muñoz, Capt. Becher of the Royal Navy, Oscar Peschel, Navarrete, the late Mr. Major of the British Museum, and Clements R. Markham, are all of this opinion, which is sustained in a recent very elaborate study of the problem, in 1884, by Lieut. J. B. Murdoch of the United States Navy. A carefully drawn chart (after Ruge) is furnished, on which all the various courses suggested are laid down, with the different landfalls resulting from them.

Not until eighteen years after the great discovery do we find the first allusion made to it in English literature, in a translation, by Alexander Barclay, of Sebastian Brandt's 'Ship of Fools,' published in 1509. We will quote as a curiosity the uncouth lines referring to it, in which it will be noticed that no mention whatsoever is made of Columbus:

"For nowe of late hath large lande and grounde
Ben founde by maryners and crafty gouernours,
The whiche londes were neuer knowen nor founde
Before our tyme by our predecessours;
And hereafter shall by our successours
Parchaunce mo be founde, wherein men dwell
Of whome we never before this same harde tell.
Ferdinandus, that late was kynge of Spayne,
Of londe and people hath founde plenty and store,
Of whome the bydynge to us was uncertayne
No Christen men of them harde tell before."

What was the form in which Columbus originally communicated the intelligence of his success is one of the puzzles of bibliography. Several varieties of the text of a letter, in Spanish, making the announcement exist in manuscript, but no one of them is in his own handwriting, nor is it conceded that any preserves his exact language. One is addressed to Luis de Santangel, the Treasurer of Aragon, and another, essentially the same in its contents, to Gabriel Sanchez. Of the former an edition in small quarto was printed in 1493, but only one copy of it has ever been discovered. This was formerly preserved in the Ambrosian Library, at Milan, but it has disappeared from there. Recently the discovery of two other printed editions of this Santangel letter has been announced, each in a single copy, one in quarto, the other in folio. The quarto copy was sold in this city within the past year for $4,300, but Mr. Winsor remarks of it, "There can be scarce a doubt that it is a modern fabrication." The folio copy is said to be held by Mr. Quaritch, in London, at the price of £1,600. But what is commonly known and cited by scholars as "Columbus's First Letter" is a translation into Latin of the letter addressed to Sanchez, made by Leander de Cosco, probably at Barcelona, on April 29, 1493. Of this, within a twelvemonth, four editions were printed in Rome, three in Paris, and one in Antwerp. As to which of these little black-letter quartos or octavos is the *editio princeps* there has been an immense amount of learned discussion, and Mr. Winsor hesitates to pronounce judgment between them, saying: "There is just enough of uncertainty and obscurity as to date and printers to lure bibliographers and critics of typography into research and controversy, and hardly any two of them agree in assigning the same order of publication to the several issues." Of all these eight editions there are only about thirty copies known, of which some ten or more are in this country. The attention of the American public has of late been attracted to this literary rarity by the large prices that have recently been paid at public auction in this city for copies of different editions. These have ranged from the $4,300 given for the Spanish copy, as we have stated, to $2,900 paid at the Burton sale by the Boston Public Library for a copy of the Cosco Latin translation; and $1,500 paid at the sale of the Ives Collection for a copy of each of two different editions of the same text. As only five or six of the thirty copies known are ever likely to come upon the market, these prices cannot be considered as excessive. We have already called attention to the praiseworthy attempt of the Trustees of the Boston Public Library to popularize this interesting literary curiosity by publishing a handsome facsimile of their copy, with a translation, which can be purchased at a very moderate price.

Into the vexed question as to the present resting-place of the remains of Columbus, about which there exists a considerable body of controversial literature, Mr. Winsor does not enter at any great length. In 1541 the remains were transferred from Spain to Santo Domingo, shortly after the completion of the cathedral there, in which they were placed. The exact spot of the interment was not made matter of record at the time, and the traditional site in consequence has been drawn into dispute. When the Treaty of Basle gave the Santo Domingo end of the island to France, the Spanish authorities, in 1796, transferred the remains to Havana, with much pomp and ceremony. But in 1877, in making some repairs in the cathedral at Santo Domingo, certain discoveries induced the bishop of that see to claim that it was not the remains of Columbus, but of his son Diego, that had been removed. This has been denied by the Academy of History at Madrid, and accusations of fraudulent tampering with the inscriptions upon the box containing the relics have been brought against the bishop. Mr. Winsor expresses no decided opinion, contenting himself with saying: "The question has probably been thrown into the category of doubt, though the case as presented in favor of Santo Domingo has some recognizably weak points, which the advocates of the other side have made the most of, and to the satisfaction, perhaps, of the most careful inquirers."

The volume is most generously embellished with pictorial illustrations of every sort, but is especially rich in maps and portraits. It is even hospitable enough to allow space for the likeness, in a fifteenth-century costume, of Ptolemy, the illustrious Greek geographer and mathematician, of whom Prof. De Morgan says "we know absolutely nothing but his date, A. D. 139." Naturally a great liberality is displayed towards the portraits of Columbus himself, of which nine out of the sixteen upon Irving's list had been previously given in the 'Narrative and Critical History of America.' Seven of these are here reproduced, although our author confesses that there is "none that can be proved beyond question the result of any sitting or even of any acquaintance." None of them at all resembles the description of his person given by contemporaries. Our author expresses no preference for any, although he states that the so-called Yañez portrait as regarded by the late Duke of Veragua as the most authentic likeness of his ancestor. He makes no reference to the picture recently discovered in Venice, bearing the signature of Lorenzo Lotto, of which some account was given in the *Nation* of December 26, 1889. We should be pleased to have learned Mr. Winsor's opinion in regard to its genuineness and value, as it is said to resemble the Yañez portrait in many particulars, with some difference in the costume.

It would be agreeable to linger longer over numerous other interesting points treated by our author, but we refrain, simply commending most heartily to our readers this valuable and beautiful volume, upon which the publishers have lavished all the resources of their art.

BLADES'S PENTATEUCH OF PRINTING.

The Pentateuch of Printing, with a Chapter on Judges. By William Blades. With a Memoir of the Author and list of his works, by Talbot B. Reed. Chicago: A. C. McClurg & Co. 1891. Demy 4to, pp. xxvii, 117.

To announce a new book by William Blades is to arrest the attention of every lover of old books. His 'William Caxton' of 1861 was a model of intelligent research and of candid criticism, in which nothing of value was left unsaid. Similar commendation must be given to many of his minor productions, but the book before us is a grave exception. Although beautifully printed, freely illustrated, and, despite its fanciful title, logically arranged, it gives no new information, nor does it present all the old facts that are really needed in an epitome of typographic history. We have "Genesis," the beginning of printing; "Exodus," the promulgation of the art of typography; "Leviticus," the rules or methods of the early printers; "Numbers," brief notices of some of the early masters; "Deuteronomy," a review of the typographical achievements of the nineteenth century; closing with the chapter on "Judges," which is an insufficient mention of the leading authorities. The plan is comprehensive enough, but it has not been fully developed, for Mr. Blades's death must have left much of the work undone. What we have is, as his editor admits, an incomplete work, possibly little more than the skeleton of the book intended. Mr. Reed assures us that he has not transcended the lawful line of the editor; only in minor matters has he filled the gaps which were needed to make the proper connections. The chief deviations are a short memoir of Blades, and a careful collection of his valuable contributions to periodicals. One lays down the book with a regret that the author had not been spared to give to it the thoroughness of treatment that characterized his previous works.

The object of the 'Pentateuch' is to present in a compact form the sifted evidences concerning the invention of printing. There is need of such a work. All the authoritative treatises on the subject are bulky, and many of them have much irrelevant matter; but the ordinary reader is most repelled by the uncritical spirit and general bad temper of the authors. With few exceptions the authors dispute more than explain. One-half of them maintain that typographic printing was first done in Holland, probably by Coster; the other half, that it was first done at Strassburg or Mentz, by Gutenberg. Protesting against the quarrelsome spirit of previous writers, Blades attempts to give "fair and impartial criticism, based on acknowledged facts and historical evidence."

Unfortunately, in a previous book he had avowed his belief in the priority of Dutch typography, but he was careful not to assent to the dubious legend of Coster as the inventor. His doubts were wise. In 1869 Dr. Van der Linde put this legend of Coster into a crucible of criticism and reduced it to ashes; but his needless gibes at the easy credulity of the Costerians made antagonists of many fair-minded believers in a probable priority of Dutch printing. Blades was of the number who took the higher ground that the legend of Coster was unimportant; that there were evidences enough without this story of a prior practice of printing in Holland. Dr. Hessels, the translator into English of the 'Haarlem Legend,' went further. He attacked Dr. Van der Linde and the documentary evidence on which some of the claims of Gutenberg are based, with great ability, but in a bitter and intolerant spirit, which makes the inquirer doubt his judicial competency.

In this book, Blades attempts to reconcile the disputants by the assumption that there were two schools of typography: (1) a Dutch school, that made rude types and printed petty books, which school was the outgrowth of a long-continued practice of block-printing in Holland; (2) a German school, that made good types and fully developed the ruder Dutch method. In support of this assumption he says there are "forty-seven different books, or fragments of books, printed with eight different fonts of type, all Dutch in origin, all without any name, date, or place, nearly all discovered in the bindings of manuscript or printed books, thirty-three of them on vellum and four of them printed on one side only. What can we do with this interesting regiment of incunabula? To make them later than, or even con-

temporaneous with, the earliest dated books seems impossible."

Why impossible? Two of these books allude to men and events of the years 1457 and 1458. Not one fragment has been found in any book bound before 1467. There is no direct evidence that they were made before the Bible of forty-two lines. The rudeness of these eight fonts of type is not good evidence of their priority. That they may have been made, as has been alleged, from punches of wood, matrices of lead, and moulds of sand, proves nothing as to their age, for these rude implements have been occasionally used by type-founders ever since for the making of large types. Didot says ('Essai sur la typographie,' p. 607) that he had used them, and his description of their use gives us the clearest and, indeed, the only acceptable explanation of their peculiar faults. One of the forty-seven books, probably the worst as to its type-founding—the 'Abecedarium'—shows typographic peculiarities which are unmistakably of the last quarter of the fifteenth century. So far from showing the earliest processes of typography, these books show its early degradation. They seem to be the work of a contemporary block-book printer who attempted an imitation of the good method of a master, from an imperfect knowledge of its processes, and with intent to evade its conditions and cheapen its tools.

Of direct historical evidence, Blades presents very little, for there is little to give. The story of early printing at Haarlem, which was first told in print in 1561, is hearsay and of small value. The earliest and clearest expert testimony concerning the invention is that of Ulric Zell, a printer, who gives this testimony in the 'Chronicle of Cologne' of 1499:

"This highly valuable art was discovered first of all in Germany, at Mentz, and it took place about the year 1440, and from this time until the year 1450 the art and what is connected with it was being investigated. In this year 1450 they began to print, and the first book they printed was the Bible in Latin. . . . Although the art, as has been said, was discovered at Mentz (in the manner as it is now generally used), yet the first prefiguration was found in Holland, in the Donatuses which were printed there before that time. And from these Donatuses the beginning of the art was taken, and it was invented in a manner much more masterly and subtile, and became more and more ingenious. . . . The first inventor of printing was a citizen of Mentz, born at Strassburg, and named Junker Johan Gutenberg. There are some confident persons who say that books had been printed already before, but this is not true, for we find in no country were books printed at that time."—*Hessels's translation.*

The last and most important sentence is not quoted by Blades in the 'Pentateuch.' Van der Linde says that these suggestive Donatuses were xylographic; Blades says they were typographic. Is this of first importance? Is it not more important to know the nature of this new, masterly, and subtile invention which surpassed the Dutch method? It must have been something more than the copying of a rude method of making and using combined letters as types that moved Zell to call the new art a valuable invention. Even if it could be proved that the unknown printer of the forty-seven books made types before 1440, his priority would not materially affect the merit of the invention at Mentz. The unknown Dutch printer did not practise "the art as it is now used." He printed petty books only; he founded no school; he left no successor. His peculiar form of printing was barren as to results, and died with him. It did not have merit enough to attract disciples, nor vitality enough to live. The printing done in Holland after 1473 was done by the process and by the disciples of the Mentz school.

Hessels says that there is no positive proof that Gutenberg invented anything. It is not necessary here to consider this doubt as to the person. It is enough to say that "the art as it is now used" did appear for the first time, as Zell stated, at Mentz, about or soon after 1450, and that it produced great books of excellent workmanship. Blades says we know very little of the tools or processes of the Mentz printers. This is true. The writers who attempted to describe the new tools of type-making had to coin new words for new things, and the new words were not exact. Their descriptions might have been clearer, but they made no mistake in calling the new art a grand invention. They clearly understood, and some of them plainly said, that its great feature was the new art of type-making. Here it may be noted that the early method of type-making, so far as we know, has not been changed from that day to this. This first method was the only method: it was so thorough and scientific that no successor pretended to claim improvement.

The theory of Blades that typography as we have it was not an invention, but a gradual and imperceptible development at the hands of many experimenters, is a severe strain on the imagination. To accept this theory, we have to believe that one printer made types of wood and another of cut or cast metal; one man made a mould of sand, and another of brass; one used punches of wood, another matrices of lead; and so the work went on until it was proved by repeated experiment that the punch of steel, the matrix of copper, and the mould of brass or steel, were the proper implements. How these experiments could be made by many block printers or by searchers after typography before 1450 without leaving any trace behind them—how one man could appropriate the fruits of this labor and drive his predecessors or rivals out of the field and into oblivion—does not appear.

Blades is certainly reckless in his assertion that the believers in the invention at Mentz hold that the processes of typography as we have it came to the inventor by "sudden enlightenment." On the contrary, they accept the statement of Zell that the inventor "investigated" the problem for ten years. That he knew all the methods of contemporaneous block-printers and of other seekers after typography is probable, but it does not follow that he adopted their methods, or that he was largely indebted to them for his success.

Documents recently found in Avignon furnish a pointed illustration. They show that in 1444 one Procope Valdfoghel, a goldsmith of Prague, was teaching to eager pupils in that city a new method of "artificial writing." The mention of lead, tin, copper, iron, of "forms" (moulds), and of engraved letters, which were necessary for the production of this artificial writing, proves that Valdfoghel knew how to make movable types, but there is no evidence that he or his pupils did any practical work. His process, or his invention, if it may be so called, antedates that of Gutenberg, but what good did it do? It is possible that the inventor of printing at Mentz knew of Valdfoghel's methods, and perhaps of others equally unsuccessful; but it is not at all probable that the art which produced the Bible of forty-two lines came from a new combination of unsuccessful processes. It is much more reasonable to assume that, while the inventor thoroughly sifted the knowledge he acquired from others, he added to this knowledge more than he found.

RUSKIN'S ART TEACHING.

The Art Teaching of John Ruskin. By W. G. Collingwood, M.A., late scholar of University College, Oxford. London: Percival & Co.; New York: Macmillan.

NOTHING could well be more infelicitous than the idea of codifying the dicta of Mr. Ruskin into a system of art-teaching. He never taught art; he tried to teach drawing, and failed either to teach or to appreciate the supreme quality in drawing, and his own work never rose above the rank of earnest and patient amateur design, with a very incorrect eye both for color and form, though the feeling for both was very keen. We read his books for their poetic form of thought, their passionate love of nature, and the exalted humanitarian and spiritual aspiration running through them; for diction, for pathos, for philosophy, not always sound, but always sincere; and not least, for a pathetic personality which gives its tone to all he says on the most trivial subject. It would be difficult to say which of his definitions (rather, perhaps, appreciations) of art are the most or least accurate, for he gave expression to so many and so different that there are few views of art which he has not in one or another way taken at various times. But what may be said confidently, and what will be admitted as the general opinion of experts whose knowledge of the matter is most intimate, *i. e.*, the general body of artists of all nations, is that his doctrines, taken in the broadest comprehensiveness, are absolutely inapplicable to art. He has said numerous wise and witty things about art, and has shown a keen perception of certain forms of it, but the vital and essential qualities of it he never grasped. He continually confounded art with the uses of art, never got rid of the early misconception that it had some relation to religion or morality, or was secondary to nature; he invariably estimated artists primarily by their treatment of detail, which is only one, and not the most important, element in a work of art; and he set up his peculiar sympathies with it for the standard of dignity, if not of excellence. It is impossible to accept his notions of art as the basis of any system of teaching, for they lead to nothing but confusion or mindless representation of nature, which he again repudiates, though it is the most logical result of his precepts, and the only one his direct teaching ever developed.

But art is only the text of his preaching, and what he says is often in no relation to the text, nor the worse for not being. He was, Mr. Collingwood says, "intended for the Church," and he passed his life in the pulpit, if not in that of the Church. What the author has attempted to do is, then, the collecting of the texts which Ruskin set for himself to preach from, apparently ignorant that it is as an artist in words and not as a teacher of the graphic arts that Ruskin stands for us in the front rank of his contemporaries. His books will be as interesting when the arts they treat of are extinct; and the best proof that it is the eloquence and not the doctrine that gives him his place is that, when translated into another language, his ideas have never made their way. The bare statement of his doctrines which Mr. Collingwood gives, with the apparent conviction that he is putting forth a gospel of art, is sufficient to show us that Ruskin was not an art teacher. And even in drawing he never understood the secret of teaching what is most important for a young artist to know, the power and meaning of style, or the signification of

conventionalism in art—for all true art has its conventions, sometimes of the school, and sometimes of the individual; conventions of color, conventions of form, drawing, composition, and subject. When his 'Elements of Drawing' came out, we happened to show a copy to one of the best draughtsmen in America, and he returned it with the remark, "Ruskin should not have printed that; we know now what he does *not* know." No more futile book of instruction in drawing, we are inclined to say, was ever put forth. He seems, according to Mr. Collingwood, to have learned later its futility, but not the reasons of it. Nor does Mr. Collingwood understand it better. He says, for instance: "The conception of Ruskin as a mere literary stylist and dilettante in Art is an error; there are few writers whose opinions are founded on so thorough an examination of the subject"—a curious non-sequitur, as if the much studying a subject were any substitute for natural capacity to comprehend it, or an antidote for radical errors in the theory of the study of it. To say of Ruskin that he is a "mere literary stylist" is an exaggeration of what is to be said of him, but that he is a "dilettante in art" is no error, but the very fact. He delighted greatly, it is true; but more than a "dilettante," *i. e.*, an amateur, he never was or could have been.

The compiler is frank enough to admit that Ruskin changed his views of art as he grew older; the pity is that he had not waited for his views to ripen before he sent them out to the world; but Mr. Collingwood gives one passage with approval from the 'Aratra Pentelici' which must be taken as the matured and approved doctrine:

"All second-rate artists will tell you that the object of Fine Art is not resemblance, but some kind of abstraction more refined than reality. Put that out of your head at once. The object of the great Resemblant Arts is, and always has been, to resemble; and to resemble as closely as possible. It is the function of a good portrait to set the man before you in habit as he lived, and I would we had a few more that did so. It is the function of a good landscape to set the scene before you in its reality; to make you think, if it may be, the clouds are flying and the streams foaming. It is the function of the best sculptor—the true Dædalus—to make stillness look like breathing, and marble look like flesh."

It is difficult to concentrate more fallacy in so few words. Most second-rate artists follow Nature as closely as is possible, and the more closely their work resembles her, the more successful they are. They adhere to facts because they have no power of abstraction, and facts are very different from truth, which is what the greater artist aims at. No landscape painter the world ever saw, besides Turner, so little resembled nature, in the sense here implied, as he did; but probably none ever told so much truth. No statue looks so like breathing as a good piece of wax-work, than which nothing else is so far from art. The "Resemblant Art" is a pure assumption in nomenclature, meant to hide the incorrectness of the deduction and the inconsistency of the logic. The object of "Resemblant Art" is of course to resemble; the assumption that resemblant art is great art, or that there is any interdependence between the closeness of resemblance and the greatness of the art, even in a portrait, is utterly gratuitous—there is none. The greatest portrait-painter, as artist, is not the man whose portraits most resemble the original, as we see in every Academy exhibition. We recognize Titian as the greatest of portrait-painters, though we do not know whether or not one of his portraits was as like the original as one of Mr. Brown Jones Robinson who lives round the corner. A portrait that deceives you into believing that some one is looking at you out of the frame it is in, is always a vulgar piece of art, and is only possible as the work of a "second-rate" artist.

"There is, however," we are told, "a sort of art which does not thus deal with Facts; it is not necessarily imitative or representative, being occupied in the actual production of beautiful form and color; and this is Decorative or Abstract Art." Here again is pure fallacy; the art in this sort is the same as the art in the other, so far as it is art; it consists in the treatment of its material and the appeal which it makes to the mind. All art is decorative, but all art is not representative or imitative, and this multiplication of kinds of art only shows that Ruskin did not reach the central idea of art in his definitions or analyses, and that is the reason why he was continually making paradoxes and conflicting definitions. It is difficult to make a partial statement on the subject which we shall not find more or less indicated in some part of his works, and it is always possible to find in some other part a distinct contradiction of it; he gives nowhere the central truth by which we can reconcile his contradictions. Even in his nomenclature is continual fallacy, as when he talks of the rank of the arts—Symbolic, Imitative, Imaginative, etc., etc.; and Mr. Collingwood, in his attempts to reduce the Ruskinian system to a logical shape, only succeeds in making the matter more perplexing. Thus, he summarizes the idea of Ruskin in, "A great master is one who has great scholars, but Michaelangelo and Raphael, Titian, Veronese, and Tintoret entirely failed to teach their art"; therefore, they were not great masters. But a great master may chance not to find pupils able to follow him; does it follow that he is not a great master? The fact is, however, that Titian had several pupils who were admirable painters; Michaelangelo, one, Scalza, who was a very able sculptor; and if Giulio Romano was not to Mr. Ruskin's or our taste, he was a very powerful painter, who failed in sincerity, not in instruction.

Ruskin has said many things that are hardly to be denied; among these is the saying that "sound criticism of art is impossible to young men." But the book of all he has ever written which has produced the greatest effect on the public mind with relation to its art tendencies is the 'Modern Painters,' begun when he was twenty-two, and the later volumes of which, written years afterwards, have never produced a considerable modification of the judgments imposed by the first, which was that which established his position as a critic.

A reprint of Ruskin with the fine writing left out is a plum-pudding with no fruit, perplexing, contradictory, exasperating, and without a *raison d'être;* and this is Mr. Collingwood's 'Art Teaching of John Ruskin,' made worse by attempts to harmonize and make methodical that which in Ruskin was one of his highest fascinations for his reader—the wayward, capricious eloquence of erratic genius, astray in the garden of Nature, winged and free as *Ariel* after *Prospero's* wand was broken. To break him to common sense or rule is to put *Ariel* in harness; it cannot, fortunately, be done.

The Battle of Gettysburg, 1863. By Samuel Adams Drake. Boston: Lee & Shepard. Sq. 16mo, pp. 178.

Mr. Drake's effort has been to prepare a popular version of the story of the great battle of the first three days of July, 1863. He makes no reference to authorities, but tells the tale currently, fluently, with well-arranged grouping of incidents and with literary skill. The historical merit of the work must be gauged by the faithfulness with which the author adheres to the facts which are established by the concurrence of the best authorities. The greater the literary merit, the greater will be the mischief done to the truth of history if the facts are perverted. The besetting temptation in popular writing is to heighten color and contrast by making much of dramatic incidents. The stock anecdotes of history are notoriously unreliable, yet the weakest of them are reproduced in popular works with the regularity of stage "gags."

In all the larger elements of the story of Gettysburg, Mr. Drake's narrative is faithful to the accepted facts, and well combines a lively style with adherence to truth. There are some points, however, in which, by accepting a version ill supported, or by incorrect conclusions as to matters of conjecture, he has fallen into error, and, so far, given his assistance to building up mythical features in the history of the battle. He describes Lee as going in person to Ewell, on the evening of the 1st of July, to see if the latter, whose corps was the extreme left of the Confederate Army and enveloped Cemetery Hill, could not carry this important point. A long conversation is reported, in which the plan is debated, the discussion ending in Lee's deciding to make his attack next day by Longstreet's corps on the extreme right of the Confederates. Lee is represented as adding, "but he is so slow," speaking as if the admission were made in spite of himself.

We here are assisting at the growth of a myth. Lee did not visit Ewell at all that day or evening, and there was, of course, no such conversation. The reports of Lee and Ewell, the circumstantial account given by Longstreet, and that of Col. Long, who personally accompanied Lee as a member of his staff that afternoon, are the authoritative evidence on the subject, and they disprove the theory of such a meeting. Col. Long's memoir of Lee is not friendly to Longstreet, but gives no suggestion of any statement by Lee that Longstreet was generally "slow," but only that Lee was impatient on the 2d of July (the second day of the battle also) that Longstreet's corps did not get earlier into action. All that Lee is even then reported to have said means no more than Wellington's impatience at Blücher's delay at Waterloo. In each case nothing more was probably meant than that the delay was unfortunate, though the causes of it may have been inevitable. By the suggestion, however, that, in Lee's opinion, Longstreet was habitually slow, the reader is led to judge that a well-laid plan was thus foredoomed to disaster, and by inserting it in an imaginary conversation with Ewell on the preceding evening, an apparent definiteness is given to a dramatic incident likely to stick in the memory.

Another little touch which it is a pity to spoil is Lee's "shaking his clinched fist at Cemetery Hill," after the fighting of the second day was over, when he announced, in spite of Longstreet's remonstrances, his determination to assault again on the morrow, as was done in Pickett's fatal charge. The truth of history requires the correction that it was Lord Marmion who shook his fist at Tantallon's towers, and not Lee at imaginary ramparts in front of Meade's thin lines. Besides, it was not Lee's style.

To continue this ruthless erasure of pretty conceits, Longstreet is pictured, when giving

the signal to Pickett to lead forward his division, as turning away under the mastery of his emotions after he gave the silent nod. Why not complete the scene, after the manner of Racine or Boileau, by making the tears stream through his fingers crossed upon his face? Longstreet, no doubt, says that he indicated his unwillingness to give the order by the silence of his signal, but he rode forward to a commanding point, where he might lose nothing of the sight, and, dismounting, sat on a fence watching every phase in the struggle, discussing it with Col. Freemantle, the English visitor, directing the movements of the artillery, and fulfilling his duties as responsible commander on that part of the field. The "turning away" is in the romantic style, but intelligent people are learning to like reality better.

On the national side Gen. Sickles is made the scapegoat. His occupation of the advanced line along the Emmittsburg road has been so often criticised that Mr. Drake cannot be blamed for taking the unfavorable view of it; but why blacken the shadows in the drawing by saying that "Yesterday he had not been able to convince himself that it would be right to move his corps out of line even that he might go to the aid of his immediate chief, and when his doing so would have saved the day"? Certainly, if there has been general assent to anything in the story of Gettysburg, it has been that Sickles on "yesterday" (the first day) had been preëminent above others for marching to the sound of the cannon without stickling as to technical orders. It is a queer inversion of justice when the man most free from blame on that score is the only one mentioned as faulty. The reason is a literary one. The picture will not be strong enough without it. As Longstreet's "slowness" was a trait to heighten the color there, so Sickles's "wavering" must be used here. Accumulating evidence has been reopening the question whether Sickles even erred in occupying the Emmittsburg road, as candid persons will be likely to admit who read the paper by Col. Rafferty in the lately published proceedings of the Loyal Legion.

It is a most wholesome thing in the literary progress of our time that moderation and self-restraint in historical writing are more and more demanded. The historian is called upon to tell what is known, not what is conjectured. He is required above all to be absolutely faithful to his materials, and to discriminate between those that are trustworthy and those that are not. If history, to be true, must be dull, the truth is still demanded, though there is a growing opinion that it will not be dull when the acts and motives of men in great epochs are so fully examined that we may make them live before us as real persons, with their own nature, and not some ideal one that does not fit them.

Egypt under the Pharaohs: A History derived entirely from the Monuments. By Heinrich Brugsch-Bey. A new edition condensed and thoroughly revised by M. Brodrick. With maps, plans, and illustrations. London: John Murray; New York: Charles Scribner's Sons. 1891. 8vo, pp. xxviii, 469.

The chief advantage and improvement in the present form of this volume, apart from the reduced price, is in the fact that the amount of letter-press is one-half less than in the two-volume second edition of eleven years ago. The editor informs us that he has attempted to retain all the facts, but to tell the story in fewer words. Such condensation is commendable, and by no means difficult; but as some of the views of the original writer have been quietly suppressed and others substituted, we are necessarily left in some doubt as to the degree of authenticity which attaches to the book as a whole. There is no intimation that the condensation is in any way authorized. Upon the whole, however, the book thus far may be considered as an improvement upon its predecessors.

That for which Brugsch is best known in some minds is the theory of the route of the exodus which he has advocated, and which many suppose that he originated, though it was really propounded and published more than a generation before he was born. The identifications upon which this theory rested were set forth at length in the body of the 'History,' and the whole expanded in an appendix. Since Naville's excavations at Maskhutah, by which he identified Pithom, Succoth, and Heroöpolis, Brugsch and his followers have been compelled to abandon their former view. Consequently, the whole presentation of the subject should have been radically modified. But besides dropping the appendix referred to, the work of condensation has gone on in utter disregard of the new facts in the case. This is an extreme instance of the mechanical character of the work done by the editor.

Some additions of greater or less importance have been made to the volume. One of these is a list of the principal Egyptian kings with their cartouches. The addition is of value, but the effect of the hieroglyphic writing is far from pleasant, as it is in the solid black character made familiar in the dictionary which Birch furnished for the fifth volume of the English translation of Bunsen's 'Egypt's Place in Universal History.' The volume also contains some new maps. One of these, "Sketch Map of Dynasties," is a useful addition. The "Map of Lower Egypt" is inferior in execution to the old one in the former edition of the 'History,' while as an indication of our present knowledge of sites and localities in the Delta it is of little value on account of its composite character. It is made up in part from the old map and in part from the results of the excavations of Naville and Petrie under the auspices of the Egypt Exploration Fund. The result is a hodge-podge, self-contradictory, misleading, and in part untrue. The case is similar to that cited in the preceding paragraph. Disregarding the results of Naville's excavations, which established the *identity of location* of the cities there mentioned, we find Succoth indicated, as in the old map, just east of Tanis near the edge of Lake Menzaleh, and also, following Naville, at a point just west of Lake Timsah in the Wadi Tumilat, midway of the Isthmus. Heroöpolis, on the other hand, is placed a short distance northeast of Suez near the present head of the Red Sea, just as it was in the former map. In this Brugsch, without regard to the view now common and gaining in acceptance, that in early times the northerly extent of the sea was greater than at present, followed an erroneous interpretation of the words of Strabo, according to whom the western branch of the Red Sea was called the Gulf of Heroöpolis. Thus instead of correcting this blunder, the editor has simply perpetuated it. Similarly and most absurdly the Khetam or fortress of Succoth is located near Pelusium, just where Brugsch put it. The land of Goshen is pushed too far to the north and is on the wrong branch of the Nile. No notice is taken of Naukratis, though the discovery of its site is one of the most important of the past decade. There can be little wonder that it is found impossible to say much in praise of this singular piece of cartography. The editor has also added a list of the nomes, or districts, in which he gives the names in their Egyptian (transliterated) and Greek forms. In the former there are three gross errors in the use of a single letter, *t'* (pronounced *tz*, not *ch*,-p. viii.), which is substituted for *th*. For this blunder Brugsch is not responsible. Tables giving the Egyptian calendar and a list of "values and prices" from about 1000 B. C. are reprinted from the old plates, but without the notes which the former editor deemed necessary. The index has also undergone a very vigorous condensation. In place of seventy-four columns we now have only twenty-six. Far more entries are necessary to make this part of the book satisfactory. One looks in vain for many points of interest, and even the names of some of the kings cannot be found.

The vice of the former edition is apparent in this also, in that we frequently find positive statements of geographical fact where it is impossible to go beyond conjecture. Exploration and excavation, the camera, the measuring tape, and diligent study of inscription and papyrus will all be needed for many a year to come, before we shall be in a position to state certainly for fact all that our author asserts most calmly and confidently.

The Use and Abuse of Money. By W. Cunningham, D.D. [University Extension Manuals.] Charles Scribner's Sons. 1891.

Dr. Cunningham has an engaging style, and he has chosen an interesting subject. It is to be presumed, we suppose, from the series in which his book appears, that it is intended for somewhat uncultivated and immature minds, and it is therefore not proper to criticise it on account of its repetitions and restatements, since these may render it more easily assimilable. It is not all books, as Bacon assures us, that require to be "chewed and inwardly digested." But this reason does not seem to be of a kind to justify the introduction of a disquisition upon the "hypothetical" and the "empirical" methods in political economy. Dr. Cunningham complains that this science is based upon the assumption of the "facts of human nature and of the physical world," whereas the facts of human nature are continually changing. We need not dispute this assertion, but we do not find it easy to conceive a science of political economy that is not based upon the facts of human nature; and Dr. Cunningham encounters the same difficulty, for he immediately proceeds to give an investigation of these facts as an illustration of the "empirical" method. We cannot but regard it as unfortunate that he should not have explicitly referred to the fundamental truths relating to the method of social science so lucidly expounded by Mill in his 'Logic.'

Nor does it seem to us wise, as the aim of the book is primarily a moral one, to attempt to supersede the accepted use of the term capital. Dr. Cunningham adopts this course because he considers that "as we talk about it at the present day" a man's capital is understood to be a fund of wealth from which he expects to get an income. "This is what is meant by the word in ordinary conversation," he says, and at once proceeds to condemn the established definition on the ground that it may "suffice for popular talk," but must be discarded "if we wish for scientific accuracy." According to the author, it follows from this definition of

capital that it can exist only where money is generally known, that without habitual commerce and the use of a medium of exchange it cannot be formed, that it may be engaged in commerce or regularly employed for lending in lands where it is never used in connection with agriculture or industry, and that there are some societies in which there is no capital at all. It follows also, we may add, that a gambler who stakes his money on a turn of the cards is a capitalist. With reference to the origin of capital, Dr. Cunningham declares that the chief motive for saving is the desire to have a reserve fund, and that accumulation might continue unchecked even if the rate of interest were merely nominal. These propositions incline us to the opinion that the method of political economy employed by the author should be called rather conjectural than empirical, and we are confirmed in this opinion by the statements that agricultural communities have no roads or other means of communication, and that the farmer can by no means make the process of production more rapid.

In spite of defects like these, much that Dr. Cunningham has to say about capital is instructive and interesting. He argues calmly but forcibly against the views represented by Marx, and is extremely guarded in his judgments of the sins and omissions of capitalists. In fact, we have never seen a better exposition of the evils of regarding the motes in our brothers' eyes than is given in his chapter on social ideals. We may, he observes, frame our ideal for man in terms of his surroundings, or we may frame it in terms that concern him. To picture possible surroundings is simply to let the imagination run riot, for these surroundings, if once realized, could be maintained only by the diligence and self-restraint of men. Hence, ideals of personal character are the only practical ones, for the externals will be added unto these. Those who make their ideal an external one are prone to look for its realization not to their own action, but to that of others; whereas "if our ideal is framed in terms of personal motive, we shall begin by seeing that our own motives are right, and we shall be disinclined to waste our time in criticising the conduct of those who are in other circumstances than ours, and of whose motives and shortcomings we cannot judge." We cordially commend this volume to the consideration of those of our bishops and other clergy who have been led astray by the doctrine that Socialism and Christianity are the same thing.

My Personal Experiences in Equatorial Africa as Medical Officer of the Emin Pasha Relief Expedition. By Thos. Heazle Parke. With map and numerous illustrations. Charles Scribner's Sons. 1891. Pp. xxvii., 526, 8vo.

Mr. Stanley's choice of a medical officer for his last expedition was singularly fortunate. Surgeon Parke, though a young man, had already had much professional experience in Africa, having amid other duties served with distinction in the campaign against Arabi Pasha and in the Nile Expedition for the relief of Khartum. More valuable, possibly, than this experience, both to himself and his companions, was a temperament which enabled him to bear the greatest trials with equanimity and good humor. His journal, though full of the most painful details of sufferings, is strikingly free from complaints. A prey for months together to fever and inanition, living in huts swarming with vermin, and in close and constant contact with people of inconceivably repulsive habits and rotting away with disease, his cheerfulness never wholly forsakes him. To this sunny disposition was joined a remarkably self-sacrificing devotion to those under his care, according to their unanimous testimony, from Mr. Stanley himself to Emin Pasha, whose first conscious word after his well-nigh fatal fall at Bagamoyo was a call for "Parke."

The most interesting part of his work, which is mainly an unaltered transcript of his notebooks, is that relating to the experiences in the great forest. These are told far more vividly in his simple narrative, written from day to day, than in Mr. Stanley's labored description. Dr. Parke's is, in fact, the only account of the sufferings of the men at Ipoto and Fort Bodo, the most distressing episode in the history of the expedition, with the exception of that of the rear column. At the former place he was for three months the virtual prisoner of a band of the "cannibal slaves of slaves" of Arab slave-hunters. It would be difficult in all the annals of human suffering to surpass the horrors of this situation, the details of which are only too faithfully given in the diary. Here more than half of the Zanzibari carriers left with him perished from starvation, disease, and cannibalism, while he and his only white companion, Capt. Nelson, were brought again and again to the brink of the grave by their hardships. Only less dreadful were the six months spent at Fort Bodo waiting for the arrival of the rear column, where the forced inaction was not the least of the trials of which fever, hunger, and filthy surroundings were the chief elements.

Apart from his record of these wretched days and of his professional attempts to alleviate the misery of his companions, Dr. Parke's book contains little worthy of especial note. He carefully avoids entering into any of the controversies aroused by 'In Darkest Africa,' though he is in substantial accord with Mr. Stanley in all important points. There are comparatively few references to native life and customs, or to the natural history of the country traversed. The individuals, however, with whom he had personally to do, are often well described. Especially interesting is his account of the pigmy woman whose freedom he bought "for a handful of beans, twelve cups of rice, and six cups of corn," and who served him for more than a year with the greatest devotion, both as a nurse in his frequent fevers and as a food-provider in the forest. Emin Pasha is precisely the same interesting, though inexplicable and trying, personage with whom Stanley and Jephson have made us familiar, a strange mixture of strength and weakness, but singularly winning withal. The most striking figure is, of course, Mr. Stanley himself, and Dr. Parke gives in some respects a stronger impression of his wonderful capacity as a leader than any previous writer. In his closing pages he pays a remarkable tribute to him, evidently sincere and frankly truthful, which we regret that we have not the space to quote in full.

There are numerous little graphic touches in the journal which lighten its somewhat monotonous and often dismal record of hardships, and not a few fine descriptive passages, as for instance the account of the arrival of the rear column at Fort Bodo and the execution of the deserter Rehan. The special contributions to science consist of accounts of the various diseases from which the expedition suffered, and their treatment, and chapters on bacteriology and the arrow-poison of the dwarfs, the ingredients of which were revealed to him by his pigmy attendant. The illustrations of the volume are rather poor, with some few exceptions, such as the two charming sketches of children by Mrs. Stanley.

The Lily of the Arno; or, Florence, Past and Present. By Virginia W. Johnson. Boston: Estes & Lauriat.

"The world does not require so much to be informed as to be reminded," is the motto Miss Virginia Johnson has chosen for her 'Lily of the Arno,' and she seems to have very faithfully adhered to her text by giving her work the form of a personal narrative of impressions received during a sufficiently long stay in Florence. Those who have carried away bright memories of the City of Flowers will find much to charm them in the handsome volume bearing the scarlet Florentine lily on its face. It is full of vivid descriptions of living, moving Florentines of to-day at their work and at their play, of their feast days and fast days. Most of these impressionist pictures are seen by our author from her window in the street of the watermelon (del Cocomero), now called Via Ricasoli, leading from the Piazza of St. Mark to the Cathedral. The window is situated, therefore, in a closely populated part of the city, from which characteristic habits of neighbors can be observed—the vegetable woman across the way, the vender of wood and charcoal occupying a cellar in the palace wall, the dealer in old books in a small shop beyond, and an antiquarian opposite. These neighbors, with their belongings, serve to give local color and to illustrate the manner of life of the poorer classes, their children, their cats and other tame pets.

With genuine enthusiasm for the past, Miss Johnson's days are spent in churches, galleries, museums. She never fails to blend with her descriptions of works of art or ancient monuments their histories, the anecdotes or romances connected with them. Vasari seems to be the source of information from which she has chiefly drawn her lives of the Florentine artists, for she repeats many of the tales about them long ago shown to be fables—for instance, that of Fra Filippo Lippi and the abduction of the nun Spinetta Buti, considered by modern critics a base calumny; or again, what she says of Botticelli, that he left off painting after the burning of Savonarola, and would have starved in old age but for the bounty of the Medici. These inaccuracies are hardly pardonable even in a work which simply skims history, biography, romance, and legend as they concern the subject written of. Moreover, throughout these pages there is a painful lack of clearness of style: the book abounds in passages of incoherent and overloaded diction, as in the case of the Campanile of Giotto:

"To the more modest artistic tourist, red guide-book in hand, this revelation of the beautiful must ever be the wayside sacrament of Canon Kingsley, to be treasured in remembrance for the remainder of life; sharing the reveries of the pipe in some tranquil German town; gleaming swiftly in a displaced photograph on the table during the long winter night of Scandinavia; checking for a moment the rapid current of Western life, as if a spray of Dante's purple black lilies were held across the path of the American in guise of magician's wand."

There is an abuse of "fine writing" throughout—an accumulation of adjectives, a wearisome repetition of questions never meant to be answered. It is as if the author had jotted down all her thoughts in a note-book and had translated them, without any particular order or method, into the most involved language the

English tongue is capable of. Speaking of ancient customs still prevalent (page 17), Miss Johnson says:

"Does the father and bread-winner of the family sicken of fever in the autumn, imbibed from the mouldy well of the court adjacent to his cobbler's stall, or the son, an apprentice to the trade of mosaic-worker, whose nights are devoted to strolling about the streets, twanging guitar and mandolin, in company with other youth, and slender, sallow daughter, clad in flimsy gown for the Sunday walk along the Arno bank to the cascine in the piercing *tramontane* wind, suffer a lung congestion—the frequent *mal di petto?* There is the hospital ready to receive them, founded by worthy Folco Portinari, father of Dante's Beatrice, at the suggestion of his servant, Monna Tessa, whose presence in ward and cloister seems to still smile benevolently on each new comer to her precincts."

There is much repetition. The book would have gained had it been judiciously pruned. It struck us that cats had been continually turning up in every part of the book, and we find on consulting the index that they have been written of no less than fifteen times. The illustrations of the chief buildings throughout the work are in collotype.

One Summer in Hawaii. By Helen Mather. 12mo. Cassell Publishing Co. 1891.

THE fascination of Hawaii for tourists is pretty well proved by the long sequence of books which describe the wanderings of pleasure-seekers and of commercial or scientific tourists who have set foot of recent years upon those pleasant shores. The present volume is the latest recital of a leisurely traveller who was advised to "take a run down to the islands," and thought the trip would be like going down from New York to Coney Island; but whose good intentions were not dashed by learning that one had to "run down" two thousand miles into the Pacific to be landed at Honolulu. Mrs. Mather's trip, made during the summer of 1890, included visits to the islands of Oahu and the capital, Honolulu; to Maui and its great extinct crater of Haleakala; and on Hawaii, an island as large as the State of Connecticut, to the active crater of Kilauea, and to the beautiful bay and village of Hilo.

This ground our writer covers with steps that may be followed with ease and pleasure; and her record has fewer errors in the drawing than is usual in a summer tourist's book. We note one inaccurate description—that of the surf-players who ride in upon the front of the billows; and the cut that accompanies the text is equally misleading. But the descriptions of Honolulu and of the Pali are especially vivid; and many pleasant glimpses are given of the late King, Kalakaua, with whom Mrs. Mather exchanged courtesies. The most amusing thing in the book is the account of a practical joke which Kalakaua played, in a lighter mood, upon one of his guests. The visitor was gambolling in the surf at Waikiki, quite in the South-Sea fashion, with a group of Hawaiian nymphs, when the King struck despair to his heart by sending him word of the sudden arrival upon the scene of his wife. A figure, fierce as Megæra, appeared upon a distant balcony; Kalakaua hurried away to act as peacemaker; and after a particularly *mauvais quart d'heure* of suspense, the jealous wife on the balcony turned out to be a stuffed dummy, prepared to personate the indignant spouse. The story has a pleasantly recognizable note for those who were acquainted with the genial King; for Kalakaua was a laughter-loving as well as a capable sovereign.

Mrs. Mather has illustrated her very readable volume with vignette woodcuts and with "process" photographs, which give some idea of the exquisite beauty of town and country in these islands. The book is handsomely printed, and the typographical errors are at a minimum. The whole forms a bright picture of Hawaii as it is to-day, and of its rapidly changing and developing society. The author calls attention to a fact that is too little borne in mind by seekers for health or pleasure. The Hawaiian climate is sub-tropical, not torrid. The islands, bathed in an ocean current that never varies much from 70° Fahrenheit, are wholly exempt from excessive heat and from violent winds. For the combined attractions of climate, scenery, and good society, it would be hard to name another region, in the tropics or out of them, that should outdo this paradise of temperate sunshine.

The New World and the New Book: An Address delivered before the Nineteenth Century Club of New York City, January 15, 1891; with kindred essays. By Thomas Wentworth Higginson. Boston: Lee & Shepard. 1891.

THE kinship which binds these essays together must be sought for in the declaration of our independence. The various papers make a chapter in our glorification. Their burden is that we are no longer colonial, and have long ceased to be so, though we are slow in recognizing the fact. This text is illustrated with much interesting information and spirited comment. There is hardly any phase of the long-vexed proposition which one does not come upon first or last in these pages, and that American must be deeply tinged with the English drop in his blood who does not end their perusal with a feeling of satisfaction, not to say complacency, which does not suffer, however, if it be touched with something akin to humor. It would appear, to adopt the author's simile, that Robinson Crusoe has pretty well furnished himself from the "wreck," and is now in a position to apply to the Old World the remedy for its ills which Carlyle once suggested for the unhappy state of Ireland. The only use which the author seems to find for Europe is to furnish delegates for that Congress of the world's literature which, in his judgment, should still hold in its hands the final verdict of excellence; but, on the other hand, this Congress seems to exist only that America should have a place in it. Whether these things are so will, of course, still continue to be questioned, but whoever would furnish himself with happy instances, brilliant paradox, clever flank movements, and similar resources of the controversial conversationalist, will find Col. Higginson's book an arsenal all in perfect condition for immediate warfare on the Anglomaniac who is unfortunate enough to encounter him.

BOOKS OF THE WEEK.

Adam, James. The Nuptial Number of Plato; its Solution and Significance. London: C. J. Clay & Sons: New York; Macmillan. $1.10.
Allen, Grant. The Duchess of Powysland. Boston: Benj. R. Tucker. 35 cents.

HENRY HOLT & CO., N. Y.,

HAVE JUST PUBLISHED:

Bright's Anglo-Saxon Reader. 12mo, pp. 384. Teachers' price, $2.00; by mail, $2.11.

Contains graded texts, from the easiest to the more difficult prose, with several suitable poems, all carefully edited and annotated. The poems are supplemented by a chapter on versification. The glossary defines all the words in the texts, furnishes much grammatical information, and gives etymological hints.

Whitney's Introductory French Reader. 16mo, pp. 245. Teachers' price, 65 cents; by mail, 71 cents.

All the matter is easy enough to present no unnecessary obstacle to rapid reading, interesting enough to hold the attention, and varied enough to serve as an introduction to any reading that will be apt to follow. The selections are all from authors of repute. There are ample notes, including grammatical references, and a handy vocabulary.

Letters of Credit. We buy and sell bills of exchange on and make Cable Transfers of money to Europe, Australia, and the West Indies; also make Collections and issue Commercial and Travelers' Credits, available in all parts of the world.

STUDY AND TRAVEL.

Mrs. Benj. Fuller Smith announces that she will continue to receive into her family in Dresden, Germany, a limited number of young ladies desiring to study abroad.

Mrs. Smith travels with her party during the summer months and holidays.

Information concerning expenses furnished upon application. Trustworthy references given and required. Address Mrs. BENJ. FULLER SMITH. Care Messrs. Thode & Co., Bankers, Dresden.

Foreign Books. Subscription to foreign periodicals, Tauchnitz British Authors. Catalogues on application. CARL SCHOENHOF, 144 Tremont St., Boston.

The Nation.

NEW YORK, THURSDAY, JANUARY 14, 1892.

The Week.

SECRETARY BLAINE on Thursday sent notes to the diplomatic representatives of Austria-Hungary, Colombia, Hayti, Nicaragua, Honduras, Spain (for the Philippine Islands), and Venezuela, informing them that the President considered the duties imposed by their respective Governments on certain products of the United States "reciprocally unequal and unreasonable," in view of the admission by the United States, free of duty, of sugar, molasses, coffee, tea, and hides; and that unless this reciprocal inequality and unreason was removed before the 15th of March next, the President would on that day issue his proclamation suspending the free introduction of sugar, molasses, coffee, tea, and hides, etc., from those countries, and imposing on them the duties prescribed by section 3 of the McKinley Bill. This section puts—under these circumstances—on all sugar below 13 Dutch standard in color, seven-tenths of one cent per pound; on all sugars above 13 and under 16 Dutch standard, one and three-eighths cents per pound; on all sugars above 16 and under 20, one and five-eighths cents per pound; on all sugars above 20, two cents per pound; on molasses, four cents a gallon; on coffee, three cents per pound; on tea, ten cents per pound; and on hides, one and a half cents per pound. It will be observed that these duties have to be paid by American consumers. They will be added to the price of sugar, tea, coffee, shoes and other leather goods. In other words, they will be fines inflicted on American citizens by Presidential proclamation, in order to punish certain citizens of foreign countries for "being reciprocally unjust and unreasonable." It would be hard to surpass this in absurdity. We do not believe it ever has been surpassed in absurdity. Its perpetration is made possible by the long habit, on which the whole protectionist system is built up, of regarding the products of human industry not as things to be consumed, but as things to sell, and the privilege of selling as far transcending in importance the privilege of eating, drinking, and wearing. This vicarious punishment inflicted on Americans for sins committed by foreigners, taken in connection with the gospel of dearness preached by the President and Messrs. Reed, Lodge, McKinley & Co. in the last year, makes a Republican political economy the most fatuous and interesting jumble of modern times.

We have no idea, however, that American consumers and manufacturers will submit to be punished by proclamation for offences committed by Venezuelans, Colombians, Haytians, Nicaraguans, Hondurans, and other "dagoes." The leather men of New England are not in the mood just now for allowing the Republican philosophers to play the fool at their expense. "There are judges in Berlin," as the Potsdam miller told Frederick, and the right of the President to lay taxes on his own countrymen in order to plague bad people in other countries is now being contested in the courts. The taxes deserve to be known as "Harrison's taxes." The President will be entitled to all the credit or shame of them, because the Act lays on his judgment alone, against all Constitutional precedent, the responsibility of imposing them. The very phrase which does this indicates the muddled state of mind of the drafters of the law. No man can be "reciprocally unequal and unreasonable" all by himself. The word "reciprocally" indicates that there is and must be another man who is exchanging inequality and unreason with him. Who is the reciprocating rascal in this case?

Judge-Advocate Remy is conducting an investigation into the Valparaiso outrage, at San Francisco, where the *Baltimore* now is. It is, of course, entirely *ex parte*. Nobody represents at it the Chilian authorities, police, or mob, and the Judge-Advocate conducts it alone. Its character may be judged of from the report of Medical Inspector Cook of the *Baltimore*, who, reporting on the case of Riggan, one of the crew, who was killed, after describing the wounds, says that one was inflicted by a rifle-ball, and that "the liberty party were assaulted in at least six different localities simultaneously," and "the work was apparently premeditated." A doctor who can make an induction of this kind from a post-mortem examination must be so clever a man that to leave him in the position of a navy surgeon is a crime against humanity. From a post-mortem examination of the other man who was killed, Coalheaver Turnbull, the same doctor reached the conclusion that "the attack was apparently premeditated, and inspired by hostility which a portion of the Chilian people entertain towards Americans." There is, however, in spite of these absurdities, nothing improper in the investigation, unless it is set up diplomatically as a reason for disregarding the findings of the Chilian court. There is some danger that something of this sort may be done. There is an evident disposition to treat the proceedings in the Chilian courts as worthy of respect if they are in accordance with, but farcical if they differ from, the evidence given here by the crew of the *Baltimore*. We have nothing from Chili as yet but the result of the secret preliminary investigation, equivalent to our investigation by the Grand Jury, and the presentation of indictments by the Public Prosecutor. The case has still to be tried by the "Judge of Crimes." If he finds that the assault was an unprovoked one, was made in three different directions by a large mob headed by Chilian police and soldiers, all will be well. But we fear if he finds that the police and soldiers did not head it, and that nobody was guilty except those who were indicted, there will be great reluctance at Washington to accept the decision as final, even if accompanied with an apology.

There is said to be a violent difference between the President and Mr. Blaine on this subject, Mr. Blaine inclining to peace and moderation, and the President longing to use the Army and Navy, and being very indifferent to the contrast between the Chilian proceedings in this matter and ours in the New Orleans massacre. If the President continues warlike, too, he is likely to get the support of the whole Republican press; the interest of the party in getting plenty of money to spend on the Navy during the next nine months being very strong, and the naval officers being very eager to try their new ships, and the issue of the war being certain. Then there is nothing like a war for increasing "sales" and making a market for sensations. Moreover, a vigorous effort is now being made to get England into the affair by showing that England is interested in exciting Chilian hostility to us, and that if we conquered Chili, we should root out British commerce in that quarter, and sell a great deal to the Chilians and buy nothing. The continued absence of any recognition of any principles of international law or morality applicable to the affair continues. Nobody would suspect from reading the newspapers that there was any rule governing the intercourse of nations except force, or that there was any way of deciding international disputes, except the submission of the little nation to the big one, after a count of guns and ships. We seem to be as free, judging from our press, in the use of our strength as Barbary pirates or Buccaneers. There was a paragraph in Sunday's *Tribune* ridiculing "the namby-pamby patriots" who "are disturbed by Washington despatches in relation to naval preparations," and whose "pusillanimity on foreign policy" is immeasurable, which might have been written by an Algerine corsair to somebody trying to dissuade him from going on a cruise. "The type," says this silly but ferocious marine ruffian,

> "of a naval cruiser which would suit them is a toy model to be launched in a private bath-tub; and if there were a tiny American flag at the masthead they would take the precaution of locking the bath-room door and pulling down the window shades."

The House of Representatives rejected by a decisive majority the resolution of the Senate appropriating $100,000 to pay the cost of freight on contributions of food to the famine-stricken people of Russia. With every desire to help those poor people and other poor people in Japan, Mexico, and elsewhere, we still think that the House has acted rightly, both from the constitutional and the economical point of view. Congress is not in the habit of appropriating money for the relief of even our own people, and, although a resolution like that which passed the Senate is not unprecedented, yet it is more honored in the breach than in the observance. Mr. John De Witt Warner hit the nail on the head when he said that the best way to relieve the poor people in Russia was to sell the food contributions here and cable the money to Russia. That is a practical, prompt, and effective way to help the needy. Loading ships and sending them across the Atlantic, through the Mediterranean, the Bosphorus, and the Black Sea, makes a spectacle indeed, and may possibly incite other people to follow the example of the donors, but it may well be doubted whether the dollar so contributed will go as far as a dollar in money put into the hands of Count Tolstoi, for example. There is no lack of food in Russia. In fact, there is an excess in certain parts and a deficiency in others. What is wanted is money to buy the excess and distribute it to those who have none.

Congressman Dockery was well within the facts last week when he said in the House that it was clear from Secretary Foster's reports that $65,000,000 of the appropriations for the last fiscal year and the first half of this had gone unpaid. Indeed, he might have put the case much more strongly. In the six months ending December 31 the Treasury expenditures were $86,000,000 less than the amount called for by existing laws—$176,018,751, against appropriations at the rate of $262,500,000 in the half year. It ill becomes the party which has brought the Treasury into such straits to make fun of even the pettiest economy practised by a Democratic House. Whatever the affluent Republican editors may say, Secretary Foster will welcome every dollar that can be saved for him. The revenue from customs runs on at disappointingly low figures, having amounted to $85,722,000 in the past six months, as compared with $124,240,000 in the same part of 1890. At this rate, Mr. Foster's estimate for the entire fiscal year will turn out $14,000,000 too great. This would make a pretty big hole in his estimated surplus of $24,000,000, even if that were not figured out on the absurd basis of expenses put at no more than $409,000,000; in the *Tribune* itself he might have learned that the appropriations for the current fiscal year are $116,000,000 greater than that sum.

Senator Morgan of Alabama brought the Nicaragua Canal forward as an object of national concern last week by a resolution directing the Committee on Foreign Relations to make an investigation into its present condition and prospects, financial and other. The Committee is also to consider and report what in its opinion the interests of the United States may require in respect of said canal. Probably the Committee will report in favor of the bill that was before the Senate last year, or with some amendment giving a larger bonus to the present shareholders; but it is not at all likely that such a bill will pass Congress at this session. There is too much money in it. Certainly, the Democrats had best be wary how they vote the credit of the United States, to the extent of $100,000,000, into the hands of their political opponents just before a Presidential election. There is much to be said in favor of the Nicaragua Canal and in favor of the Government's control over it, but it will not "get away" in the course of the next nine or ten months, and the intervening time may be profitably spent in investigation.

Since Senator Teller has taken the initiative in moving for a new international monetary conference, we may assume that the resolution he has offered, or something equivalent to it, will pass both houses of Congress. Mr. Teller is the head and front of the Republican silver faction. He is in general agreement, on the money question, with Mr. Bland, who is the head and front of the Democratic silver faction. They represent sufficient strength in both Senate and House to pass the resolution, and it is not likely that they will meet with any resistance except possibly among Republicans like Senator Sherman, who would like to keep the silver debate hot during the Presidential campaign. The first thought that occurs to a careful observer of the silver craze in its different stages is that the call for international action comes now from the free coinage men, whereas heretofore they either have been opposed to it or have sneered at it. Their maxim hitherto has been the famous one of Stanley Matthews: "What have we to do with Abroad?" They have looked upon international conferences as dodges to gain time. They have also considered our assent and participation in such conferences as a kind of sanction of the idea that free coinage by separate action would be unwise if not futile. An international conference, moreover, always implies an international ratio, which must be fixed by a majority vote, and may not happen to be our ratio of 16 to 1. But if our ratio were not agreeable to the majority, what would become of the "dollar of the fathers"? Who would be able after that to denounce the rascals who stealthily and secretly deprived us of this revered coin in 1873?

President Harrison's nomination of Judge Lindsay of Kentucky as one of the Inter-State Commerce Commission is remarkable for the fact that the announcement was a surprise to the appointee, inasmuch as he had been in no sense an applicant for the office. His admirable fitness for the place is conceded by both parties, so that it was really a case where the office sought the man. This is coming to be a rare thing in our politics. Witness the recent scramble of a dozen Kansas politicians for the Senate seat left vacant by Mr. Plumb's death, and the necessity laid upon Mr. Sherman of going to Columbus, opening "headquarters," and working for himself with all his might, in order to secure a reëlection to the Senate. Judge Lindsay must be a dreadfully "old-fashioned" sort of a man.

Mr. Cleveland's speech to the Business Men's Democratic Club on Friday night was chiefly remarkable for his vigorous denunciation of "shifty schemes," "insincere professions," "political manœuvring," "political riddles," "conundrums," and "doubtful phrases." He reminded all those who are expecting to win the next Presidential election by the art of intrigue and feats of hermeneutics, that however enjoyable and successful these processes may be in the little circles which carry them on, the day comes when the party must "meet face to face the voters of the land," and these voters demand "a plain and simple statement of political purpose." In other words, no man can be juggled into the Presidential chair, except in the way in which the Republicans won it in 1876—a performance which the Democrats cannot hope to repeat. Any Democrat who wins this year must rely on his principles, and must be able to state these principles in language which the plain people can understand. How splendidly the Republicans, for instance, got along among themselves in the House with their explanation of the way the McKinley Bill was going to benefit the country by making all the dear things cheap, and all the cheap things dear, and by putting the blessing of dearness within every poor man's reach; but what rags and tatters were made of their theories when the tricksters who compounded them came face to face with the voters at the polls. What a different person, for instance, ex-Speaker Reed appeared to the human eye on the 5th of November, 1890, from what he appeared on the 4th of November in the same year. What a different aspect all his little dodges, quips, and quirks wore. Into what thin air Lodge's dialectics were dissolved. We trust our Democratic metaphysicians will ponder this, and be wise in time.

Mr. Springer gave the Club the very comforting assurance that we shall have no free-coinage bill from this Congress, nor any silver bill which all parts of the country will not be willing to accept; which is the same as saying that we shall

have no silver bill at all. He was equally emphatic and equally comforting in assuring us that no attempt will be made to pass a new tariff bill. Any party which now attempts a complete revision of the tariff is doomed to defeat. Both Democrats and Republicans have made the experiment, and we know with what result. The monstrosities of the McKinley Bill must be attacked in detail, one monstrosity at a time. In this way the country will have the benefit of comparing the respective merits of cheapness and dearness on a small scale. If, for instance, the removal of the wool and clothing duties should cheapen coats, trousers, and blankets to the masses, each man would be able to ascertain by observation of himself, his children, and his neighbors, whether cheap clothing has, as President Harrison and McKinley have alleged, a deteriorating effect on the character of the wearer. If the general experience showed that cheap clothing was really injurious to morals, the restoration of the duties would be easy, and would create no serious industrial disturbance.

When the Democrats got control of the Ohio Legislature, they gerrymandered the State so flagrantly that they secured 14 of the 21 Congressmen at the next election. Now that the Republicans are again in power, some of them want to give the Democrats a dose of their own medicine, and a scheme has been brought forward which would redistrict the State so as to give the Republicans 17 of the 21. But Gov. McKinley has signalized his accession by an earnest protest against such injustice. He characterizes in proper terms the abuse of power committed by the Democrats, but he warns his own party against passing any sort of a measure except one that is fair all around. He says: "Make the districts so fair in their relation to the political divisions of our people that they will stand until a new census shall be taken. Make them so impartial that no future Legislature will dare disturb them until a new census and a new Congressional apportionment will make a change imperative. The districts should be made so as to give the party majority in the State a majority of Representatives, and so arranged that, if the party majority shall change, the Representative majority shall also change." This is the kind of talk that is needed to put a stop to the abuse. It does no good to "arraign" the other party for a gerrymander, and then seize the first opportunity that offers to make a worse one.

The Brazilian despatch the other day, announcing the discontinuance of the existing requirement of consular certification to invoices of imported goods, attracted little attention, although it is really a highly significant step. Under the reciprocity agreement with this country, care had to be taken, of course, that goods nominally coming from the United States and claiming lower rates of duty should have a proper consular guarantee; and, in fact, a plan for securing it was made a part of the agreement. Then it occurred to Fonseca that it would be only fair to extend the same plan of consular certification to imports from all countries, and accordingly he issued a decree on November 21, only a few days before the collapse of his Dictatorship, putting in force for Brazil a very close copy of the McKinley Administrative Bill. The dissatisfaction it caused among merchants engaged in the foreign trade was great, and found general expression as soon as mouths were unmuzzled by Fonseca's fall, and it was not long before the new Government listened to the complaints and rescinded the objectionable measure. Of course the old conditions remain for exports from our country, but with other nations Brazil has declared that she wishes to trade without vexing administrative hindrances.

The "Chadourne incident," which M. Ribot has brought on himself by resenting the expulsion of a French newspaper correspondent from Bulgaria, has reached a stage which makes the French Government a little ridiculous. The French expel newspaper correspondents themselves, as do all the European Powers except England. They have expelled an English correspondent, who was also a member of Parliament, named Cunningham, within a year; so they could not complain of the expulsion of Chadourne on its merits. The point they made was that, Bulgaria being a vassal of the Porte, French citizens living on her soil were covered by the capitulations just as if they lived in Constantinople. Accordingly, when Bulgaria refused any satisfaction, they appealed to the Sultan to discipline the vassal, but the Sultan has grown very wary about meddling in Christian rows. He was not going to offend Germany and Russia by obliging France. Russia, too, showed little interest in the matter, and England and Germany were openly vexed at what seemed a disturbance of the peace. So there was nothing left for M. Ribot but to "break off diplomatic intercourse" with the vassal. This has been done, but nobody seems to care, and least of all the Bulgarians. The moral seems to be that it is very foolish, as the world is now constituted, for any one who has dignity to look after, to make a great fuss over a wrong for which he knows of no remedy.

General Lesczynski, who was a year ago commander of the Ninth German Army Corps, publishes, in the January number of the *Deutsche Rundschau*, an article on the military situation in Germany, which the *Mémorial Diplomatique* summarizes in its last issue from advance sheets. The writer, of course, speaks with an authority which his national prepossessions do not seriously lessen. He puts the German Army at the head of the military forces of Europe, owing to its uniformity of training, to the personal character of the officers, and the facilities for filling their places after losses in war afforded by the existence of a highly educated middle class such as no other country possesses. The importance of this last consideration may be estimated from the fact that in the Franco-German war of 1870, which lasted only nine months, the Germans lost over 6,000 officers, which Count von Moltke in his history of the war pronounced irremediable. It was doubtless irremediable as regarded the immediate supply of officers as good as those who had fallen; but the high order of instruction which all classes of Germans receive, and the military spirit with which the whole population is now imbued, would make such a loss far less serious in Germany than in any other European country.

Gen. Lesczynski ridicules the fears excited by the much-talked-of concentration of Russian troops on the German frontier. He says this concentration is a source of danger to Russia rather than to Germany. These troops could not take the field without calling up the reserves, and the difficulty of transporting the reserves to those distant points would be very great, and they would have to pass over long lines of railroad, which would greatly tempt and be very accessible to the German cavalry. As to the French Army, he acknowledges its present excellence in strength and armament and discipline, but says the German organization is more solid, and he counts on a revolution in Paris after any reverse in the field. He eulogizes the Austrian Army, and that of Rumania, but, curiously enough, speaks slightingly of that of Italy, the main use of which, he intimates, would be the detaining of a large French force from the seat of war on the Rhine and on the Polish frontier, where the real contest would be fought out. This, coming from such a source, is cold comfort for the Italians, who have made so many sacrifices for the Triple Alliance. But nothing but a victory over a European force will ever give the Italians a good military reputation after Lissa and Custozza. Both battles, one on sea and one on land, were lost through bad generalship. The defeat at Custozza, where the Italians took the field alone against an Austrian force for the first time after Novara, was particularly provoking, for the behavior of the troops was excellent. But they had to debouch from the hills on a plain, in the presence of the enemy, who swept away the heads of the columns with his splendid cavalry as fast as they showed themselves, and the battle was lost before more than half the Italian force could get into action.

THE DEMOCRATIC HOUSE AND WAR WITH CHILI.

THERE are grave issues pending between the Government at Washington and Chili. That we all know. But neither Congress nor the country can accurately know the cause, occasion, character, and responsibility till all that has been done and said by officials on both sides has been published by one or the other house of Congress, and until the appropriate committee of one or the other house has investigated and reported. The efforts industriously made to promote a "snap judgment" by either Congress or the country, and before the facts have been thus officially placed before the people, are not quite commendable. An illustration is to be seen in the following, found in the Washington correspondence of the *Herald:*

"So conservative a man as Mr. McCreary of Kentucky, a legislator of long experience, who has served for years on the House Foreign Affairs Committee, and who was the Chairman of the Committee in the Fiftieth Congress, said to me to-day: 'The war spirit is very general throughout the country. It is not confined to the young men who have come upon the scene since 1861. I find it quite as prevalent among the soldiers of the North and South who served in the Union and Confederate armies. A million of these men would respond to a call to arms. There would be no trouble about the number of men. The only embarrassment would be whom to select.'"

We all know Mr. McCreary. He has frequently appeared in interviews tending to uphold the plans and contentions of Secretary Blaine. He has been for many years a member of the Foreign Affairs Committee of the House, but was never Chairman excepting during a few weeks after Mr. Belmont became Minister at Madrid. He was not made Chairman by Speaker Crisp, but Mr. Blount, a sound, careful lawyer and experienced member of the Committee, was placed at its head. If one asks himself what Mr. McCreary, a Kentuckian, can, while sitting in Washington, know of the feelings concerning a war with Chili entertained by Northern soldiers who were in the civil war nearly thirty years ago, he will come to a pretty clear perception of the motive and value of Mr. McCreary's opinion, and the propriety of expressing it before he has, as Committeeman, heard or read what the Chilian facts are.

Every cautious and fairly intelligent man will now try to keep it clearly in mind that the present issue between the United States and Chili is complicated by Secretary Blaine's doings, just ten years ago, in the war between Chili and Peru, and by his fad in 1889 that the Irish vote could be won for himself and the Republican party by sending Egan to Chili, under circumstances most irritating to England and to her friends in Chili, whether in or out of diplomacy. Secretary Blaine must be judged in the present complication somewhat by his previous conduct in the State Department, at least until the facts are all spread out and Congress has made all needed inquiry. What did he do in the Chilian-Peruvian war, even after Arthur became President?

One of the questions of December, 1881, was this: Why did Chili suppress the Calderon Government, which the United States had recognized? In order to ascertain, Secretary Blaine sent a special mission to Chili, consisting of Mr. Trescot and Mr. Walker Blaine, and instructed them, on December 1, 1881, to suspend diplomatic intercourse with Chili if she avowed her motive to have been "in consequence of the recognition by the United States." The instructions to Trescot were aptly framed to authorize him to decide in regard to the motives and explanations put forth by Chili, and so to pass on the question of breaking off diplomatic relations between Washington and Santiago. Neither Congress nor the country knew in 1881 of those instructions to Trescot. President Arthur was hoodwinked and did not correctly appreciate their significance.

In the middle of December of 1881, Mr. Blaine retired from the State Department to make room for Mr. Frelinghuysen and Mr. Bancroft Davis. The doings of Mr. Blaine could after that be thoroughly investigated, and it was discovered that Mr. Trescot had gone to Chili with power to bring on a situation calculated and intended to lead to a war between the United States and Chili, and to put our Congress in a condition wherein it must declare or accept war. During the Christmas holidays of 1881, very early and very late work, by day and by night, was done in the State Department by Mr. Blaine's successor, with the result that immediately after New Year's of 1882 President Arthur was by Secretary Frelinghuysen and Senator Edmunds confronted with the fact that, by the authority given to Mr. Trescot, war with Chili was in sight unless Chili explained the Calderon episode and made promises concerning the Cochet and the Landreau claims satisfactory to Mr. Trescot under the note to him from Mr. Blaine of December 16, 1881. When President Arthur appreciated the situation, he ordered that a cable be sent to Mr. Trescot countermanding, in effect, the Blaine instructions of December 1 and 16, which cable was sent on January 3, 1882. Trescot was told that the Calderon incident could be treated in Washington, which was done by an explicit declaration, promptly made by the Chilian Minister at Washington, that the arrest of Calderon was not intended as an affront to the United States.

It was probably the eviction of Mr. Blaine from the State Department in 1881 that kept off a war scare then, and possibly actual war, which might have swept England in. One plainly discerns in the Chili-Peru episode of ten years ago that Mr. Blaine and Mr. Trescot (now in control of the State Department as in 1881) will bear watching, even although ten years more of age may have chastened both somewhat.

Of course a great deal depends not merely on the official instructions given to Egan, but on the temper which he is *privately* told to display in Chili. Egan can, if so ordered, easily nag Chilians into saying very nasty things of us. The official notes will, when laid before Congress, be necessarily tinged by the intentions of Blaine and Egan, whether to create and keep alive a muss or throw a wet blanket over explosive incidents. It is the business and duty of the House Foreign Affairs Committee and the Democratic House to explore carefully the conduct of Blaine, Tracy, and Egan in dealing with Chili, and tell the country what they find. Obviously, what the Republican leaders are seeking is to make, through Chili, a cuttle-fish emission whereby the doings of the Billion Congress can be obscured. Ten years ago Mr. Blaine's magnetic diplomacy in Chili was arrested by the peremptory interposition of President Arthur. The Democratic House can render a like invaluable service now.

THE CONNECTICUT DECISION.

IT will simplify the many complexities of the Connecticut contest just ended in the courts if we remember that the constitutional questions have focussed almost entirely on the single point of the power of the State Legislature to investigate and change the election returns made by the town moderators to the Secretary of State. The Democrats have contended that under the Constitution of the State the returns of the moderators — barring fraud — were final, that the election ended with their certification of the November vote, and that the legislative function was clerical and arithmetical. The Republican plea, on the other hand, has been that when the State Constitution says that the General Assembly shall, "after examination, declare the person whom they shall find to be legally chosen," it means also an inquisitive and judicial process as to the returns, and that the final declaration forms an integral and essential part of the Governor's title. This divergence of constitutional interpretation has marked the wide and deep line of cleavage between the two parties ever since the bitter and scandalous contest began one year ago. The briefs of the counsel for Morris and Bulkeley and the hopes of the people of Connecticut have centred upon a settlement of this fiercely disputed point.

The unanimous decision of the Supreme Court—which we are bound to hold good Connecticut law—does answer this question, but it answers in terms more abstract than practical in their results. It asserts that the Legislature has the inquisitive power, but that its exercise must be limited to the first and second days of the legislative session. It follows, with the present defect in the State laws relating to elections, that the moderators' returns from some 200 Connecticut voting-places must be "examined," questions of law and of fact decided, and the result "declared," all within the brief compass of two days. To do such a thing fully and fairly in so short a time is obviously often physically and morally impossible for a legislative body;

so that the court asserts as a legislative power under the Connecticut Constitution a thing which other words of the Constitution nullify in practice. The remedy under the court's finding is such a set of election statutes as will test the law and the facts in the interval of two months between the election and the Legislature's meeting. But even then, as the sub-findings must be reviewed by the Legislature before it makes the "declaration," and as the declaration is held by the court to be essential to a Governor's title, there seems to be unlimited scope for disputes of the two houses. It manifestly puts it in the power of either house refusing to "declare," to force, for a time at least, a hold-over set of State officers, precisely as the Republican House has done this year. In such a plight does the antique Connecticut Constitution, as interpreted by the highest and final tribunal of a New England commonwealth, leave the State.

The case of Bulkeley is one directly to the point. The court holds, or at least strongly implies, that the Republican House, in the absence of sufficient statutes bearing on the election returns, ought to have accepted them on their face and "declared" Morris elected. But it did not do so, and it let the second day of the session go by without a declaration. Hence the court holds that the Legislature has lost all purview of the case. It is, as we may say, *functus officio* so far as the State offices are concerned. It follows, and the court so declares, that Bulkeley is not only Governor *de facto*—which has been generally conceded—but Governor *de jure* also, which hardly anybody has believed either in Connecticut or outside of it. Such is the extreme to which the "two-day limitation" of the State Constitution compels the court, and it is undoubtedly good Connecticut ruling. It may be added, by the way, that it seems to leave in a curious position Comptroller Staub, who was not "declared" by the Connecticut House until some five weeks later than the first day of the session, and thus falls far outside of the two-day limit. How the Republican policy has also overreached itself and "killed" Merwin is obvious.

Coming to broader principles of the case, the court, quoting the legal maxim of a remedy for every wrong, concedes the evils of the present situation in Connecticut, and intimates that Judge Morris has such a remedy in establishing title by proceedings begun before the Superior Court of the State. Here again we find one of those not uncommon examples where sound law conflicts with facts and the utilities. The Superior Court of Connecticut is an inferior tribunal of general jurisdiction in each county. It takes about two years, or the whole term of a Governor, for an unimpeded case to pass through it to a Supreme Court decision—longer, if one side resorts to tactics of delay. Moreover, the Connecticut Supreme Court has held, over and over again, with the greatest emphasis, that its own jurisdiction relates only to points of law, thus leaving the inferior court in the assumed case to try questions of fact coming to it from perhaps two hundred voting-places in the State. The inadequacy in practice of such a lower tribunal to pass upon a vast array of questions in a suit involving title to the highest State offices is seen in the mere statement, and adds its testimony to the abstract and technical quality of last week's decision.

But at one point the decision is exceedingly clear. It establishes firmly Gov. Bulkeley's title, and demands from good citizens of the State recognition of the fact. Gov. Bulkeley has plotted to hold over in his office; he has wrought grievous shame to the good name of the State; he has vulgarized his office; he is the first violator of the secret-ballot law of the State, and he has united the unscrupulousness of a Hill with the audacity of Ben Butler. Still, he is Connecticut's Governor. The duty of the Democrats is clear and imperative. They should bow to the unanimous decision of the court, and their Senate should proceed straightway with legislative business. If rascality is for the time triumphant over them, and if their moss-grown Constitution has come to satirize republican government, the remedy is at the polls, and at the polls only. In the larger and wiser view of political events, it is from just such strict constructions of a bad Constitution as the Connecticut court has given, that the popular impulse to change the organic law is derived. Certainly, the disgraceful episodes of the last year in Connecticut have advanced that change by years.

OHIO'S REPUBLICAN TAMMANY.

THE victory of John Sherman in the caucus of Republican legislators at Columbus last week is a matter for national congratulation. Mr. Sherman is the most eminent man in public life to-day, and, despite all his faults and weaknesses, comes nearer than any one else now left to the measure of a statesman. Though he will be almost seventy when his present term ends in 1893, he is still in vigorous physical condition, and gives promise of being able to render as efficient service during his next term as at any previous time during a public career which has already kept him continuously in office at Washington—as Representative, Senator, Secretary of the Treasury, and then Senator again—for nearly forty years. It would have been nothing short of a national misfortune if the Republicans of Ohio had failed to return him to the Senate, in favor of one of the most notorious blatherskites in American politics.

But the most significant feature of this contest at Columbus is not the fact that Senator Sherman won: it is the narrowness of his escape from defeat. In caucus, to be sure, he secured 53 votes to ex-Gov. Foraker's 38, but the issue was really decided when the Sherman candidate for Speaker beat Foraker's man by only four votes. The members who had been waiting to see which side would win thereupon went over to Sherman, but if the Foraker candidate for Speaker had received three votes more than he got, and the Sherman man three less, Foraker would in all probability have carried the Senatorial caucus. So narrow was the escape from defeat in a Republican legislative caucus of the most eminent Republican in the State, whose return to the Senate was desired by the great majority of his party and advocated by three-fourths or four-fifths of the Republican newspapers.

How did Sherman come so near to failure and Foraker so near to success? The question is fully answered in a remarkable review of the Senatorial controversy which has just been published by Gen. H. V. Boynton, the veteran Washington correspondent, whose sturdy Republicanism, high personal character, and intimate knowledge of Ohio politics entitle him to speak with authority. The explanation is found in the existence of "a Republican Tammany organization in Hamilton County [Cincinnati]," which Gen. Boynton characterizes as "of a lower order of political morality and worse than any similar organization in either party anywhere else in the United States." "The boss of this Cincinnati Tammany," he says, "is George Cox, an illiterate saloon-keeper of one of the most notorious dives in the most notorious part of the city, known as 'Dead Man's Corner' because of the many murders committed in and about it. It has had a gambling-house attachment and a department devoted to even viler uses." It was while running this saloon that Cox entered politics, and he soon became a power in city affairs. A fellow-feeling drew Cox and Foraker together when the latter came to the front in State politics ten years ago, and they have been hand-and-glove ever since. When Foraker became Governor, he appointed Cox to the lucrative sinecure of coal-oil inspector, and the saloon-keeper went through the form, so familiar in this city, of nominally putting the establishment out of his own hands and into the hands of his former barkeeper. It is this man Cox who was "the acknowledged leader of the Foraker forces, and without his countenance the Governor would have had no chance of success." The second in command in this Republican Tammany is a confidence-man, who deals in bogus remedies for the cure of consumption—a person who has no standing among Cincinnati physicians, and who advertises only at a distance, manufacturing his worthless stuff by the barrel for sixteen cents a quart, and selling it to gullible invalids all over the country at five dollars a quart. He, too, early became a favorite of Foraker's, and was appointed to office by the Governor.

So absolute has become Cox's control that Gen. Boynton declares it to be "now impossible for any aspirant to be nominated by the County Republican Conven-

tion in the city unless he first seeks out the local boss and pays him spot cash"—save where it happens that he deems it discreet to allow a few representatives of decent politics to go on the ticket to allay the suspicions of the body of honest voters. The way in which Cox "set up the pins" for his pal Foraker is thus described:

"In the last campaign the candidates as a body, from those aspiring to the Legislature to those seeking judicial nominations, were obliged to visit this boss at his headquarters and pay in advance. The sums ranged from $200 up to $2,000. As an example, the cash price paid for nomination as Sheriff was $2,000, and immediately after the election the boss coolly demanded that he be allowed to name sixteen out of the twenty-one appointments in the Sheriff's office. Every man on the Hamilton County Republican Legislative ticket, without an exception, was selected in advance by this boss, George Cox. Doubtless this will seem amazing, but it is true, without a qualification."

This is the way it was done: Shortly before the convention, Cox called on the Postmaster and Collector (both Sherman men) with a list of five names as his personal choice for the Legislative ticket, and asked them to select eight from another list of sixteen, all of whom were represented by him, and believed by the Postmaster and Collector, to be for Sherman, this concession being due to the unquestioned fact that the Republicans of the city were overwhelmingly for Sherman and against Foraker. Eight names were accordingly selected from the sixteen, but the thing turned out to be a confidence game on Cox's part. "Every man of the sixteen, as is now known, had made his pecuniary and political peace with Cox, and the latter had taken a pledge from each one in advance that, in case of nomination and election, he would do such a favor for Cox as the latter might name. So strong was this pledge that those who knew of it among Cox's press supporters made bold to announce, in double leads, the morning after the election, and before a man of those elected had been consulted, that the Hamilton County delegation was solid for Foraker for Senator, to succeed John Sherman." The announcement was universally denounced as false, but was speedily found to be true. "This capture through false pretences and a confidence game," says Gen. Boynton, "made it possible for Gov. Foraker to open a public campaign to oust Mr. Sherman from the Senate. Without this solid delegation of one more than one-quarter of the Republican vote in the Legislature necessary to a caucus nomination, there would have been no possible chance of success."

Such is politics to-day in one of our chief cities and in one of the largest States of the Union: an illiterate saloon-keeper absolutely controls the municipality, and almost succeeds in controlling the Legislature, in order to turn out from the United States Senate its most eminent member! Unhappily it is not a unique case. Many another large city can match it in its chief features, and many a smaller one as far as circumstances allow imitation. Cox is a Republican in Cincinnati, but he would be a Democrat in New York, and he would be here as loyal a supporter of "Dave" Hill and as bitter an opponent of Grover Cleveland as in Ohio he is the backer of Foraker and the "knifer" of Sherman. The significance of Cox is as a type of the men who are to-day the most powerful class in the government of this country—the bosses of our great cities.

CHEATS AND CHEATING.

THE history of the Republican party since 1874 is probably the most solemn warning ever given to the world against the policy of trying to keep power by employing cheats to cheat. The party was never so strong as when it elected Grant in 1868 and reëlected him in 1872, but it lost control of Congress in 1874 simply because, vivid as were still the memories of the war, voters saw, or thought they saw, that the Administration was surrounded and controlled by cheats. It suffered a still deadlier blow in 1876, when "the gentleman" from the *Times* office got Mr. Chandler to telegraph to the Louisiana Returning Board to prepare to cheat, and it never recovered at all from the cheat by which Mr. Hayes obtained the Presidency. On the day he was inaugurated, in spite of the convenient disguise afforded by the Electoral Commission, the whole country felt that something was gone from the party which could never come back, and that thing was character. The popular belief in its sincerity and simplicity and high aims and unselfish purposes, which had during the previous sixteen years clothed it with almost arbitrary power, died on that day. It was able to elect Garfield in 1880, by becoming a tariff party and promising to make plenty of money for everybody who voted for it; but it was never again able to promise to make Americans proud of their country by standing for purity and justice. In 1884 it lost the Presidency for the first time by going one step further and nominating a man who, rightly or wrongly, was suspected not only of having the support of cheats, but of being a cheat himself. It got back the Presidency in 1888, as almost everybody now admits, by venality on an enormous scale, under the leadership of a man accused not only of buying votes, but of robbing the Treasury of his own State; and it used its slender majority in Congress to accomplish so much cheating and bullying that in 1890 it was almost swept out of the House by a torrent of popular indignation.

Is it possible to mistake the meaning of all this? Is there in all history a plainer political lesson? Does it not show, as many another such lesson has shown, that ill-gotten power cannot be permanent? Power may be acquired by theft, or fraud, or murder, but it can be kept only by honest arts. The "Something not ourselves which makes for righteousness," is, in politics as in business, always on the track of the villain, and sees to it that peace shall not come to him. For even dishonest communities expect their rulers to be honest, just as even dishonest jurors are ready to punish theft and fraud.

Is there, therefore, anything more astonishing in politics than the present attitude of a portion of the Democratic party in this State? They have just seen a party which had a thousand claims on popular attachment and confidence such as the Democrats cannot pretend to — which is associated permanently with the heroic period of American history—cast out of power, utterly discredited, for persistent lying and cheating, for employing knaves to acquire by force or fraud things which did not belong to it, and for elevating, or trying to elevate, to places of dignity and authority men whose word could not be relied on, and who owed both fame and fortune to ways which they would be ashamed to acknowledge. Nevertheless, these Democrats are now, in the Presidential year, with Republican sins fresh in the popular mind, with the leading Republican rogues paraded, as it were, for their inspection with placards on their breasts describing their offences, actually entering, with great glee, on a campaign of similar frauds, and putting laurels on the brow of the man who concocted and carried them out.

They know very well how closely the country is divided between the two parties, how small a thing may turn the scale next fall. They know that the Republicans are sure of 183 votes in the Electoral College, the Democrats of only 176; that there are five doubtful States; that the Republicans can win with Indiana, Iowa, and Massachusetts, and do without New York; that the Democrats cannot win with New York alone; that even if they carry New York, they must carry also Indiana; that if they do not carry New York, they must carry Indiana, Iowa, Connecticut, and Massachusetts. They know that the public conscience is not dead in any of these States; that their majority in them is at best very small, and that there is in none of them a Tammany Society. They know that it is difficult or impossible to make a sorry rogue like Hill, without eloquence, without "magnetism," without social or political credit, specially attractive even to knaves, unless they have directly profited by his frauds; that outside this State he must be odious to tens of thousands who still cling to the old political morality, and "believe that righteousness exalteth a nation," and who have a patriotic care for the character of public men. They know that they will not have a vote to spare in any State. And yet they are tumbling over each other in their eagerness to do honor to this poor trickster, as if he were the inventor of a new patent process for seizing the Presidency or the Legislature; as if his secret were not known in all

the jails in the country by tens of thousands of less fortunate practitioners. They remind one forcibly of Macaulay's story of that unfortunate Brahmin who bought a mangy sheep for sacrifice, refused to believe the friends who pointed out to him the animal's unsoundness, and insisted on offering the beast to the gods, who promptly smote him with disease in all his joints.

UNIFORM RAILWAY CLASSIFICATION.

THE railways of the United States have been forced by similarity of geographical and traffic conditions to divide themselves into groups, each group having, among other things, a classification of freight peculiar to itself. There can be no question that these group classifications hinder the free exchange of articles by reason of the differing rules and rates in cases of shipments which must cross the imaginary group boundary. There is no commercial reason why an Eastern manufacturer should not sell his product in Kansas; but if, in order to do so, he begins a calculation to see whether the selling price there will allow a profit, he finds that the arbitrary change in the railway classification, say at Chicago, leaves the actual transportation charge through to Kansas in doubt to such a degree as to be a real hindrance to the freedom of trade. Under these conditions, felt to be burdensome by the merchants in all large cities, there has arisen a demand for a classification of freight and of rules which shall be uniform throughout the country. Under the spur of the Inter-State Commission, a committee of railroad men a year or more ago after much labor devised such a uniform classification, but it failed of adoption by the roads between Chicago and the Atlantic seaboard. The annual report of the Inter-State Commission, just made to Congress, asks for an amendment to the law which shall require carriers to adopt uniformity within a fixed time. As the National Board of Trade Convention a few weeks hence will doubtless discuss this question, and as a bill may be introduced in Congress making a uniform classification of shipments compulsory upon our railways, it is well that the merchants of the States east of the Mississippi and north of the Ohio Rivers should know what is involved in this demand which they are openly or tacitly endorsing.

We must remember that arranging into classes the different articles carried is not an end in itself, but a means towards determining the sum to be collected. Uniformity of classification involves a corresponding uniformity of charge; this is often forgotten. We should like, of course, to see clearness in our printed tariffs, but are we willing to pay higher charges on our manufactures for the privilege? This is the real question at issue. What is a proper rate on a given shipment must be determined by the commercial and transportation conditions under which the merchandise is carried; these conditions vary greatly in different sections of our country, and the variance is one of the principal reasons for the separation of railways into groups. Thus, the Pittsburgh or New England iron masters must sell their product in Chicago in competition with large furnaces or factories on the spot, and in competition also with Southern rivals who reach the Chicago market by other roads. The selling price in Chicago is thus limited, and so is the freight charge which can be collected on shipments to that market. On the other hand, on nails from Chicago to Arizona can be imposed what is a fair rate of itself, the consumer there paying the Chicago price plus the freight charge. The heavy traffic east of Chicago and the comparatively light traffic into Arizona make reasonable a low rate in the first instance and a high one in the second. A part of this larger charge on the Arizona shipment is covered by a higher rate, class for class, than is usual on the trunk lines, but a very important part is arranged by putting the same article in a higher class. This principle works itself out in other ways. Cotton must be carried on low classification in the South, but it does not follow that the same low class would be always fair to Northern lines. Instances of this can easily be found in all trades.

Without carrying these illustrations to a wearisome extent, let us turn to the effect of compulsory uniformity. The classification (that is to say, the rate) is high in one section and low in another. Uniformity must mean a compromise. A compromise would mean that the higher charge would be reduced, while the lower one would be advanced. As the tariffs in use on the trunk lines east of Chicago are the lowest in the United States, it follows that, in the event of uniform classification, the rates charged to and from the Atlantic seaboard would be advanced. The question involved is, therefore, simply whether Eastern producers, for the sake of an abstract theory of uniformity or for a little more ease in doing business, are willing to sacrifice their profits. It will be remembered that in the summer of 1890, when the classification question was debated by the trunk lines, it was discovered that every change in Eastern freights under the proposed uniform classification would have been an advance. When this was clearly seen to be the practical outcome, the Trunk-Line Committee declined to adopt the proposed plan. In this decision, and in any further discussion, the Eastern railways should have the hearty support of the shipping and travelling public.

It has not escaped observation that the conditions of transportation on our Western railways are gradually approaching those under which the older roads are operated. Western rates are constantly declining as population and traffic increase, and as there is increased competition between old factories and those newly established in the remoter States. Thus uniformity of classification and of rates is in process of accomplishment because really contingent upon uniformity of trade conditions; nor can we hurry its approach except at the expense of the older communities. It is, however, true that there exist to-day in some instances unnecessary and arbitrary differences between the classifications in use; differences which it is not only proper but right to abolish. But correction of errors in individual cases is one thing, while compulsory classification throughout the list is quite another. The language of the Inter-State Commission is cautious: "It is shown by the deliberate statements of experts in the employment of the carriers that a much nearer approach to uniformity than now exists is practicable"—an opinion which few dispute. But to make such a statement the basis for practical compulsion in the matter of uniform charges on all articles throughout the country, regardless of varying circumstances, is a serious mistake, the ill effects of which the shippers of the East would be the first to feel.

A LABOR CHURCH.

A NOVEL experiment in the evangelization of the poor is reported from Manchester, England. The Rev. John Trevor, who spent some time as assistant minister in London, and who is now in charge of a Free Church in Manchester, recently set going an institution which he himself calls a "Labor Church." The motives and aims back of the effort may be gathered from a circular which Mr. Trevor distributed last July. In that he said:

> "Those who have been most active in promoting popular services, and the various social enterprises now considered essential to active church life, appear to admit with sorrow that very few indeed of the workers themselves are attracted to any religious organization, or give practical assistance to the work done for their own class. Men and women everywhere are willing to come and listen to smart addresses and good music, and, undoubtedly, many are benefited by what they hear. But they are not organized, they do not work, they will accept no responsibility, they do not give financial support to the movement. Everything is done for them, and they are simply willing to be catered for. . . .
>
> "The next step forward in developing religious life, and improving social conditions in our land, must be to bring religion into practical harmony with the workingmen who are really alive and in earnest about the elevation of their class. If these men are manifesting little interest in the churches, and in the social work they are doing, it is because the preponderating bulk of religious influence in our country is still opposed to their advancement, and also because, even when religion does appear to take their part, it is usually in such a mild manner that it becomes questionable to them whether active opposition would not be preferable."

Mr. Trevor then asked: "Cannot religion be presented in such a form that it shall become a real power and inspiration in the lives of these earnest and clear-headed workingmen? Cannot a religious organization be formed which, while supporting them in their daily life and social work, shall in turn be cordially supported

by them?" It was in the hope of solving that problem that he set about establishing his "Labor Church," which is now holding regular meetings in a public hall in Manchester, and is said to be flourishing. He says that his church is to "include what, for want of a better name, may be called the Labor Program, with a distinct recognition of God's government of the world, and of the need, in every sphere of life, to obey the laws He has revealed to us." And in an account of his work which he contributed to a London paper, he showed what his "Labor Program" means, by affirming:

> "The true representative of the labor movement is John Burns, standing in the prisoners' dock after the Trafalgar Square riots; Ben Tillett, preaching at the dock gates the glad tidings of the tanner; or the poor Socialist, standing on an old wooden chair in the rain, shouting himself hoarse to catch a few stragglers.
>
> "These are the men who represent God's power in the world. . . . Many of them are called atheists, infidels, self-seeking agitators, agents of the Evil One, stirring up strife on which they may grow fat. And some of these brave men, denounced by the official representatives of God, deny the God in whose name they are denounced, and submit, without retort, to be called atheists."

We call attention to this unique experiment, and to the methods on which it is conducted, not for the sake of its own importance, which does not appear to be great as yet, but on account of its marking the extreme of a tendency which has long been observable in the churches. We mean the tendency to make concession after concession in order to win back to the churches the alienated working classes. Here is the origin of the modern variations in methods of church work and appeal, in cities especially, which are known as "popular services," "carrying the Gospel to the masses," and so on. The motto has been to become all things to all men if by any means workingmen may be got to go to church. So that it is but a logical extension of a common principle for the Manchester pastor to set up a branch for Socialistic propaganda, in which a minimum amount of theistic belief is included, and call it a "church." Probably the agitators whom he is able to bring to his side are shrewd enough to be indifferent to the name as long as they get the thing. If they could get influential supporters for their views of the labor question, and an advantageous and unwonted platform from which to urge their favorite remedies for social ills, they would doubtless be willing to be known either as Jews, Turks, or Christians, and would acquiesce as readily in having their organization called a "Labor Synagogue" or "Labor Mosque" as in naming it a "Labor Church."

The Manchester experiment ought to serve a useful purpose in showing exactly on what terms a union can be effected between the Socialists of the Democratic Federation and the Christian Church. The former give up nothing, and the latter everything —except religious passion and enthusiasm, which it is at perfect liberty to transfer to the new "Gospel of Labor." Matthew Arnold's definition of religion as "morality touched with emotion," would soon have to be made over if the "Labor Church" were to have its way, so that it would read: "Religion is Socialism held as passionate faith instead of reasoned conviction." It seems evident that the Manchester Socialists have greatly the advantage. They have positive views and know precisely what they want. On the other hand, Mr. Trevor and his sympathizers cling only to a vague theism as absolutely indispensable, and are sure simply that they want somehow to put an end to the estrangement between the workingmen and the Church. When two parties thus circumstanced come to an agreement, it is not doubtful on which side the substance will be found and on which the shadow.

On the other hand, this clear showing of the conditions on which alone a "Labor Church" is possible should serve to reinforce the very best forms of work among laboring people which the Church is adopting to-day. We have recently referred to these. Springing from Christian motives, in most cases, and conducted in a Christian spirit, they yet put distinctly Christian teaching into the background, and give their strength to education, in a broad sense, and social reform. The social and debating clubs of the University Settlements, for example, are far better places to come to grapple with Socialism and the labor movement than any so-called church, which must practically concede all the claims of Socialists before it can join forces with them. We have no doubt that a great deal more good is done in some of those clubs in London, where Oxford and Cambridge graduates and professors discuss Socialism with its advocates, than can be looked for in a "church" where Socialism acquires religious sanctions. In the club the social question can be discussed on its merits, and whatever truth there may be in Socialistic doctrine can be argued out and accepted without either giving it the artificial aid of religious enthusiasm, or, on the other hand, loading down a religious system with harmful theories of society.

"SUFFERING PARIS."

PARIS, December 23, 1891.

A GLOOMY title, 'Paris qui souffre,' but not a bad one, for two works by M. Adolphe Guillot, a police magistrate of Paris and one of our criminalists. One of these two volumes is a curious monograph on the Morgue, the other is a description of the 'Prisons and Prisoners of Paris.'

I am an old Parisian (it is not necessary to be born in Paris to be a Parisian), but I must confess that I have never entered the Morgue. I have often wandered on the shores of the Seine, and admired the beautiful and suggestive view which you have when you come before Notre Dame. Behind the splendid cathedral, on a sort of little promontory of the island on which it is built, is a low building; it is the Morgue, the temple of suicide. The church is sometimes empty; the Morgue always has visitors. Men and women enter into it, some led by a morbid curiosity, others, alas! by the fear and the hope of discovering some relation or friend.

M. Firmin Maillard was the first who wrote an historical study on the origin of the Morgue, in 1860. He could not find out exactly when first a place was chosen for the deposit and exhibition of the corpses of unknown persons, found in the streets or in the river. We know by the registers of the Grand Châtelet, which have been kept since 1651, that these corpses were exposed in it, and afterwards buried by the Sisters of St. Catherine. The Châtelet was first a fortified castle in the city; it afterwards became its judicial centre and gave its name to a prison; it was essentially a municipal prison, where all the men arrested in the streets of Paris were first taken. The Sisters of St. Catherine, commonly called Catherinettes, were very popular; their statutes obliged them to receive all poor women for the night, and to feed them for three successive days.

Where did the name Morgue come from? We see it appear first in the Academy's Dictionary in 1718; Voltaire uses it in a letter to M. de Thibouville in 1777; Littré finds its origin in a word of Languedoc, *morga*, which signifies face. The word *morgue* is used also to describe a proud and haughty demeanor: we say familiarly, "La morgue espagnole." Is there a relation between the two senses of the word Morgue? In his 'Répertoire de Jurisprudence' of 1768, Denisart says: "The *basse geôle*, which is in the court of the Grand Châtelet, where are exposed the corpses of those who are not recognized or claimed immediately, is called Morgue from the verb *morguer*, which, in one of its significations, means to look fixedly, as people do before a dead body which they cannot recognize." In our old French, *geôle* was employed more often than prison; it now applies only to the House of Detention. We call it *greffe*, the place where the prisoners are visited and inscribed (*écroués*), and we have kept the word morgue only for the place of exhibition of the dead.

The Morgue has been one of the cradles of what we call "legal medicine." The Châtelet had its surgeons who made official reports on the bodies which bore marks of violence. These surgeons were not functionaries; at the present moment all the bodies brought to the Morgue are examined by a doctor, and he has to send a report to the *parquet* (the public prosecutor). If there is no sign of crime, the *parquet* authorizes burial; when a crime is suspected, a police magistrate takes charge of the affair, and authorizes an autopsy. As soon as this is made, the doctor sends his report to the magistrate. The doctors of the Morgue have no right to use the bodies, either for their lectures, or for "legal medicine," or for their own scientific researches, except when the bodies are not claimed and have been unrecognized, or when the families, after having recognized them, have not claimed them. The Penal Code of 1810 specifies, in article 14, that the bodies even of criminals who have suffered capital punishment shall be delivered to their families if claimed, on condition that they be buried without ostentation. We have even gone further: for some time unclaimed bodies of criminals who had been guillotined were given over immediately to professors of physiology in the Collège de France, who submitted them to various experiments. Now the criminal himself can decide whether or no this shall take place; we allow him the right not to become an object of scientific inquiry, and to

have an ordinary burial, even if he is completely abandoned by his family.

The bodies exposed at the Morgue can be legally subjected to an autopsy if they have remained unrecognized after an exposure of from ten to fifteen days; practically this does not take place, as it is feared that the families are not always warned in time and that this delay is not long enough. The only bodies thus treated are those which have been recognized, but unclaimed by the families, or those of the persons who have been murdered. Lectures on "legal medicine" take place regularly at the Morgue, and there is now a real clinic where young experts are trained in all the branches of medicine which touch on suicide and crime. Dr. Brouardel has organized this service as well as he could with the means placed at his disposal.

There is some question of reconstructing the Morgue on a larger scale; and in view of this the question of public exposure has been much discussed. M. Guillot pronounces against it. He says:

"For a long time, the public exposure of criminals has been abolished. The time is near, I hope, when executions will take place inside of the prisons. The spectacle of the Morgue is no better; it familiarizes people with the sight of blood and with contempt for human life. Let us at least turn away the children who come there to satisfy a precocious curiosity; let us shut the door on this indiscreet crowd, on these women with shameless eyes, these men who are on the search for an emotion or a crime. Let the doors be open only to those who are brought there by a clear interest; to them the Morgue will transform itself; we call as witnesses those who have seen it only when the public is gone, and when silence reigns; then it takes on an air of majesty, and becomes almost a holy place."

It was certainly an original idea to write a book on the Morgue, and to pay so much attention to the temple of death, of criminal or voluntary death, in this city of Paris, which has the well-deserved reputation of being addicted to pleasure. But there are men and women in Paris who give almost all of life to philanthropy; they do it noiselessly, in a true Christian spirit, and this same spirit will be found in 'The Prisons and Prisoners of Paris,' by M. Guillot. Permanent contact with criminals has not hardened him; it has inspired him with a sentiment of profound pity and compassion. Not that this pity goes so far as to excuse crime or to attempt to diminish human responsibility. M. Guillot does not belong to the modern criminalist school, which has invented the "criminal man," the man born for crime, absolutely irresponsible, led by hereditary and irresistible instincts. M. Guillot believes in hereditary instincts, in their influence, in the influence of education and of the surrounding medium; he believes also in human liberty.

His work is a minute description of the ancient and the modern prisons of Paris. The most ancient prison was the Roman dungeon, which Gregory of Tours describes under the name of *carcer Glaucini*. Saint Denys was shut up in it by order of the Roman Governor; it became afterwards the chapel of a little church. Under Louis XVI., Paris had eight principal prisons—the Grand and the Petit Châtelet, the Conciergerie, For-l'Évêque, the Magdelonettes, Sainte-Pélagie, La Force, the Temple, La Salpétrière, Bicêtre, Saint-Lazare, the Bastille. Many of these prisons have been minutely described; the memoirs of the Revolution have rendered some of them famous. Balzac in one of his novels has led us through all the doors and passages of the Conciergerie. The prisoners who were in the Châtelet on the 2d of September, 1792, were all massacred. The Châtelet itself exists no more, and there remains no trace of it. As for the Conciergerie, it still forms one of the most beautiful features in the valley of the Seine, near the Palais de Justice and the Sainte-Chapelle. Three of its old towers still exist — the Tower of Cæsar, the Silver Tower (Tour d'Argent, so called, probably, because in Saint-Louis's time it was inhabited by his mother, Queen Blanche), and the Tower called Bon-Bec. The Magdelonettes have been demolished in recent years, and have been replaced by the prison, "de la Santé." Sainte-Pélagie has been described by Mme. Roland, who left it to go to the scaffold. Saint-Lazare is a dark and gloomy building, which was at first built for the unfortunates who were attacked with leprosy. The Kings and Queens often visited it, and made it their last station before being carried to the Church of Saint-Denis. The Abbé of Saint-Lazare was an ecclesiastical lord of the first rank. This prison is now at the same time a prison and a hospital exclusively for women. For-l'Évêque became famous, as it always received the comedians arrested in virtue of a *lettre de cachet*. Mlle. Clairon remained in it five days, and received in it the homage of her numerous admirers. This prison has been demolished. La Force was opened only in 1782 as a prison; it was a part of the ancient Hôtel Saint-Pol, which belonged to Charles, King of Naples and Sicily, a brother of Saint Louis, and afterwards to the Dukes of La Force. "La Petite Force" was annexed to "La Force"; it was the Hôtel de Brienne, and was intended chiefly for the class of women who in the last century were called *femmes du monde*, and who would not in our time be called even "du demi-monde." Poor Mme. de Lamballe was shut up with these unfortunates and cut up by the populace. During the September massacres the blood flowed in torrents in the prison of La Force. This prison was shut up only in 1850; the 700 prisoners who were in it at the time were transferred to the new prison of Mazas, which shows its high walls near the terminus of the Lyons-Marseilles Railway. The name of Bicêtre comes from an Englishman (Winchester) who had a castle on the spot in the sixteenth century. Bicêtre is called by Mercier, in his 'Tableau de Paris,' the ulcer of Paris; it has ceased to be a prison and is now only a hospital. The Bastille was the State Prison; it is needless to say under what circumstances it was demolished. The Temple received Louis XVI. within its walls, and thus gained an eternal celebrity; it was demolished in 1811, and prisoners guilty of high treason have ever since been sent to the dungeons of Vincennes.

The genesis of crime fills the greater part of the work of M. Guillot: he shows us the roads to the prison, as well as the prisons themselves; the personal, domestic, and social causes of the demoralization of men and women in a great capital, the destruction of family ties, the corruption engendered by bad examples, by poverty, by the competition of labor, by the organization of huge shops, by the *hôtels garnis*, the cafés, the brasseries, the races. He analyzes at length the effects of alcoholism; he has a curious chapter on the crimes which go now under the name of *passionels*, and criticises the leniency of the jury and its responsibility. There is, in fact, not a line in his work which is not instructive and suggestive.

IN SICILIAN SULPHUR MINES.

CALTANISETTA, Dec. 12, 1891.

ALL the descriptions penned by philanthropists, sensationalists, and Socialists of the sulphur mines of Sicily, and the work of children therein, which seemed sheer exaggeration when read in northern Italy or abroad, fall far short of the reality, which the pen of Dante could not portray. Not the slavery of the negroes in its worst aspect, not the sweating of the whites as we know it in London and in all great cities, can compare in any least degree with the inhuman system of child torture openly and continuously practised in all the sulphur mines of the island, and especially in the central Province of Caltanisetta and the adjoining Province of Girgenti, bordering on the sea. This last week I have spent chiefly in and around the mines and in the mining-district, as a penance for the pleasant tour through the Provinces of Trapani and Palermo, where the progress everywhere manifest, the healthy aspect of the country population, fill one with exultation, and dissipate the gloomy doubts which often assail one as to the benefits of liberty and civilization.

Nor does your first arrival at Caltanisetta dispel these illusions. The town is built up the hilly slope, has some fine buildings old and new; the population, as you see it in the daytime, looks sturdy and healthy. Butchers' shops are plentiful, the fish market may vie with Palermo for the fine soles and enormous red mullet that come from Terra Nuova direct by rail; the fruit and vegetables, artichokes and *finocchi*, the oranges, lemons, and mandarins, the figs and almonds and big loaves of well-baked wheaten bread exposed for sale, seem to promise that here is "bread and work for all." But wait till eventime; go up to the top of the city, and, while chatting with the women who are preparing the evening meal of lentils or dried horse beans in dirty, airless, stinking hovels, watch for the first arrival of the *carusi*. Note the first batch of children, varying in age from six to ten, who work on the top of and about the mines, and who, if too young to be put to work at all, bear as yet no traces of it on their bright, impish, dirty faces or thin, half-naked bodies; wait for the next batch of lads, varying from twelve to fifteen or seventeen years of age. The smaller and younger still retain the form and features of human beings, though their eyes are red and bleared and their skin sallow and thick; but the older they are, the more marked the result of hours and days and months and years of toil in the subterraneous caverns and galleries of the sulphur mines. All, or nearly all, have a hump on the left shoulder-blade; many a hacking cough; all are listless, taciturn, unless aroused to anger—then woe to the offender or even the bystander: out flies the long, slim, sharp knife, regulation size, if indeed the ever-ready revolver does not do swifter and deadlier work. Wait as you will, the stream pours on and in; hundreds and thousands of *solfatari* walk to and from their work, two, four, even six miles each day, preferring this additional fatigue to eating and sleeping in the pestiferous atmosphere of the sulphur mines.

When the price of sulphur is high, as at present, from fifty to sixty thousand men and children are employed in extracting and bringing to the surface the sulphur in its natural state, *i. e.*, mixed with the calcareous, clayey, or chalky soil; so it may be calculated that four times the number exist on the product of their toil. The proportion of the mineral to the soil varies from 8 to 40 per cent., the medium being 24 per cent., as the poorest mines are worked only at intervals and abandoned when prices fall. But the natural wealth of

the mines adds nothing to the earnings of the *caruso* (literally a "boy," but now a term applied to all the toilers who bring the raw material to the surface of the pit). The mines all or nearly all belong to wealthy proprietors of the soil, of the old feudal estates; and though now the *feudi* are abolished, the *ex-feudi*, as they are called, still remain in the same families. When a proprietor of the soil possesses, or believes that he possesses, a sulphur mine (the indications are various and of interest only to experts and owners), he is bound to inform the authorities and pay a small sum (about $25) for the right of working the mine. Here his duties end and his rights begin. Few proprietors work their own mines. They seek or are sought by a *gabelloto*, who hires the mine for four, nine, or even eighteen years. All the expenses of exploration, sinking pits, constructing galleries, etc., are assumed by the *gabelloto*, or contractor, who pays the proprietor so many loaves or *balate* of sulphur, which his own agent selects and carries off. The proprietor keeps a staff of agents to look after his interests; to see that so many galleries, arches, columns are constructed and kept in due repair, so that, at the expiration of the lease, the proprietor may find all in due order, and be able to make better terms with the next contractor. Some are obliged to construct galleries for draining off the water, and *calcaroni* or furnaces; and the very agents of the owner are often paid by the contractor, who is also expected to pay the taxes—the land and income tax which the present Government exacts relentlessly. Hence the owner risks nothing, "not the shadow of a cent." Rarely does the first contractor make ends meet; he fails and is ruined, but the owner has his mine in working order and finds plenty of *gabelloti* who compete with each other in their tenders.

The *gabelloto*, when once the mine is in working order, has to find his miners, and as he rarely has sufficient capital for his enterprise, he trades on borrowed money at exorbitant interest. The *sborsante*, who only lends when the sulphur is actually found, so that he can fall upon it and secure repayment, lives in the city, and from banks or individuals can obtain money at a low interest, which the *gabelloto* never can. Then he has to seek one or more *capomastri*, or miners who have gone through all the stages of the "art," have been *carusi* and *picconieri*, and who, though few of them can read or write, have such absolute material and empirical knowledge of the operations and of the special mine in which they have worked from babyhood, as may put to shame the engineers, directors, etc., who issue from the technical schools, institutes, and universities. The plan or map of the mine they carry in their heads, and from long experience know the habits and customs of the workmen, over whom they have extraordinary influence, as they never arrive at the post of *capomastro* unless endowed with intelligence, energy, courage, and, comparatively speaking, probity. Their duties are various—chiefly to direct the choice of the gallery to be worked, to superintend the erection of columns, the filling up of exhausted passages, and the superintendence of the *picconiere*, or actual miner, who, with his pickaxe from which he takes his name, brings down the material, or bores the rock for blasting. This *picconiere* is a notable personage in the mining hierarchy. He also must be robust, intelligent, and able to command and control his subalterns, the wretched *carusi;* and the fact that he has been a *caruso* himself seems only to make him harder and sterner in his dealings with the crew. The *picconiere* refuses always and absolutely to work by the day, even at the highest wages. Down in the bowels of the earth, naked and dripping with sweat, he wields his pickaxe for six, eight, ten, even twelve hours—as long as his strength holds out. The depth of the mines varies from mine to mine, and in the same mine from plane to plane. Maybe the first gallery is at 150 metres below the mouth of the pit; 50 feet lower another gallery, again, and again, the lowest 300 metres often. The heat is so intense that only those used to it can stand it. Each miner or *picconiere* has so many *carusi*—boys of twelve, men up to sixty—who transport the material either to the cars or to boxes on wheels, or to the mouth of the pit. These cars run on inclined planes, but "lifts" are now introduced in some of the largest mines, and only where there are such contrivances can a stranger descend.

We have visited two mines during the past week, each time arriving at the surface with fervent resolve never again to seek such sickening sights. It is not the physical inconvenience that hurts, but the horror of the spectacle. Where these slides, or lifts, are used, you may, if you do not descend, leave the mines with the conviction that all the process is carried on by this rough sort of machinery; but it is not so. The boxes go down only about a third or half the depth of the mine; and from the bottom up to the level where the cars land, the children or men bring up the material in sacks, baskets, or even the huge blocks on their backs, in loads of 10, 20, 50, even 80 and 100 kilos per journey. Up the steep, slimy, slippery steps or paths they go, scarcely daring to rest a second, every one in three carrying a stinking oil-lamp stuck on his head, sweating, panting, moaning with a peculiar and specially heart-rending groan till he reaches the "magazine," or depot, flings down his load, then turns, and with lightning speed dashes down again—some of the little ones out of whose bodies life has not yet been crushed actually singing, capering with the sheer joy of the momentary relief from pain. Ten, eleven journeys these "bearers" make per day, and, if the distances are short, twenty, and even thirty.

The worst feature of the case is that the children are farmed out by their own fathers and often their own mothers to the *picconieri;* hence their life-long slavery begins at ten years. The toil is such that when the mines are all at work, as at present, the *picconieri* have difficulty in finding sufficient *carusi* to carry up the material; and as they are paid by the job—so much for each "box" (*cassa*)—this is a serious matter. A family is "in want"; the father or mother seeks a *picconiere* and gets a loan of five, ten, even twenty dollars, and pledges the boy to work it out. The debt goes on increasing, for the miners and their families never save a cent, and when the *picconiere* sweats unmercifully, often the *caruso* will seek another, saying, "Give me such and such a sum to pay off so and so, and I will come to you." It is a point of honor for no *picconiere* of the same mine to take the *caruso* of another. When one does so, they "have it out" on Saturday or Sunday, and hence the frequent scenes of bloodshed that occur. When the *caruso*, come to man's estate, gets so over head and ears in debt that the miner sweats him without payment, he absconds, leaves the province for another mining district, and there begins again. The miner goes to the home of his indebted *caruso*, and, failing to find him, reports *perhaps;* but neither the police nor the mining population assists his researches, and this fear of losing the "bearer" of his treasure is the only check on the brutality of the *picconiere*.

Crime of every sort, and especially the unnamable vice, goes on in these mines. The *camorra* of course thrives, nor can any police regulations avail. In olden times the mines were the resort of brigands and *renitenti* and deserters; now the brigands are extinct. Old Mr. Rose, the last Englishman carried off by the band of Leone, farms his mines in peace at Lercara, and has the reputation of being a very humane part proprietor, part *gabelloto*. Conscripts no longer shirk the levy, deserters are rarer still, though the mining districts furnish very few soldiers, the most being rejected as "deformed," *i. e.*, hunch-backed, or half-blind, or bow-legged. But crime and criminals thrive; and as no books are kept, and workmen come and go at will, or with the connivance of the *picconieri*, here they find safe hiding-places, and miners, like dead men, "tell no tales."

As yet we have spoken only of the mines where the material is brought up at least half way on trucks; but if the visitor who has come to the surface of one of these insists on the fact that in near spots the *carusi* do all the business, he will succeed in being taken there, and on a rough waste at the pit's mouth will see one after another the naked, sweating toilers reach the surface, bending under their load—the groaning, not dissimilar to the death-rattle, audible and continuous long before you *see* the scarcely human creatures who issue from the mouth of hell. It is said that the children are used gently and by degrees to the toil and danger; and in fact it is one of the duties of the *capomastro* to see that each new comer descends only a certain depth, carries only a certain weight, and is assisted by a more experienced *caruso* to the surface. But only the other day a boy, barely of the prescribed age, sold by his mother to the *picconiere*, too heavily laden and not guided at all, rolled down the almost perpendicular steep, and, crushed under his load, was taken out, after his first journey, a mangled corpse, to his last home, which is but another pit. Note another fact. In a mining district some two miles from Caltanisetta, where there are seven important mines, in each of which the workers vary from 100 to 1,000, there is not a single doctor or surgeon on the spot. Sufferers (and they are numerous) taken ill or injured in the mines, and brought to the surface by their comrades, have to be taken into the town *on foot*, to be cared for or to die. As a rule, catastrophes are rare, yet they do happen when the mines are not properly ventilated or the airshaft is obstructed. One happened some years since in the very mine we descended yesterday. Fifty corpses were taken out, forty died on the surface, other thirty were saved by the courage and coolness of the *capomastro* (Gagliardi by name), who has the gold medal and ten children, not one of whom is he bringing up to his direful, dangerous trade.

Need I say that miners chiefly figure on the list of delinquents, and especially as homicides? Girgenti stands first on the list—50 per 100,000; Caltanisetta, 35, as against 2, 3, 5, 8 in other non-mining districts. The prisons are the very worst I have ever visited—which is saying much. One of them is actually in the same building as the elementary and secondary schools; male and female prisoners, condemned and those arrested and awaiting their trial, all huddled together, with crime for school and the worst species of camorrists for school-

masters. I was able to visit all the cells and to speak with the prisoners. Asking for what fault each was arrested, the murderers answered frankly, "Homicide"; the thieves looked ashamed; those imprisoned "for crime against morality," indifferent or cynical. Numbers are there for participation in strikes. For one strike at Monte d'Oro there is a father, his wife, and two sons, his brother, and nephew, with wife and infant, born in prison. I mean to reach the history and mystery of that strike. No one was hurt or killed; no intimidation was used, as the entire family of miners struck for higher wages, and because the box, according to them, was bigger than it ought to be (as here the money is paid by size and not by weight). They burnt the *cassa*, and threatened the Mayor, who is also interested in the mine; did not disperse at the order of the carbineers, and some say threw stones. The punishment has been mitigated "by royal decree," but has twenty-one months still to run. A worse strike took place at Favara, in the province of Girgenti, where the cause was the truck system and tally shops—an infamous system grafted on a shameless institution. The men clamored to be paid in money, not in bad flour and paper shoes, at high prices. The employers combined and refused; the men and women set fire to the Casino dei Signori, the gentlemen's club, and in the scuffle killed a carbineer. Here the penalty will be thirty years at the galleys.

In a mine some twenty miles from Caltanisetta, conducted by a French company, the *capomastro* was murdered last month in the mine and a shot fired at the French engineer. The firer, a lad of twenty, was arrested and is condemned to twenty years at the galleys. The rest are still on trial. Here cause and consequence follow in rapid succession. On Saturday the miners all knock off work at twelve, and Saturday afternoon and Sunday they spend chiefly in the public houses, drinking the cheap, strong wines of the country, and adjusting their quarrels. Their earnings vary. The miner makes from three to four lire a day, the *caruso* from one to two lire. The latter rarely see their money, but the *picconieri*, after giving their wives (whom, by the way, they never ill treat, even in drink) sufficient for next week's food (*bread* at breakfast and dinner, soup of paste and vegetables in the evening), drink up all the rest.

Attempts have been made by benevolent citizens not interested in mining gains to better their condition. Evening schools are opened, and it is wonderful how many tired, wretched children frequent them. Mutual aid societies, for pay during illness and for burial expenses, you find here and there, but these are poultices on cancer, and nothing more. Here we want missionaries—a Mazzini, a Lloyd Garrison, Mrs. Fry, Lucretia Mott, the Rochdale pioneers—to get hold of the children, of their mothers; to stir up public opinion until, while the "sacred rights of property" are respected, the sacred rights of humanity shall not be openly, flagrantly, brutally violated. Here, indeed, the young men who spout at clubs and twaddle in newspapers might find a grand field for labor; find an "ideal" which they complain is wanting to their generation. Communal, provincial, State authorities are called upon by these "reformers" to mend all; but they can do next to nothing until the mining populations combine to will an altered state of things—not by partial, useless, and lawless strikes, seeing they save not a farthing for the time when they are out of work, but by bringing their wants and wills, their sufferings and their wrongs, to bear on the absentee proprietors and the sweaters, etc. The time will come, is coming; but now one can only exclaim, with wrung heart and harrowed soul, "How long, oh Italy! how long!" J. W. M.

Correspondence.

THE CONFLICT OF THE FUTURE.

To the Editor of The Nation:

Sir: Gov. Russell has justified the efforts which the people of Massachusetts made last autumn in his behalf. In his inaugural address he has strongly and clearly developed the idea which he started last year, and which has been the keynote of his administration—the false position of, and the want of responsible power in, the chief executive. He points out that, with the confirmation of appointments and removals by the Council, there are practically ten Governors instead of one; that there are twenty-five State commissions and more than 100 trustees of public institutions.

"Experience has shown as practical results of such a system:

"First—That neither the Governor nor the people through him have any adequate power over the executive departments, of which he is the head, but his power is practically limited to suggestions, advice, and appointments to fill vacancies.

"Second—That over many of the departments and executive offices there is no power of control in any one.

"Third—That the power of removal, and so of control, usually requires for its exercise a formal trial upon specific charges, and proof of absolute malfeasance in office.

"Fourth—That an officer of an important public department accused of official misconduct which, in the opinion of the Governor, requires his removal, may remain in office without the confidence and against the will of his executive chief.

"Fifth—That a member of an important commission may hold his office indefinitely after his term has expired, without appointment and without the approval of the Governor.

"Sixth—That nominees of the Governor, beyond criticism and objection, may be refused confirmation for the sole and declared purpose of holding in office men whose term of office has expired.

"Seventh—That with the present limitations upon the power of removal, the power to confirm can always be used for this purpose, and successfully in every case of an expired term."

It is true that he does not touch upon the root and basis of the whole evil, the fact that executive unity and subordination are destroyed by the separate election of the chief officers of the State; but his vision seems to be obscured in this respect by the Democratic maxim that the people have the right to elect their officers, not seeing that in the executive branch this is fatal not only to efficiency, but to a working possibility as well as to all responsibility, and that the true way for the people to exercise control is to elect one head and make him responsible for his subordinates.

The Governor halts, also, in his proposal for remedy. Instead of boldly demanding the abolition of the Council and the power of appointment for the Governor of the chief officers of the State, and through them of their subordinates—one man in every place—and thus paving the way for the ultimate abolition of the commissions and boards of trustees, Gov. Russell modestly limits himself to a request for the power of removal of officials, leaving the confirmation of appointments to the Council, and, besides this, the whole jumble of commissions and trustees, with various terms of office. The demand is so small that, even if it were granted, it would make hardly a perceptible difference in his position.

But it will not be granted. The people of this country are accustomed to the party conflicts of Republicans and Democrats, but they have not waked up to the fact that there is an "irrepressible conflict" between Executive and Legislature; that the Legislature has absorbed practically all the power, and used it to reduce all government to anarchy, of which the ultimate result is civil war and, beyond that, despotism. The Legislature will no more grant Gov. Russell's demand than they would the rest, and their simple mode of defeating him is to pay no attention to his recommendations, or, what is the same thing, refer them to a committee, so that after a year or two the obnoxious incumbent may glide out of office with no result beyond the satisfaction of expressing his opinions. The struggle is an unequal one between a single man, who can retain office but for a short period, and a numerous body, which, however its members may change, remains animated by the same corporate spirit.

How the people, by whose aid alone any successful result can be obtained, can be made to understand the question, and to put forth their strength in relation to it, is a problem by no means easy of solution. But if we consider that the difficulty is the same with the government of forty-four States as well as that of the nation, although at Washington it is in a different stage, then I say that Gov. Russell deserves the gratitude of the whole United States for having had the courage, in defiance of tradition and of the spirit of the Legislature, to state squarely the issue upon which more than any other the future of government in this country depends.

If the people of the United States should see the point, and give him that reward which would do most to stimulate him and other Governors to move on in the same direction, I can only say that my respect for popular government and universal suffrage, standing already at a very high point, would be enormously increased. Gamaliel Bradford.

Boston, January 9, 1892.

PARTY AN END IN ITSELF.

To the Editor of The Nation:

Sir: No better illustration can be found of the humiliating principles which are now dominating the quondam great Republican party of Massachusetts than is furnished by the speech of Mr. W. E. Barrett at Brockton the other night. This is a time peculiarly favorable to the honest, straightforward discussion of political problems. In the lull which fills the interval between the squall just past and the heavy storm to come, candid and sincere opinions are given which it is impossible to obtain at any other time. Consequently, the words of a leader are looked upon as carrying a special weight and significance. According to the advice of the Honorable Speaker of our House of Representatives, the lofty aim and purpose of the party with the "grand old past" should henceforth be to "inculcate in the minds of the voters the belief that the Republican party is an organization . . . determined at all events to form itself into a great political army, not for one election, not for one decade, but for generations." And a little further on he declares that if only the Republican party has clung to the principle of popular sovereignty, "then it is an organization not meant for one crisis or for one generation, but to be strengthened and perfected, no matter under what

leader or what may be the temporary questions which present themselves." It is this policy of putting the cart before the horse, party before principle, that has repelled from the Republican party a host of conscience voters since 1884. In our last State campaign, circulars were sent among Republican voters asking their opinion as to the issues on which the coming campaign should be fought! I cannot imagine a more shameful confession of utter lack of honest purpose. To Mr. Barrett belongs the glory of first coming out squarely and openly for conducting future campaigns upon no issue whatever.

Obtuseness has never characterized the voters of Massachusetts, and one or two more speeches like the one under discussion will open their eyes to the fact that their politics is being run "for selfish political ends, or for no end at all." Yours respectfully,

R. W. W.

Boston, January 5, 1892.

THE ADVENT OF THE AUSTRALIAN BALLOT.

To the Editor of The Nation:

Sir: The article in the January *Forum* on the Australian Ballot reminds me that before it is too late I should put in my claim as first inventor, or, in other words, claim the authorship of the first "Australian Ballot Law" in the United States. The Kentucky act to amend the election laws for the city of Louisville was passed on the 18th of February, 1888. The skeleton of the act was read by me, with comments upon its main features, at a meeting of the "Conversation Club," one of the two leading literary societies of Louisville, in October, 1887. Mr. Arthur Wallace had been elected to the Legislature from Louisville in August of that year, and had resolved to put through a radical measure of reform. He knew that I took an interest in the subject, and that I had some experience in framing municipal laws. I was then Assistant City Attorney, and drawing charter amendments was in the line of my duty. But this particular amendment was not of the kind which the authorities would request me to frame; in fact, the men most powerful in the city councils were bitterly opposed to it.

In conference with Mr. Wallace, I drew up the bill substantially as it passed, yielding those points to him, of course, which he insisted on; all but the new criminal clauses, in which, knowing the laxity of our punitive justice, I felt very little interest. Mr. Wallace, by giving up all and every private object, and concentrating his endeavors solely on this great object of reform, succeeded, with the aid of the country members, in getting the bill passed, and I believe it antedates the Massachusetts Act of 1888. It applied only to this city; our Constitution, as it then stood, demanded viva-voce voting in all State and county elections.

Our bill was framed mainly on the British Act of 1872. The candidates were to be grouped in alphabetic order, and about this there was no room for choice, as it was not usual then to have party nominations. Of course, there were no pasters and no permission to use unofficial ballots. The only provision for illiterates was the distribution on the eve of election of a facsimile ballot, on which the illiterate might, by inquiry among his friends, learn how to vote. The Court of Appeals having intimated that this is not enough, the law has since been amended by authorizing the clerk of the polls to make a dot against the name indicated by the illiterate voter, who may afterwards put his cross either there or elsewhere as he chooses. The act has a corrupt-practices clause; that is, a single attempt at bribery or intimidation which can be brought home to the candidate, avoids his certificate, suit being brought for that purpose before the common-law court by any five citizens. A contest is also to be decided by the court, not as heretofore by the Council.

The new Constitution extends the "secret official ballot" and the principle of the "corrupt-practices" act to the whole State; but before it was framed, some of the smaller cities had in the main copied the "Wallace Law," and it is quite likely that, but for this initial step, the Convention of 1890-'91 would not have undertaken to embody this reform in such strong, sweeping, and unequivocal words in the organic law of the State.

Very respectfully, Lewis N. Dembitz.

Louisville, January 2, 1892.

BOBBIN AND LATCH-STRING.

To the Editor of The Nation:

Sir: It may interest your correspondent on the "Bobbin and Latch-string" in No. 1383 of the *Nation* to know that among poor people in this State the "latch-string" is in common use. A wooden latch is used, to which a string is fastened and passed through a hole in the door, three or four inches above the latch. The door is made secure against outsiders by simply pulling in the string. "My latch-string always hangs outside for you" is a common phrase in this State, and is understood to be synonymous with unbounded hospitality.

Yours respectfully, G. S. W.

North Carolina, January 5, 1892.

Notes.

Roberts Bros., Boston, publish this week 'A Last Harvest: Lyrics and Sonnets,' by Philip Bourke Marston, edited by Mrs. Louise Chandler Moulton; a cheaper edition of William Morris's 'Story of the Glittering Plain'; 'The Tragic Comedians,' by George Meredith; 'Wells of English,' by Isaac Bassett Choate; and 'Pastels of Men,' by Paul Bourget, a second series, translated by Miss Wormeley.

Charles Scribner's Sons announce a serial publication, 'The Homes and Haunts of Shakspere,' by James L. Williams, with photogravure and other illustrations; a series of English poets, to be called "The Muses' Library," beginning with Herrick, to which Mr. Swinburne furnishes a preface; a "Great Educators Series," beginning with Aristotle, by Thomas Davidson, and Loyola, by the Rev. Thomas Hughes; and 'Two Happy Years in Ceylon,' by Mrs. C. F. Gordon Cumming.

The Harpers have nearly ready the volume of Moltke's early letters to his mother and brothers; 'The Marquis of Salisbury,' by H. D. Traill; and a new and revised edition of Keep's Autenrieth's 'Homeric Dictionary.'

Cassell & Co. have in preparation a 'A Life of Gen. Robert Toombs,' by Pleasant A. Stovall.

Macmillan & Co. announce for early publication a new volume of the "Library of Philosophy," entitled 'The Philosophy of Aesthetics,' by Bernard Bosanquet.

E. P. Dutton & Co. will issue next month the American copyright edition of 'Meditations on the Life of Christ,' by Thomas à Kempis, a work generally unknown.

Thomas Whittaker is about to publish 'A Cyclopædia of Nature Teachings,' with an introduction by Hugh Macmillan, LL.D.

'A First Family of Tasajura,' by Bret Harte; John Fiske's 'Discovery of America'; 'A Golden Gossip,' by Mrs. A. D. T. Whitney; and 'Roger Hunt,' a story by Mrs. Celia P. Woolley, are forthcoming publications of Houghton, Mifflin & Co.

As pertinent to the approaching Columbian Exposition, A. C. McClurg & Co., Chicago, will bring out a new 12mo edition of Joel Barlow's epic, the 'Columbiad.' Mr. Charles Burr Todd, Barlow's biographer, will contribute a critical sketch of the poet.

Charles H. Sergel & Co., Chicago, announce a series of histories of the Spanish-American Republics, beginning next month with Peru, by Clements R. Markham. Brazil has been assigned to W. E. Curtis, and the Argentine Republic to the author of 'An Earnest Trifler.'

Dr. L. H. Mills's edition of the 'Gâtha Ahunavaiti,' with the Zend, Pahlavi, Sanskrit, and Persian texts (the first three translated), is now in type and will soon be issued; also the 'Commentary on all the Gâthas.' A very large discount will be made to clergymen and to scholars applying directly to the author at No. 19 Norham Road, Oxford. The importance of the subject to the history of Scriptural doctrines may be learned from Canon Cheyne's article in the *Nineteenth Century Review* for December, 1891.

Methuen & Co., London, are about to issue in six or eight volumes an authorized edition of the 'Speeches and Public Addresses of the Right Hon. W. E. Gladstone, M. P.,' with notes and introductions, edited by A. W. Hutton, Librarian of the Gladstone Library, and H. J. Cohen. The collection will, of course, be not complete but merely representative. It will in size be uniform with Prof. Thorold Rogers's edition of Mr. Bright's Speeches, and each volume will contain a portrait of Mr. Gladstone. It is hoped that the first volume may be ready in July. The work will be issued to subscribers.

An interesting example of the way the higher criticism is coming to be put into forms to be understanded of the common people is furnished in the 'Genesis of Genesis,' by the Rev. B. W. Bacon (Hartford: *Student* Publishing Co.). Not quite half the book is taken up with a discussion of the methods of historical criticism and documentary analysis, and with an account of the harmony of the leading authorities as respects the main points, and then comes a graphic representation of results as arrived at in the book of Genesis; the various documents being shown in their juncture and overlapping by the use of different type. Prof. G. F. Moore contributes a brief but sympathetic introduction.

Three volumes of poems, one of Medical Essays, and one, 'Our Hundred Days in Europe,' complete the baker's dozen that form the handsome new Riverside Edition of Dr. O. W. Holmes's Writings (Houghton, Mifflin & Co.). Only to the Medical Essays has the author thought it worth while to give a new preface, but this is a third. Dr. Holmes sticks to his guns in regard to homœopathy, and thinks he sees it in danger of being swallowed up by its logical progeny, Christian Science and faith cure. On the other hand, he repeats his acknowledgment of the good accomplishing by reducing the heavy drugging of the old school. The final volume is provided with an index to the thirteen, filling nearly 100 pages, for which Dr. Holmes's admirers will be duly grateful.

In addition to the volume of Poems, already

noticed by us under their proper rubric, the Brantwood Edition of Ruskin's Works (Chas. E. Merrill & Co.) has been advanced with 'Munera Pulveris' and 'The Queen of the Air.' Prof. Norton's introduction to the first is a sort of reconciliation of Ruskin's "political economy" with the genuine article by explaining their absolute lack of identity, and is both an ingenious, a truthful, and a charitable apology. The like friendly service for the medley, 'The Queen of the Air,' is also noticeable for its ingenuity, and there are again several piquant extracts from private letters of Ruskin's which dispense Prof. Norton from saying a good deal, or from bearing on.

A. C. McClurg & Co. have brought out a new edition of Sir Joshua Reynolds's 'Discourses,' edited with notes and an historical and biographical introduction by Edward Gilpin Johnson, and illustrated with twenty half-tone reproductions from Sir Joshua's own pictures, which form a curious commentary on the text. Sir Joshua's theories of generalization and the "grand style" are of the eighteenth century, and are very much shop-worn and out of date at present; but he was a painter as well as a theorist, and his discourses are full of shrewd remarks and admirable advice. The struggle in him of temperament with education —of the painter's love for the concrete and the particular with the philosopher's theoretical admiration for the abstract and the general—makes him very interesting reading, and, perhaps, not unprofitable, at this day, when his misunderstanding of Michael Angelo, Raphael, and the Greeks can do little harm, and may serve to interest the art student in those immortal masterpieces which innumerable modern "movements" are too likely to push out of our sight. The introduction and notes are sufficient, and the book is neatly printed.

In 'Nature in Books' (London: Methuen), Mr. P. Anderson Graham has undertaken, under a somewhat misleading title, to trace the early formative influences which went to the making of Jefferies, Tennyson, Thoreau, Scott, Carlyle, Burns, and Wordsworth. In two cases at least (Tennyson and Carlyle) he is forced to admit that books had a greater moulding power than nature. His essay is a curious combination of discursiveness and vigor, and from its main literary judgments there is little reason to dissent; the author often throws out an *obiter* of singular perverseness. On the whole, these studies in biography are to be commended.

Prof. Basil Hall Chamberlain, who is about to take a year's leave of absence from his duties as Professor of Japanese Literature and Philology in the Tokio University, has just issued the second and revised and enlarged edition of his invaluable 'Things Japanese.' About twenty-five new articles appear in the work.

Ohm's 'Galvanic Circuit Investigated Mathematically' has just been republished in the Van Nostrand pocket Science Series. Mr. Thomas D. Lockwood furnishes an introduction, from which it is to be inferred that the present translation, by William Francis, is new, and there has been but one other, now not easy to procure.

Mr. Fred. A. Ober's 'Knockabout Club on the Spanish Main' (Boston: Estes & Lauriat) takes his youthful readers to Venezuela—a land of mystery, romance, or adventure, from the time when the eager Spaniards first listened to the fable of El Dorado down to the present time. This book contains a good deal of interesting information about Bolivar's country not elsewhere, so far as we know, to be had, at any rate in a form likely to entertain boys; and this, eked out with some account of the buccaneers, and a description of the little-known island of Curaçao, makes up the volume. Mr. Ober's style would be improved if he studied simplicity more and made less effort to be humorous. He no doubt would reply to this that he knows his market and supplies the demand.

In our late mention of the newest bound volumes of *Scribner's Magazine* we might well have spoken of the Index to volumes i.–x., already on our table. The editor takes occasion to pass in summary review the contributions of the decade, both literary and pictorial, with a degree of satisfaction which nobody will find excessive. The index is in two sections—Articles and Authors, and Illustrators (not engravers, except author-engravers). The latter is a just and useful innovation.

That the Germans are great book-writers and readers, but very poor buyers, is a well-known fact, which is again brought home by a recent showing in the Berlin *Boersen-Courier* that even fame or notoriety is not such an aid in the sale of books as it is in other countries. It seems that, some time before Bismarck's dismissal, the publishers H. Fried & Co. made a compilation of Bismarck's speeches and letters and printed them in several volumes as 'Prinz Bismarck's Gesammelte Schriften.' Orders came in briskly from the booksellers, and a third of the large edition was bespoken before the first volume appeared. Then came the Chancellor's fall, the demand ceased at once, and in the twenty-one months following not a hundred copies were sold, although the price had been reduced to $1 a volume. The publishers are now offering for sale the plates and the 3,000 volumes remaining on their hands.

The *Overland Monthly* begins in the January number a series of communications from the Lick Observatory. The first article relates to lunar photography, and the work of the Drapers, father and son, Bond, Rutherfurd, and others is instanced. Fairly good process-cuts are given of three photographs of the moon taken with the great telescope in 1888 and 1890. Those who own small telescopes will find it interesting to compare these plates with the veritable moon. With the idea of securing a pair of satisfactory negatives at intervals of a few hours throughout a whole lunation, the taking of moon-pictures has been made a part of the regular routine work at Mount Hamilton. From time to time changes on the lunar surface have been reported, but very few of them can be considered as established. They largely arise from simple alterations in the aspect of a crater or other formation due to alterations in the shadows. A fine series of lunar photographs must obviously afford the ultimate decision in all such cases. It is unfortunate that the photographic plate cannot be appealed to for a ruling on such anomalous observations as those published from the Lick Observatory which have suggested a real duplicity of the inner satellite of Jupiter. This very improbable condition of things makes it wise to adopt, for the present at least, that explanation of the observed phenomena which assigns the apparent duplicity to mere contrast of the background upon which the satellite was projected.

Mr. Lawrence Rotch, of the Blue Hill (Mass.) Meteorological Observatory, in summarizing the records of the last month, finds that its temperature was exceptionally high—higher, in fact, than that of any December in more than eight years. Sunshine was much in excess of the usual amount, and the neighboring ponds were mostly free from ice during the month. Summarizing for the entire year, it is found that the average temperature and pressure were both higher than for many years; also, there was a smaller number of rainy days and a greater frequency of southwest winds than the average. Other noteworthy phenomena of the year were the exceptionally high humidities and an excess of rainfall in January and February, the heat of mid-June, a cool July, an exceptionally warm September, a dry autumn, and a fall of three inches of snow in October. In central New England the present winter has been remarkable for a practically entire absence of snow until the 6th of January.

Lewis Bohn, Milwaukee, expects to issue in mid-April a quarterly classified Bibliography, bearing his name, "of all new publications in the English language," together with announcements of forthcoming works.

The voluminous 'Official Records of the Union and Confederate Armies' still in progress has just begun to be illustrated by an Atlas, of which Part I. has been issued by the War Department. It is published in folio, and contains five double-page plates, beginning with Capt. (afterwards General) Seymour's sketches of the Confederate batteries built or manned for the reduction of Fort Sumter in February, 1861. These are succeeded by sketches of Rich Mountain battlefield, W. Va., of Bull Run, and Manassas, of Belmont, Mo., the defences of Charleston harbor, etc., etc. Some of these are official, by engineers; others, memoranda from observation or hearsay. The execution of these maps needs no praise. They have been made by Julius Bien & Co. of this city.

The Royal Geographical Society has just issued a circular in reference to the confusion in British maps with regard to the spelling of geographical names, and advocating the adoption of an arbitrary system of orthography. The general principle proposed by the Society in 1885 is again stated, "that in writing geographical native names vowels should have their Italian significance, and consonants that which they have in the English language." This principle has been adopted in the charts and maps issued by the Admiralty and War Office, and has been accepted by the Foreign and Colonial Offices. "Even more important, however, than these adhesions is the recent action" of the United States Government in the adoption of a system in close conformity with that of the Society. France and Germany, it is added, have both formulated similar systems of orthography for foreign words. In order that the principle may be thoroughly understood by travellers and others interested, it is proposed to publish some tentative indexes of a few regions, in which the place names will be recorded in the accepted form.

Not long ago we drew attention to the fact that the Bishop of Guiana, Dr. Austin, had entered upon the fiftieth year of his episcopate. The remarkable fact, that down in South America a clergyman of the Anglican Communion had for so long a time been the Bishop of one and the same diocese, did not pass unobserved in the Old World, and telegrams of congratulation were sent to the venerable prelate by the Archbishop of Canterbury and the Secretary of State for the Colonies. Now, Queen Victoria has just honored the Bishop, who is also Primate of the West Indies, by appointing him to be Prelate of the Order of St. Michael and St. George—the Order of Knighthood reserved for the Colonial and Diplomatic Services. We may mention, by the way, that Bishop Whipple of Minnesota and the Bishop of Missouri have sent contributions towards

the Building Fund of the Cathedral at Georgetown, British Guiana, wherein it is hoped the Bishop of Guiana will celebrate his Jubilee on the 24th of August next.

By an oversight, we credited last week to the wrong firm the American publication of Collingwood's 'Art Teaching of Ruskin.' We should have given the name of the Messrs. Putnam.

—The alleged "Daily Prayers" of Washington are reproduced in facsimile in the first issue of the *Beacon*, a magazine devoted to "religion, literature, and the reproduction of rare manuscripts." Dr. Deems has very amiably written an essay on the prayers, and the owner of the MS., a dealer in autographs, contributes a very touching picture of Washington "in the pleasant library at Mount Vernon, kneeling at a chair surrounded by his family and household slaves, reading aloud in impressive cadences the beautiful language of these prayers." Of course, some attempt is made to determine the date of composition, for that is an essential point in establishing the authenticity of the MS. The legend of the catalogue is vamped for the purpose, and the prayers are said to have been written between 1750 and 1756, and to have been used by Washington in camp during the French and Indian war. Note the judicial opinion of Dr. Deems: "It [the MS.] is manifestly in the handwriting of George Washington. Compared with another MS., a paper containing the plot and measurements of a certain piece of waste land surveyed for Maj. Lawrence Washington, and which was made and signed by 'G. Washington,' and by him dated August 23, 1750, I am inclined to believe that the prayers were written in Washington's early life, probably about the time he started on the military expedition to western Virginia in 1754." And the authority of "one of his aids, Col. B. Temple," is quoted on the use of prayers in camp.

—This evidence is utterly worthless. In a single collection of Washington MSS., we have his copy-book, 1745; his notes of a journey, 1747; surveys, 1749–1750; his commercial correspondence and his letters during the Bouquet expedition—an almost unbroken series, by which we may judge accurately what changes occurred in his script. In no case is there the least resemblance to the script of the "Daily Prayers." Further, all of Washington's papers were captured at Fort Necessity, and so these prayers could not have been with him in his first campaign. As to the second campaign, the definite character assumed at that time by Washington's writing rules the prayers out, as there is no resemblance to be traced save in the single word *amen*. When Col. Benjamin Temple was obtained as an "aid," history saith not. He was not on the rolls of the troops serving in the French and Indian War; he never was an aid to Washington. In 1778 he was in Virginia to superintend the clothing of a regiment then being raised, and his delay in accomplishing that task brought down upon him some criticisms from headquarters; but there is not the slightest evidence of his having had any of Washington's confidence. A comparison of a letter of Judge Bushrod Washington with the MS. of the prayers would have raised the question whether he, or his father, was not the writer. The similarity in penmanship is striking, and far greater than can be established between any writing of George Washington and that of the prayers.

—That eminent English physicist, Lord Rayleigh, reviewing in a recent number of *Nature* Prof. Langley's 'Experiments in Aerodynamics,' directs attention to the work of early authorities, among them Newton and John Robison in his 'System of Mechanical Philosophy,' the latter of whom enunciated what is known as the law of the simple sine, the immense importance of which was clearly recognized by Wenham in a valuable paper upon flight in the Report of the Aeronautical Society for 1866. Some years later, Mr. W. Froude, the greatest authority upon kindred matters, discussed the whole subject with characteristic insight and lucidity. The laws of resistance, says Lord Rayleigh, were fairly well established many years ago, at least in their main outlines. The chief problem is, of course, the law of obliquity; and this Prof. Langley has attacked with two distinct forms of apparatus, which are beyond the scope of our present writing. When once the law of obliquities is known, the problem of aerial maintenance presents no further theoretical difficulty. It was successfully treated many years ago by Penaud (Aeronautical Society, 1876), and later by Froude. Lord Rayleigh thinks the work of Penaud so little known that he proceeds to recapitulate some of his theoretical conclusions. Penaud actually constructed a successful flying-machine, in which horizontal flight was maintained by a screw-propeller; the energy being stored by means of stretched india-rubber. The principle of the rocket, Lord Rayleigh says, may perhaps be employed with advantage, and even upon a large scale the abolition of all machinery would allow of considerable extravagance in the use of explosive material. While interested to note the coincidence of Langley's favorable view of the practicability of flight upon a large scale, with the conviction of Penaud expressed fifteen years ago, Lord Rayleigh concludes without undue reserve that "sufficient maintaining power is not the only requisite, and it is probable that difficulties connected with stability and with safe alighting at the termination of the adventure will exercise to the utmost the skill of our inventors." Just here the *Cosmopolitan* magazine of this city steps in with an offer of $500 in prizes for three essays upon aerial navigation. As to what may grow out of them, Mr. Edison has offered the free use of his laboratory for experiment; Capt. Haupt, Professor of Engineering at the University of Pennsylvania, is to supervise the engineer's work and the mechanical construction, while Prof. King, probably the most experienced of living aeronauts, has been engaged as adviser in practical aeronautics. Plans and suggestions will be welcomed from all sources, and no effort spared to combat the recognized difficulties of the experiment. It is worthy of further note that no patents are in contemplation, but that the results are to be public property. The essays must reach the magazine by March 1 of this year.

—In Europe, where the custom of giving fees would seem to be indissolubly bound up with the whole framework of society, the feeling has nevertheless gained ground that it is both necessary and possible to put a stop to it. Baedeker, in the latest edition of his 'Switzerland,' says that in that country the practice has become a "monstrosity," and that it is a serious interference with the pleasure of the traveller. At the meeting of the International Innkeepers' Union held at Cologne last month, it was unanimously recognized that, in the interest of the traveller, and no less in the interest of the innkeeper, on account of the dislike of him which it excites in the traveller's breast, the custom must be broken up; and three hours were devoted to a thorough discussion of the best means by which this could be effected. There can be no doubt that the abolition of the custom would be effective in increasing the amount of travelling that takes place. No one, of course, consciously renounces travelling on account of the irksomeness of deciding at each hotel, in regard to porters, waiters, chambermaids, and bootblacks, to just how many of each and to just what extent conscience requires him to practise generosity. But no principle is better established in modern science than that causes which are too weak to be appreciable in any one instance are, nevertheless, effective in the long run. No one thinks, when he sits down in the spring to consider whether he shall make a journey to Switzerland or store up the money which it would cost against the necessities of old age, of the disagreeableness of giving fees; but in the general, vague picture of the pleasantness of the journey which arises before him, no one can tell just what part is played by that element of the situation, and the intending traveller himself least of all. In other words, we have here a picture in little of the statistical effectiveness of small causes—a principle which has been so effective in modern physics, and which the political economist still finds it so difficult to get a firm grip of. The hotel-keepers are doubtless right in thinking the traveller would not only be happier, but also more of a traveller, if he were relieved of the burden of paying fees.

—If rhyming were not one of the primary instincts of human nature, and if Dr. Daniel Sanders, besides being the author of more than one admirable German dictionary, were not also a human being, one might be surprised to see him, at the venerable age of more than threescore and ten, risk his reputation by publishing a collection of original verses. The title of the volume in question, '366 Sprüche' (Leipzig: Ernst Keil's Nachfolger), seems to indicate that it is meant to offer a grain of wisdom for each day of the year. But we cannot help thinking that most readers will prefer swallowing the whole pill at one dose, especially since the absolutely harmless nature of its ingredients deprives it of all possible danger to normal digestion and sleep. Even where the writer (as is frequently the case) exposes human frailties and follies, he does it in such a manner as to offend none but the æsthetic sense, and some of the *Sprüche* display such a monumental commonplaceness that they seem to have been designed as inscriptions for public buildings. How would this, for instance, do for a City Hall?

"Die Ehrlichkeit
Ist zuweilen nicht ohne Beschwerlichkeit;
Dagegen ohne Gefährlichkeit
Ist niemals die Unehrlichkeit."

Or this for a Y. M. C. A. building?

"Den stummen Fischen und quakenden Fröschen
Genüg' es, den Durst im Wasser zu löschen:
Doch begeisterten Menschen, die singen können,
Ist der Wein als begeisternder Trunk zu gönnen."

Or this for the future monument of William II. of Germany?

"Wenn dünkels- und anmassungsvoll
Zu hoch sich stellet Einer,
Erscheint er dem Beschauer nur
Dafür um desto kleiner."

—A memorial of the late Dr. von Holtzendorff contemplates a fund with which to advance the science of criminal law, and the knowledge of all that concerns prisons, by proposing prize questions, by affording the means for travelling, and other methods of carrying forward the investigations and labors of Holt-

zendorff's long life. The headquarters of the association are to be in Berlin, and the governing body is to be composed of the representatives of thirteen societies, viz.: the International Criminal Law Association, the International Commission Pénitentiaire, the Institut de Droit International, the Deutscher Juristentag, the Paris Société Générale des Prisons and Société de Législation Comparée, the Brussels Société des Études Sociales, the Juristische Gesellschaft of Berlin and of Munich, the London Howard Association, the National Prison Association of the United States, the Congress of Dutch Jurists, and the Congress of Scandinavian Jurists. The right is reserved of adding representatives of kindred associations. There is also a small committee of three subscribers to be chosen to coöperate with the representative members. The Fund is to be obtained by donations and subscriptions, both from individuals and from societies, and it is to be expended by the Board in the way best calculated to forward the main purpose of the organization, to honor and perpetuate the memory and services of Prof. von Holtzendorff by just such methods of investigating and improving criminal law and prisons as he followed with so much advantage during his long and busy life. Thus far the American subscribers form a very small proportion of the one hundred and fifty or more names representing the leading European authorities. Holtzendorff had many American students and correspondents, and those who wish to join in this memorial or to ascertain its conditions can do so by addressing Prof. Rosenfeld, Halle. The Treasurer is Mr. Ferdinand Reichenheim, Thiergartenstrasse 10, Berlin W.

KENNAN'S SIBERIA.—I.

Siberia and the Exile System. By George Kennan. The Century Co. 1891.

UNDER the above title Mr. Kennan has collected, in two bulky volumes, the articles which have appeared in the *Century Magazine* at intervals during the last four years. Any one who has read those articles consecutively is already practically acquainted with the contents of the book. A few pictures have been omitted; changes, chiefly of arrangement, have been made in one or two of the papers; the matter remains undisturbed. The series of papers on the prisons of European Russia have been omitted, and the space which they would have occupied is taken up with appendices devoted to special points: a list of the books, documents, and so forth, on the Siberian question consulted; a list of reprimands and the like inflicted on the Russian press by the Censorship during the last ten years; revolutionary documents; laws and orders of the Government with regard to political offences and offenders; letters from Mr. de Windt on the Tomsk forwarding prison and the author's replies; reports on Siberian prisons culled from Siberian newspapers and other public sources; reports from the Governor of Eastern Siberia to the Tzar.

The first thing which strikes the ordinary reader is the delightful and graphic style in which the book is written. Nothing could be better. It takes somewhat deeper knowledge and observation to appreciate another quality, viz., the art with which the omission of what is not desired is concealed. It is the commonest of practices to state only one side of a question, but the knack of doing so in a manner which shall leave the reader utterly unconscious that another side exists, is a rare gift. In his preface, the author states that he had been interested in the subject of Siberian exile since 1879, and had planned a journey of exploration. In 1884 he was enabled to make a preliminary trip to St. Petersburg and Moscow, "for the purpose of collecting material and ascertaining whether or not obstacles were likely to be thrown in his way by the Russian Government." In 1882 he had spoken approvingly of the Russian Government, and he found this of great assistance to him. In 1885 the projected exploration was finally begun. The points to be noted with regard to these facts, mentioned with clever lightness, are as follows: (1) that the nature of Mr. Kennan's preliminary reading between 1879 and 1884 is not stated; (2) that the nature of the material and information secured in his preliminary excursion of 1884 is not stated; (3) that the nature of his feeling in 1882, when he defended the Russian Government, is stated to have been favorable; (4) that the nature of his impressions when he set out on his trip of 1884, when he returned from it, and when he began his exploration with fuller knowledge a year later, is left for the reader to infer—and the inference is expected to be that he set out prejudiced in favor of the authorities, and changed his mind only afterwards. Something of this sort is, in fact, announced later on.

These omissions bear upon the subject in various ways, and Appendix A will aid the unskilled reader in coming to some conclusion as to the spirit in which the expedition was entered on, which has already been the ground of controversy. Among the books there set down as read, quoted from, or consulted (the author has a catalogue of 10,000 numbers, he says), many will be found which date back, not only previous to 1884, but previous to 1879, some even to the extent of forty years. This refers not to the private documents, but to the publications which were for sale openly, and which any one could buy in Russia or Geneva, or could cause to be forwarded from those places. As the author himself makes a point of calling attention in his preface to the fact that more than one-half of his information is derived from official sources, and as he quotes extensively from books, periodicals, and newspapers which are neither rare nor exempt from advertisement, on their appearance, in the prominent newspapers, not to mention the newspapers themselves, we may fairly draw a few inferences from the facts laid before us. One inference is, that even superficial search during the lightly dismissed preliminary journey must have revealed the general character of the evidence which Mr. Kennan was likely to collect, even if it were not already familiar through reading between 1879 and 1884. That it was not wholly a surprise seems probable, from the fact that the author was given the opportunity to make this journey two years after the publication of the Rev. Mr. Lansdell's book, which set forth the rosy view of the matter, and that the final expedition was considered expedient after this preliminary trip, during which preparations were in so advanced a state that five days were reckoned as sufficient to procure letters of introduction—perhaps to make acquaintances also, if the previous trip is to be counted for nothing in the results. It is not usual, to say the least, for wide-awake newspaper men and publishers to enter upon expensive investigation of the same side of a subject which has been so recently set forth by a writer in the same language, unless there is presumptive evidence, amounting to a certainty, that a "surprise" is in store. Reference to Appendix B will convince the reader that, if the very varied list of newspapers and periodicals there mentioned was really compiled from the author's personal reading—which we have every reason to believe is the truth—he did not fail to keep himself duly posted as to Russian publications and doings in the years immediately preceding his journey.

Before entering upon the discussion of these points, however, it may be remarked that the most prominent feature of the narrative, next to its charming style, is the stress laid upon the difficulties of the journey and the sufferings of the author and his companion. An interesting Siberian comment is, that "he has made his sufferings of almost equal magnitude with those of the martyrs whose canonization he is negotiating." This criticism is accompanied by a suggestion that there was no special exhibition of clever cajoling, as represented, in the travellers donning their dress suits and calling on the authorities of each town, as a mark of respect, since, if they had not called on the officials, they would not have obtained the necessary permits; and if they had not donned their dress suits, equally of course, they would not have been received. With the exception of a short journey to the mines of Karâ, which their tardy arrival compelled them to make on horseback, the accommodations, vehicles, food and lodgings made use of by the travellers were precisely those employed by all travellers in Siberia. That there was no dearth of such travellers, the author's frequent complaints of interrupted slumbers at the posting-houses afford abundant testimony. Nor do we ever hear that these Russian and Siberian travellers (including women and small babies, and ranging from a General Governor down) murmur at anything except at delay in obtaining horses. There are Siberians who think nothing of running on to St. Petersburg from Irkutsk, with the same conveniences or inconveniences, once or twice a year, for a visit of a couple of months. If the author and his companion preferred to carry about a photographic apparatus and forty pounds of documents, instead of the usual portable travelling mattress to spread over the baggage in the bottom of the *tarantâs*, and an adequate supply of food, it is a case of choice for which sympathy can hardly be demanded.

As a contrast to these tales of woe, the reader may be interested to know the unphilanthropic, unbusinesslike view of the same subject taken by one of these lady travellers: "We were seven weeks on the way [to Eastern Siberia], and we travelled night and day, with no special fatigue or hunger (though we had little to eat), nor cold (though the degrees of frost were unusually low). One could even sleep, and it seemed as though the feast of fresh air made up for everything." This relates to a mid-winter journey, in January and February. Of another journey in May, during the breaking up of the frost, at the worst season of the year, the same lady says: "We travelled on day and night, when possible, being stopped only two or three times during the four or five darkest hours of the night. No moon; we had wind, rain, snow, and cold; then fine sun and air, and we enjoyed it all. It is, to my mind, the next best way to travelling after a sea voyage."

The minute description of the way in which Mr. Kennan, a man of exceptionally hardy frame, bore the common inflictions of lodgings without beds, poor and scanty food, insufficient clothing, and cold (the Siberians are unable to understand his accounts of shivering for hours with impunity, since people who are not properly protected freeze before they know it),

serves to illustrate the lesson which any reader can apply himself, if the key-word be once supplied; and that key-word concerns the nature of the people who are found in the forwarding prisons and the *étapes*.

Mr. Kennan shows, from official records, that the number of purely political prisoners sent to Siberia each year by "administrative process"—that is, without trial—is, on an average, 125. Allowing twenty-five more per annum as the approximate number of politicals sent as hard-labor convicts and penal colonists, probably for direct violence, murder, robbing sub-treasuries, and other acts universally recognized as deserving of punishment, it appears that a little less than one per cent. of the total number of exiles belong to the political class. In other words, less than one per cent. of exiles belong to the educated classes, who are in any measure accustomed to the comforts of life. Only a very small fraction of this one per cent. have, according to the evidence offered, belonged to the ranks of life or the conditions of fortune in which their physical comforts have been sufficiently great to cause the physical hardships of exile to weigh upon them in the degree which would seem to be natural to the ordinary reader. One need go no further than Dostoevsky's realistic novel, 'Crime and Punishment,' to become convinced that not alone students like the hero of this tale are inured to suffering, but that their life in Siberia might even be an improvement on their life in Russia, except so far as deprivation of books and writing-materials is concerned. The majority of the political exiles are shown to come, if not from the student class, from other classes which are practically similar in the matter of comfort and surroundings. The word "student" in Russia by no means conveys the ideas of luxury, sports, pleasure, and personal elegance which have come to be associated with it in England and America. Many of these noble and courageous fellows deserve the crowns of heroes or martyrs for their endurance of privations in their effort to obtain that education which the privileged classes receive gratuitously in many cases.

After deducting this fraction of one per cent. for the political exiles, we find that nearly 4,000 out of the remaining 99 per cent. of the yearly 10,000 consist of persons banished by administrative order of village communes—not by the Government—because of their general worthlessness and bad conduct, and because they are obnoxious to their fellow-citizens and a burden to society. Out of more than 5,000 exiled by administrative process, by a mere order of the Minister of the Interior, some are furnished by these very peasants who have been exiled by their communes, and whom their communes refuse to receive on the expiration of their term of banishment. Naturally, the majority of the convicts who have had a trial come from the same classes, though some spring from the middle classes and the aristocracy, like the lawyers who conspire to obtain fraudulent divorces, or rob their clients, and like the Count and his accomplices who got money under false pretences—all of which are cases of recent occurrence. However, it is not worth while to consider them separately, since their own deeds have deprived them of privileges and rank.

Practically, then, the vast majority of exiles belongs to the peasant class. This division into two distinct classes, with subdivisions, becomes of importance when our attention is repeatedly called to the absence of bedclothing and pillows in the *kameras* of the *étapes* and forwarding prisons, to the few changes of raiment, to insects, bad ventilation, and other details not in keeping with Western ideas of life's commonest necessities. These peasants are not accustomed to beds, bedding, or pillows at home; they sleep on the floor, on the bench along the wall, on the oven, in their ordinary clothes. Their changes of clothing at home are rarely greater than in prison; the presence of baths in the prisons would seem to indicate that they have something like the same facilities for their weekly baths as at home. The amount of fresh air which they can endure out of doors, and the amount which they can dispense with in the house anywhere, are astonishing. The sanitary conditions at home are probably not much superior to those which they enjoy in prison. The food is probably as good, plentiful, and regular as they have at home—more regular in some cases, no doubt. The forced marches of this class of prisoners can hardly be considered as the extreme of barbarity in itself, since the guards do the same amount, and the chances are that if they were not engaged in tramping from west to east in Siberia, many of them would be tramping north and south, throughout the whole length of Russia, in all weathers, under the guise of pious pilgrimages, to numerous shrines, and subsisting on the spasmodic and precarious charity of the villagers—if they were not engaged in some more reprehensible occupation calling for condemnation. The practice of the *brodyágs*, the runaway prisoners, who pass the summers, with or without leave, in roaming the forests and picking up their living by chance, at the prompting of their Russian blood, returning to prison for the winters, or allowing themselves to be captured, affords confirmation of this assertion. It is difficult to see how bedding could be provided for such masses, constantly changing, or how it could fail, under the circumstances, to add to the insects and unhealthy conditions. In the posting-houses, lodgings, and all the hotels visited by the author (except one or two in large cities), he and all other travellers slept on the floor, omitted ablutions, and had not even the luxury of prison *nári*. It is the modern version of the old Russian idea of luxury, which caused grandees to scorn other people's beds, sheets, provisions, and cooking, and to carry their own paraphernalia and retinue with them. The same idea obtains in some parts of European Russia still.

Other matters which must be taken into consideration are the Russian constitution and the Russian temperament. The former is robust, to put it mildly; the latter is a worthy match for it. These tough-fibred Russians have a way of accepting the inevitable promptly, cheerfully, almost unquestioningly, which, combined with a mystical belief that suffering is a good thing in itself, their native habits, and their normal life, causes the actual amount of misery which they endure to be less than a tithe of what the uninitiated reader would imagine from the harrowing descriptions given by Mr. Kennan, unrelieved by these very important factors in the question. If he did not set out with the intention to see everything in the blackest possible light, why was no hint of these matters given?

RUBINSTEIN ON OTHER COMPOSERS.

Die Musik und ihre Meister. Von Anton Rubinstein. Leipzig: B. Senff. Pp. 153.

THIS little book is the sensation of the hour in Germany. Great composers are expected in our times to write not only scores but books as well. The writings of Berlioz, Schumann, Liszt, Wagner, and others fill many volumes, but Rubinstein had not hitherto made any contributions to literature, excepting a few short essays, and the brief autobiography which appeared about a year ago—and even this was only an interview, edited, however, by the composer, and therefore authentic. But now we have a genuine book from Rubinstein's own pen, which has fallen like a bombshell into two camps at once—that of the worshippers of Handel, Haydn, and Mozart on the one side, and that of the followers of Wagner, Liszt, and Berlioz on the other.

The whole book is in the form of an imaginary dialogue between the composer and a lady who visits him at his villa in Peterhof. She finds his walls adorned with busts of Bach, Beethoven, Schubert, Chopin, and Glinka, and asks surprisedly why Handel, Haydn, and Mozart are not also there. "These are the representatives of my art whom I most revere," is the answer; and in the sequel the reasons for this preference are given in clear and emphatic terms. Having thus "paralyzed" the admirers of the three masters excluded from the first rank of composers, he aims his next blow at the lovers of opera. Mozart's greatness as an opera composer does not save him, for "in my opinion opera is an inferior species of music, anyway," and if the public prefers opera to symphony, that is "because it understands the opera more easily." Then follows an interesting bird's-eye view of the development of music. It leads up to what a sporting writer would call the "heaviest slugging" in the whole book, and the victims of it are Wagner, Liszt, Berlioz and—*all other modern composers after Chopin!*

It has long been known that Rubinstein detested Wagner and did not believe in any of his reforms and innovations in music, nor ever follow them in practice. If any doubts had remained on this point, they would be emphatically set at rest by his remarks on pages 95-105, where we are told that Wagner is "highly interesting, very valuable; but beautiful or great in his works, or deep or high in a specifically musical sense, he is *not*." "His art-principles are so unsympathetic to me that my opinion of him can only serve to provoke your anger." Then he picks to pieces each of Wagner's principles. Wagner puts vocal music above everything, while with Rubinstein "music begins only where words cease." Legend leaves Rubinstein cold. An example of real drama, in his opinion, is to "compel a man to shoot an apple from his son's head." "The leading-motive principle is such a naïve procedure that it cannot claim serious consideration, but produces rather a comic effect"(!). The exclusion of arias and ensembles from opera is a mistake. The orchestra is too much of a good thing, because it diminishes the interest in the vocal part. The use of steam to conceal a change of scene is *intolerable*. The darkening of the auditorium is only a caprice, not an æsthetic requisition, and benefits chiefly the managers by saving gas! The personages in Wagner's dramas are always pathetic, never dramatic (!); there is "no diversity of musical characterization"; "in no case does the melody, the musical thought, characterize the person" (!). And so on, the conclusion being that Wagner cannot be classed among real musicians.

These remarks of Rubinstein are extremely interesting from a sociological point of view. They might be printed as an appendix to Wagner's pamphlet on 'Judaism in Music,' as brilliant proof of his contention that the Jews lack

the dramatic sense. Rubinstein has written almost as many operas as Wagner, but not one of them has won a permanent success on the stage, although many attempts have been made. Wagner's, on the other hand, have slowly but surely conquered the world, and are sung more than a thousand times a year. They have succeeded because they are dramatic, and Rubinstein's have failed because they are undramatic. Meyerbeer, though a Jew, succeeded as an opera-composer because he was willing to learn from other dramatic composers. Had Rubinstein been willing to learn from Wagner, he, too, might have succeeded on the stage, for the time being, at any rate; but his stubbornness and his undramatic instincts prevented him from doing so. And now that he sees his utter failure as an opera-composer, instead of honestly admitting his mistake, he makes a weak exposure of his irritation by attacking Wagner and those dramatic principles which have not only won over the whole musical world, but have leavened all modern music. He has every reason, personally, to detest Wagner, for if Wagner had not taught the world to expect dramatic truthfulness in an opera besides beautiful music, Rubinstein would no doubt have been the hero of our operatic world, instead of being nobody in it.

One cannot help noticing the difference between the two men in nobility of artistic character: Wagner believes that dramatic (vocal) music is the highest of arts, and he clings to his ideal through life against a thousand obstacles; Rubinstein writes almost as many operas as Wagner, but as they prove failures he discovers (after he has passed his sixty-second birthday) that the opera is "an inferior kind of music anyway," and if Wagner succeeded in monopolizing almost the whole musical attention with his operas, this only proves that all his principles are wrong, his music bad, and the musical public a lot of ignoramuses who prefer opera to symphony because "opera is more easily understood." And in conclusion he further shows his lack of a sense of humor by prophesying that time will "judge" these music dramas, although he must have known that Schumann (also undramatic and jealous) made the same prophecy more than forty years ago, since which time these operas have steadily advanced in universal estimation, although not one opera in a hundred ordinarily survives a decade.

It is a great pity that Rubinstein has marred his book by these ill-tempered remarks on the opera and on Wagner, because it is to be feared that they will prevent some of the other judgments in it from having any effect at all. Amateurs will naturally distrust a critic who can not only find no good in Wagner, Liszt, and Berlioz, whom he calls the leaders of the modern epoch in music, but can see nothing original in Franz, Brahms, Dvorák, Grieg, Tchaikowsky, Verdi, Gounod, etc., all of whom he sweeps out of existence with a stroke of the pen by his iterated assertion that "music came to an end with Schumann and Chopin."

Fortunately, in his judgment of the dead, where his bitterness over his personal failure as a composer does not cloud his vision (and it must be admitted that Rubinstein has not received a hundredth part of the honor he deserves as a creator), not only is he trustworthy, but he also does excellent work by rearranging the busts of composers, putting some on higher pedestals, others on lower ones. Placing Glinka among the five greatest composers is, of course, a bit of patriotic arbitrariness which none but a Russian will approve; but in putting Schubert and Chopin in the first rank of composers, and Handel, Haydn, and Mozart in the second, Rubinstein has done a most valuable service, all the more as he gives convincing reasons for this rearrangement of reputations. For half a century and more, historians and critics have parroted certain opinions without ever questioning their correctness. Rubinstein's bombshell will stimulate thought, and demonstrate that if absolute originality is to be taken as a measure of genius, Schubert and Chopin must be placed in the very front rank. We regret that no space remains for quotations, but the book (which Rubinstein himself wrote both in Russian and in German) has already been translated into English, and every one interested will read it himself. We will only add, therefore, that, besides the topics already touched upon, many others are briefly discussed, such as woman's failure as a composer, the utility of conservatories, the value of programme music, prodigies, editions of the classics, great pianists, the arrangement of the orchestra, church music, etc. There are also many admirable incidental remarks on famous pieces, as on the absurdity of calling a certain piece of Beethoven's "The Moonlight Sonata," and the author's brief "programme" for the movement in Chopin's sonata which follows the funeral march, and which, a chaotic mystery otherwise, gains a thrilling significance when we look on it, with Rubinstein, as "the midnight sighing of the wind over the graves in the cemetery." Nor can we refrain from noting with some personal satisfaction that Rubinstein puts Chopin above all other composers for the piano, and calls the collection of Preludes "the pearl of his works"—which agrees with a preference expressed in the *Nation* many years ago for Chopin's Preludes if by any chance all piano-forte music in the world excepting one volume were to be destroyed.

TWO BOOKS BY PROF. SHALER.

Nature and Man in America. By N. S. Shaler, Professor of Geology in Harvard University. New York: Charles Scribner's Sons. 1891.

The Story of Our Continent: A Reader in the Geography and Geology of North America for the Use of Schools. By N. S. Shaler. Boston: Ginn & Co. 1891.

In striking contrast to most of the popular books on geological subjects of one or two decades since, in which the author was apt to take an apologetic attitude towards Nature for fear of wounding the religious prejudices of his readers, Prof. Shaler says frankly, in the opening sentence of the preface to his 'Nature and Man in America,' "Modern Science unhappily appears to be in conflict with the religious traditions of our race." He avoids, however, a flippant attitude towards religion. He speaks in a certain tone of regret of the destruction of many of our ancient ideals, but believes that the study of nature can and will do much to replace that which it has overthrown.

"Half a century ago," he says, "Science appeared as the destroyer of faith and trust in the universe. It seems to me that we are now approaching the time when our knowledge will reaffirm the old belief which our fathers had in the essential control of a beneficent Providence. With each advance in our knowledge concerning the conditions which have brought men to their present state, we come to a fuller sense as to the order and system by which the processes of Nature have made men what they are. There is reason to hope that the faith of our children may be like that of our fathers—better, indeed, than the old faith, for it will rest on the firm foundations of our knowledge, rather than on the trust in the opinion of our elders."

His book is an admirable exposition of the latest views of modern science on the relations of organic life to its environment, treated not in the systematic and to many somewhat dry method of scientific treatises, but in the easy and charmingly colloquial style of which he is so easily the master. While his facts are drawn freely from the results of the work of others, a very important portion of the interesting and often singularly ingenious conclusions are undoubtedly his own, and possibly would not be subscribed to without reserve by all geologists. In the first half of the book he traces the effects that geological changes and consequent variations in the surface conditions of the earth, or in its geography, have had upon organic life and especially upon the human race. In so doing he gives an epitome of the geological history of our continent and of the underlying causes of its present geographical features. In the second half he speculates upon the political bearing which these features have had upon the development of the race.

Areas isolated by natural features were, before modern methods of transportation had practically destroyed all natural barriers, adapted to be the cradle of permanent and strong races. Europe has been in all time peculiarly divided up into such areas; hence the multiplicity of its political divisions and the fixity of race characteristics of the separate peoples which have inhabited them. North America, on the other hand, is unfitted to be the cradle-place of different peoples—its continent is in the main a geographical unit. As regards the beginning of life, the Americas appear to have been better constituted for the nurture of plant than of animal life. They have contributed but one animal to the domestic uses of civilized man, the wild turkey; while the plants which the New World has afforded, such as tobacco, maize, the potato, and tomato, have been sufficient to make something like a revolution in the economic conditions of our civilization. The human inhabitants of America Shaler regards, on geological as well as geographical and ethnological grounds, as of probable Asiatic provenance. The retrogression of the aboriginal inhabitants of the Mississippi Valley from the advanced conditions shown by the mound-builders to the nomadic habits which characterized them at the advent of the Europeans, he ascribes to an eastward migration of the buffalo, which, by furnishing an easy method of supporting life by hunting, discouraged the more laborious pursuits of agriculture.

Among effects produced by geographical conditions upon the European colonists may be mentioned that, to the isolation of the British between the coast on the east and the practically impassable barriers of the Appalachians on the west, Shaler ascribes the great development of maritime pursuits. As these barriers have been broken down by modern methods, and new fields have thus been thrown open to the enterprising youth of the country, commerce has been more and more neglected. Our author's view of the favorable part played by the African slave trade in the early development of our country is noticeable as advanced by one who, though brought up in the slave-holding region, has been most thoroughly identified with the North during his manhood. For the same reason, he is particularly well qualified to show, as he does, the effect of the soils upon the people living upon them as illustrated in the way in which the inhabitants of the

border States espoused in some cases the pro-slavery and in others the anti-slavery cause; and thus brings geology in direct contact with politics.

Reasoning from the same class of causes, he indulges in some interesting speculations as to the future. Canada he regards as destined by nature to become in time a part of our new political system. The idea which has often been advanced, that the Saxon race has physically deteriorated during its stay upon this continent, he considers as unfounded, and brings facts from his own observation during the war to show that the American has greater vitality and endurance than the European. He therefore concludes that our continent is, in its physiographic conditions, well suited for the development of northern Europeans, and that the people which will be developed here will possess those differences which, by their interaction, bring about the advance of the race.

This little book is intended, according to its preface, primarily for beginners in the study of geology; it would seem also to be full of interesting suggestions to the more advanced student, while the peculiar clearness and simplicity of its mode of presentation render it intelligible to the average reader who may not possess a technical knowledge of geology or biology.

'The Story of Our Continent' is another small volume by the same author, characterized far too modestly by its sub-title. It is devoted more exclusively to what might be called the geological and biological history of the geography of our continent, and touches but lightly upon the ethnographical and political speculations found in the first-mentioned volume. In so brief a space, no better exposition could be found of the best methods of the modern geography, which does not content itself, as did the school geographies of our youth, with a barren enumeration of the superficial features of the globe—its mountains, valleys, rivers, and oceans—and a dry statement of its political divisions and the peoples which inhabit them, but seeks the underlying causes of these features. To this end geography is obliged to call upon its sister science, geology, and learn from it the phases in its history to which these various features are due.

It is only within a comparatively recent period that the field of geological research has been sufficiently extended over the more mountainous and inaccessible portions of our continent to enable the geologist to reconstruct a tolerably complete history of its development, and even now there remain many gaps in that history yet to be filled. Mountainous regions form the favorite field of study for the geologist, for there alone the evidences of the critical phases in the orographic history of the globe, the great earth movements, can be detected. Moreover, although the high mountains of the world are, in their present form, of comparatively recent geological age, the mountainous regions have been the most permanent land-masses, and are therefore in one sense the most ancient geographical features of the globe. In the numerous incursions of the sea upon the land, during the earlier epochs of the earth's history, certain portions of these regions have always remained above the water, and from their abrasion have been formed the sediments which, first accumulating as sand or mud in the ocean bottoms, have later been consolidated into the sandstones and limestones which form the greater part of the present surface crust of the earth. These sediments naturally accumulated in greatest thickness near the shore-lines of the land-masses from which they came; hence we find that the geological column is there represented by a thickness of sedimentary rocks many times greater than that found in the great depressions like the Mississippi basin, which are far away from any great mountain uplifts, and which have often been entirely submerged under mediterranean seas. On this fact has been founded one of the most important theories of mountain building, which ascribes the uplifting force to the overloading of the crust in the immediate neighborhood of the mountains, which have been the scene of incessant changes, of constant and almost contemporaneous building up and wearing down. It is by the study of the successive and varied forms of land sculpture produced during these processes of change that modern physical geographers are enabled to trace out the history of the surface features of our land, as has been so admirably done for the river systems of Pennsylvania by Prof. Shaler's colleague, Prof. Wm. M. Davis of Harvard, in a recent memoir which has placed him in the front rank of physical geographers.

Prof. Shaler inclines rather to the biological than the physical side of geography in the little book under consideration, probably because this side has more to attract the attention and interest of the youthful students for whom it is intended. Although it necessarily goes over much of the same ground, it is by no means a repetition of the first-mentioned volume, and, when the same facts are introduced, they are described in a new and generally more detailed manner. The result is not only a model text-book, but one which may be read with interest and profit by a large class of readers whose school days have long since passed.

The Cruikshankian Momus. London: John C. Nimmo; New York: Dodd, Mead & Co.

The Humourist. 4 vols. London: John C. Nimmo; New York: Dodd, Mead & Co.

THE establishing of George Cruikshank as a famous artist, and of his works as classics, is going on apace, and is marked by the appearance of republications of some of his earlier works. Probably these are selected as being the more scarce and inaccessible. His work, from about 1840 to his death, was rather more commonly given to regularly published books, or to well-established periodicals, but before that time a large part of it was, as some of it was always, in the form of broadsides, sheets of caricature, frontispieces for music, and the like. A number of the ballads, songs, and bits of prose satire, published between 1791 and 1846, with frontispieces by George Cruikshank, his father Isaac, and his brother Robert, have been gathered by Mr. Nimmo and published in a large octavo volume, under the title 'The Cruikshankian Momus: Pictorial Broadsides and Humourous Song-Headings.' To bring all the pieces within the size of the page, some of the larger ones have been reduced in size. Thus, the etching to the "Lord of the Manor," No. 455 of Reid's catalogue, was nine and one-half inches long; it is reduced to five and three-fourths inches in the publication before us. They all seem to be process reproductions, perhaps from uncolored copies of the originals, and have all been colored by hand. Each colored plate is accompanied by its original literary matter, but there is no attempt at imitation of the original form. The print is large and clear, the pages uniform; tail-pieces, selected chiefly from George Cruikshank's different works (often much later than the ballads they here adorn), are inserted, and the whole is made into a book as handsome as the queer and fantastic colored pictures would allow.

It is an entertaining book for those who like to revive an epoch seemingly as far in the past as the time of the crusades. The text as well as the pictures will remind a man of fifty of many things that were antiquated, indeed, but still in use, in the days of his youth. Here is George Colman's ballad, "The Barber's Wedding," and his admirable song beginning—

> "One night came on a hurricane,
> The sea was mountains rolling,
> When Barney Buntline turned his quid
> And said to Billy Bowling:
> 'A strong sou'wester's blowing, Bill;
> Hark! don't you hear it roar now?
> Lord help 'em! how I pities all
> Unhappy folks on shore now.'"

And here is "Paddy Carey," which was included in many a collection of "songs and music" half a century ago. There is something that need not be forgotten in these old bits of broad farce, and the pictures are as good as the verses in themselves, and have the additional value of being associated with the whole body of work of him whom the publishers of this book call rightly "the great George."

A publication of greater importance in the same line from the same publisher is 'The Humourist,' a work first published in four volumes, small 12mo, in 1819–'21, now reissued in four much larger volumes, with heavy laid paper and large type. This work is a most extraordinary collection of stories, anecdotes, poems, and verses which are hardly poems, all humorous in intention. Here are the jokes that are scarcely jokes, like this—that Capt. Silk had a good name for a soldier, because "*Silk* can never be *Worsted*." Here are the jokes which are centuries old, like Francis the First's conversation with his jester about Charles the Fifth passing through France; and here are the jokes that come down to us from Greek antiquity, like Agesilaus's remark about the walls of Sparta. As for verses, here are many of those "comic and amusing" selections which the "speech-books" of the school-boy made familiar to the generations that are now gray-haired; here is "The Three Black Crows," certainly an excellent piece of simple composition and of good story-telling in rhyme and metre; here is "Monsieur Tonson Come Again"; here is "Bad Company"—the story of the magpie and Tom More; here is "John Gilpin"; here is Mrs. Thrale's "The Three Warnings," and Southey's "The Well of St. Keyne," and that extraordinary piece of George Colman's, "The Elder Brother," which one finds also in Colman's 'Broad Grins.' These four volumes would be a very cyclopædia of old-fashioned fun, but that there is no index nor contents whereby to find anything at need.

The forty colored etchings by George Cruikshank are of his early prime, coming just after the savage political caricatures, the assaults on King George IV. and those equally unmeasured on Queen Caroline, and just before the famous 'Points of Humour.' The plates, on being compared with a good original set, certainly lose a good deal; they are inferior in line, as if reproduced by photographic process, and the coloring is less vigorous—much paler and less forcible—as, indeed, might have been expected. Good colorers by hand of book-illustrations are not common nowadays. But an original copy of the book is a costly rarity now, and these are good Cruikshank pictures after all.

Annals of My Early Life, 1806–1846. With Occasional Compositions in Latin and English verse. By Charles Wordsworth, D.D., D.C.L., Bishop of St. Andrew's and Fellow of Winchester College. Longmans, Green & Co. 1891.

Charles Wordsworth is a nephew of the poet, a son of Christopher, the famous Master of Trinity, a younger brother of Christopher, the eloquent Bishop of Lincoln, and an uncle of the present Bishop of Salisbury. Born in 1806, he still lives, and contemplates a volume of later 'Annals' at no distant day. He had been wiser if he had put all he had to say into one volume, and it need have been no bigger than this, from which a great many letters of congratulation and approval sent to him on his preferments and discourses and Greek Grammar might safely have been omitted, together with all the Greek and Latin poetry. This, however, reveals the man as does no other part, an admirable scholar and by clearest right one of the New Testament Company for the Revision of the Authorized Version; but, as unmistakably, a pedant of such inordinate vanity as the modern world seldom has furnished it for its amused compassion. The Harrow Prize Poem in Latin and the Oxford Prize Poem in Greek are given in full, as, also, is the Latin Prize Essay. But the printing of these back numbers is pure self-effacement in comparison with the four pages of notes on the Prize Essay, which range through the whole length and breadth of classic literature, but are of no imaginable use to any living soul.

His religious character is frankly revealed at the outset when he relates that he was not baptized till six months after his birth, and confesses that "it has always been a cause of some uneasiness." A custom of baptism before birth at one time acquired some prevalence, and Bishop Wordsworth may approve of that. He was educated at Harrow and Christ Church, Oxford, and at either place distinguished himself as much in athletics as in study, and has set down his victories with as much care and pride in the one thing as in the other. In fact,

> "He nothing common did, or mean,
> Upon that memorable scene,"

in his own estimation, looking backward on it from the summit of his years. We have such entries as "Walked with Twistleton," "Wine with Popham," "Breakfast with Phillimore." There is something very naïve in his self-approval for never having given supper parties or had cards in his own rooms, though he accepted invitations to supper and cards from other men. An amusing circumstance is his trouble with a chimney that had smoked 300 years. He went to Dr. Pusey and requested his opinion on the passage in Psalm cxix. 93, "I am become like a bottle in the smoke," but got no help from him. Of Tennyson's prize poem of 1829, "Timbuctoo," he wrote to his brother who was at Cambridge, "If such an exercise had been sent up at Oxford, the author would have had a better chance of being rusticated—with a view of his passing a few months in a lunatic asylum—than of obtaining the prize."

The most interesting pages are those giving an account of his Oxford pupils in 1830; and it is a fact very honorable to him that a group of such remarkable men came to him for tuition. They were James R. Hope (who became Mr. Hope-Scott by marriage with Sir Walter's grandchild, Lockhart's daughter), a Parliamentary lawyer of very great abilities, who turned Romanist (it is said) from studying the subject of Papal aggression; Cardinal Manning, whom Wordsworth had known from childhood and has still for a friend; W. K. Hamilton, the future Bishop of Salisbury; Sir Francis Doyle, afterwards Professor of Poetry at Oxford; Sir Thomas Acland, Lord Lincoln, Charles J. Canning, who afterwards as Viscount Canning was Governor-General of India, and last, and yet first, William E. Gladstone, of whom the Bishop gives some interesting recollections. He was confident in 1830 that Gladstone would some day be Prime Minister, but he little thought it would be as a Liberal, as then he was the stiffest of "those stern and unbending Tories" of whom he very soon became "the rising hope." Several of Gladstone's letters are given, which foreshadow the versatility of the historic man; and one of them, relating how he failed to get the Ireland Scholarship, is more humorous than we imagined him ever to have been.

From Oxford he went to Winchester as second master in 1834, and while he claims for himself certain measures of reform anticipating Arnold's at Rugby on similar lines, his "Reform in Greek Grammar" is the principal ground on which he bases his confidence of the approval of mankind. It would seem to have met with heartiest appreciation. The young man's eye to the main chance was very keen. He made it a rule to get acquainted with as many distinguished persons, or persons likely to be distinguished, as possible; consequently there was a tremendous rally in his favor when he sought the Winchester vacancy, and he gives a formidable list of the men who wrote him letters of recommendation and the offices which they have filled. Like every English ecclesiastical biography, the book reeks with the scent of place-hunting and patronage. The reforms that have made the English civil service so much better than ours have left the abuses of the Church to keep in countenance those of our politics. A postscript on the Oxford movement adds little to what we already knew, but there is a characteristic and delicious passage in which the author relates his efforts to soothe Newman's distress of mind when, after the Tract 90 business, he was wavering in his attachment to the Church of England. Wordsworth wrote him feelingly, "at the same time offering to send him a copy of Wetstein's Greek Testament (2 vols., folio, bound in Russia by Kalthoeber), one of the handsomest books I had in my library." Newman accepted the gift, but, if it soothed his feelings, it was only for a little time.

The Soft Porcelain of Sèvres, with an Historical Introduction by Édouard Garnier. London: John C. Nimmo. 1891. Folio, 32 pages of text and 50 plates in colors.

This is one of those books which furnish their reviewers with the materials of their own criticism, and thereby give cause to the profane to scoff at all reviewing. The whole story of the attempts at imitating in Europe Oriental porcelain, the consequent invention of different "soft" porcelains, and the final happening on the material needed for "hard" porcelain, is told in these pages (1-17), not at very great length, but sufficiently. Then follows, in chapter iv., an account of the composition of the soft porcelain of Sèvres and the peculiarities of the decoration of the early pieces of this ware. Chapter v. contains a list of the chronological marks of the porcelain from 1753 to 1792, and also the private marks of the painters, with their names and mention of the kind of work done by each. And so the too brief text terminates; for there is no attempt at a serious history of the manufacture, no quoting, and but little citation of documents, and no greater fulness of treatment in this monograph than might be looked for in a general history of porcelain, or even in a general history of ceramics. The obvious advantage which this treatise has over others is in its being the latest. Every year increases our clearness of vision, in these archæological matters, and every fresh writer who takes his work seriously is able to reach a more intelligible and useful result. In this connection we may note a correction which the author makes in the tables of date-marks: J., which corresponds to 1762, he says, must be inserted, thus changing all the dates that follow.

We are not told who has translated Mr. Garnier's French text, but it has been well rendered into English. There is also one really important service done the student: the French terms of the trade, *caillouté*, *à culots*, *mignonette shape*, are explained, either by full definition in words or by reference to the pictured form. Some terms of obvious meaning so far as the mere words go, such as *carrée*, *en éventail*, etc., need explanation still in their use as describing pieces of porcelain, and these also are made clear in this book by the pictures which illustrate them. Nor is this a light matter; no French dictionary, glossary, or special work on decorative art exists, it is safe to say, in which these terms are regularly defined; their meaning is to be got at only by long study and comparison. It is also a pleasure to find the distinction made clear, in print which all may read, between the burnishing *au clou* of the gilding of earlier pieces and the agate burnishing of the later ones.

As to the fifty plates and the 500 pictures of rare old porcelain which they contain, it is very hard to speak with confidence, because we like them very much as to their general effect, while they are not delicate nor beautiful on closer examination. They are printed in full color and gold on a very glossy paper, and the effect produced is very like the real porcelain. Perhaps they could hardly be better in this way; but there is an ugly outlining in a purplish-brown ink which shows too much in places, and frequent slips in the registering of the different printings, which in some cases is very noticeable indeed. The plates are, consequently, not very delicate, however fine and rich they appear. They do, however, give a good idea of the look of the ware; and the splendid vases of the Jones collection at South Kensington and those of the Double collection being well portrayed, we must infer the same of the priceless pieces of the Rothschild and Buckingham Palace collections, which are less well known.

England and the English in the Eighteenth Century. By Wm. Connor Sydney. 2 vols., pp. 361, 407. Macmillan & Co. 1891.

In one of the Bampton lectures delivered at Oxford in 1871, Canon Curteis made the following comprehensive charge against the eighteenth century:

"There is probably no one now living who does not congratulate himself that his lot was not cast in the eighteenth century. It has become by general consent an object for ridicule and sarcasm. Its very dress and airs had something about them which irresistibly moves a smile. Its literature—with some noble exceptions—stands neglected upon our shelves. Its poetry has lost all power to enkindle us; its science is exploded, its taste condemned."

This view of the eighteenth century commends itself to Mr. Sydney, and he has col-

ected a mass of information, from various authorities on the period, all of which tends to trengthen and confirm the position taken by he Bampton lecturer. There is, of course, nother side to this, as to most other questions; ut of the other side Mr. Sydney takes no account. The evidence he has gathered together s decidedly interesting, and, although its arangement is open to improvement, the general esult is a readable and valuable contribution o the literature of the subject.

If a large measure of importance is attached o the comforts and conveniences of life, it is ot difficult to make out a strong case against he eighteenth century. From this point of iew the "good old times" were certainly ery bad times. Gangs of robbers infested the treets of London and all the main roads leadng into the city, and the watchmen of the eriod were utterly unable to cope with these uffians or to protect the lives and property of he inhabitants. The streets were unpaved, nd were almost impassable in bad weather, so hat for long periods there was no communicaion between Kensington and Westminster; hile in the country roads the ruts were four eet deep even in summer. There were no dewalks, so that foot passengers were liable o be covered with mud or run over by every assing vehicle, and this was particularly true f those who were compelled by force to 'give" the wall instead of "taking" it. Even s late as 1797, there was only one umbrella in he town of Cambridge, and this precious article vas kept at a certain shop and let out by the our. The fashions, in dress and other matters, seem very absurd to us, as ours will probbly seem to our descendants. Horace Walole declares that the beaux used to carry two vatches, one to tell what the time *was* and the ther what it was *not*. Ladies were obliged to it on stools in coaches, being unable to occupy he usual seats on account of the height of heir head-dresses. As to their gowns, Goldmith says: "A lady's train is not bought but t some expense, and after it has swept the ublic walks for a few evenings, is fit to be orn no longer." Men's hats were very exensive, so much so that when Dean Swift nade his will, he solemnly left his best beaver at to one friend and his second best to another. Rogers used to tell how he had seen Haydn playing at a concert in a tie wig, with sword buckled at his side; and still stranger must Garrick have appeared acting *Othello* in regimental suit of George II.'s body-guard, with a flowing Ramillies wig. Mrs. Yates played *Lady Macbeth* in a hoop eight yards n circumference, while another lady's conception of *Cleopatra* included a hooped petticoat, a stomacher, and a powdered comnode.

The standard of learning was no doubt lower han it now is, especially among the fair sex, nd at the universities this difference was very marked. When Lord Eldon was examined in Hebrew and history for his degree at Oxford n 1770, he was asked only two questions: "What is the Hebrew for the place of a skull?" and "Who founded University College?" and having given satisfactory answers, he was told that he was competent in both subjects! Comparisons of the moral condition of a nation at different periods in its history are apt to be misleading, but without going so far as Lady M. W. Montagu, who wrote that certain statesmen were preparing a bill "for the purpose of excising the word 'not' from the decalogue and inserting it in every clause in the creed," it may be admitted that England in the eighteenth century was quite as immoral as France. Gambling, duelling, and drunkenness were the fashionable follies of the age, and it was such men as Pitt and Sheridan that made these follies fashionable. Perjury was a regular occupation, and its professors walked about Westminster Hall with straws in their shoes to denote their calling. Political morality was at a very low ebb. Bribery was universal. Horace Walpole said that England was absolutely controlled by some two hundred noblemen, who received more from the Government than they paid to it; and Southey wrote: "In order that the fidelity of political supporters might be secured, every office in the State, from the Prime Minister down to the humblest fellow in the Post-office or the Custom-house, was conferred." Truly a lamentable state of things, but not without a close parallel in this glorious nineteenth century of ours. Commissions in the army were bestowed on children and even on young ladies of favored families, and the brutalities practised by press-gangs in recruiting for the navy are not pleasant reading. The country clergymen were no doubt lacking in religious zeal, and many of them were more interested in the pursuit of foxes than in the cure of souls. Arthur Young quotes the following advertisement from a newspaper of the period: "Wanted, a curacy in a good sporting country where the duty is light and the neighborhood convivial." The few really learned divines preached over the heads of their audiences, and gave Wesley and Whitefield an advantage in reaching the hearts of the masses similar to that claimed for the Salvation Army preachers of to-day. In the words of Phillimore: "The profound speculations and subtle logic of Clarke and Butler were not intended for the colliers down whose blackened cheeks the tears furrowed channels as they listened for the first time to Wesley."

Of all these things, and of many more, Mr. Sydney discourses at length, and the picture he draws of England in the last century is certainly not an attractive one. So far as his evidence goes, it makes for Canon Curteis, but it is only necessary to consider the really great movements of the century in scientific and political thought, and the great men whose names are associated with them, in order to reach a more accurate and a fairer conclusion.

We note very few errors. The attempt of the young Pretender took place thirty years, not twenty-five, after that of the Chevalier St. George. Milton did *not* write:

"To-morrow to fresh *fields* and pastures new,"

although the line is generally so misquoted, nor did Johnson write:

"Toil, envy, want, the *garret* and the jail."

BOOKS OF THE WEEK.

Bacon, Rev. B. W. The Genesis of Genesis. Hartford: The *Student* Publishing Co. $2.50.
Bird, Isabella L. Journeys in Persia and Kurdistan. 2 vols. London: John Murray; New York: G. P. Putnam's Sons. $6.50.
Chaplin, Stewart. Suspension of the Power of Alienation, etc. Baker, Voorhis & Co. $4.50.
Donelson, Katharine. Rodger Latimer's Mistake. Chicago: Laird & Lee. $1.

READY TO-DAY:

JAMES'S PSYCHOLOGY

BRIEFER COURSE.

AMERICAN SCIENCE SERIES. 12mo, [illegible] Teacher's price, $1.60; by mail, $1.74.

This work is an abridgment and rewriting (two-thirds of the volume is either new or rewritten) by Prof. James of his 'Principles of Psychology,' and has been prepared as more directly available for the class-room than the larger book.

HENRY HOLT & CO., N. Y.

ARTISTIC PRESENTS of PERMANENT VALUE.

Fine Pictures at Moderate Prices

HIGH-CLASS

Etchings, Engravings, and Water Colors.

FREDERICK KEPPEL & CO., PARIS, and 20 East 16th St., between Union Square and Fifth Ave.

Foreign Books. Subscription to foreign periodicals, Tauchnitz British Authors. Catalogues on application. CARL SCHOENHOF, 144 Tremont St., Boston.

Letters of Credit. We buy and sell bills of exchange on and make Cable Transfers of money to Europe, Australia, and the West Indies; also make Collections and issue Commercial and Travelers' Credits, available in all parts of the world.

Brown Brothers & Co., Bankers,

NO. 59 WALL STREET, NEW YORK.

HOTEL AURORA, RIVA DEGLI Schiavoni, Venice, long and favorably known by Americans, has been enlarged and refitted. It offers well warmed and sunny rooms for the winter, and at all seasons a position unequalled, excellent table and willing service. Terms are moderate, and include servants' fees.

The Nation.

NEW YORK, THURSDAY, JANUARY 21, 1892.

The Week.

WE give in another column a weighty letter from a valued correspondent at Valparaiso, who is vouched for, as will be seen, by several citizens of the United States, as well as by his name—a national inheritance. Apart from its direct testimony to the unwise and dangerous spirit which has characterized the actions of our naval and diplomatic officers in Chili, it is a valuable witness to the humiliation which such conduct brings upon self-respecting Americans on the scene. It is largely for their sakes, it is said, to increase their sense of security when abroad and their pride in the reverence shown the American flag in foreign lands, that bluster and bravado are necessary in our intercourse with other nations. It is a striking commentary on this doctrine that one of the earliest results of its application is to bring a mortified protest and appeal to the American people from those very foreign residents who were expected to be frantic with patriotic joy over it.

Such remarks as those of the Rev. Dr. Allis, reported in the *World* of Saturday, ought to have great weight with President Harrison. Dr. Allis is a Presbyterian missionary in Chili, now in this country, and he quoted with approval and endorsement a letter he had just received from an American resident in Valparaiso, which said:

"Minister Egan and Consul McCreery have made a mountain out of a mole-hill, and would only be too glad to stir up a fight. The sooner Egan and McCreery are recalled, the better it will be for the good name of the United States. We are not ashamed that we are Yankees, but we are heartily ashamed of what our representatives on this coast are doing and reporting to the home Government. Chili will do what is fair in international questions between her and the United States, and it will ill befit the United States to play the bully much longer."

"The writer of that," said Dr. Allis, "fully understands the situation." He also distinctly intimated that Egan had tampered with the official communications which it was his duty to transmit to the Chilian Government. We understand that other Presbyterian missionaries are ready to testify to Egan's scandalous life and diplomatic improprieties in Chili. Now, President Harrison is himself an eminent Presbyterian, and thus has added reason for believing these missionaries of his own church to be honest and intelligent witnesses. He knows, too, that an unprovoked war with Chili would put an immediate if not permanent end to Presbyterian missions in that country, and would greatly cripple them throughout all South America. Is he, as a Presbyterian elder, going to present to the world the grotesque spectacle of first shelling and burning the cities of the Chilians, and then contributing to send them preachers of the Gospel of the Prince of Peace?

The more we reflect upon it, the more difficult we find it to believe that the President could have been correctly understood when he was reported to have declared that the trouble with Chili was not one that could be arbitrated. In his last annual message he urged the Senate to ratify the arbitration treaty adopted by the Pan-American Conference—a treaty which, as he says, this Government took the initiative in bringing about; and, when he first transmitted it to Congress, he declared that its ratification would "constitute one of the happiest and most hopeful incidents in the history of the Western Hemisphere." This treaty, which asseverates that "war is the most cruel, the most fruitless, and the most dangerous expedient for the settlement of international differences," and proclaims that "the Republics of North, Central, and South America hereby adopt arbitration as a principle of American international law for the settlement of the differences, disputes, or controversies that may arise between two or more of them," positively stipulates that "arbitration shall be obligatory in all controversies concerning *diplomatic and consular privileges*, boundaries, territories, *indemnities*, the right of navigation, and the validity, construction, and enforcement of treaties." Further than this, it stipulates that "arbitration shall be equally obligatory in all other cases than those mentioned, whatever may be their origin, nature, or object, with the single exception mentioned in the next following article." That exception is where the matter in controversy may, in the judgment of one of the nations, "imperil its independence"; and even in this case arbitration is made "obligatory upon the adversary Power."

Did the President believe, when he advised the incorporation of these stipulations in the law of the land, that he was seeking to saddle the country with degrading conditions? Was his action wholly deceptive when he renewed that advice? or has he been incorrectly reported? It will not do to say that, because the provisions of the treaty have not been formally ratified, they are irrelevant, at least as regards the President, to the present situation. As approved by the representatives of this Government and advocated by the President, they are a sham and a fraud if the principle they contain is to be scouted and rejected on the first opportunity. It is true that the representatives of some of the Central American States had hardly left the conference when their Governments went to war, as if they were trying to do all the fighting they could before the treaty was ratified. But the people of the United States, living in a "Christian country and in a Christian era," ought not to be in such haste to give the lie to their professions by their conduct. If it be true that Chili, as the President is reported to have suggested, has been "spitting" in our faces, she ought, in the name of common decency, to apologize. Who it is that has been indulging in that salivary performance we are not informed, unless it is Señor Matta, the late Minister for Foreign Affairs, of whose utterances some at least have been withdrawn by his successor. But assuming that there are other and actual grounds for demanding an apology, is it to be supposed that arbitrators would not so find? The only reason that could exist for anticipating such a result would be the consciousness that the grounds for the demand were insufficient—an admission which would be fatal to the refusal.

If the Navy Department is not careful, the Jingo policy which it is now pursuing will have an effect upon appropriations quite the reverse of that which is evidently intended and expected, unless, indeed, the American people want a navy for the purpose of swagger and bullying. If Commander Evans's despatch about the refugees was to be published at all at the present time, it should have been given out only with a censure. Our naval officers do not represent the Government of the United States in its foreign intercourse; and while this is true as a general rule, it is doubly true where such officers are in the port of a country in which we have a duly accredited diplomatic agent. Commander Evans's comment upon the action of the Chilian Minister of Foreign Affairs—that "it seems unworthy of the representative of a serious government"—is as cheap and ill-mannered as his request to the American Minister to send an insolent message to the Minister of Foreign Affairs is a flagrant transgression of the bounds of his authority. What Egan has done under the instructions of this new Secretary of State we are not informed, but we shall be surprised, little as we expect from him, if he has not refused to obey them. If the Navy Department intends, by publishing Commander Evans's despatch, to approve and endorse it, we can only apply to that Department the Commander's own language—that its action, we will not say "seems," but is, "unworthy of the representative of a serious government." But if the reports that come from Washington be true, we have no longer a "serious government." We have instead, certainly as regards the political personages who are now vociferating their feelings to the public, a mob panting to "clean out" the

Chilians, just as the mobs at Rock Springs and elsewhere "cleaned out" the Chinese.

The action of the Navy Department in publishing Commander Evans's despatch without disapproval is rendered only the more censurable when we consider that it relates to the carrying away of the refugees who were in the American Legation. This is a subject on which the Government of the United States is bound to act with exceptional courtesy, since it is exercising in respect to Chili a right which it would never admit if the case were reversed. Extracts from the records of our Government published in Wharton's Digest show that, while asylum has always been granted by foreign Ministers in Spanish America, it has always been denounced by the United States as an anachronism and abuse, to be tolerated only in exceptional cases. Webster, Marcy, Seward, and Fish have all concurred in discouraging it, and in the printed personal instructions to our diplomatic agents (Wharton, § 104) we find the following standard rule:

"In some countries, where frequent insurrections occur, and consequent instability of government exists, the practice of extra-territorial asylum has become so firmly established that it is often invoked by unsuccessful insurgents, and is practically recognized by the local government, to the extent even of respecting the premises of a consulate in which such fugitives may take refuge. This Government does not sanction the usage, and enjoins upon its representatives in such countries the avoidance of all pretexts for its exercise. While indisposed to direct its agents to deny temporary shelter to any person whose life may be threatened by mob violence, it deems it proper to instruct its representatives that it will not countenance them in any attempts to knowingly harbor offenders against the laws from the pursuit of the legitimate agents of justice."

Among a series of evening lectures by distinguished members of the bar, on various legal topics, to be delivered to the Columbia College law students, one is to be given by Mr. C. C. Beaman, on the Geneva Arbitration—a subject on which Mr. Beaman is a well-known authority. But the Geneva Arbitration has now passed into history. All that can be or ever was said about it can be found in print by any one who wishes to study it, either as an historical episode or a legal illustration. There were giants in those days on both sides of the water, who expended on it freely all the learning and eloquence and acuteness at their command. We would, therefore, suggest that Mr. Beaman should substitute for the Geneva Arbitration the Chilian Trouble. We shall, by the time he delivers his lecture, it is true, either have settled our dispute with Chili peaceably, or be engaged in a bloody war with her. But no matter which way the negotiations now pending may terminate, Mr. Beaman, in taking the matter up, will be doing not only the Columbia College law students, but the public at large, the inestimable service of saving the country of Webster, and Adams, and Marcy, and Seward from the disgrace of going to war with a small State without any public discussion whatever of either the law or morality of the quarrel. It is at this moment seriously proposed to attack Chili, bombard and blockade her ports, and, if need be, kill thousands of her people, and make the American name for ever odious to them, without any public examination by any competent hand of the nature and foundation of our complaint against her; without any publication of the correspondence between her Government and ours; without the slightest discussion, even in the newspapers, of the facts of the case, or any attempt whatever to take the judgment of the moral and religious public on its merits. This step, if taken, will be taken solely under the stimulation, as far as we can now see, of naval officers, contractors, and nitrate speculators, and of a fugitive from foreign justice who has been and is our representative in Chili at this critical period, of whose character and capacity the American public knows nothing whatever, but whose word must be the President's main reliance when he orders the work of slaughter to begin. In this deplorable condition of affairs a leading university like Columbia could render no greater service than to employ a competent lawyer to restate, *ex cathedrâ*, what the traditions of American diplomacy are, apropos of this lamentable episode.

The contest over the Philadelphia delegates to the Republican National Convention is putting a very severe strain upon the much-talked-of "harmony" between President Harrison and Mr. Blaine. The victory of the Secretary's friends was complete, and they "rubbed it in" by adopting resolutions in the district where the Federal office-holders had made the hardest fight for the President, declaring that "it is apparent to the most casual observer that the overwhelming sentiment of the Republican party earnestly demands the nomination of Hon. James G. Blaine for President of the United States," and instructing the delegates to vote for his nomination and use all honorable efforts to secure the same. It seems equally plain that the entire delegation from Pennsylvania will be for Blaine, no matter how hard Harrison may try to secure support by the use of the Federal patronage. Nor is this the most serious feature of the matter for the President. The Secretary's friends are angry at Mr. Harrison's course. Not only, therefore, is it true, as the Philadelphia *Inquirer* says, that "from one end of the country to the other the news will go forth that Blaine has won a great victory, and the result be set forth as the first great defeat of President Harrison," but, in the opinion of this excellent Republican authority, while in the natural drift of things the delegation elected on Wednesday week would have supported Harrison next to Blaine, "the contest has aroused so many antagonisms that it is impossible to tell what it may do should Blaine decline to receive its support."

Gen. H. V. Boynton believes in following up a rascal when he gets on his track, and he is still pursuing Cox, the illiterate saloon-keeper who has organized the Republican Tammany in Cincinnati and made himself the virtual ruler of that great city. Although defeated in the attempt to substitute Foraker for Sherman in the United States Senate, Cox and his gang are at work again after their usual manner, the object this time being to secure control of the Ohio delegation to the Republican National Convention. They are using Mr. Blaine's name to help on their scheme, but this is only part of the fraud, as they do not expect him to be the candidate, but can fool the people more easily by pretending to be for him. Gen. Boynton makes a thorough exposure of the plot in an article published in the Washington *Post*. "The real question," he says, "is whether a gang, such as has been described, with the large majority of the Republican voters of the State against them, can, by the use of the machine which they have captured by stealth, and by employing deceit, and fraud, and confidence games, and by hypocritical conjuring with a great name, capture such a State as Ohio, and secure the power to cast her forty-six votes in the next National Convention." As in the Senatorial contest, the stronghold of the conspiracy is Cincinnati. Gen. Boynton declares that eight out of ten of the Republicans of that city are opposed to this degraded gang, but that they "are, nevertheless, at present prostrate before it through the gang's possession of the machine."

The three Republican Senators of this State—Messrs. Saxton, O'Connor, and Erwin—whom the Lieutenant-Governor, Mr. Sheehan, has declared to be in contempt for refusing to vote on the Enumeration Bill, announce their determination not to purge themselves of that contempt by apologizing. We trust that they will adhere to that resolution. Mr. Sheehan's absurd conduct, which is precisely what was to have been expected of a ward politician of his calibre, is calculated to injure no one except the Democratic party. Taken in connection with the seat-stealing performances, it is making valuable capital for the Republicans, and will help them greatly in the next campaign. In fact, from the moment that the State Canvassing Board gave the Democrats control of the Senate by stealing a seat, Messrs. Sheehan, Roesch, and Cantor have acted as if the Senate Chamber were a mere branch of Tammany Hall, to be controlled by them on regulation Tammany methods. They have adopted rules to suit themselves, are passing measures

without examination either in the Senate or in committee, and are threatening with contempt, fine, and imprisonment those Republican Senators who oppose their rowdy proceedings. It will be a wise policy for the Republicans to give them plenty of rope.

Mr. Geo. Fred. Williams's speech at the Reform Club banquet on Saturday evening was pitched in the right key and was very telling. "I owe allegiance to my party," he said, "and my party owes allegiance to me." This was a fair statement of the contract made by and with the young men of Republican antecedents in Massachusetts who have given that State, in two consecutive elections, to the Democratic party. The Democratic party did pledge itself to tariff reform in its last national platform. It did not pledge itself to the free coinage of silver. On such a platform it received the support, and now holds the allegiance, of Mr. Williams, Gov. Russell, Mayor Matthews, and their associates. But it owes allegiance to them in the sense of remaining true to its pledges. There is nothing more hopeful to the party in its length and breadth than its gain in New England since the last Presidential election. There is a fair prospect that it may carry all the New England States except Maine and Vermont this year. But it can do so only by keeping the allegiance that it owes to the men who, like Mr. Williams, joined it for the sake of principle, and will adhere to it only so long as it adheres to its principles.

Mr. Sherman Hoar of Massachusetts has introduced a bill giving all postmasters hereafter appointed tenure of office during good behavior, and providing for promotion of postmasters of the first, second, and third classes from one post-office to another. The passage of the bill would do away with one of the greatest abuses in our civil service. The postmasters are by far the largest class of Government officers, and it is the class which increases most rapidly. There are now 64,329 postmasters of all classes, of whom only 2,942 are appointed by the President, and the number grows every year with the growth and spread of population. The term of office of the Presidential postmasters is four years, which may be cut short by removal or suspension "according to law." As a general rule, all postmasters appointed by the President and Postmaster-General of one party are removed, for one cause or another, when the President and Postmaster-General of another party come into office. The effect of this on the service need not be pointed out to any business man. Everybody knows that insecurity of tenure makes the highest efficiency difficult if not impossible. In the case of the American postmaster, however, not only does insecurity of tenure render him necessarily less efficient by acting on his morale, but it converts him into a working politician, thus seriously distracting his attention from the duties for the proper discharge of which he is paid, not by one party only, but by the whole American people. No post-office system can reach a very high standard which is manned in this way. There is, however, another feature in the system which is nearly as bad. When a new administration comes into power, no matter what the pressure of really important questions of home or foreign policy may be, it is impossible for the President or the Postmaster-General to give any attention to them until the 64,000 postmasters have been changed. Weeks on weeks of the most valuable time are spent in this ridiculous work. The spectacle, besides being ridiculous, however, is a very humiliating one for a great commercial nation. If Mr. Hoar can end it, he will be one of the greatest of recent public benefactors.

Gov. McKinley made a little speech on Thursday before an agricultural society in Ohio, in which he brandished the club over the New England woollen manufacturers once more, saying that there could be no tax on coats if there was no tax on wool, or words to that effect. This threat has been used so many times and with such success that McKinley, Lawrence, and Delano fancy that it can never fail. They have never imagined a time or an occasion when the people of the United States—the great body of consumers—would take the matter into their own hands. They have contemplated only two very small classes as having any interest in the subject or as worth consulting—the handful of wool-growers and the handful of woollen manufacturers. But the time and the occasion that they never looked forward to has come. There is now a House of Representatives in which the threat of the wool-growers is of no more consequence than was the threat of the quinine-men years ago that they would smash things if the duty on quinine was repealed. Smash as much as you please, gentlemen. You cannot smash too much for us. But as a matter of sober truth your power of smashing is very slight. There will be a fair measure of protection left for the woollen manufacturers in spite of all the smashing you can do. This will be left because public opinion is not ripe for free woollens, but is ripe for free wool.

The President's selection of United States District Judge McCormick of Texas as Judge of the new Circuit Court for the States of Texas, Louisiana, Mississippi, Alabama, Florida, and Georgia is heartily commended by the local press of his State. He has always been a Republican, but at the same time so liberal in his views that he was once elected to the Texas Senate largely by the votes of Democrats over a narrow-minded member of his own party. In 1879 he was appointed Judge of the District Court of the United States. Shortly after the war he had served as Judge of a State court. The Galveston *News* says that "as both State and Federal Judge he was never suspected of mixing judgment with partisanship. As a State Senator he so far sank the partisan in the discriminating and diligent legislator as to command the admiration and respect of his fellow-Senators, and elicit the unqualified approbation of his constituents."

The death of the Duke of Clarence has really little importance except to his family and friends. From the political point of view it may be considered a distinct gain for the British monarchy, as the next brother is very much superior in force of character and mental ability. The possible succession of the Duke of Clarence, in these days of Radical criticism, has, in fact, ever since he reached manhood and came under popular observation, been viewed with more or less anxiety even by the stanchest supporters of the throne.

A Belgian law of August 9, 1889, which sought to provide cheap and sanitary homes for working people, was the subject of a speech by the Prime Minister December 4, giving an account of its methods and results. Its chief feature is the almost complete preservation of private initiative, thus marking it off from other legislation of the kind, and from such flatly Socialistic proposals as those lately put forth in England by Mr. Chamberlain. Under the law the intervention of the Government is limited to advances from the national savings bank to individual workingmen or to building societies at 2½ and 3 per cent., and in every case amply secured by mortgages, and to freeing property obtained under the terms of the law from certain kinds of taxation, and from liability to be lost to the family in case the owner dies before having completed his payments. The loans are made payable after a number of years, varying from ten to twenty-five, and at varying rates of annual, monthly, or weekly payment. A mixed plan is also possible by which a workingman gets an insurance upon his life by the payment of a slight additional sum. M. Beernaert stated that in the scarcely eight months of the law's full operation $33,300 had been loaned at 2½ per cent, and $19,360 at 3 per cent., mostly to individual workingmen, while thirteen building societies had been organized, in addition to those already in existence and capable of receiving the benefits of the law. Belgium has had so unpleasant a prominence in the labor question, what with repeated strikes on an enormous scale and anarchistic outbreaks, that it is gratifying to record a promising movement of this kind.

NAVALISM.

THE great curse of Europe to-day, and especially the curse of those countries of Europe in which the sovereign plumes himself on being before all things a soldier, is the curse which is known as "militarism." What "militarism" means is the influence exerted on society and Government by the existence of an immense army, with thirty or forty thousand officers, whose profession is fighting, to whom peace is full of tedium and disgust, and to whom war brings not only practice in their calling, but a rapid advance towards the highest honors the State has to bestow. In order, too, to keep these men in suitable fighting condition, as Mr. Lecky, the historian, has so well pointed out, the sentiment of "honor"—that is, of extreme susceptibility to insult and of readiness to punish insult by bloodshed—has to be sedulously cultivated in them. They have, in fact, to take as tender care of their reputation for courage as a woman has of her reputation for modesty. In the peculiar condition of Europe to-day, the respectability of each State among its fellows (and, indeed, one may say, its very existence) is dependent on keeping these men in good humor. The Government is, in a certain degree, compelled to shape its foreign policy under their code. It has to be as touchy as they are and as ready to avenge slights and impertinences. It cannot safely make any concession or pass over any incivility which would in the mess-rooms be considered a good cause for a fight. It may be safely asserted that to-day the relations of France and Germany are controlled by their respective armies far more than by their respective foreign offices or by public opinion. This it is which keeps the European air so full of war rumors, and keeps the European business world in such a constant tremble, and surrounds the future of public liberty and civil government in all Continental countries with so much uncertainty. The growth of English liberty would never have been possible but for the stern determination of the people, from the earliest times, not to have a large standing army, or any army whose existence was assured for more than a year.

The absence of any such force and of all necesssity for it has been one of the happy conditions of the existence of the United States. We have never had, either afloat or ashore, any large and respectable and respected body of men among us interested in war, or eager for war, or able to force us into war in order to oblige them. Militarism has been unknown in this country, and fighting, on the whole, an unpopular profession. In truth, it was the American Government which first introduced into international relations the practice of negotiating as business men, and not as soldiers. With this practice it has won extraordinary diplomatic triumphs. The Oregon boundary dispute, the *Alabama* dispute, and the San Juan dispute with Great Britain have all been settled satisfactorily to us without either army or navy. Our various smaller quarrels with France, Spain, and Germany have all been settled in the same way. Not once in the national existence, except when the *Leopard* took the men out of the *Chesapeake* in 1809, have the United States had to regret the want of a great military or naval force.

We do not use these considerations as an argument against the creation of a navy of the modern sort, to take the place of the old wooden ships which were absolutely incapable of fighting. A sham navy is worse than no navy. Moreover, common prudence requires that we should have on the ocean a force capable, if need be, of protecting American commerce, or repelling chance aggression, now that the world has grown so wide and America such a huge and far-reaching organization. But the bigger and more formidable the navy we create, the more tenaciously should we cling to the great traditions of peaceableness and good sense which have from the beginning marked our diplomacy. Franklin did not negotiate with a big sabre by his side and a long pair of spurs on his heels, and Franklin set the fashion for all our diplomatists until now. Professional fighting-men have never managed to fill the departments at Washington with their peculiar love of glory and sense of honor. It was the general expectation in Europe in 1865 that Grant's and Sherman's army would be used, and would have to be used, to overrun Canada and Mexico; but Secretary Stanton began to disband the force and sell the stores on the evening of the fall of Richmond. That was true "Americanism."

Our Navy Department, however, seems, and has seemed almost ever since Secretary Tracy came into office, to be determined to break completely with these great diplomatic traditions, to the amazement of those who knew him here as a cool, sensible, and highly respectable member of the bar. Whether for the purpose of helping the President in his quarrel with Mr. Blaine, or for the purpose of magnifying his own office, we do not know, but the fact is that he has practically taken our foreign relations out of the hands of the State Department, and turned them over to the Admirals and Captains and Lieutenant-Commanders of our new navy, who, except the Admirals, are mostly young men, full of fight and eager to show what the new ships can do — so that they may fairly be considered firebrands in every foreign port. The beginning of this extraordinary policy was the Barrundia affair, in which Mr. Blaine, either through weakness or blindness, acquiesced and, indeed, cooperated with Mr. Tracy in reducing the State Department to nothingness and handing the foreign policy of the Government over to navalism. In that case he permitted a naval commander who had, under the resident American Minister's direction, strictly obeyed in a foreign port the law of nations and the existing naval regulations, to be loaded with abuse and dismissed his ship for so doing.

We pointed out at the time the unfortunate effect which this episode was likely to have on the mind of naval officers, and the complications in which it would be likely to involve us in foreign waters, and this was long before there was any sign of our trouble with Chili. We maintained that it would make them both reckless and meddlesome and lawless, and would involve us in quarrels which we could not decently uphold. We might cite a dozen illustrations from recent events in support of this assumption, but here is one which will suffice, showing how soon the poison began to work, taken from a speech of Lieut. A. V. Wadhams of the Navy in Boston last February, before the Boston Boot and Shoe Club. Lieut. Wadhams, be it remembered, is just thirty-one years old, is a professional fighting man, and may be any day in command of a ship in foreign waters.

> "What does the arrival of the *Baltimore* in the harbor of Valparaiso mean? It means just this, that *without any orders from the home Government, without any orders from anybody else*, the regulations are well established as to our duties as naval officers. The magnificent stand that has been taken by this Administration in regard to the affair of the killing of that Mexican on board the Pacific Mail steamer has caused great joy in the navy. That is what we want. We want to be able to say, 'You go just so far and you will come to grief,' and the time has come when a naval officer can say it.
>
> . . . . . .
>
> "In regard to our rights of action in emergencies which may arise, I don't suppose there will be any question hereafter as to just the extent to which a man can go. *Heretofore there always has been, and now, to be sure, there will be, constant consultation with the civil authorities — the Consul and the Minister in command*; but I fancy there is nobody in the United States Navy to-day who doesn't feel that if he was called upon to act he would act if the Minister did not act."

If a Prussian cavalry colonel talked in this way at a Berlin dinner, big a man as he is, what a wigging he would get! But the head of every youngster in our navy is probably filled with just such stuff, and his superiors have put it there and are keeping it there. Our State Department has been practically abolished, and its Manuals of Instruction and the text-books on International Law are being used as fuel to get up steam. What a situation for the country of Webster and Lincoln and Seward and Marcy and Fish and Evarts!

POPULAR ELECTION OF SENATORS.

AGITATION in favor of a constitutional amendment to this end, begun by several State Legislatures during the past year, was renewed on Saturday before the appropriate committee of the House of Representatives. Every thoughtful mind must welcome the least sign of revolt against the present composition and disgraceful tendency of the United States Senate. The election to that body of Gov. Hill, the Demo-

cratic boss of New York; the bare defeat of Foraker, the Republican boss of Ohio; the arts to which Senator Sherman was forced to resort in order to save his seat from political brigandage; the motives which led to the election of his new colleague—these recent events have stimulated the growing sense of a vital defect in the Senate-making machinery. It is as yet but a vague and unreflecting sense, that does not perceive the root of the evil, and it is in danger of precipitate action that will breed fresh abuses; but the unrest is wholesome. Once more an idol of the Constitution is challenged, and men are not afraid to think and to say openly that the work of the fathers must be undone or done over in the interest of government of the people, by the people, and for the people.

The change proposed is so momentous that it is no exaggeration to affirm that it outweighs in importance the burning questions of the tariff and the coinage. These are mere questions of housekeeping, which, however they may be decided, leave the fabric of 1787 untouched. To take from the Legislatures the choice of Senators is to revert to one of the plans rejected in the Constitutional Convention, and to embark on a fresh voyage of experiment. It at once alters fundamentally the relation of the States to the Federal Union by making the party complexion of the State Legislatures a matter of no consequence whatever in Federal politics, so far as concerns the control of Congress. We hasten to declare that this would be a great boon to the citizens of the States and to the people at large—perhaps the greatest that has ever been rendered by any constitutional amendment save that prohibiting slavery. It would aim a well-nigh fatal blow at the identification of State with Federal party lines and party organization which the fathers unwittingly ordained when they made the Senate the creature of the Legislatures. Never again would the voter be called upon to sacrifice his scruples respecting local measures or men, on the ground that the party ascendancy in Congress depended on returning a Legislature which would maintain the party strength in the Federal Senate. This freedom once acquired, we cannot doubt that our municipal life would immensely profit by it; that municipal (and State) contests would tend more and more to emancipate themselves from every other consideration save the genuine issue; and that more and more independence and fluidity would be manifested in forming parties *ad hoc*, irrespective of names and affiliations applicable to Federal party organizations. Surely, to bring about such a consummation, much may be hazarded.

Nevertheless, it must not be forgotten on the very road to real, away from sham, politics, that to bestow on the people the election of Senators by Constitutional enactment is not the same thing as to insure their possessing it. Men look at the obvious grasp of the machine on nearly all our legislatures—its potential grasp on all—and conclude it would be a fine stroke to take away its occupation. They need to be reminded that the greatest victim of the machine, the almost helpless victim, is not the Legislature, but the people itself. By an unconscious juggle in terms, election is assumed to be synonymous with choice; it is in fact a mere registering of the decree of the caucus and the machine. The average honest voter goes to the polls without having had the smallest part in *nominating* the candidates for whom he votes. He does not know them personally, he may never have heard their names; until recently, on leaving the booth, he could not repeat the list he had just deposited in the ballot box, and on the morrow he might have forgotten all that he brought away. The Australian ballot has to some extent altered this state of affairs, and one of its highest merits is that it enables the people really to put in nomination as well as to pass upon the cut-and-dried. It alone, of our present safeguards, would prevent the election of Senators by the people from being manipulated by the machine as readily as that of Representatives.

To our minds, there is small chance of the proposed amendment being carried, especially if it is complicated (as is proposed by one Congressman) with a scheme for enlarging the Senate and thus overcoming the inequitable equality of the small States. Moreover, an opportunity is afforded to better our existing condition by simply giving back to the States the power to regulate the election of Senators—that is, by repealing the act of July 25, 1866, the first of its kind, "to regulate the times and manner of holding elections for Senators of Congress," with its pernicious enforcement of viva-voce voting, most favorable to party pressure and bribery. Senator Sherman himself opposed it on its passage, as did Senators Fessenden and Edmunds, and their objections have been sustained by the results of experience. A writer in the *Atlantic Monthly* for August last propounded a plan of election by the Legislature as required by the Constitution, out of nominations by the people—a restriction which may or may not be constitutional, but which it would be worth the while of any State to test the legality of. To evade the machine and the lobby, the same writer urged making use of the Australian ballot both for these nominations and for the legislative vote upon them—a procedure certainly presenting no difficulty. He argued that this system, if established, would enable capable men to put themselves in nomination without being indecently beholden to any body or interest. We observe that a member of the House Committee at the hearing on Saturday asked "if popular elections might not result in sending less able men to the Senate, and if the present method did not secure the services of men of ability who, perhaps, could not be induced to take part in a political contest such as was incident to elections." Undoubtedly they might, if the machine were left free to manage the "popular elections"; quite otherwise if the people could really send up a list of candidates, each name representing a considerable body of voters, such as would entitle it to a place on the official Australian ballot. "A man," says the *Atlantic* writer referred to, "fit to be Senator would have a decided prestige when proposed in this manner as against the product of intrigue and jobbery. Such men would tend to multiply in the popular nominations, inasmuch as they could allow their names to be used without loss of self-respect, and with no obligation to work in their own behalf."

By whatever mode to be accomplished, the question presses, how to make the Senate the Broad Stone of Honor of our American commonwealth—a body no longer, to be sure, "the camp of slaves," as in the unhappy days of doughfaces and lords of the lash, but a chapel of ease for millionaires, a baron's castle for the spoilsman, an altar of refuge for Quay, a legitimate goal of ambition for Hill and Foraker.

THE OBJECTIONS TO CHEATING.

THERE is in Nebraska to-day a Governor who, though legally, is not morally entitled to the place. The same thing is true of Connecticut: there is also a Governor in the latter State who, though legally, is not morally entitled to his place. Each owes his office to the determination of his party supporters to get as much power as they can, no matter what their opponents think of the fairness of their procedure. The New York Legislature is Democratic owing to the disregard of the law by Democratic officials in the mode of conducting the election, under the encouragement and with the assistance of the Governor of the State, who actually went so far as to resist the courts and denounce them for interfering with his schemes. This was a step beyond anything which has occurred in Nebraska and Connecticut. In their cases the law was used to deprive the voters of their rights in the forum of abstract justice. In this State the law has been openly violated to deprive them of both their legal and moral rights. Now that the Legislature has met, the power of passing on the qualifications of members is being used by the majority in the same spirit and under the same inspiration to deprive duly elected members of their seats, on any pretence, however trivial.

It must be admitted, however, that Hill did not originate the spirit of lawlessness from which all these displays of contempt for the rights of minorities have flowed. Their true source is to be found in the view which the Republicans took of the Democrats at the close of the war—as dangerous persons who, if they got control of the Government, would proba-

bly wreck it. This led to the desperate and successful attempt to cheat Tilden out of the Presidency, and to the great hesitation, lasting nearly twelve days, on the part of the Republicans in admitting Cleveland's election. It is not too much to say that during the whole of that period the Republican leaders had a vague expectation that something, whether legal, extra-legal, or illegal, would turn up which would enable them to get Blaine into the Presidency. The same feeling which led them to consider the Democrats unfit to conduct the Government made them indifferent to choice of means for keeping them out of control of it. This also undoubtedly accounts in part for the extraordinary manner in which Mr. Reed filled the office of Speaker, and for his high-handed contempt for the right of the Democratic minority—something entirely novel in the parliamentary annals of really constitutional countries. He made himself, instead of an Anglo-Saxon Speaker, a French President of the Imperial period, like Rouher or De Morny.

We might multiply these illustrations, if we had space, by citing such cases as the denial of the Governor's power of appointment in this State through the refusal of the Republican Senate to confirm his nominations, thus enabling Platt's Quarantine Commissioners to hold over for years. The great apparent increase just now of these displays of contempt for the law is due in large part to the fact that the Democrats, as they creep into power all over the country, are beginning to retaliate in kind on the Republicans by vigorous cheating. The impression which these things are producing, both at home and abroad, is an impression of rapidly spreading political rottenness, the outcome of which nobody can predict; and the abounding material prosperity does nothing to diminish or destroy it. The chief danger of the situation, however, lies in the fact that it is distinctly revolutionary. People can stand a long while, and very good-humoredly, gross cheating or corruption at the polls, but, for some reason or other, they will not stand frauds in the counts or in any other part of the procedure which directly inducts a man into an office. Whenever these become so numerous that there is general doubt whether the man who has clearly won an office at the polls will be able to occupy it, civil war is not far off. The concoctors of such frauds grow bolder and bolder with impunity, and some day, when a Secretary of State abstracts or suppresses a genuine return and produces a fraudulent one, somebody who feels aggrieved will take him by the throat and search him, and then the mischief is afoot. The evil may go far in this country before producing an outbreak, because people are so busy and prosperous, so long as security to life and property is not impaired; but there is a limit to the patience even of the happy and good-humored, and it may be reached sooner than is expected, as the Southern slaveholders found to their cost.

It is therefore high time for both parties to mend their manners, before the whole country gets into the way of expecting to be cheated, or of relying on cheating in order to reach even desirable ends. The admiration of Hill, for instance, as a man who "gets there" is a highly explosive material. The "art of ultimate arrival," as some one has called it, is a very good art to cultivate, but it has to be cultivated with scruple and moderation. People like to see a man "get there," but they do not tolerate his travelling at their expense, with stolen money. Popular government does not rest simply on majority rule. It rests just as much on the acquiescence of the minority in that rule, on the general belief of the minority that it *is* really a minority, and fully enjoys the rights guaranteed to it by the organic law.

THE INTER-STATE COMMISSION AND THE COURTS.

In the Lehigh Valley Railroad case, the United States Circuit Court in Philadelphia decides that no injunction can issue against that company for disregarding an order of the Inter-State Commission, but that practically the whole matter must be retried by that court. The decision is based on the ground that the findings of the Inter-State Commission are only *prima-facie* evidence, and that this, as defined in the act to regulate commerce, means a trial of the whole issue *de novo* when a United States court is asked to enforce the Commission's decree. The same construction was put upon the Inter-State Law a year or more ago, in Cincinnati, in the party-rate case before Judge Jackson. Indeed, the unpleasant position of the Commission—that of a sort of referee, merely—was clearly seen and ably considered by Judge Cooley in the Commission's annual report to Congress for 1890. It was forcibly urged upon Congress that controversies about railway rates were questions of fact and not of law, involving many complicated matters which none but specialists could properly investigate, and which no court of law could fairly be asked to decide. Hence the findings of fact by a body of specialists like the Commission should be accepted by the courts, the only question left open being whether the forms of law had been observed.

To remedy the Commission's complaint about inadequate power, Senator Cullom, on December 15 ult., introduced a bill which seems to have escaped public attention. This bill provides that upon appeal by the Commission for an injunction or mandamus to a United States court, the defence of the railway shall be restricted to pointing out errors in the findings or proceedings by the Commission. The Court may refer the case back to the Commission for a retrial, or may issue the writ, but cannot itself retry the case. That this would much increase the power of the Commission over railway charges is easily apparent; in fact, the position of the Commission would be that of an inferior United States Court. It might be a question whether this would be a violation of the Constitution, which requires judicial questions to be determined by judges holding office during good behavior; though the courts generally are willing to give Congress every possible chance to carry out its legislative intentions. But it would seem, whatever the machinery authorized by Congress, that railway rates in the end must be settled as a judicial question. This is apparently the meaning of the Supreme Court decision in the Minnesota cases, where an unreasonable rate imposed by a railroad commission was declared to be equivalent to the taking of private property without compensation. Evidently, though, the injustice done by a Legislature or by a railroad commission would have to be very clear to call out that remedy.

The restiveness of the Inter-State Commerce Commission under the law which makes its decisions *prima-facie* evidence only, and not conclusive, can be traced in part to a change in the Commission's ideas about its own importance and the place it was intended to fill in our regulation of railways. In the early years the Commissioners took a more humble view of their duties; their first reports express the opinion that adjustment of existing discriminations was their principal duty, not the fixing of rates *per se;* that they were to regulate tariffs originated by the railways. Lately the idea seems to have been growing in their minds that they were in some way responsible to the people for our whole system of transportation and charges. In 1890 they attempted to say what the rates on corn should be, not relatively but absolutely. Not long ago they told some Southern roads that only so much must be charged on all the oranges carried. This is not regulation, which is adjustment; it is the imposition of tariffs on carriers. The Inter-State Act says that all rates must be reasonable; but reasonableness, economically if not legally, is a relative question. To say whether 10 cents or 25 cents or 50 cents ought to be charged on breadstuffs from Chicago to New York is a commercial problem which cannot be determined theoretically any more easily than can the proper price for meat. But given the rate as decided upon by the railway managers, it becomes competent for the Commission to declare that all shall be charged the one rate without unjust discrimination as to persons or places. If we admit that the Commission must or can fix our railway tariffs in the abstract, we take a long step towards Government ownership.

The Commission's restiveness, therefore, is due in part to their opinion upon this question: whether we ought to intrust such a vast problem entirely to their hands, or whether we shall go far enough if we make the Commission merely the mouth-

piece of public opinion. It can indeed hardly be said that we have solved the question. We know that our most successful State railroad commissions were formed on the latter theory and have no real power. The first of this class was that of Massachusetts, organized in 1869. The Commissioners selected were able men, and their opinions on questions in dispute between Massachusetts railways and citizens were received with respect by both parties, though they could not be enforced; but, being recognized as voicing public sentiment, the carriers generally yielded to them. But the United States is larger than any one State, so that it is undoubtedly more difficult for public opinion to force obedience to a Federal than to a State commission. Yet, on the other hand, there is so much necessary work to be done on the simple lines of the original intention, that the question of additional power over tariffs in the abstract may well be left to the future. Personal discrimination yet flourishes. One road lost its traffic manager because of rate-cutting. Three more were accused of the same offence by their own associations at the recent meeting of the Advisory Board. This advantage of one firm over another through the cutting of rates is demoralizing to all honest merchants. We might better amend the Inter-State Law in some way which would secure fair treatment to all shippers (for even railroad managers do not defend rebates) than to give more theoretic powers to a commission which, under the law as it stands, seems helpless before the simpler and more important evil. In the Lehigh Valley case justice seems on the side of the original complainant, and a further investigation before the Circuit Court ought to bring it out more clearly.

THE SCALING OF THE URUGUAYAN DEBT.

SOME months ago we spoke of the effort to arrange a compromise between Uruguay and her foreign creditors. The scheme then in contemplation has now been carried into execution, with all its principal features unchanged, and it deserves a review not only on account of its own importance, but especially because of its ominous significance as an example to other countries situated as Uruguay is.

The origin and course of the negotiations leading up to the final result were described by the Minister of Finance in the course of a speech before the Uruguayan Congress. He said that as far back as May of last year the President had sounded the Government's financial agent in London as to the possibility of making some new adjustment of the national debt, "based on the reciprocal interest of the State and its foreign creditors." At the same time, the President affirmed that "the Government believes that it holds sufficient resources to realize its firm proposition to comply faithfully with all foreign obligations, even at the cost of the greatest sacrifices, as it has hitherto done." In the latter part of June a special agent was sent to London from Montevideo to push the negotiations, his instructions being to propose a unification of all foreign loans into a new issue bearing interest at 4 per cent. for the first five years, 4½ for the next five, and 5 afterwards.

But this agent, Señor Ellauri, had scarcely reached London when the financial crash came upon Uruguay which closed the English and National Banks and struck all business with paralysis. Thereupon the Government peremptorily notified its English creditors that it could pay no interest for at least six months, and that a greater and permanent reduction of its foreign indebtedness was absolutely necessary. It was in the face of this statement that the Corporation of Foreign Bondholders took up the matter. This Corporation is an organization formed some twenty years ago to represent the holders of bonds of foreign countries. It has had a remarkable history in arranging and settling the debts of many defaulting States, and has accumulated a large capital, by means of commissions and in other ways, which it can draw upon to meet the preliminary outlays involved in negotiations with foreign governments. Its members are usually men of high financial and personal standing, Sir John Lubbock being the present Chairman, and Sir Edward Thornton being at the head of the committee appointed to deal with the Uruguayan case.

The arrangement which was agreed upon between the Corporation and the agent of Uruguay, and which has now been given the force of law, embraced the following particulars: A new consolidated debt is to be funded to the amount of $96,350,000, bearing interest at the rate of 3½ per cent. It is to include $49,934,680 of the Unified Loan of 1885, which bore 5 per cent. interest, $19,363,530 of the 6 per cent. loan of 1888, $9,306,000 of the 6 per cent. loan of 1890, $2,866,953 to be issued to holders of the bonds of the two last-mentioned loans as "compensation" for accepting a lower rate of interest, $3,744,090 in payment of arrears of interest, $2,975,000 to meet railway guarantees now due, $5,640,000 to complete the building of the Western Railway, and $2,519,646 as costs and commissions on the entire refunding operation. This last item was the subject of severe criticism in the course of the debate in Congress, one member calling it "an infamous robbery of the nation." The Finance Minister mildly defended it, although he refused to give the details of the expenses, or to say to whom the commissions were to be paid. The Government pledges 45 per cent. of the customs revenue, to be turned over daily to the English Bank, as security for the payment of interest.

The arrangement did not go through without vigorous protests on the part of many bondholders. Delegations and remonstrances from Antwerp and Paris and Madrid kept the Corporation of Foreign Bondholders informed of the indignation which their negotiations were arousing, but they went steadily ahead and secured the assent of a majority of bondholders. The minority still threaten to fight for their rights in the courts, but it is doubtful if they can accomplish anything. One of the most scandalous features of the affair is the inclusion of the loan of 1890 in the arrangement. This was an issue of bonds to the amount of $10,000,000 left on the Barings' hands when they went into liquidation. They had accepted them in return for private advances to Uruguay, and had been unable to sell a dollar's worth. It has been stated, we believe with truth, that the Barings themselves were unwilling that this loan of their own, which they had been unable to float, should be given the same standing as bonds bought in good faith by investors; but those who are now managing their affairs thought differently. The result is to give their bonds a value and a security far beyond what they might claim, and to do it at the expense of other bondholders.

It is undoubted that Uruguay's creditors have acted in what they thought was the wisest and safest way, accepting a reduced but certain interest in lieu of a larger but precarious if not impossible rate. Yet their action cannot fail to be disastrous in its indirect results. It is not even certain that they are safely secured in their lowered interest. One Uruguayan Deputy made a forcible argument to show that the Government could not meet even its reduced obligations. As to that we cannot say, but what is certain is that the whole operation has distinctly relaxed the idea of the binding nature of a national debt. This has clearly been the effect in Uruguay itself, and the influence of her example upon other South American countries cannot fail to be bad. One Senator argued for fixing the rate of interest at 2½ per cent. instead of 3½, which he thought they might as well do while they were about it. The demoralization wrought in the sense of public honor is well shown by the Montevideo *Times*, which said in its issue of September 23:

> "One of the first things to strike any one who has followed the criticisms and debates on the Consolidated Debt Bill must be the extraordinary conceptions held concerning such foreign obligations as debt services or railway guarantees. So far from being looked upon as sacred obligations which it is dishonorable to violate, it is evident that there are not a few persons here, and persons in high position too, who regard them as something tiresome which may or may not be complied with, according to the good-will and position of the debtor. They virtually say to the creditors: 'We have promised you 6 per cent. or 5 per cent., but we have been foolish and extravagant, and cannot conveniently pay you. No matter, we will condescend to give you 3½ per cent., or if that does not suit us, we will make it 2½ per cent. Really, it is a great nuisance having to pay you at all, and your claims are a burden which we are anxious to get rid of as soon as possible.'"

THE ST. ELIAS GLACIAL FIELDS.

OBERLIN, January 7, 1892.

At the recent meeting of the Geological Society of America, two members of the United States Geological Survey gave reports upon expeditions made by them last summer through unexplored territory in southern Alaska. The results of the expeditions are as interesting to the general reader as they are instructive from a geological point of view.

Mr. C. W. Hayes was sent by the Survey to accompany Lieut. Schwatka in a trip undertaken by him in the interests of a syndicate of Western newspapers. They entered the southeastern portion of the Territory from Juneau, through Taku Inlet, and, after ascending rapidly to the summit of the pass, reached the broad glaciated plateau running north and south, which was partially explored many years ago by the Western Union Telegraph Company, when, before the Atlantic cable was laid, they contemplated an overland route to Europe by way of Bering Strait and Siberia. For many hundred miles just east of the coast range, this plateau, walled in on two sides by mountain ranges of moderate height, is a striking feature of the country, and furnishes the head waters of the Yukon River. Though now free from ice, it bears every mark of having been formerly a centre from which glaciers debouched both into the sea and into the Yukon Valley for a distance of about three hundred miles, where a well-marked terminal moraine is reported as crossing it from east to west. Between this moraine and Fort Selkirk, a distance of about one hundred miles, there are no further marks of glacial action.

From Fort Selkirk the party struck across the country directly west to intercept the White River, which rises about half way between Mt. St. Elias and Mt. Wrangell—the latter being an active volcano. The whole of this distance was in an unglaciated region, showing that there has always been a remarkable limitation to the ice-fields on the northern side of the St. Elias range. But it would appear, from the results of this expedition and from earlier reports both of Mr. Dall concerning Kotzebue Sound and of Mr. Russell concerning the Yukon Valley, that, while the main body of Alaska was never covered with moving ice, it is, even yet, for the most part covered with stationary ice, which in many areas takes the place of underlying rock, and carries soil enough upon its surface to maintain in many places a vigorous arctic vegetation. The banks of the Yukon present occasional precipices of solid ice surmounted by soil and timber precisely as though it were some hard, sedimentary rock. The short hot summer suffices to warm the surface soil and quicken a variety of plants and trees into rapid growth, without producing any effect upon the frozen stratum a few inches below. The deep moss which covers everything persistently retains the water, compelling the traveller to wade continually in discomfort through its spongy mass, though the climate is so arid that for six weeks together no storms were encountered, and the air was so clear that sleep was obtained under the open sky without once going through the formality of pitching a tent.

But, meanwhile, Mr. Russell's party were having very different experiences upon the southern flanks of the St. Elias range, where, for days and days, they were waiting, amid blinding snows, for a rift of fair weather in which to attempt the final ascent of the solitary peak. The amount of snow which falls upon these névé fields which feed the great glaciers flowing down to the Pacific Ocean is something perfectly enormous. A single fall of six feet of solid spicules of ice which, when compressed, would make half that thickness of glacier ice, is by no means uncommon; while, by examination of the films of dust which separate the snowfall of successive storms, Mr. Russell is confident that sometimes as much as 100 feet of snow descends without interruption. In view of such facts, it is easy to understand the reason why the southern flanks of this great Alaskan range so abound with glaciers, while the northern side is comparatively free from them. It is becoming more and more clear that the cause of great accumulations of glacial ice, both past and present, is to be sought not simply in a low temperature, but in a combination of conditions which secure an abnormal precipitation of snow over any particular area. The average temperature upon the south side of the St. Elias Alps is considerably higher than that upon the north side; but the glaciers are many times as large, the main difference being in the amount of snowfall.

The most instructive portion of Mr. Russell's observations relates to the condition of the great Malaspina Glacier, or ice-field, which covers about 1,500 square miles of the level country intervening between the base of the mountains and the Pacific Ocean. This great mass of ice is from 1,500 to 2,000 feet thick, and is but a remnant, though, it must be confessed, a very respectable remnant, of the ice-fields of former days, whose bold front extended into the sea for hundreds of miles along the shore. In its present condition it furnishes probably the best object-lesson which has yet been brought within the reach of glacialists. Here we can see in progress upon a grand scale all those operations which have produced the phenomena so characteristic of the glaciated area in Europe and throughout British America and the northern part of the United States.

The surface of this great ice-field resembles that of a rolling prairie. About the margin next to the mountain it is deeply covered with earthy débris, and, except where the glacial tributaries directly join the mass, stands considerably lower than the centre, owing to the radiant heat of the mountain side, which causes it there to waste away with exceptional rapidity. Along this natural channel, between the ice and the mountain, temporary water courses take their way, distributing the morainic material in long lines, which, as the level of the ice gradually lowers during successive decades or centuries, become a series of beachlike terraces, such as, about the Adirondack Mountains and other places, have often deceived observers, and led them to infer a subsidence in the country and the formation of sea-beaches at high elevations, where everything originated through the simple processes connected with the wasting away of the great ice-field itself.

But most interesting of all was the outer margin of the Malaspina Glacier. For a long distance on its southwestern border the ice debouches directly into the sea, breaking off into icebergs with thundering noises, after the manner so vividly described by Vancouver a hundred years ago. The eastern half of the glacier exhibits a wasting front some little distance back of the sea, where a terminal moraine of great size and intricate complication is in process of formation. In the course of centuries the earthy débris thinly distributed through the glacier has been brought to the front, and, as the edge has melted away, has settled down in great depth over a thin margin of ice several miles in width. Upon this incipient moraine, with the ice still remaining underneath it, vegetation has rapidly advanced, until now it is covered with a dense pine forest containing trees as much as three feet in diameter, and the whole area is so tangled with underbrush and flowering plants that it is almost impossible to work one's way across it. Through these forests the ever-changing sub-glacial streams cut their way, and here and there submerge and bury them beneath their rapidly accumulating sediment.

Far up on the surface of the great ice-sheet, also, but in nearer proximity to the mountain, may be found extensive areas of morainic débris covered with vegetation. These long protect the ice underneath them from melting, and stand as promontories above the general level. As the wasting process, however, goes on in the clearer ice around them, they at length slide down in mixed heaps around the bottom of their pedestal, to repeat the process of protecting awhile their new foundations. At length, if the ice entirely disappears, these will rest upon the surface of the earth in a confused mass well calculated to give endless perplexity to the glacialist who shall attempt to unravel their full meaning. It is clear that these observations of Mr. Russell's sweep away at one stroke a great body of speculation concerning successive glacial epochs and repeated changes of level which has seemed to be necessary to account for the buried forests and apparent sea-beaches so often encountered in the glaciated area. When the facts are placed before our very eyes, it seems strange that we had not sooner worked out the problem from the simple elements of the case; for ice is such a complex cause, being at one moment a rock, and the next a fluid, and the next a gas, that, without doing violence to the known nature of the cause, the widest range of phenomena can properly be attributed to it.

At first it seems singular that we should have remained so long comparatively ignorant of this portion of the North American coast. Mount St. Elias still defies the attempts which have been made to scale its summit. For the second time, even Mr. Russell has been compelled to give up the attempt. For a hundred years, also, unsatisfactory efforts have been made to ascertain the exact height of the peak. This is now found to be 18,100 feet. Upon the last attempt to reach that height the party struggled for twenty hours from their permanent camp at 8,000 feet, but attained an elevation of only 14,500 feet. Doubtless they could have reached the summit had they continued to press on, but it is equally certain that they never could have returned, and their discretion was clearly the better part of valor.

The reason why so little has been added to our knowledge of this region during the past one hundred years is the lack of motive urging to its exploration. Near the close of the last century the waters of this part of the Pacific fairly swarmed with adventurous navigators fitted out by various nations of Europe to find the Northwest Passage. Of some one or other of these, almost all the great natural features of the country bear witness in the names by which they are still designated. We have Cook's Inlet, Dixon's Entrance, Vancouver's Island, Puget Sound, the lofty peaks of Crillon and La Pérouse, and, last but not least, the great Malaspina Glacier. At the present time the only motives leading to this desolate region are those of science and adventure. Annually for the past six years some lone Government vessel has carried a party to Yakutat Bay in the early part of summer, and returned for them after the lapse of three or four months.

In consequence of these visits a whole galaxy of glaciers now bear the names of distinguished scientific men of the present generation. Yet the work of careful exploration has but just begun, and it is science and not pleasure or mammon that must complete the promising and noble work.

G. Frederick Wright.

COMMON SENSE IN NATIONAL ART GALLERIES.—I.

London, January, 1892.

It is fortunate that an occasional public function, such as the opening of the new Museum at Vienna, calls special attention to national art collections, since at other times existing conditions are accepted with the childlike, unquestioning faith which religion has long since ceased to inspire. I have been struck with this during late visits to Berlin, Dresden, and Munich.

It is natural that the public, with absolutely no knowledge of art and with no original ideas on the subject, should accept Baedeker, or at the best Crowe and Cavalcaselle, as infallible gospel. It would be amusing to take the man who, as a child, had never been allowed to look at a picture—like the proverbial youth brought up without religion—and suddenly let him loose in a gallery of old masters. The result would be of no practical value to the artist, but it might help to show the absurdity of modern art superstitions. As it is, professional art critics, or their students, would learn much if they followed an artist through galleries to them as sacred as St. Peter's to pious Catholics or the Mosque of St. Sophia to devout Mohammedans, and saw his utter indifference to the objects of their deepest reverence, and his raptures over canvases which they had passed without a thrill. To cast aside lightly the accepted traditions of centuries is folly, but it is far more preposterous to give up all right to private judgment when once the threshold of a picture gallery has been crossed. The protestant in art, as in religion, is a necessary quantity. It is as impossible for the lover of art to enjoy all the pictures which have survived their generation as it would be for the lover of literature to read with pleasure all the publications hidden away in the fastnesses of the British Museum. To the unprejudiced, some of the most salient features of the great European galleries are those unrecorded in guide-books and art compilations.

This is especially true of the Dresden Gallery, of which the reverent speak with a trifle more awe and respect, perhaps, than of any other in Europe—a fact not to be wondered at. There is, to begin with, a charm about Dresden itself which at once puts one out of the humor of cavilling and fault-finding. After passing through Berlin or Munich or the other large German cities, it is refreshing to come to a place as full of character as the Saxon capital; and the characteristic centre of this characteristic town is the Zwinger, with its eighteenth-century graceful affectations and rococo classicism. For those who can enjoy architecture artistically, just as they would painting, there is nothing more amusing than a good example of rococo, which it has become the correct fad to depreciate. Always delightful, the Zwinger is doubly so in summer, the tourist's season, when the central court or garden is full of flowers. The galleries themselves are no less delightful. The rooms are airy and spacious. Here I do not include the little cabinets, which are a weariness to the flesh; there is no more depressing experience than to stand in the room of the Holbein Madonna, and look down the long passageway leading by these cabinets, and feel that one is obliged to enter each by turn. The light, too, is good throughout, except in some of the lower galleries, which, save for very notable exceptions, seem to serve the purpose of waste picture baskets. And the decorative scheme is excellent; the chances are you come away without having noticed the color of the walls or the motive of the decorations. This is no small matter. Indeed, the importance of the treatment of the picture's background—simply because to be successful it must not distract attention from the pictures themselves—is not realized until this first principle of success is violated, as in the new gallery of Vienna.

The general system adopted in the arrangement of the pictures is also a credit to the directors. They are fairly well hung according to their schools and dates, which is not only a concession to the student, who studies them from the historical standpoint, but a help to the artist, who wants to know where to look for the painters who interest him. The overflow of the smaller canvases into the cabinets, however, is bewildering, since few of these open directly into the corresponding large galleries; the chances are that Italian primitives are not discovered until long after sixteenth-century Venetians and Bolognese have been seen, while the work of Dutchmen and Flemings who happen to have painted both small and large canvases, Rembrandt and Rubens, for example, is as scattered as that of the exhibitor in the average modern show. The hanging of the pictures is far less satisfactory. Piled one above the other, the effect of the walls is as distracting and wearying as in the Salon, and this could be easily avoided were a little more judgment shown in the selection, purchase, and preservation of work included in the collection.

That there are pictures worthy of the gallery built for them, the most inveterate enemy of "cock-eyed Madonnas" and of everything not essentially modern would be slow to deny. That there are others worthier of the bonfire—or at best of the obscurity of a Bloomsbury lodging-house—only the hopelessly enthusiastic would not admit. If the most needed reform in the exhibition of contemporary work is a hanging committee who will reject all artless and worthless canvases, despite the popularity of the names signed to them, so the national galleries of old masters call for the vigorous reformer with courage to throw out the failures of the great painter and the trivialities of the minor craftsman, no matter in what remote century they were produced. At Dresden the work which would pass the impartial hanging committee of all the world and all time would form a collection as invaluable to the student as it might seem insignificant in number to the tourist who prefers quantity to quality; but many of the accepted would not be pictures which now give the gallery its reputation. Were it not for the undue virtue attributed to quantity, acres of fair and flamboyant ladies, overfed and flabby men and pudgy babies, colossal witnesses of the fertility of Rubens's workshop, would be banished without compunction, though there would be always space and to spare for such proofs of his own genius, convincing if less conspicuous, as his sketches, dismissed in a few words by the catalogue as "studio work." And it would be far wiser cheerfully to accept the fact that the Italian schools are better represented elsewhere than to encumber walls, already overcrowded, not merely with many second-rate pictures by Italian painters, but with second-rate copies of others, and hopelessly restored canvases, not worth the restoration, like the big Correggios. Baedeker, in a burst of grandiloquent enthusiasm, extols the latter for their flower-like tinting, but, combined, they have not the value of one square inch of the little Magdalen, said by critics, with their usual perspicacity, not to be the work of Correggio because it is painted on copper, which was not used for that purpose in his day; that he might by chance have tried the experiment, seems never to have occurred to them. According to the same argument, Dürer never etched, Prince Rupert never made mezzotints. But this is a fair specimen of the critical argument upon which the "schoolmarm" of the west of America and the intense young person of the East of London thrive.

The Italian rooms might with advantage be reduced to one large enough to include a few of the primitives; the two exquisite Palma Vecchios (those three fair, florid "Fates," in their luxuriant beauty, and the "Marriage of Jacob and Rachel," so obviously composed, and for that very reason so decorative); one Titian, the "Tribute Money," the others being but melancholy proofs of what very bad work a great man could sometimes turn out; one or two Tintorettos, and as many of Veronese's lavish arrangements of brocades and satins; the famous Raphael, and, if a corner here and there were still left, perhaps others, too good to perish altogether, might be picked out. In the cabinets, bushels of Flemish and Dutch pictures might be thrown away and no one lose thereby. Among them are little masterpieces, of course—the Cranachs and Dürers, the Ter Borchs, and more than can be enumerated here. But who, save the Baedeker or Crowe and Cavalcaselle fanatic, will not own that he is bored to death by the tons of Teniers, whose one merit is the superabundance of detail, which make good "copy" for art historian and compiler; of Wouvermanns, when two or three would have more than sufficed; of bad Ruysdaels, which can but blind one to the few fine examples of the same artist; of so many others by men whose names are practically forgotten? It is useless, too, to hang by the dozen the tiny Gerard Douws and Gabriel Metsus and Kaspar Netschers, when only by looking at each apart and through a microscope can the infinite labor and patience devoted to it be appreciated, even while one wonders if this labor, this patience, be really art. More useless still is it, for the sake of covering the walls, to devote two or three small rooms to the commonplace productions of Dietrich, who is unknown outside of Dresden, and by rights should never have been heard of there, or to spare only less space to a man like Crispi, though in comparison he seems a master. The same indifference to quality is the rule in the pastel galleries. In one the old work but proves how much better the moderns understand the art, though Wauters is the one modern represented; in the other, all the bewigged fine ladies and gentlemen might disappear so long as Meng's and Liotard's work remained, so long as one could see how astonishingly clever and modern in treatment and feeling is the original of the poor "Chocolate Girl," caricatured in countless chromos and advertisements.

A more serious mistake in the hanging, showing as it does the directors' acceptance of the popular rather than the artistic standard, is the uncalled-for prominence given to certain pictures, the comparative obscurity reserved for others of greater importance if of less notoriety.

The most glaring instance is the setting aside of a special shrine for the Sistine Madonna, a remarkably fine Raphael, it is true, making the £70,000 paid by the English Government for the Blenheim picture still more unpardonable, but with its sentimental little angels, its claptrap device of drawn curtain, and its obvious catering to the public for whom it was produced, not to be mentioned in the same breath with that artistic triumph the Holbein Madonna, which, authorities say, Holbein never painted. Great work asserts itself without the help of sensational devices. What need of a separate room to emphasize the power of Velasquez in his two Spanish courtiers, both elderly and gray-haired, both in black with white about their necks, and yet each so wholly and entirely distinct in character that by contrast with them portraits by Rubens and Van Dyck in the same gallery seem lifeless and mannered, though these masters have seldom asserted their own individuality so successfully, seldom managed so well to forget the conventions which ruled them when they turned out their huge pot-boilers—the St. Jeromes, for example? That those two conventional saints, with their conventional lions, set in conventional landscapes, with such fidelity to current conventional methods, should be hung side by side, in all seriousness, is the best proof of the absurdity of the modern superstitious reverence for names which passes for appreciation of art. One could imagine a Carolus Duran and a Besnard or a Sir Frederick Leighton and a Whistler, with the same composition, producing results so positively unlike that the distinction and individuality of technique would give originality to the scheme as well. But not so with Rubens and Van Dyck when pot-boiling; at a glance their two compositions are identically the same, but Van Dyck, by a great stretch of imagination, has put the lion to St. Jerome's right, the book at his feet, placed the saint on a lowly seat, and carried a bit of black drapery across the canvas, while Rubens keeps the lion to the left, elevates the stone seat, spreads the book open on a table of rock, and omits the drapery—and this is all. Why, simply because the pictures are in the Dresden Gallery, should we be forced to think them great? Because they are painted by eminent men, they may have a certain negative interest, but their place, if they must be given a place, is in a museum of history, not of art.

While good work will assert itself when seen, owing to the vagaries of directors it may be hung practically out of sight. This is the case with Rembrandt's little "Saskia," in hat and feather, though it is far finer than the more talked about "Saskia" sitting on the painter's knee, and the "Crucifixion," both marked with stars in the well-appointed guide-book. Equal want of discrimination is shown in the hanging of Christopher Pauditz's three clever portraits in which he curiously anticipated Carrière, and which are the greatest surprise Dresden has in store for the artist; of Cranach's extraordinary little portrait of Melanchthon on his death-bed, with white beard, in white robes, against the white background, the ingenious forerunner of innumerable other death-beds, first communicants, and gentlemen in tennis flannels which have haunted Salon and Royal Academy for some years past; of Ter Borch's little interiors, Whistlerian as if the master himself had painted them; of too many others to be specified here.

Dresden possesses many masterpieces unrivalled elsewhere; it is rich in pictures like those of Pauditz and Ter Borch and Cranach, of special interest to the artist in their anticipation of modern problems and methods; it gives an unparalleled opportunity for the study of men like Ribera and Canaletto, who, great at their best (Ribera in that beautiful golden "Magdalen," Canaletto in his Pirnas), were full of mannerisms, with the one degenerating into mere theatrical commonplace, with the other into dull conventionality, by which, unfortunately, they are best known. But why not be honest, and recognize the fact that Dresden will never become the ideal gallery it might be made until directors no longer look upon a picture, when once it is bought and hung, as a sort of fetish, to be piously preserved at all costs, until the public no longer believe that an old master could never paint trash, that the authorities in a national gallery can never err in the arrangement and estimate of their treasures?

Correspondence.

AMERICAN TESTIMONY FROM CHILI.

To the Editor of The Nation:

Sir: One would naturally expect that diplomatic and consular representatives of a friendly Power, while zealous to protect the interests of their citizens, would, in circumstances of reorganization such as exist in Chili, do all they could to render the difficulties of the situation less trying to those bearing the responsibility of the reëstablishment of law and order. Such a spirit does not characterize the conduct of the United States officials in Chili to-day; and it is this temper of obstructionists which rile Chilians and makes them disposed to resent the spread-eagle, overreaching officiousness of Egan, McCreery, etc.

With reference to the *San Francisco* trip to Quintero Bay, concerning which I wrote a letter published in your issue of October 8, what I claimed was the fact: that she went; that the boat which left the United States Consul on board brought back the news of the Congressional landing; and that the news thus became public property. Admiral Brown denied the fact of his going out to spy, and claimed that he limited himself to cabling facts to his Government; yet the following telegram by the Intendente Viel to Balmaceda surely bears no uncertain testimony to Admiral Brown's witness to the effectiveness and military meaning of the landing:

[Translation.]

"*From Valparaiso to the Moneda—August 21, of 1891 (at 9:36 A. M.).*

"Mr. President: The American Admiral has just left me, and he believes, as I do, that re-embarkment is impossible. Viel."

To sustain the fact of the giving out of the news, I now state that I received, through the *San Francisco*, on the morning of August 21, a list of the vessels seen at Quintero and probable number of men actually disembarked.

In connection with the murder of two United States seamen, Capt. Schley knew the popular feeling against Americans because of the *Itata*, Quintero, and cable-cutting incidents, and, whether justified or not, its existence could not be ignored. Even the Consul had advised that the men be kept on board, yet 117 men were given shore leave on October 16. Sailors always make for the worst sections of the city, and their drinking invariably leads to rows and arrests. Given the excited popular prejudices against Americans, it was highly indiscreet in Capt. Schley to land his men at all; and, given the unfortunate tendency of these Latin races to treacherously draw the knife where Anglo-Saxons would have a good honest fisticuff, it is only surprising that more were not injured. Every honorable man deplores the whole affair, yet thinks it was provoked by Capt. Schley's indiscretion. Still, such troubles with seamen are no rare occurrence, and the cause of them is manifest in the Judge's note of November 20, transmitted to Capt. Schley, which calls attention to the fact that, when presenting themselves as witnesses at the hearing, two *Baltimore* seamen were so intoxicated that one had to be carried out of the court-room.

The question of claims growing out of this sailors' row is for the United States Government to consider soberly and calmly; but is that possible when those who inform the Government go about saying, as several different persons have told me, and as I have myself heard from the lips of the Consul: "By what right of international law, I should like to know, can German and English seamen come ashore, and ours not? If this Government cannot guarantee us protection, why, we will come down and establish one that will. They have had their star chamber to whitewash their men, but we have also had ours. We have spent $4,000 cabling our report, and now it rests with the Cabinet to say what shall be done. It is an international question. I tell you Chili is over a volcano, and if she is not careful, she will be wiped off the face of the earth."

I have no personal animus whatever against Consul McCreery, yet when partisan feeling and rash talk show a desire to bring two nations into collision, it is time to speak and write the truth freely. To make a personal street conversation public is delicate, and my only excuse for doing so is to substantiate and guarantee as true what from other sources I know as street talk. The real object sought in pressing claims is, I believe, to influence exchange. Consul McCreery saw that every Congressional success bettered exchange, while Balmaceda's success lowered it. He was in daily communication by letter and telephone with Minister Egan in Santiago, who had constant access to the Moneda (White House), and who thus received the earliest news. The Consul could not help using this when he bought and sold bills of exchange, and made money. He was advised to be content with gains already made, but he was willing to back his opinion that, after receipt of arms, the organization of a force sufficient to defeat Balmaceda would take months; and so the sudden apparition in Quintero Bay, and the successes that followed, raised exchange so as probably to nip him badly. If now he can only make exchange drop, it would suit his bank account, and in furthering that object he talks as no representative of a foreign Power has any right to do.

The Shields claim has the same purpose, I believe. On roll 427, number 23 of steamer *Keeweenaw*, dated New York, July 18, 1891, he is registered as Patrick Shields, born in Ireland, subject of Great Britain, aged twenty-nine years, height 5 feet 10 inches. His also is a case of maltreatment and imprisonment. Diagnosis: drunk. Nothing shows the spirit of aggression of the United States representatives better than their making a claim of this when these data and the register of Shields as a deserter existed in the consulate.

The State Department will, I hope, be asked by Congress to hand over all official and private correspondence bearing on this war and its incidents, and its publication will show whether the representatives kept the Govern-

ment informed as to the true condition of affairs or misrepresented it.

Minister Egan's son had a railroad contract from Balmaceda's Government, and he himself was the closest diplomatic friend of the defunct Dictator. Admiral McCann compares Balmaceda to Lincoln, and in offering to mediate urges it because of the impossibility of the Congressionalists overthrowing him. Consul McCreery talks violently and is busy in exchange speculation. Admiral Brown, despite his denial, labors under the imputation of providing Balmaceda with military news and opinions.

Is the testimony of such men, and of the naval officers whose sentiment they mould, reliable and sufficient ground for pressing claims and assuming a threatening attitude? Forbearance and magnanimity become a great people. Do not allow prejudiced, self-seeking representatives to lead you to belie the traditions and history of your past.

JOHN TRUMBULL.

The undersigned, United States citizens, vouch that Dr. John Trumbull, Chilian born, an American by parentage and education, writes the foregoing honestly, from facts in his possession, and is worthy of credence.

W. S. SHRIGLEY,
P. A. MCKELLAR,
A. A. PLOTNER,
REV. F. THOMPSON.

VALPARAISO, December 9, 1891.

THE APPLICATION OF IT.

TO THE EDITOR OF THE NATION:

SIR: It is much to be desired that you should point the morals of your own articles, but if you will not, then I must perform the part of the chorus in the old Greek play and do it for you. Thus, your article upon "Ohio's Republican Tammany" gives the history of Mr. George Cox, and closes with this sentence: "The significance of Cox is as a type of the men who are to-day the most powerful class in the Government of this country—the bosses of our great cities." The lesson to be drawn is, that the "boss" of to-day is the ἀναξ ἀνδρῶν of the old Greeks; that from that time to this the world always has been, as it probably always will be, governed by men; that men, and not measures, are the only effective medium of appeal to the masses of the people.

If there is one general characteristic of our politics—national, State, and city—it is the amount of precaution taken for the suppression of individuality. It is true that we elect mayors, governors, and presidents, but before we trust them with office we carefully tie their hands and feet and deprive them of every shadow of power, except by underhand combination and intrigue. Honestly and openly they can do nothing and can be held responsible for nothing. We then proceed to put all power in the hands of bodies of men called legislatures, made up of a mass of political atoms, all precisely equal, with no leaders or crystallizing element, working entirely by majorities and minorities, nominally based on the shibboleths of Republicans and Democrats, though these are merely covers for the log-rolling and intrigue by which majorities are obtained. The whole body splits itself up into committees, which work again by majorities and minorities and the same methods, the chairman having only a nominal precedence. The members of the Legislature are selected by caucuses and conventions, working by pure majority and minority, the candidates themselves having very little to do with the matter, at least publicly. And when the people look on in stupefied amazement at a game which they do not understand, and in which they take little or no interest, we scold at them and proclaim aloud that universal suffrage has failed.

Meantime, Mr. George Cox, being gifted with natural shrewdness, strong will power, and the instinct of rule, takes the short cut towards it. He gathers a band of followers, the conditions being implicit obedience on one side and plunder on the other. Through these agents and by processes so simple that a child can understand them, he takes possession of the nominating conventions, and provides candidates for the Republicans. A counterpart so exactly like him that it is difficult to avoid suspicion of collusion, does the same thing for the Democrats, and the people are limited in their choice to the candidates of these two worthies.

Your article, succeeding the other, upon "Cheats and Cheating," is merely a development of the same theme. You express surprise that when the Republicans have come to grief by a long course of cheating, the Democrats, on their advent to power, should proceed in exactly the same way. The fact is, they can do nothing else. It seems pretty strong to say that cheating is the only way in which our politics can be carried on, but the process of lobbying, intrigue, and trading of votes by which alone majorities are obtained, comes so near to it that the difference is not great. Not that there are no honest men in politics. Thanks to universal suffrage, there are a great many. But they find that they can accomplish nothing by honest methods, and so they either conform to the political atmosphere about them or take themselves off. This latter alternative is most in favor, thus leaving a residue of the kind dear to the heart of Mr. George Cox, the first lesson impressed upon them being on all occasions to oppose any strengthening of the executive, by raising a howl about "one-man power."

What is the remedy? Why, to recognize frankly that "bosses" are just as much a necessity in politics as in a factory, a railway, or a dry-goods store; and instead of resolutely shutting our eyes to facts, to take measures that we have good bosses instead of bad ones. The one-man power does and will force itself to the front in spite of all we can say or do. The only choice left to us is as to what kind of one-man power we will have.

The method is, to convert the nominal into the real executive, to give to the Mayor, Governor, or President the full conduct of administration by the power of appointment and removal of heads of departments, and through them of all subordinates, one man in each place. Then give to the Legislature no power of interference with the executive, but every power of inquiry and criticism, with that of granting or refusing money. Give to the executive, further, the power of proposing and defending such measures as it thinks necessary for administration, and to the Legislature (*mirabile dictu*) the veto power. Then let the whole struggle over these questions be carried on in full view of the public, with as much care for the protection of individuality as we now use towards the suppression of it; so that the people may know what kind of men they have chosen, and which of them they will select for further advancement; and instead of civil war being necessary for the evolution of Lincolns and Grants and Shermans, the same result may be arrived at through the finances and the civil service, and the local affairs of States and cities.

G. B.

BOSTON, January 16, 1892.

BARBARISM IN OHIO.

TO THE EDITOR OF THE NATION:

SIR: It is to be hoped that that portion of the press which is on the side of civilization as against savagery will do its full duty in the condemnation of the brutal mob which murdered a negro prisoner at Oxford, O., a few days since. The hanging and riddling with bullets of a man who was in the hands of the law, with nothing to cause doubt as to his trial and punishment, would have been bad enough at best; but when the fact is added that his life was fast ebbing away by a wound inflicted by his own hand, the wantonness of the butchery becomes almost inconceivable.

The community has suffered a disgrace which can be wiped out by nothing less than the prompt arrest of the leaders in the bloody outrage and their punishment to the fullest extent which the law will allow. If this cannot be done, then Oxford is a community from which respectable people should absent themselves.

A CITIZEN OF OHIO.

LOWELL AS INTERPRETER TO THE SOUTH.

TO THE EDITOR OF THE NATION:

SIR: The characterization of Lowell in the January *Atlantic* by Mr. Henry James brings to mind what has long seemed to me something of special interest to the Southern student in the writings of that poet. Speaking for myself, I have found it hard, in my reading, satisfactorily to recover the North's point of view in entering upon the contest with the South. This difficulty, I apprehend, has been more or less plainly felt by many foreigners—by Mr. Gladstone, for instance, and Prof. Freeman, to mention no others. No familiarity, however large, with the public utterances of that time seems altogether to clear the view of a student of to-day; the life-blood is gone out of events; their finer spirit is irrevocable.

Approaching the problem from the Southern standpoint, I had my first distinct sense of illumination when I took up the poems of Lowell. I began with him to feel again what had been felt before. I recognized in him "the throb" Mr. James speaks of. I could no longer be oblivious to the steady and powerful impulse that had driven the North on. Each repeated reading of the "Commemoration Ode," the second series of the "Biglow Papers," and the other war pieces of Lowell has brought me nearer, I am fain to think, to realizing the highest significance of the contest to the Northern people.

In this view, Lowell's value, to the Southern student at least, is to be found in his poetry, less as poetry than as criticism; and if I venture to contend that his fame as an interpreter of literature and events will outlast his vogue as a singer, I am not sure that this is to attempt a detraction. He will remain, more than any other American, the inspirer of love for one's country. I think of him as a perfect example among the moderns of that noble saying by Thucydides of the Athenian, that his true self was his mind; and this was never more truly his own than when working to compass the welfare of his country.

I may add, if so personal a view as this can possess an interest, that, next to Lowell, I have found Motley's Letters most helpful in fixing the true purport of the war to the Northern people.

THOMAS H. CLARK.

MONTGOMERY, ALA., January 9, 1892.

THE HOLTZENDORFF FUND.

To the Editor of The Nation:

Sir: Referring to the note in your issue of January 14, on the Holtzendorff Fund, I take pleasure in informing you that a movement is on foot for the formation of an American committee to further the interests of this truly commendable object. Pending such organization, the writer would be happy to furnish documents and information to any who may be interested in the project.—Respectfully,

Roland P. Falkner.

Philadelphia, January 15, 1892.

AN EXHUMED CIPHER.

To the Editor of The Nation:

Sir: Some time ago a gang of workmen, who were excavating for the foundation of a barn on my farm near here, dug up a small pile of English coins dating more than 150 years ago; they were all copper and of small value. Near the same place was also found a curious copper plate, which at once engaged my interest, and I have tried to trace its origin and learn its owner and use.

The plate has engraved upon its face the English alphabet, also the punctuation marks and the Arabic numerals, and opposite to each of these is a cipher. Upon the reverse side is the name of the engraver—Pontifex, 46 Shoe Lane, London. This plate was found in ground upon which, it is said Gen. Braddock's army of English and colonial troops encamped, and adjacent to the old "Braddock's Road" made by them as they advanced from this point towards Wills' Creek, Maryland (afterwards called Cumberland for his warlike Highness the Duke of Cumberland), and thence towards Fort Duquesne, now Pittsburgh, Pa., in the memorable campaign of 1755 against the French, which resulted in the disastrous ambuscade and slaughter of nearly the whole of Gen. Braddock's army. Along this same road Washington led the retreat of the survivors of this battle back to Winchester, where he built Fort Loudoun, which may be seen here to-day.

The locality of the finding of the plate and coins and the dates of the coins have induced me to venture the conjecture that they were dropped by some one in Braddock's army, and that the plate was a key to cipher despatches, and perhaps belonged to Gen. Braddock's private secretary, young Shirley, who was a son of Gov. Shirley of Massachusetts; or else was the key to private cipher communications between individuals of that time. Through a professional correspondent, I have had an examination made in the British Museum, by Mr. W. J. Hardy of Lincoln's Inn, London, a son of Sir William Hardy, formerly Keeper of the Records, and himself a "Record Agent"—*i. e.*, he works up cases of genealogy, custom, and such like for solicitors and others, and is therefore familiar with the repositories of the records and ancient documents. He writes that "in the Sixth Report of the Historical Manuscripts Commission, page 638, may be found a cipher used by Mary Queen of Scots; some of the ciphers are similar to those on this copper plate." He does not think it could have been a military cipher, as they do not, at the Record Office, know of any cipher used in despatches from America, except that of numbers for words, such as 1688 = was, and 1972 = through. Pontifex, the engraver, Mr. Hardy finds, was well known in his day, and that was more than a hundred years ago, but the people who have succeeded to his business at the same place in London can give no information about the plate.

I send herewith an impression from the plate. Can any of your readers tell me more about the cipher?—Yours truly,

W. Roy Stephenson.

Winchester, Va., January 12, 1892.

EXPECT FOR SUSPECT.

To the Editor of The Nation:

Sir: This substitution, though it has been called an Americanism, is, probably, in the colloquial language both of the high and of the low, quite as common here in England as elsewhere. Until somewhat recently, however, it seems to have been sanctioned very infrequently by authors of good repute; and one would fain believe that polite literature can furnish but few quotations to accompany the following:

"Leibnitz, . . . being very erroneous himself, cannot be *expected* to have bequeathed precision to his followers." Oliver Goldsmith (1759), *Miscellaneous Works* (ed. Prior, 1837), Vol. III., p. 246.

"I *expect* they are of a character which will not set you upon making comparisons." Rev. Dr. William Whewell (1821), in Mr. I. Todhunter's *Account of Dr. Whewell's Writings* (1876), Vol. II., p. 43.

"But it is an old saying, that a story never loses in telling; and so we may *expect* it must have been with this story." Sir George W. Dasent, *Story of Burnt Njal* (1861), Vol. I., Preface, p. viii.

"Now, *I expect*, Lady Ambrose, that, in its true sense, you know a good deal more history than you are aware of." Mr. W. H. Mallock, *The New Republic* (1877), p. 184 (ed. 1878).

The misuse of *expect* thus exemplified occurs again and again in the writings of President Jefferson. In at least one instance, where the reference is not to the future, he has also *expectation*. Yet, as will be seen from what is about to be cited, he is not the sole proprietor of this barbarism:

"A fond *expectation* that the Duke had come in search of her filled her bosom with the hope of an explanation; and, removing the traces of tears from her eyes, she waited his coming with eager anxiety." Mrs. Eliza Nathan, *Langreath* (1822), Vol. III., p. 88.

Your obedient servant, F. H.

Marlesford, England, December 29, 1891.

Notes.

Houghton, Mifflin & Co. will shortly bring out 'The Early Renaissance, and Other Essays,' by Prof. J. M. Hoppin of Yale; and 'Miss Bagg's Secretary,' a new novel by Clara Louise Burnham.

A translation of G. Maspéro's 'Life in Ancient Egypt and Assyria,' with illustrations, will be published directly by D. Appleton & Co.

Fleming H. Revell Co. have nearly ready a new Life of Lincoln, following those of Spurgeon and Wesley in their series of "Lives that Speak."

Macmillan & Co. have in press 'The Problems of Greek History,' by Prof. Mahaffy.

A new and cheap edition of Andrew Lang's literary and critical essays is announced by Longmans & Co., together with one of Lecky's 'History of England in the Eighteenth Century,' in twelve monthly volumes, divided seven to England and five to Ireland.

'The Place-Names' of Scotland, by the Rev. J. B. Johnston, is to be published this month by David Douglas, Edinburgh.

Selections from George Long's translation of the 'Discourses of Epictetus' form, with the 'Encheiridion,' the new volume of the Knickerbocker Nuggets (Putnams).

Mrs. Ellen Hardin Walworth has put together in one volume an account of the Battles of Saratoga, 1777, and a statistical sketch of the Saratoga Monument Association, 1886-1891 (Albany: Joel Munsell's Sons). The volume is profusely illustrated with views, portraits, and maps, and has a permanent value. The monuments marking sites are shown photographically. They are the gifts of descendants, sometimes women, of American participators in the campaign against Burgoyne. A visitors' guide to Saratoga Springs concludes the compilation.

Every student and teacher must be thankful to Prof. Albert Bushnell Hart of Harvard for his 'Epoch Maps Illustrating American History,' bearing the imprint of the Messrs. Longman. They are fourteen in number, and bear witness to an immense amount of well-directed research among the sources. Very striking is the series showing the territorial extent and civil divisions of the United States on March 4, 1801, 1825, and 1855, July 4, 1861, and March 4, 1891, respectively. The infamy and peril of the last moves of the Slave Power stand out most effectively in the map exhibiting the status of slavery 1775–1865, where the disgraceful legend in red reads, over nearly half the country, "Opened to Slavery—Slavery Confirmed," by acts of Congress and the Dred Scott decision. The small scale of these maps rendered crowding unavoidable. We should hope that Prof. Hart regards them only as an essay, to be followed some day by a larger atlas with a printed reference to the leading authorities and points of controversy upon the back.

The Collections of the Nova Scotia Historical Society are never without interest for the people of "the States," and there is much to bear out this assertion in the latest volume (vii.), issued by the Society at Halifax. Most important is the publication for the first time of the tabular General Return of the population in the several townships for January 1, 1767, with very instructive comments by D. Allison. Incidentally the writer discusses the number of Acadians summarily expelled in 1755, shows that the race was not exterminated and survived the shock, and that the exiles in some measure made their way back, though not so soon as to be counted in this General Return as landowners or citizens owning allegiance upon oath. The American settlements reckoned about 1,000 souls. Very readable, also, is ex-Gov. Archibald's story of Nova Scotia's share in peopling Sierra Leone with negroes, which might be paralleled by the experiences of our own fruitless Colonization Society.

We should have noticed sooner the appearance of what is undoubtedly a valuable contribution to the study of the history of our language, namely, 'Die Sprache der Rushworth Glossen zum Evangelium Matthäus und der Mercische Dialect,' Part I., Vokale (Göttingen: Dietrich, 1891). In view of the now generally accepted theory that Mercian is the direct ancestor of our modern literary English, it is clear that any light thrown upon its peculiar phonology will be most acceptable to all scholars of English. The author, Prof. E. M. Brown (who now holds the chair of English in the University of Cincinnati), has treated the vowel-system of Rushworth Mercian exhaustively. His conclusions are that in point of age the language is later than the Corpus Gloss and older than the times of King Alfred and the Life of Chad; in point of form it is distinctively Midland and not inclining to Kentish.

The fourth volume of *Garden and Forest* (New York) lies bound before us, bearing ample testimony to the continued success of its conductors in maintaining its high character during the past year. The editorial column has been ably filled with matter useful to municipalities as well as to individuals. The engravings afford a rich variety of remarkable or rare trees, flowers, shrubs, and landscapes, each with its accompanying letter-press. Perhaps most noticeable in the contributions is the series of letters from the shore towns of Massachusetts, by Mr. J. B. Harrison, whose pilgrimage was made to determine how far citizens, hotel-keepers, and summer cottagers had appropriated the shore with the prospect of cutting off public access to it, and what provision for commons existed. His revelations are surprising, and ought to lead to vigorous village-improvement societies from the Merrimac to Provincetown.

An interesting contribution to recent Goethe literature is Dr. Karl Heinemann's 'Goethe's Mutter: ein Lebensbild nach den Quellen' (Leipzig: Seemann, 1891). The remarkable qualities of the Frau Rath, as she was called, the "Mütterchen" from whom her son claimed to have inherited

"die Frohnatur
Und Lust zu faulliren,"

were not generally recognized until the publication of Bettina von Arnim's 'Goethe's Briefwechsel mit einem Kinde' in 1835. Heinemann's biography covers a period of nearly seventy years, and gives a history of the poet's ancestry, including his great-grandfather, the farrier of Artern in Thuringia, and his grandfather, the tailor, who wandered off to Frankfort, where he generated the stock that has made the family name famous. The present volume contains many of Frau Goethe's letters, full of kindly feeling and fresh humor, independent of the conventionalities of society and of grammar, and as original in thought as in orthography. Heinemann also depicts at length the life and trials of Goethe's sister, the gifted but unhappy Cornelia. The publisher has spared no pains in illustrating the work, which has met with deserved success, having already passed into a second edition.

In the January number of the *New England Historical and Genealogical Register* may be found a list of battles and casualties of Massachusetts regiments during the war of the rebellion, compiled by Mrs. Florence W. Jaques, chief assistant to T. W. Higginson, State Military and Naval Historian. Mr. Waters's "Genealogical Gleanings in England" have a weighty reference to the Lees of Virginia, who are also taken up in an authoritative paper by J. Henry Lea, a little later on in the same number.

The General Theological Library of Boston is making an effort to extend its membership and so its usefulness. It was established in 1860 for the benefit of clergymen and all others in all parts of the country interested in theological studies, and now has at command some 16,000 books, besides nearly as many pamphlets and newspapers. Full particulars in regard to its methods and needs and the ways of meeting the latter may be obtained from the Secretary, Mr. Luther Farnham, 6 Mt. Vernon Street, Boston.

The School of Applied Ethics will hold its second session this year as last at Plymouth, Mass., from July 1 to August 12. The managers have good hopes of founding a permanent school of this name and scope in connection with some large university. Prof. C. H. Toy of Cambridge succeeds Prof. H. C. Adams as dean for the current year, and to him or to S. Burns Weston, Treasurer, No. 1602 Chestnut Street, Philadelphia, contributions for the support of the School may be sent. Meantime there has been a necessary raising of the tuition fee from ten to twenty dollars (for all the courses in the three departments).

The annual Alvarenga prize for the best essay on any subject in medicine is offered through the College of Physicians of Philadelphia, of which Dr. Charles W. Dulles is Secretary. Essays must be received by him on or before May 1, 1892. The prize this year amounts to about $180.

An historical exhibition illustrating the technical methods of the Reproductive Arts, with special reference to the photo-mechanical processes of the present day, is now open at the Boston Museum of Fine Arts, and will close on March 6.

From the report of the directors of the British South Africa Company presented at the recent annual meeting of shareholders, and the comments upon it, two or three things are apparently true of the vast region of 500,000 square miles administered by it. Although the alluvial gold and the reefs down to a certain depth in parts of Mashonaland have been exhausted by prehistoric miners, there are reefs in the heart of the virgin forest which have never been touched by either black or white, and, when rapid communications are opened up, will yield a considerable profit on the expense of working. As regards the agricultural value of the land, a deputation of prominent Cape Colony farmers who visited it on behalf of intending colonists, and whose observations were made over a region 500 miles in extent by 25 in width, concluded that at least 40,000 square miles of Mashonaland can be occupied by a white farming population. An interesting discovery, it may be added, in this same region has just been announced of a hill on the rock of which are imprinted a crowd of footsteps, "many human, many of wild animals," all turned towards the top of the hill, as if fleeing from some great primeval disaster. What this was there is nothing left to show.

A correspondent obligingly points out that in our issue of January 7 we erroneously ascribed the authorship of the article on the Encyclical *Novarum Rerum* in the *Revue des Deux Mondes* of December 15 to M. Paul Leroy-Beaulieu, editor of *L'Économiste Français*, while it is the work of his elder brother Anatole, who is known especially on account of his remarkable volumes on Russia. "It may interest you," adds our correspondent, "to know that while in college, where they were classmates of each other, Paul was known as a strong all-around man, while Anatole, who excelled his brother in his literary studies, paid no attention whatever to the purely scientific side of his education. This may explain partly why he is now a good deal more of a dreamer than his 'hard-headed' brother."

—The January Bulletin of the Boston Public Library contains two interesting selections from its valuable collection of historical manuscripts. These, the first of an intended series, are published partly for the purpose of making them known, and partly for the sake of preserving them in permanent form. The first consists of the 'Memoranda of Lieut.-Col. Eld of the Coldstream Guards, during his service in America, in the years 1779 and 1780.' They are written on leaves inserted in a copy of Tarleton's 'History of the Campaigns of 1780–81,' and were probably begun as a commentary on this work, although the intention was only partially carried out. The most interesting portion is a vivacious account of an expedition to Paramus in the Jerseys, where an American picket was posted, on March 23, 1780. The rebels were surprised and dispersed, but the British on their retreat were apparently saved from total destruction only by the gallantry of Col. Eld, then an ensign, who with three others stopped the advance of the Americans by tearing up the planks of a bridge under a heavy fire. The last entry is: "March 26th. Got permission to visit New York & to perform at the Theatre." This is followed by ten letters of Earl Percy, written between the years 1774 and 1778. They contain nothing of special note except the view which he takes of the situation in his first letter written from this country, dated October 27, 1774. In this he writes: "Our affairs here are in the most Critical Situation imaginable; Nothing less than the total loss or Conquest of the Colonies must be the End of it." He forms a very poor opinion of the colonists at the outset, for he writes in November of the same year: "The People here are the most designing Artfull Villains in the World. They have not the least Idea of either Religion or Morality. Nor have they the least Scruple of taking the most solemn Oath on any Matter that can assist their Purpose, tho' they know the direct contrary can be clearly & evidently proved in half an Hour." The American letters close with an account of the battle of Long Island, in which, however, the Earl took no part.

—The Code of Georgia is the only one in the United States in which the common law and the principles of equity are reduced to a series of separate and distinct propositions having the form and force of statutes. Judge Richard H. Clark of Atlanta, the only surviving member of the commission which drafted it, gives its history in the November-December number of the *American Law Review*. The Code, strange to say, was constructed on the general plan of the Code of Alabama, a State which Judge Clark calls "the daughter of Georgia." But when Mr. George A. Gordon of Savannah, who had examined with care the Alabama Code of 1852, proposed in November, 1858, to the Georgia Legislature the codification of the laws of Georgia, he went further, embracing in his scheme laws derived from the common law and the decisions of the Supreme Court of the State as well as from the statutes. The Code of 1860, prepared on this design, was the two years' work of David Irwin, Thomas R. R. Cobb, and Richard H. Clark. To Mr. Cobb was assigned that part which is its distinguishing feature—the Civil Code. Judge Clark says of him that he possessed an order of mind which qualified him, if genius and learning can qualify one, for originating codes and constitutions for the government of States. But he adds: "A code of laws must be founded on the developments of time, and no State or nation is prepared for a code of laws until it has gradually enacted a series of laws from which, by harmonious amendments and alterations, a wise system may be formed." Though Judge Clark asserts that, during the twenty-seven years of trial, the Code of Georgia has been found adequate to every emergency, it may be doubted whether it has been a benefit to the jurisprudence of the State. There are others besides the late Robert Toombs who have doubted its wisdom. The Code enacted into law the decisions of the State Supreme Court. That court was not organized until 1845. It

was unhampered by binding precedents, and consciously adopted a policy at war with the arbitrary and technical principles which characterized the early common law. There can be no doubt that this court, if care had been continually exercised in the selection of its judges, would in fifty years have gradually moulded a much more admirable system of laws than that struck off at a heat by the three codifiers of 1860.

—Mr. Randolph Harrison of Lynchburg, Va., calls our attention to the fact that the Confederate Gen. Early, in Southern Historical Society Papers for December, 1877, is authority for the story of Lee's interview with Gen. Ewell on the first day of the battle of Gettysburg, which was treated as mythical in the review of Drake's 'Battle of Gettysburg' in our No. 1384. To have the authority for a story definitely placed is one step towards a correction, and we thank Mr. Harrison for the reference. In the review it was spoken of as "a version ill-supported," and a little fuller citation of the authorities referred to will, as we think, make this clear. In his official report, Gen. Lee himself speaks of his wish that Ewell should seize Culp's Hill at the close of the first day, but adds that the National forces anticipated Ewell and occupied the hill, "but in what force could not be ascertained, owing to the darkness." He also says that "an intercepted despatch showed that another corps had halted that afternoon four miles from Gettysburg. *Under these circumstances*, it was decided not to attack until the arrival of Longstreet, two of whose divisions encamped about four miles in the rear during the night." He thus distinctly makes his determination not to press the attack by his left wing (which is a material part of the story referred to) *follow* these events. Ewell's report fixes the time. He says: "I received orders soon after dark to draw my corps to the right, in case it could not be used to advantage where it was. . . . I represented to the Commanding General that the hill above referred to (Culp's Hill) was unoccupied by the enemy, . . . and that it commanded their position and made it untenable, so far as I could judge." He waited for Johnson's division to arrive before making the attempt to take it, and "after twelve o'clock at night" sent his orders to Johnson. Johnson's attempt failed because Meade's troops had been first in occupying it, and the fact was thus discovered; but by the time Ewell got the news, "day was now breaking and it was too late for any change of place"; that is to say, he could not carry out the alternative in Lee's order by moving his troops towards the right. It is thus proved to have been near daybreak of the second day when Lee made the determination which it is the gist of the story that he reached in the afternoon of the first. Ewell further says of this second day: "Early in the morning I received a communication from the Commanding General, the tenor of which was that he intended the main attack to be made by the First Corps (Longstreet's) on our right, and wished me, as soon as their guns opened, to make a diversion in their favor, to be converted into a real attack if opportunity offered." This is the order itself, and Ewell's mode of describing it shows that it was not given on the evening of the first day, as it could not have been.

—Mr. Drake is equally explicit in making the supposed conversation occur after "Culp's Hill had been snatched from his (Ewell's) grasp." His mistake is in failing to notice that Ewell did not know of this till nearly daylight of the second day. It is thus that these official reports show that no such conversation could have taken place on the first day, when Ewell was still expecting to seize the point which would make Cemetery Hill "untenable." The circumstances told by Gen. Longstreet and Gen. Long are equally decisive, if we had room to analyze them. Long's narration not only shows that Early's story was an error of recollection, but gives a hint how it may have arisen. Lee went to Ewell's position in the forenoon of the second day, to see the ground for himself, and expected to hear Longstreet's guns open while there. He expressed the same impatience at the delay that he had expressed on the day before at the prolonged absence of Stuart's cavalry. This seems to be the germ out of which grew the misrecollection of 1877. Further examination only shows more conclusively the truth of our general proposition, that in a struggle for a place in history between authentic facts and a telling anecdote, the odds are all in favor of the anecdote.

—Students of English phonology will welcome the reprint (from *American Dialect Notes*) of Dr. O. F. Emerson's scholarly thesis on the "Ithaca Dialect." The author, who is now Assistant Professor of English at Cornell University, has made a worthy contribution to American scholarship, and opened a new field of linguistic study of great interest and value. His historical sketch of the settlement of Ithaca, N. Y., precedes a discussion of the language of the common people of that community, special care being taken to record only the unaffected pronunciation of the uncultured. The material is summarized in tables showing the development of the vowels of the dialect from Old and Middle English, and there follows a thorough treatment of the phonology. The concluding chapter treats of the relation to English in the mother-country, and points out that the Ithaca dialect shows the peculiarities of the eighteenth and, to some extent, the seventeenth-century English. In all probability it is a descendant of some branch of the Eastern Division as given in the classification of Ellis. Possibly the same conclusion might safely be drawn from a less minute study, but it is a matter for rejoicing that this first treatment of an American-English dialect should show in both plan and execution that scientific spirit and thorough workmanship which will render it a safe model for later explorers in the same field.

—M. F. Brunetière has published a new and revised edition of his interesting book on 'Le Roman Naturaliste,' in which he brings out even more forcibly than before his conviction that Zola and the writers of his school do not deserve to be called "naturalists" in the true sense of the word. This opinion is stated in so many words in the brief preface, but it is developed and maintained in the whole series of articles which forms the volume. Needless to say that M. Brunetière's exposition is a masterly one, and forms a valuable contribution to the literature of modern criticism, and that while readers who are not fanatical admirers of the Zolaesque school will cordially thank him for his courageous attack on the filthy and abominable books which so-called "naturalists" have produced, the partisans of the latter will find it a difficult task to invalidate his conclusions. Two essays have been omitted from this edition, the one upon Miss Rhoda Broughton's novels and that upon the Russian nihilistic novel. On the other hand, four essays have been added, on "Les Petits Naturalistes" (Céard, Huysman, Hennique, Maupassant), "La Banqueroute du Naturalisme" (in which Zola is severely handled *apropos* of 'La Terre'), "L'Évangéliste" of Daudet, and "Les Nouvelles" of Maupassant. Recent numbers of the *Revue Bleue* contain the lectures M. Brunetière is engaged in delivering weekly at the Odéon in Paris. These lectures, fifteen in number, will cover the history of the French drama from the time of Corneille to the present day. They are particularly interesting and instructive. Of the five which have appeared in the *Revue*, two especially deserve marked notice: they are those on Racine ("Andromaque") and Molière ("Le Tartuffe").

THE COMTIST CALENDAR.

The New Calendar of Great Men: Biographies of the 558 Worthies of all ages and countries in the Positivist Calendar of Auguste Comte. Edited by Frederic Harrison. Macmillan. 1892.

THAT the contemplation of the lives and characters of great men is a salutary and invigorating spiritual exercise has always been admitted and often proved. But it is so only on condition that the heroes are apprehended in all their living reality and passion; and, unfortunately, biography is infested with pious frauds. Washed-out accounts of Washington and Franklin have done incalculable injury to American characters. Such portraits had their origin in that deep faith in mendacity, as the only thing to be trusted to excite a desire to be good and to keep society straight—a sacred duty, too, to the dead—which was pervading and powerful in this country up to thirty years ago; and, thus engendered from the spirit of lies, how could these biographies bear living seeds of anything but hypocrisy and sordidness? Auguste Comte's calendar is a more systematic and resolute endeavor to belie the facts, not of this or that man's existence, but of biography in the wholesale. A list of Worthies which excludes Napoleon while admitting Harûn-ar-Rashîd, as if there were a single littleness of the former which was not still littler in the latter, or a single spark of greatness in the latter which was not a fiery blaze in the former, is plainly animated by some ulterior purpose; and a portraiture of man's development, as this calendar professes to be, that is arranged in thirteen equal divisions, each of these subdivided into four equal parts, and each of these again into seven others, of which six are equal and the seventh superior in every case, is no transcript from nature, but a fanciful invention.

Among Comte's contemptible traits, none more marks his smallness than this calendar—not the drawing of it up, for that might pass for a rational pastime, but the failure to inspire his disciples with manhood enough to cast it aside. Auguste Comte was as utterly wanting in admiration and sympathy for great men as he was for his neighbors. He thought of them, not as concrete souls, but only as factors in the advancement of the human race, abstractly considered. What are his thirteen greatest men? Mere figureheads: Moses, Homer, Aristotle, Archimedes, Cæsar, Charlemagne, Dante, Gutenberg, Shakspere, Descartes, Frederick the Great, and Bichat. Gutenberg! What did Comte know or care about Gutenberg as a man? But he is not thinking of the men themselves. Where is Jesus? Not among these 13; nor among the 52 of the second rank; nor yet among the 312 of

the third rank; nor even among the 181 of the fourth rank—not there at all! Buddha, Confucius, and Mahomet—the gentle Mahomet!—are in the second rank; Zoroaster, Manco Capac, Menu, Sesostris in the third. Jesus is omitted because he does not represent the sentiments which it is Comte's purpose to inculcate. Most persons, asked to name a baker's dozen of the greatest names of all time, would choose twelve of them from among Alexander, Buddha, Cæsar, Charlemagne, Dante, Homer, Jesus, Mahomet, Michelangelo, Moses, Napoleon, Newton, Pythagoras, Shakspere, and Socrates; but only half of Comte's list is drawn from these. Those great leaders of armies and rulers of peoples, Attila, Belisarius, Charles XII., Clive, Cortez, Queen Elizabeth, Genghis Khan, Julian, Marlborough, Napoleon, Omar I., Peter the Great, Pitt, Timour, Turenne, Wallace, Wellington, William the Conqueror, are not recognized as great men at all. Godfrey de Bouillon goes in as a stanch Catholic. Comte held everything like Protestantism in detestation; we search his list in vain for the names of Calvin, Huss, Knox, Luther, Savonarola, Swedenborg, Wesley, Wiclif. These he excluded as mere destroyers, thus betraying a very false notion of the process of mental development, in which destruction plays an essential part—there was no other good in Comte himself. He took little stock in doctors, and did not know John Hunter, Jenner, Sydenham, nor Vesalius.

Some great names in science, too, are omitted, as Gilbert, Herschel, Rumford; and perhaps not a single scholar is named as such. Yet mediocrities like Vaucanson and Montgolfier appear in the second rank! And this in the year of our Lord 1849, with the mechanical theory of heat in the air! Of course, Sadi-Carnot, Gaulois, Abel, are not to be dreamt of. Queer notions of philosophy find places for the stupid Albertus Magnus, the superficial John of Salisbury, the crazy Raymond Lully, the empty Ramus, the emotionalist Bonaventura, the unsound Hobbes, the insignificant Cusa, Campanella, Vauvenargues, Duclos, and others equally destitute of all claim to greatness, while such important thinkers as Epicurus, Abelard, Duns Scotus, Ockham, Berkeley, Rousseau, Bentham, James Mill, pass unnoticed. Comte was too small a mathematician to appreciate Cauchy, Fresnel, Gauss, Laplace, or even Ricardo. Fermat, who as a reasoner cannot possibly be placed lower than second in the whole history of mind, for he invented a form of inference absolutely novel, and, besides, discovered the mode of reasoning of the differential calculus, all but its notation—this man is admitted to the list, but only in the lowest rank, as second to a second-rate mathematician, John Wallis.

But this is only an example of how little the utilitarian world cares for reasoners. Reasoners are of no use, for the most part, except to posterity—and unborn posterity rouses but a mild interest. The calls of a bread-and-butter profession prevented Fermat from accomplishing much. He could do little but jot down on margins of books and on stray leaves surprising propositions about numbers without demonstrations, destined to puzzle his ablest successors for over two hundred years. One of his theorems is still under investigation. Nevertheless, Comte, a professed mathematician, wearily assigns to Fermat bare standing-room among his assemblage of Worthies. So it was with Jacob Steiner, another most wonderful reasoner, with little question the greatest of all geometers, though not in Comte's list. Extreme poverty quite prevented the publication of the greater part of his discoveries, which have thus been lost; and those that were published had to be published without demonstrations. Thus they remained a dead wall for geometry during thirty-six years. It was the same, in a measure, with the remarkable reasoner, Thomas Young, though he practised a lucrative profession. Kepler's great work, beyond comparison the most marvellous piece of ampliative reasoning ever executed, as well as the most momentous in its consequences, was rendered possible only by his wife's riches and the bounty of the Emperor. His contemporaries, no doubt, held Kepler in high esteem, but they could not dream that his performance was destined to lead to a Newton's, and thence, through the development of modern physics, was to revolutionize the daily life of every civilized being. It was only a sinecure professorship, which another had voluntarily resigned to him, that enabled Newton to do his work (the wealthy Halley paying the printer); and surely this one result by itself fully justifies and compensates all the expenditures that have ever been made in England to establish foundations. Rowan Hamilton, the inventor of quaternions, likewise held a professorship without definite duties. The annual dues of the Royal Society prevented him from the advantage of membership; Newton had been excused from their payment.

Aristotle himself, the prince of thinkers, would scarcely, we believe, be heard of to-day, if it had not been for Alexander. Even as it was, his great works excited so little attention that if a single copy had not been exhumed from the cellar where it had been rotting, forgotten, for nigh two centuries, the whole current of human thought would have been different, and we should perhaps be this day in semi-barbarism. The same thing would equally have resulted if it had not happened that the greatest man of thought of all time was beloved by the greatest man of action. It needed an Alexander to appreciate an Aristotle: ordinary men have not imagination enough to be interested in posterity.

If Newton had not done his work, it would have got done piecemeal, with a delay of, say, fifty years in the establishment of the law of gravitation. If Kepler had not done his more difficult work, it would have had to wait for the further development of mathematics and of philosophy, which would themselves have been greatly retarded, so that civilization would probably have been put back almost two centuries. We should now be living in something like the age of Queen Anne. If Aristotle had not done his work, the result would have been too vastly altered for our comprehension.

Palissy the Potter, a man of great penetration, and the best possible judge of such a matter, gave it as his opinion that a large majority of the world's powerful thinkers are either crushed by circumstances or forced into the pursuit of wealth, and so lost for the world's uses. Who can imagine how we should be situated now if these men had had the encouragement that the public interest required? No doubt, human misery would have been greatly abated, for poor and for rich, and human life much prolonged. But we have to suffer for our forefathers' improvidence. There is no civilized country where a great work of reasoning is less feasible than in ours. We have most superb observatories and laboratories, it is true, but what would a Kepler, with his bad sight and awkward hand,* be doing in such an establishment? Perhaps among our sixty millions there may just now live such a mind; certainly, nobody is on the lookout for him. If he does exist, one wonders what he is doing. Reading examination papers?

The notices in this volume are perfunctory, dead-and-alive things; considering the men, not as they lived and breathed and burned, but as they appear in relation to the cult of Comte's *Grand Être*. There are but 644 pages for 558 biographies, so they could hardly but be jejune and dull. Yet the reader might at least have been referred to the best sources of further information. In fact, he is referred to second and third-rate authorities. Loose and incorrect statements are so abundant that we do not think it necessary to give instances of them.

* "Ad observationes vero sum hebeti visu, ad mechanica inepta manu, ad negotia domestica et politica curiosa et cholerica natura, ad continue sedendum (præsertim ultra justum et statum tempus epularum) infirmo corpore, etiam cum valetudo constat."

KENNAN'S SIBERIA.—II.

Siberia and the Exile System. By George Kennan. The Century Co. 1891.

If Mr. Kennan's book is to be regarded from the standpoint of its title, as a discussion of the exile system in general, it will be seen from the foregoing instances that a good many things remain to be said. If it is to be considered as a remonstrance against the treatment of politicals, administrative exiles, only, we will concede at once that this treatment entails some hardships to which they are generally unaccustomed, and which even the poor students find physically hard to bear. That they suffer, at times, from the caprices of brutal officials, may also be safely admitted. Two points, however, cannot fail to impress the unbiassed reader: the freedom of intercourse with politicals allowed the author, even when the officials caught him in the act; and the fact that the bulk of his most valuable testimony (next to that afforded by official documents) was furnished him by Government officers in charge of exiles, some of whom were frank, and the majority of whom were frank and humane. When it is considered how undesirable these charges are, far from society and friends, and that first-class officials can obtain desirable posts elsewhere and will not accept these, it must be admitted that the balance of testimony is strongly in favor of the assertion that kind-heartedness and humanity, not brutality, are the prevailing characteristics of the Russian character. That prisoners should not be left at the mercy of brutal policemen and officials in Russia—or in America—is indisputable. Unfortunately, the means for enforcing discipline in this respect, even at much shorter range than from St. Petersburg to Irkutsk, has not yet been discovered.

If there is one thing which Mr. Kennan has succeeded in demonstrating more plainly than this general high average of Russian character in the officers, who rule mildly, and the prisoners, who endure with patience and even cheerfulness, it is not only that the Russian Government is fully aware of the evil state of the Siberian prisons and *étapes*, but that it has appropriated funds and given orders for the construction of new and suitable buildings. "If all the money that has been appropriated for the construction and maintenance of 'tumble-down' buildings could now be gathered together, it would be enough to pay for the erection of a line of solid-silver *étapes* along the whole route from Tomsk to the city of Irkutsk," is the testimony of a well-posted inspector of exile transportation, as quoted by the author. If "the greater part of it has been divided between fraudulent contractors and corrupt Government officials," what an-

swer can America make as to remedies, from her very palace of glass, except to deplore such international brotherhood of officialdom all over the world? Two wrongs do not make a right, it is true, but it is equally true that matters are not likely to be improved by outside interference when a country is conscious, as in this instance, of having taken adequate means to remedy an evil, which have come to naught by reason of such highway robbery.

That the prisons and *étapes* are in bad condition is perfectly plain from the testimony of both the Russian and the Siberian press, which also proves that nothing which Mr. Kennan says is news to Russians who can read. Certainly, the criticisms of Russians on the system do not seem to indicate any great severity of censorship or desire to shirk the question. It would be hard to find anything more outspoken in the books or newspapers of America, where the freedom (not to say the license) of the press is regarded as satisfactory by the most virulent man with a grievance, the most disinterested investigator of abuses, the most ambitious society dame. It is probable, indeed, that if any one, native or foreigner, were to publish a similar compilation of newspaper criticisms in regard to American prisons, convict-gangs, mines, almshouses, insane asylums, charity schools, and hospitals, the sum total would not be much behind this exhibit of Russian wrongdoing, while it would call forth more animadversions on the liberty of public speech and horror at American barbarity. We Anglo-Saxons are fond of boasting of our advanced civilization and humanity, not only as compared with Russians, but with other nations. The Russian system, with its defects, is not successful in repressing crime. We will not pause to consider which branch of the American system is the least effectual—that which is represented by sentimental petting and dainties, flowers and adoration, for convicted murderers; exaggerated solicitude that the few who pay the penalty of their crimes should not suffer a single twinge of pain, though they have not hesitated to inflict tortures on their innocent victims; and prisons so comfortable that it is a privilege to reside in them—or the opposite extreme of brutality which rivals any tale of Siberia because it is systematic, not spasmodic, as is shown to be the case in Siberia. We "live in a very large and very fragile glass house" ourselves, as the author remarks of his own position, when he encounters the diplomatic insincerity of the chief of police at Irkutsk; and it is well to leave Russia to decide upon her own policy in dealing with so vast and complicated a question as the disposal of her criminals, when we cannot remedy as bad a state of morals and sanitary conditions among the emigrants in the steerages of first-class ocean steamers, and our immigrant question in general. The system of Russia possesses at least one imperial merit, which no one should be quicker to appreciate than Americans—it disposes of its own criminals, and does not exile them to America to become a public charge and danger, as do the Continental Governments upon whose systems we bestow our favor.

That the prisons and *étapes* are in bad condition may be readily admitted on the testimony of the Siberian press, contained in Appendix F and elsewhere, without reference to Mr. Kennan's observations, or without hesitating over Mr. de Windt's assertions in Appendix E. When Mr. de Windt's promised book on prisons appears, we may be forced to reverse our ideas in detail. Meanwhile, although he is historically weak in his former work, which touches incidentally on Siberian travel and scenes, we have no just reason to question the accuracy of his sight on certain points, before he engaged in special researches, although they mitigate Mr. Kennan's view in some particulars.

The tables containing statistics of the hospital in one of the most congested of the forwarding prisons, that at Tiumén, for 1885 show that the percentage of deaths was 28.1. In the prison, as a whole, it sometimes rose, in other years, to 30 or 44 per cent. In none of the calculations is allowance made, apparently, for any unsanitary influences of the locality, but everything is attributed to overcrowding and the condition of the prisons, although some of the town sites are very unhealthy. The majority of the sick suffered from typhus fever and other infectious diseases. That some allowance should have been made for local conditions is shown by the fact that the percentage of deaths from infectious diseases, caused by bad sanitary conditions, is 24 in Kieff, 21 in St. Petersburg, 18 in Moscow, against 16 in London and 8 in Brussels. Undoubtedly, the percentage, all allowances being made, would still remain very high, but there would be a juster statement of the question. The computation of an annual death-rate of 8 per cent., which is made later on, upon the foundation of the deaths occurring during the voyage of ten days from Tiumén to Tomsk, which is attended with excessive mortality, goes to prove the necessity for allowances.

There are places where we should be glad of a little more information. In some cases, the author frankly admits that the political prisoners have been exiled for robbing sub-treasuries, conspiring against the Government, and so on, which would entail punishment in any land. In other cases, as in those of Mr. and Mrs. Cherniavski, Rosa Frank, and Vera Sheftel—to carry the list no further—he does not even tell us whether they are falsely accused, or of what. On p. 30 of vol. ii., the sweeping character of some of the statements is misleading. The reader is left to assume that *all* persons who taught factory-operatives were sent to Siberia, and that no schools for the lower working-classes, taught by the educated classes, exist any longer. On the contrary, it is not difficult to find in the capital persons who have taught such schools during the critical years referred to, and down to the present time. As for the accusations against the police, of bribe-taking from notorious criminals, subornation of perjury, clubbing nearly to death, and the like, we shall not be forced to go as far as Tomsk or other Siberian towns to find parallels, and we can only say, "Human nature is much the same everywhere," and deplore the fact that "human nature" has acquired such a specialized significance. This does not mean that we advocate these practices anywhere. That Russia will be forced, at some future day, to adopt the long-urged recommendations of her own officials, and comply with the demands of the Siberians by building home prisons and ceasing to flood Siberia with criminals, is perfectly plain. In the meantime, she might conciliate foreign opinion, if she thinks it worth her while, by adopting the methods of her foreign critics and hanging her evil-doers, instead of giving them another chance, under conditions which are, frequently, superior to those which they enjoyed at home when they are of the peasant class. Criticism would then fall powerless, and foreign humanity might plume itself.

In the meantime, also, the silver lining of this cloud is much more apparent than is usually the case to direct vision: the descendants of the present convicts will, no doubt, turn out very worthy and even aristocratic citizens, like the descendants of England's convicts in Australia. The intellectual work accomplished by the political exiles who are allowed such astonishing freedom in Western Siberia, will inure not only to the good of the country and the science of the world, but to their own fame. It is no exaggeration to say that some of these men have done more original work and will win more prominence eventually, through their Siberian researches, as a result of their banishment, than they would ever have attained under ordinary circumstances at home. Vladimir Korolénko, the writer, is a case in point. His first and chief fame rests on his sketches of Siberian expérience, where it seems likely to remain, judging from later developments. That the politicals are not absolutely deprived of civilized implements, we may infer from the fact that the photograph on p. 273 of vol. ii. was made and given to Mr. Kennan by a political in Nerchinsk.

The Programme of the Revolutionists in Appendix C, and as embodied in their letter to the present Czar directly after the assassination of his father, reads reasonably enough, in some particulars; but some of the aims are dangerously utopian, and might be expressed more briefly in the formula repeated to Mr. Kennan by the Irkutsk Chief of Police, as coming from an exiled lady in answer to the question, "What government she and her companions would establish in Russia if they had their way—a republic, a limited monarchy, or a commune?"—"All men have been created free and equal, and any kind of government is a violence done to individual liberty." The foreign anarchists have already tried to demonstrate to Americans the merits of this plan, but they were hanged before its full beauties had been made apparent in practice. The Russian woman and her comrades were merely exiled. The fact remains that, although nearly every educated Russian frankly advocates constitutional government under a limited monarchy, all confess that the masses are not yet ready for this; and their doubts as to the expediency of elective assemblies are reinforced by the abuses of justice and other defects which they perceive in the great model of elective government, the United States. For Russia can criticise as well as America.

In conclusion, it may not be amiss to say a word as to the "Rules relating to Police Surveillance," under which the administrative exiles live. Sec. 7 provides that the exile shall not leave the place to which he is banished without permission from the proper authorities; and if he moves from one house to another, he shall notify the police within twenty-four hours. This is a supplement to sec. 5, which says that when an exile reaches his destination, he shall be deprived of his passport, and shall be furnished with another document setting forth his name, rank, and previous residence, and giving notice to all concerned that he is authorized to live in the village of X——. These conditions do not differ essentially from those under which ordinary natives and foreign visitors live. A foreign passport entitles one to a six-months' residence in the empire, after which a special passport, containing the above information, and valid for one year, is issued. Both these passports must be sent to the police when one changes one's residence from one town to another, or from one house to another, and preliminary permission is required before one leaves the empire. The expense is slight, the inconvenience no-

thing, unless in very exceptional cases; the security afforded in case of accident or violence, because one's whereabouts can be ascertained from the official records, is great. The passport of the exile contains no data as to rank, etc., which is not contained in the ordinary passport, and the information required is less detailed and searching than that demanded by the German police from ordinary travellers.

That Mr. Kennan should have been charmed by and have fallen in love with his politicals is in no way surprising. As a nation, the Russians are a charming and lovable people, and their attractions are heightened, naturally, by their sufferings. But, while indulging in judicious sympathy and pity for innocent sufferers all over the world, it will be well, in spite of Mr. Kennan's extremely well-written and interesting book, to keep our heads clear, and subdue the fervor of our undiscriminating indignation and interference, until we are thoroughly posted on Russian life, nature, habits, and character (which is never more complicated—though complicated at its best—than in the case of these exiles), and on the difficult problems which the Russian Government has to solve in many directions when it undertakes reform in any given quarter.

Dark Days in Chile: an Account of the Revolution of 1891. By Maurice H. Hervey, Special Correspondent of the *Times*. Macmillan & Co.

THE chief object of Mr. Hervey's book is to show that the *Times* was not justified in ordering him home from Chili; but after reading it the real mystery is why he was ever sent there. So jaunty and self-confident a rattle-pate as his own pages unwittingly reveal him to be is a most unlikely man to get at the facts in a case of disputed constitutional interpretation and clash of powers such as he was despatched to investigate. On his own showing, he gave much more time to carousing than to news-gathering, extract after extract from his diary referring mysteriously to certain days and nights of revelry sandwiched in between his hobnobbing with Balmaceda and Government officials and banquets and receptions. Indeed, where he went to wreck was on his pronounced love of creature comforts; and after Balmaceda had placed special trains at his disposal, and "two large cabins fixed up *en suite*" on board the *Imperial*, the idea that such a generous-hearted ruler could be a tyrant became flatly unthinkable.

He goes through the form of a serious argument, it is true, to prove that Balmaceda had the best of the constitutional dispute; but his suppression of facts which must have been perfectly well known to him at the time, makes his discussion wholly futile. Thus he admits but one infringement of the Constitution—"at least in spirit," he cautiously says—on the President's part, namely, his refusing to call an extra session of Congress at the instance of the "Comisión Conservadora"; overlooking the levying of taxes without warrant of law, the closing of the courts, etc. Beside all this, the unconstitutional, or at least extra-constitutional, attitude of Congress in refusing to vote the appropriation bills, and in endeavoring thereby to inaugurate a system of parliamentary government, is a venial offence.

But it is idle to take Mr. Hervey's book seriously. He is hopelessly weak in his facts throughout. Thus he thinks it an amazing piece of stupidity on the part of the editor of the *Times* to give more credit to a Lisbon correspondent than to a man on the spot in Chili; not knowing, apparently, how the *Times's* Lisbon correspondent was secretly supplied with accurate information by an Englishwoman resident in Chili. And in other ways he betrays an incredible amount of ignorance. Moreover, a great deal of his narrative bears on its face the stamp of good-natured mendacity—that is, the idea that he must make out a roistering and spicy story even if the facts had to crack in the process. This lends a certain interest to the book, by constantly stimulating the reader's amused wonder at the effrontery which could try to palm off as historic such impossible conversations as are here recorded; and the sprightly, *bon-vivant* air of the whole prevents the volume from being often dull. In one particular, too, no little information is given—the account of the various naval operations. But, this apart, no one need consult the book for anything except a series of desultory and unveracious chapters. The writer's numerous ventures into Spanish are nearly all dreadfully misprinted; we should have thought the publishers would have seen the need of getting the proof-reading done by a more competent hand than his.

A Supplement to Allibone's Critical Dictionary of English Literature and British and American Authors. By John Foster Kirk. 2 vols., 8vo. Philadelphia: J. B. Lippincott Co. 1891.

THE proverbial ungraciousness of looking a gift-horse in the mouth is particularly applicable in the case of a bibliography, since in no class of literary labor is the reward, either in fame or in money, so disproportionate to the time consumed. We say this in advance, that we may not be supposed to underrate our obligations to editor or publisher of the work whose title we give above. The original 'Dictionary' filled three volumes; Mr. Kirk's is contained in two of nearly the same size, although the first work covered three centuries, and the latter covers, on an average, only thirty years. The compiler has been fully conscious of "one of the embarrassing complications of the task—the necessity, namely, of referring, at every step, to the entries in an earlier work, and connecting his own with them by a process of dovetailing." It is a pity that both he and his publishers could not have seen their way to cast aside the old plates, and issue a second edition of the original brought down to date. Any one who has used Mr. Allibone's three volumes knows that they contain much irrelevant matter; some of Mr. Kirk's, even, could well be spared. By judicious excision the whole could easily have been brought within four volumes; and it may safely be asserted, in view of the special character of the market for such works, that nine-tenths of those who will buy the Supplement would have bought the revised issue. The work ought to be not only in every library, but in every school in which English literature is taught.

As regards the manner in which the continuation has been done, we do not know whether we ought to say that errors are few or many. We have noticed several, but we should hesitate to say that they were numerous in proportion to the total number of statements. As to one feature, however, we think the compiler has been decidedly remiss, viz., in furnishing biographical data. In cases where authors were applied to for information, they "occasionally furnished the materials required with a fulness which would have imparted a liveliness to the narration not in keeping with its purpose and surroundings." But it does not follow that the compiler's course of giving no details, in many cases, is to be approved. To know, for instance, that the author of an historical work has been a professor of history at a reputable institution is to be able to form a useful, if only provisional, opinion as to the value of his work. But of President Andrews of Brown University, formerly professor both at Brown and at Cornell, we are told absolutely nothing—not even his name is given in full, and no mention is made of one of his books. The same is true of Profs. G. B. Adams, E. W. Bemis, E. G. Bourne, J. G. Clark, and we know not how many more. There is no mention of E. A. Cruikshank, whose history of Welland County, Ont., was published in 1887 (591 pp.); nor of E. W. Davies, a novelist; nor of J. W. De Forest's 'Justine's Lovers' (1878); nor of A. A. Graham, who wrote not only a history of Indiana (1876, 750 pp.), but also ten large histories of counties in Ohio, Indiana, and Illinois; nor of Barnet or William Barnett Phillips, both novelists, the latter of whom was an author as early as 1867; nor of E. Walford, author of a Life of Bayard. H. W. Chaplin is said to have published a book called 'The Village Convict,' in New York, 1884-85, whereas this was one of several tales in 'Five Hundred Dollars' (Boston, 1888). In two cases we observe a work recorded which was announced, but never published. In the case of Elizabeth and "Emily" Bellamy one author is made into two. We should have thought the proof-reader would have noticed the absurdity of the statement (page 879) that a collection of 'Fugitive Poetry, 1600–1878' was published in 1868.

Want of care is shown in the occasional enumeration, as distinct publications, of the same book published under different titles, *e. g.*, C. Barnard's 'My Ten-Rod Farm' and 'Gardening for Money,' or Mrs. Terhune's 'Col. Floyd's Wards' and 'Helen Gardner.' Pseudonyms, even when they show for such on their face, are sometimes printed without any hint of their true character—for example, "Aitchenbee," *i. e.*, H[enry] N[ugent] B[anks]. Less obvious pen-names are "Ada Cambridge" (Mrs. Cross), "Virginia Champlin" (Grace V. Lord), "M. J. Colquhoun" (Mrs. C. Scott), "Marie Connor" (Mrs. Leighton), "Milly Deane" (Mrs. Erskine, her name being elsewhere given), "M. B. Fife" (Margaret M. Black), "Evan Stanton" (Rev. T. P. Hughes). Change of name by marriage, also, is sometimes ignored, as in the cases of Julia Cartwright (Ady), Dorothea Gerard (Longard), Laura Holloway (Langford), Lucy Lillie (Harte), A. R. Macfarlane (Logan), E. Nesbit (Bland), Annie Swan (Smith), Adelaide Trafton (Knox), and Mary Tytler (Greene). The compiler's intention evidently is to mention the date of death when known, but this is often omitted: among many instances we mention only Robert Mackenzie, the historian (1881), Henry Mayhew, the social reformer (1887), Lucy Mitchell, the art writer (1888), and Elizabeth Taylor (1879). Mrs. Mortimer is said to have died in 1874 (instead of 1878), and Schliemann in 1891 (instead of 1890).

Mr. Kirk has before now given ample proofs of learning, taste, and discrimination; and in the not inconsiderable portion of the present work which calls for these qualities they are not found wanting. We refer particularly to the skill and discretion with which he has chosen his critical citations, the reading for

which must have been largely a labor of love. In the original work, the editor's prejudices and peculiar point of view were unfortunately obvious, but to see how well this sort of thing can be done one has only to look at the articles on George Eliot, or Howells, or Stevenson, or Swinburne, or Lewis and William Morris. In the quotations ranged under the names of distinguished historians and political thinkers, such as Mill, Morley, and Motley, Mr. Kirk is less full, and perhaps less satisfactory. Mr. Freeman, however, gets as much attention as he deserves—possibly more—and Herbert Spencer is adequately treated. As to men of science, Darwin is handsomely cared for, and Wallace well; but from the notices of Huxley and Tyndall the reader might infer that their reputation was that of literary or philosophical scientists rather than investigators.

Le Morte Darthur. By Syr Thomas Malory. Faithfully reprinted from the original edition (1485) of William Caxton, edited by H. Oskar Sommer, Ph.D. Vol. III. Studies on the Sources. With an introductory essay by Andrew Lang, M.A. London: David Nutt. 1891. Pp. xxv., 338.

Dr. Sommer now presents to "the world of scholarship" the final volume of the work which he began to prepare for the press four years ago. The first volume contained the text of Caxton's 'Le Morte Darthur,' a noble quarto of 861 pages; the second, 230 pages of introduction, including bibliography and essays on the various editions, collations, notes on the language, a complete and critical index of names and places, and a glossary; the final volume deals with the "Sources." It was well known that our Iliad of Chivalry was made from earlier romances. Caxton tells us in his preface that "Syr Thomas Malorye dyd take it oute of certeyn bookes of frensshe and reduced it into Englysshe." Malory, also, in the text itself, frequently reminds us that he tells the tale as the French book says. French books and English books telling similar adventures of the same heroes have been long familiar. Dr. Sommer has attempted to trace in detail the whole series of adventures, tell us where the original of each is found, and set the original before us by description and quotation, so that we can make out clearly what credit belongs to Malory. Thus he finds that the first seven chapters of book first run parallel with the 'Merlin' of Robert de Boron. He therefore gives a *résumé* of this 'Merlin,' with quotations of considerable passages, stopping at every turn to point out in what particulars, if any, Malory varies from the original. It is accompanied, of course, with much collateral information, such as the thorough student desiderates, about other texts, the bibliography, and the like, and makes a pretty long chapter—more than twice as long as the Malory.

The result of it, however, is to give a distinct picture of Malory's manner of working. In the first place, the De Boron story is more than five times as long as Malory's. The materials worked up in the whole 'Morte Darthur' are ten times as long as the book. Then this brevity is not gained by dropping descriptive particulars, and reducing all to a thread of narrative, or an outline of adventures, but by modification of the series of events and persons, omitting such as do not suit the adapter. What he does tell he tells with minute realism, often adding fresh particulars. These Dr. Sommer sometimes finds in other versions, sometimes credits to Malory's invention. Changes are not infrequently made to adjust matters to different forms of the story which Malory has accepted in the later books. He is not merely collecting by whim a jumble of good stories. He has a plan. His diction also is seen to be his own. Sometimes he translates literally, sometimes not; but he never goes far without showing vital signs. So that, on the whole, Malory writing his 'Morte Darthur' from De Boron, is quite like Shakspere writing a scene of "Julius Cæsar" from North's 'Plutarch.'

With the eighth chapter Malory took up the "Ordinary Merlin," and at the eighteenth he changed to the "Suite de Merlin"; at book v. he took up the "Morte Arthur" in the version of the Scotch poet Huchown. Thus far Dr. Sommer goes on as in the first seven chapters, but afterwards he moves more rapidly. He goes through, however, the whole twenty-one books, and is able to give the originals of all except the seventh book and a few pages in the sixth, the twelfth, and the nineteenth. These last pages narrate Lancelot stories which are not found in any known sources. A study of them in connection with variations elsewhere from the known Lancelots convinces Dr. Sommer that Malory has followed in the main a lost "Suite de Lancelot," which we may well hope may be found, or at least fragments sufficient to construct it with the help of Malory. The seventh book is the adventures of Gareth and Lynette, with which Tennyson begins his Round Table series. Dr. Sommer can trace no part of this book, nor can he find anywhere the slightest reference to Gareth's exploits on this adventure, or to the Lady Lyonesse, her sister Lynet, her brother Gryngamor, or the five brothers whom Gareth fought and overcame. He suggests that it is a story not belonging to the Arthurian cycle, but adapted to it by Malory, or by some unknown author whose versio. has been lost. Malory speaks of his "frensshe book" as usual in this narrative, but the style is perfect Malory—Malory delighted with the unwonted humors of his personages. He evidently relished the later lively fabliaux; possibly this may be one of his own making. To the general reader it is like one of Shakspere's comic scenes in a tragedy: it gives a delightful laugh; and now that Tennyson has repeated it we may safely say that its introduction shows high art in Malory. Tennyson closes:

> "And he that told the tale in older times
> Says that Sir Gareth wedded Lyonors,
> But he that told it later, says Lynette."

So far as appears in Dr. Sommer's "Sources," all the old books say "Lyonors," that is, "Lyonesse." It is Tennyson who says "Lynette," that is, "Lynet."

So far as the statistical setting forth of the immediate antecedents of Malory's book is concerned, Dr. Sommer's volume is of great value. He has completed a work of immense labor. It is pleasant to learn that he means to continue his investigations. There is opportunity, one sees, for hundreds of papers of research and criticism upon the exact relations of different versions, MSS., and editions to particular passages of Malory. On the other side the more inviting question of the origin and development of these romances waits for solution. Much has been written on it, and by great scholars. Dr. Sommer gives us some bibliography. By and by, perhaps, he may give us a volume.

Mr. Lang's introductory essay brings Malory into pleasant relations with Homer and Tennyson, and gives him much gracious praise for the enjoyable elements of his work, "the noble and renowned acts of humanity, gentleness, and chivalry" which he likes to tell, and the simplicity and picturesqueness of his style.

The Dramatic Works of George Farquhar. Edited with Life and Notes by Alex. Charles Ewald, F.S.A. 2 vols. London: John C. Nimmo.

Mr. Nimmo has followed up his excellent edition of the plays of Sir George Etheredge by the present equally handsome and welcome edition of the plays of Farquhar; we hope that he may find his account in the venture and be encouraged to give us also, in similar stately volumes, the plays of Congreve, of Vanbrugh, of Wycherley, and of Cibber. Etheredge was edited by Mr. Wilson Verity; Farquhar was prepared for the press by the late A. C. Ewald, and has been seen through it by Mr. Robert W. Lowe, a far more accomplished and accurate student of stage-history than the writer he succeeded. The notes, therefore, to the second volume are more to the point, all too infrequent as they are—a rare thing in these days of over-editing. We could have wished, too, for somewhat more elaborate introductions to each play, tracing its history since the original performance. In the Life prefixed to these volumes, the editor refers to the "comparative failure" of the "Inconstant," without telling us that the play afterwards became a great favorite in Garrick's time—as we are reminded by one of Sheridan's jests, who, when asked his opinion of Garrick's *Young Mirabel*, answered summarily, "Ad-mirable!" In this country, also, the "Inconstant" long held the stage, with Mr. Murdoch as the hard-hearted and sharp-tongued hero; and it is only four or five years since the play was revived in this city by Mr. Daly, with Mr. John Drew as *Young Mirabel* and Miss Ada Rehan as the devoted *Oriana*. Mr. Daly has also revived for us what is perhaps the best of Farquhar's comedies, the briskest and brightest, the "Recruiting Officer." Mr. Ewald, however, speaks of Farquhar's leading characters as "now banished from the stage" (p. 13).

Type, paper, presswork, and binding are what we expect from Mr. Nimmo's imprint.

Old Cottage and Domestic Architecture in Southwest Surrey, and Notes on the Early History of the Division. By Ralph Nevill, F.S.A., F.R.I.B.A. Second edition. Guildford: Printed by Billing & Sons; New York: Dodd, Mead & Co. 1891.

This is an admirable book of its class. To an antiquarian it is the better for being confined to the buildings of a small district; and to an architect, at least none the worse, for one can better detect on what the degrees of excellence among the examples depend than if the types were more various. It has the great advantage of being written by an architect who knows the meaning of both design and construction, and of the relation between the two. He has illustrated the book abundantly with sketches, small but adequate to his purpose, of a kind of buildings that is apt to our present fashion of country cottages—in half-timber work, tiling, brick, and stone. His commentary, technical and artistic, is excellent; the sketches are after the English habit of pen-drawing, a little labored, and dry for want of accent, but tell their story well, and the drawings of detail leave nothing to wish for but more of them. The buildings are simple and modest, sparing of detail, and look as straightforward as if it had needed nothing but intelligence and a hint from necessity to produce them; but if any one will

try to imitate, not copy, the charm of such examples as the Crown Inn at Chiddingfold, the house on the Mount at Guildford, or the cottages at East Street Haslemere, at Witley, Compton, Binscombe, Wonersh, or a dozen others of these, and can succeed, it will be in virtue of a command of design and proportion that will bear testimony to the skill of the original builders. The book gives the architect much valuable suggestion, as well as much pleasure, and will afford the enterprising amateur rope enough for endless entanglement, if not for suicide.

BRIEFER COURSE OF
JAMES'S PSYCHOLOGY.

American Science Series. 12mo, pp. 478. Teacher's price, $1.60; by mail, $1.74.

This work is an abridgment and rewriting (two-fifths of the volume is either new or rewritten) by Prof. James of his 'Principles of Psychology,' and has been prepared as more directly available for the class-room than the larger book.

HENRY HOLT & CO., N. Y.

Direct Fast Express Route
TO THE MEDITERRANEAN.
First-class Passenger Steamer Service between
NEW YORK and GENOA, ITALY,
BY THE
NORTH GERMAN LLOYD STEAMSHIP CO.

TIME, LESS THAN ELEVEN DAYS.

To meet the demand of the American public for some direct and expeditious means of reaching the shores of the MEDITERRANEAN during the FALL and WINTER months by steamers of the same standard of speed, comfort, excellence of service, and cuisine that marks the Express service of the NORDDEUTSCHER LLOYD S. S. CO. between New York, Southampton, and Bremen, this Company have decided to despatch two of their well-known Express steamers from NEW YORK to GENOA, ITALY

The fine, fast steamers FULDA and WERRA of 5,000 tons and 7,000 horse-power have been designated for this service, and will sail from NEW YORK for GIBRALTAR and GENOA at regular intervals;

FULDA, Feb. 6, March 12, April 16.
WERRA, Jan. 23, Feb. 27, April 2, May 7.

The time from NEW YORK to GENOA by these Express Steamers is less than ELEVEN days.

The traveller can reach ITALY and the shores of the Mediterranean by this route during the Fall and Winter months, without braving the Northern latitudes of the ATLANTIC, without crossing the Channel, and without tedious railroad travel.

From GENOA the traveller can proceed to CANNES, NICE, SAN REMO, MENTONE, MONTE CARLO, or any other health resort on the RIVIERA and to all points in ITALY, in a comparatively short time by rail.

Travellers bound for EGYPT, INDIA, CHINA, JAPAN, and AUSTRALIA can make connection at GENOA with the fine NORDDEUTSCHER LLOYD IMPERIAL MAIL STEAMERS that touch at that port on their way to the EAST, INDIA, CHINA, and AUSTRALIA.

Opportunity is offered the Winter sojourner in ITALY or in Southern France to return to AMERICA by the same route in the early Spring from GENOA, thus entirely avoiding the rigorous climate of Northern latitudes. Apply to

OELRICHS & CO., 2 Bowling Green.

EQUITABLE
MORTGAGE COMPANY

A Tonic

HORSFORD'S
ACID PHOSPHATE.

A most excellent and agreeable tonic and appetizer. It nourishes and invigorates the tired brain and body, imparts renewed energy and vitality, and enlivens the functions.

Dr. EPHRAIM BATEMAN, Cedarville, N. J., says:

"I have used it for several years, not only in my practice, but in my own individual case, and consider it under all circumstances one of the best nerve tonics that we possess. For mental exhaustion or overwork it gives renewed strength and vigor to the entire system."

Descriptive pamphlet free.

Rumford Chemical Works, Providence, R. I.

Beware of Substitutes and Imitations.

CAUTION: Be sure the word "Horsford's" is on the label. All others are spurious. Never sold in bulk.

NEW BOOKS.

Two Happy Years in Ceylon.

By C. F. Gordon Cumming. With 19 full-page illustrations and a map. 2 vols., 8vo, $9.00.

A delightful book of personal impressions and experiences, with much valuable information, freshly presented, about the ruins of ancient cities, the customs of the natives, and social and other questions.

The Literature of France.

By H. G. Keene, of Oxford. 12mo, $1.00 *net.*

A popular presentation of the origin, development, and relations to each other of the various schools of French literature from the beginning of the nation to the present, forming a new volume in the University Extension Manuals.

THE SECOND VOLUME OF

Patrick Henry.

Life, Correspondence, and Speeches. By William Wirt Henry, with Portrait. Eleven hundred sets printed from type. 3 vols., 8vo, *net* $12.00. Vols. I. and II. *now ready.*

Dr. Moses Coit Tyler to the author: "I believe that your method and tone in the book are just right, and that your work, when laid before the public in its entirety, will be to all students of our history a convincing proof of the greatness and patriotism of Patrick Henry, and will be an imperishable monument to his memory."

The Real Japan.

Studies of Contemporary Japanese Manners, Morals, Administration, and Politics. By Henry Norman. With 70 illustrations from photographs taken by the author. Crown 8vo, $3.00.

Mr. Norman's book differs from all others on Japan, in that it gives an account of the chief aspects and institutions of Japanese life—political, economic, educational, and social—as it really exists today.

SECOND EDITION.

Japonica.

By Sir Edwin Arnold. Illustrated by Robert Blum. Large 8vo, $3.00.

"It is hard to decide between penman and draughtsman in praising this dainty work of art."—*Critic.*

The Development of Navies

During the last Half Century. By Captain S. Eardley-Wilmot, R. N. With 41 full-page illustrations. 8vo, $1.75.

This new volume in the Events of Our Own Time Series traces, in a popular, spirited manner, the development of modern ships of war and their equipment, and describes the principal operations in which they have taken part. The illustrations are an important and interesting feature of the book.

NEW IMPORTATIONS.

Ten Centuries of Toilette.

From the French of A. Robida by Mrs. Cashel-Hoey. With 29 full-page illustrations in colors and many other illustrations in black and white. Crown 8vo, $2.50.

Selected Poems of Robert Burns.

With an Introduction by Andrew Lang. New volume in the Ideal Series. 16mo, $2.00.

The Nation.

NEW YORK, THURSDAY, JANUARY 28, 1892.

The Week.

CONGRESSMAN BRECKINRIDGE remarked of the President's message that it was "an excellent presentation by an admirable lawyer of a case he is prosecuting against an adversary." There certainly is in it a cavalier disregarding of the findings of the Chilian court, and of the evidence presented, which is more befitting a lawyer's harangue before a jury than a judicial statement. Thus, the Chilians brought forward evidence to show that the refugees in the American Legation had insulted the police. The President dismisses this by simply saying: "It seems to me incredible." In a similar *a-priori* way does he dispose of the charges and the evidence against Admiral Brown: "The charge is too base to gain credence with any one who knows his high personal and professional character." This may be a slanting allusion to Secretary Tracy, who admitted, as he could not well help doing in face of the evidence, that Brown had given valuable military information to Balmaceda. Throughout, moreover, the President accepts the *ex-parte* testimony taken in California as more credible than the sworn and sifted evidence given in court in Valparaiso. The danger and absurdity of this were immediately exposed in a specimen case: A sailor who, by the time he reached Vallejo, remembered all sorts of damaging things against the Chilian police, in Valparaiso testified that he was confused and frightened in the row and saw nothing definite whatever. The legal force of the message is greatly impaired by such a procedure, as no one has pointed out more forcibly than the intimate friend of Mr. Blaine, ex-Senator Henderson.

The Valparaiso press publishes, both in translation and in the English original, a document showing how Egan's son was given the power of attorney to press a claim for $5,750,000 against the Chilian Government. This fact has been vaguely referred to before in despatches from Valparaiso, but complete verification of it has been lacking until now on account of a mistake made in the name of the notary before whom the affidavit was made; it was given as Wolle or Wolly, but turns out to be Molloy. The Secretary of the Brooklyn company urging the claim was highly suspicious when asked questions about the affair by a reporter, and referred the inquirer to "his attorney." But the fact is now beyond question. We believe that Egan himself admits that his son received the power of attorney, but asserts that he never acted under it. That, however, is not saying he would not have acted if the Balmaceda Government had not gone to smash in a few days after the receipt of the document in Chili. The main significance of the affair lies in the fact that the company knew that the name of Egan was a power in the Dictator's day. But we are amazed at the modesty that was content to put "damages" at so small a sum as $5,750,000!

The selection of Chicago as the place for holding the Democratic National Convention was brought about apparently by considerations of convenience, and not by the efforts of "boomers." In fact, Chicago seems not to have been a candidate at all, being a little uneasy lest the awarding of the Convention to her should detract something from her claims to an appropriation for the World's Fair. So far as local feeling and influence go, Chicago is and will will be a hotbed of Clevelandism, which no new-born zeal for John M. Palmer can lessen or offset. Indeed, Senator Palmer himself will, most likely, contribute his full quota to the Cleveland strength in the Convention.

The outgiving of news from Washington that Mr. Blaine is about to write a letter withdrawing from the Presidential contest altogether, has been so often repeated that it has become a trifle stale and rather a subject of mirth. Yet it comes to us through such a channel that we cannot doubt its accuracy. Mr. Blaine, whatever his inclinations might otherwise be, is aware that his impaired health would not permit him to be a candidate. There are so many Republicans, however, who would rather vote for Mr. Blaine's effigy than for Mr. Harrison, that the former has been restrained from making public his intentions respecting the nomination. He may be restrained some time longer. It would probably be gratifying to him to show his chief that he is the stronger of the two in the party councils—to show this in a way that does not admit of doubt or dispute. But that Mr. Blaine should be seriously a candidate for the Presidential nomination this year is incredible and impossible.

The death of Justice Bradley removes from the Supreme Bench of the United States its oldest member. He was born in March, 1813, and was consequently within a few weeks of completing his seventy-ninth year. He was one of those men who, like the late Justice Miller, enter the legal profession rather late, but with so strong a bent for it and with such concentration of purpose that they rise steadily to the top. The story goes that it was from the first his ambition to reach the Supreme Bench of the nation, but it was not until he was fifty-seven years old that his hopes were gratified by President Grant's offer of a place. He was entitled to retire on a pension thirteen years later, upon attaining the age of seventy, but he enjoyed the work and preferred to remain in active service. He was a man of broad legal learning, of a keen and analytical mind, and his decisions carried great weight with lawyers. To the general public he stood only as one of the Supreme Court, except during the period of the Electoral Commission, when he constituted one of the majority in the "eight to seven" votes of that body, and was singled out by the Democrats as meriting especial reproach therefor, although in point of fact there was no more reason for blaming him than the other two judges who stood with him. President Harrison has now another chance to appoint a member of our highest judicial tribunal. He has already had two vacancies on this bench to fill, and when he has named Bradley's successor, one-third of the judges will bear his commissions. There have occurred during his Administration an unusually large number of vacancies in the subordinate courts, and he has been charged with the appointment of judges for the new Court of Appeals. Altogether his four-years' term will include more judicial appointments than have fallen to the lot of any other President. It is most fortunate that Mr. Harrison is well qualified for this branch of the Executive's duties.

Mr. Bland introduced his free-coinage bill in the House on Thursday. It repeals the present silver act, and provides that the new Treasury notes issued under it shall be cancelled as fast as they come into the Treasury, and that notes of a new kind shall be issued in place of them. These are called "coin notes." The legal-tender character of the existing notes shall not be changed, but the "coin notes" are not to be legal tender. Any person may deposit gold or silver bullion at the mint and receive therefor either coin or coin notes. The most curious part of the bill is one which provides that "as soon as France reopens her mints to the free and unrestricted coinage of silver at her present ratio, fifteen and one-half to one, the President of the United States is to immediately make public proclamation of that fact, whereupon the said ratio shall be the legal ratio in the United States, and thereafter the standard silver dollar shall consist of 400 grains of standard silver, and the laws relating to the standard silver dollars of 412½ grains standard silver shall be applicable to the new dollar of 400 grains. The silver dollars of 412½ grains are then to be recoined as fast as practicable into dollars of 400 grains." What would happen in case France, after reopening her mint, should again close it? Would our ratio then change back to the old figure of 16,

or would it remain at 15½? And would the dollar of 400 grains be the "dollar of the fathers," or some other kind of a dollar? Mr. Bland's bill is such an oddity that we cannot consider it likely to pass the House, still less to become a law.

Senator Manderson reported on January 12, from the Committee on Printing, a "Bill providing for the public printing and binding and the distribution of public documents," which was placed upon the Senate Calendar, and was made a special order for Monday. This is a measure of broad scope, which it is difficult succinctly to analyze, but it may briefly be stated that it attempts (1) to define the duties of the Joint Committee on Printing, and its relation to the Public Printer; (2) to define the duties and powers of the Public Printer, and to formulate general rules for the administration of the Government Printing-office and Bindery; and (3) to codify the statutes relating to the whole subject of the printing and distribution of the public documents. That part of the bill which attempts to regulate the printing and distribution of the public documents is of special interest and importance. Every one knows something of the chaotic and inadequate manner in which the great mass of literature included under the above designation is now produced and distributed, and any serious attempt to bring about a better state of things is welcome. The provisions as to what documents are to be printed and the number of copies of each, are minute and apparently exhaustive, but want of space forbids any detailed examination of them here.

Regarding the distribution of the public documents, the bill, in addition to providing for folding-rooms and document-rooms such as already exist, creates a new office. The Superintendent of Documents is to be appointed by the President, by and with the consent of the Senate, at a salary of $3,000 a year; and the Sergeant-at-Arms of the Senate, Doorkeeper of the House, and Public Printer are, between them, to provide office and storage rooms for his use, and he is to have general supervision of the distribution of all public documents. He is also charged with the sale of documents, and is to prepare a comprehensive index to all the documents of each session of Congress, as well as a "consolidated index of Congressional documents," and the indexes to special documents when so directed by the Joint Committee on Printing. It is also made his duty to prepare a monthly catalogue of Government publications which is to be printed in the *Official Gazette* of the Patent Office, and on the first of July of each year he is to print a catalogue of the documents issued during the previous year. All accumulations of unused documents in departments and bureaus are to be turned over to him at intervals of one or two years, and he is to distribute them, giving preference to libraries and to the completion of sets, after sending out printed statements of the documents in his possession for this purpose. The Superintendent of Documents is also given authority to investigate the condition of libraries that are designated depositories of public documents, and if he ascertains that the number of books in any such library is below one thousand volumes, exclusive of Government publications, or that it has ceased to be a free public library, he is given authority to strike its name from the list. It may be stated, in conclusion, that under this bill public libraries are likely to fare better than heretofore as depositories of documents. As a rule, some 500 copies of the various Government publications are set aside to go to libraries, and when extra copies of any work are ordered, the number reserved for libraries is increased until the total number reaches 1,000, except in the case of the Patent Office *Gazette*, of which a very large extra number of copies is distributed free to public libraries.

Mr. Bernhard Quaritch, the London bookseller, has written a letter to "the Honorable William McKinley, Governor of Ohio, Cleveland, U. S. A.," on the subject of the duty on books under the laws of the United States. Mr. Quaritch is apparently under the impression that Mr. McKinley still has some position of influence in reference to the tariff. But that error is of no moment. What he writes is equally useful whether addressed to Wm. McKinley or to Wm. M. Springer or to Benjamin Harrison. Mr. Quaritch is a dealer in old books, which are free of duty under our tariff. As we have no manufactory of old books, his observations do not touch the question of protection. He says that many books bear no dates, and thus fall under the suspicion of the customs authorities. Some works consist of two or more volumes, only one of which may be twenty years old, while the others are under that age, thus leading to doubt and uncertainty at the Custom-house. Some books more than twenty years old have modern bindings, in which case the *Boston* Custom-house officers assume that the binding makes the whole book dutiable. Even if this is a correct decision, Mr. Quaritch maintains that nobody, not even the most skilled expert, can pronounce with accuracy upon the date of a binding. Finally, although old books and books in foreign languages are duty free, yet if they contain plates in considerable number, they are liable to duty on the engravings. These smaller barbarisms (the word is ours, not Mr. Quaritch's) might be avoided by putting a specific duty on all books, new or old, no matter in what language, of, say, ten dollars per hundred pounds. This would avoid disputes at the Custom-house, and would be more satisfactory to the importers of books than the present system, and would afford equal protection to the native industries.

The Republicans of Pennsylvania are choosing delegates to a State Convention which is to nominate a candidate for Justice of the Supreme Court. Among the delegates already elected in Philadelphia are three Appraisers who were indicted for their complicity in the Bardsley frauds. In the same city have also been nominated for reëlection by the Republicans two magistrates who admitted before the Councils Committee that they permitted Bardsley to retain portions of the costs and fees when a settlement was made with him for the delinquent mercantile taxes of 1890; the reason for their payment of tribute being the outrageous costs which they had themselves piled up, one of them having charged $8.76 for each dollar taken in, and the other extorting $36 for the collection of $1. The *Press* pronounces it a gross scandal to renominate these offenders, and asks to have the convention called to "undo this work and remove this taint of Bardsleyism from the magisterial bench." But what will the men who run the machine care for such protests? They know that the *Press* will never refuse to support the party.

Gov. Flower's appointment of Isaac H. Maynard as a Judge of the Court of Appeals is recognized by the Democratic press as so indefensible that they receive it in silence. There is nothing in his career to commend him for this exalted position. He has been a politician of the "pernicious activity" kind for nearly twenty years. He began as a member of the Assembly from Delaware County, and though his skill as a politician was sufficient to get him elective office in that county, he has never been able to command popular support in the State at large. He was elected County Judge and Surrogate there in 1877, and his service on that bench constitutes his entire judicial experience. He was the Democratic candidate for Secretary of State in 1883, and was defeated, running behind his ticket. He then secured the appointment of Deputy Attorney-General at Albany, and in 1885 Secretary Manning appointed him Second Comptroller in the Treasury Department at Washington. Secretary Fairchild promoted him to the post of Assistant Secretary, and in that position he originated the bogus "sugar-fraud" charges against officials in the New York Custom-house, and used them as an excuse for making fifteen removals.

After his departure from the Treasury Department, Mr. Maynard was again appointed Deputy Attorney-General at Albany. When the Democratic State Convention met last summer, he appeared before it as Gov. Hill's candidate for Attorney-General, but found so little encourage-

ment for his claims that he left town before the balloting began, and his name was not presented to the Convention. When Gov. Hill began his campaign for the control of the Senate, after election, Mr. Maynard acted as his ally and agent in instigating the County Canvassing Boards to the various fraudulent proceedings which culminated in the theft of the Dutchess County seat by the State Board of Canvassers. He was the recognized "counsel" of the Onondaga and Dutchess County Canvassing Boards, in which the most outrageous frauds were committed. His activity in this work is universally admitted to have constituted his chief claim to the present appointment, and Gov. Flower in making it is generally regarded as using a Court of Appeals judgeship as payment for a political debt. Nobody pretends that Mr. Maynard's legal attainments or judicial experience entitles him to the position. The appointment is only for a short term, but such an appointment is usually regarded as giving the appointee a claim upon the nomination for the position when the candidates for election to it are selected.

It is a great pity that the editor of the *North American Review* should, in his last number, have lent the magazine to a transparent fraud by printing an article in defence of Tammany as the composition of the "Hon. Richard Croker," which was not written by Croker at all, and which Croker is no more capable of writing than of calculating an eclipse. The *North American Review* has a history which ought to protect it from such degradation. A genuine article on Tammany from Croker, written without assistance, would have considerable political interest as showing the world outside the city the kind of man the ruler of the city is, and elucidating the municipal annals for future generations. But a windy and absolutely disingenuous apology for Tammany, fraudulently attributed to Croker, is something which ought not to have found its way into a respectable periodical. An air of low comedy is given to the table of contents by sticking in the "Croker" article between one by Anthony Comstock on "Lotteries and Gambling" and the first of a series on "The Olympian Religion" by the Right Hon. W.E. Gladstone. Both Comstock and Gladstone are entitled to more consideration. Nothing does more to promote political and social degradation than the treatment by the newspapers of serious people and things as comic, and of comic people and things as serious. We ought to have at least two magazines, relying on literature solely and not on pictures for their support, which would not lend themselves to these travesties.

Compromise is certainly stamped all over the final form of words adopted by the Presbyterian Revision Committee in regard to preterition and other leading doctrines of the Calvinistic system. The old substance is grasped after in saying that "God saw fit . . . not to elect . . . the rest of mankind," and that "them he ordained to dishonor and wrath"; yet all is really abandoned in conceding, "nor is it his decree, but the wickedness of their own hearts" which plays the mischief with them. Such a prophesying of smooth things to suit the itching ears of an evil generation would have been enough to call out the sternest rebuke of a man like John Knox, and we suppose that the minority vote in the General Committee against the report was cast by men who stood for the old conception of a "decree" as a thing that did what it set out to do. A like concession to carnal minds appears in the revised form of the doctrine "Of Good Works." The Westminster roundly declared these "sinful" when done by "unregenerate men," after the good old way of calling heathen virtues "splendid vices"; but this is now to be weakened into the assertion that they "do not meet the requirements of the divine law, hence they cannot be pleaded as a ground of acceptance with God." Evidently this is not so far from the idea of the candidate for orders who told his examiners, when asked what was the Church of England's doctrine of good works, "that a few of them would do no harm."

Some interesting statistics are published in a London journal relating to an exhaustive inquiry into the causes of the poverty of 152 families in a certain city district containing a population of 126,000. These families presented a wide variety in trade and religion and nationality, and their application for charitable assistance was taken as *prima-facie* and confessed evidence of poverty. Investigation showed that forty-two families were brought to want by their own fault, the causes of their poverty being set down as "reckless improvidence," "crime," "drink," "idleness," "bad temper," etc. Then come fifty-three families whose poverty was due to certain common accidents or misfortunes which might have been provided against, but were not. The final group of fifty-seven families presents cases of excusable poverty, such as those due to extraordinary slackness of trade or the absolute destruction of some branch of business, though even in this group appear twenty-one families who are made hopelessly poor by "incompetence." The whole result goes to show the untrustworthiness of the figures often cited of the number of persons in London and other cities who are unemployed, and said to be "able and willing to work if they could only get employment." A similar conclusion is led up to by an article of Prof. Hyslop's in a late issue of the New York *Independent*, in which he showed the astonishingly high percentage of the unworthy who apply to charitable organizations in this city for aid.

The heat which marks the relations between France and England regarding Egypt seems likely to be intensified by the trouble which has recently arisen in Morocco. Some of the tribes from the southern frontier have risen against the Sultan, and have forced their way nearly to the capital. This has caused an assemblage of the Spanish, French, and British Mediterranean fleets at Tangier, ostensibly to look after the interests of their own resident subjects, but really to get a share of the empire in case it breaks up. The Spaniards say their claim is stronger than any other, inasmuch as they have held Ceuta and other ports for two centuries, have thrashed the Moroccans in one recent war, and have always been considered the heirs of the last Sultan, whoever he might be. The French appear with a claim founded on the recent aggression of a Moroccan tribe on an Algerine tribe, on their having beaten the Moroccan army in the war with Abd-el-Kader, and on their having at one time bombarded Mogador and Tangier. Great Britain claims only the port of Tangier, on the strength of having owned Tangier in the seventeenth century, and on the theory that it is the complement of Gibraltar, and ought properly to belong to the Power which holds Gibraltar, inasmuch as if Tangier were in the hands of an enemy, Gibraltar could not be provisioned. She does not care who has the rest of Morocco, but Lord Salisbury gives notice pretty plainly, through the *Standard*, that England is going to have Tangier, no matter what any one else thinks about it.

The Panama Canal share and bond-holders are still besieging the Government of France to advance the money or to guarantee the interest on a loan sufficient to complete the work as a canal with locks. The amount which they consider necessary is $180,000,000. The Government has declined to accede to the prayer of the petitioners, and even the Deputies who present the petitions have no confidence in their ability to persuade the Government to assume the desperate undertaking. The concession from the Colombian Government will expire on the 28th of February, 1893, if the work is not resumed. Although the Chamber of Deputies declined to recommend a subvention or a guarantee, it voted a resolution inviting the Minister of Justice to institute criminal proceedings against the promoters of the enterprise if the facts developed by the investigation should warrant them. When those proceedings are properly pushed, we shall perhaps find out how much of the money of the peasants and shop-keepers and chambermaids was pocketed by the journalists who furnished the wind power for De Lesseps.

"THE ULTIMATUM."

SOME of our morning contemporaries were very amusing reading on Tuesday, so many of them were prepared for war and determined to die around the American flag. What led to this droll spectacle was the belief into which they had persuaded themselves, with the help of the Navy officers, that the Chilians were an insolent and conceited people, ignorant of our power and resources, and that, therefore, they were sure to fight sooner than make amends in any way for the Valparaiso affair. As the *Evening Post* said, in answer to a naval officer who produced this view in its columns, if the Chilians engaged in a war with the United States,

"it would show either that the governing class had gone stark mad, or were as ignorant of our resources as Sitting Bull or Rain-in-the-Face. But we know they are neither stark mad nor brutally ignorant. They are shrewd, well-equipped statesmen, who have established and carry on a civilized government which does not suffer by comparison with our own or that of any European country."

The ultimatum despatched by President Harrison on Thursday last was the first formal statement of our demands that we have made, and they have promptly complied with them. With regard to the apology required, it would have been childish to refuse it, as the dispute was over words. The correspondence shows that Señor Matta spoke of the Valparaiso outrage on October 27 as a "deplorable occurrence" and "lamentable affair" (Egan withheld these expressions in his despatch). On December 11 Señor Montt spoke of "the lamentable events at Valparaiso which his Government had deeply deplored." He repeated this in substance December 19. On January 4 the new Chilian Minister of Foreign Affairs spoke of "the occurrence of October 16 which Chili has lamented and does sincerely lament." On January 8 the Minister in Washington wrote to Mr. Blaine:

"I have also received special instructions to state to the Government of the United States that the Government of Chili has felt very sincere regret for the unfortunate events which occurred in Valparaiso on the 16th of October."

If we had not the President's Message before us, we should find difficulty in believing that a civilized Power had refused to accept these expressions as a sufficient apology from a "sister republic" for the acts of a street mob. But the President says expressly that it is not enough to say the affair was "lamentable," or that it is "regretted." He wants something more, and he furnishes a model of what he wants in Mr. Webster's despatch on the occasion of the mob's attack on the Spanish Consulate at New Orleans in 1851. Mr. Webster there says the attack was "a disgraceful and flagrant breach of duty and propriety," and that "these acts have caused the President great pain." The Chilians, of course, are willing to adopt Mr. Webster's language if it makes President Harrison feel any easier. To go to war for the difference would be the act of a child. The way the President labors over this point is enough to make grown men smile.

The Message is, in fact, throughout rather an Indianapolis brief in a suit for damages than a diplomatic state paper. It is studiously insulting to the Chilians from first to last. It insists upon it that the attack on the sailors was evidence and expression of general Chilian hostility to the United States, in spite of the solemn disavowals of the Chilian Government. It treats the findings of the Chilian courts as unworthy of credit, and the assertions of Chilian officers as unworthy of belief. It accuses the "Chilian authorities" of lying when they charged "the refugees and inmates of the legation with insulting the police" through the windows; the President's authorities for this contradiction being Egan, who is himself a foreign fugitive from justice, and the refugees, some of whom were notorious criminals. On the strength of an *ex-parte* investigation conducted by a naval commander on board his own ship, he treats the results of the Chilian investigations on shore as "evasion and subterfuge," intended "to cloud his [the President's] clear vision of this brutal work." If the President had had any diplomatic training, this would all deserve severe criticism; but in view of the fact that his training has consisted in thirty years' practice before Indiana juries, we forbear. The Chilians have inflicted on him the severest possible punishment for his "brutal work" by surrendering without seeing the Message. There is something very ludicrous in this termination of the controversy. We are afraid it will be taken in very bad part at the Navy Department. Is there not very gross insolence in giving in without hearing the President's arguments? Does it not call for a "naval movement" of some kind to make them listen to it before apologizing?

The unkindest cut of all, however, is the offer to submit the matter of the attack on the sailors to the Supreme Court of the United States. This is the second time since Mr. Blaine and Gen. Harrison came into charge of our diplomacy that this slight has been inflicted on them by a foreign disputant. It is a great compliment to the Supreme Court, but it must be confessed it is a good deal of a slight on the State and Navy Departments. Ought this to be allowed to pass unrebuked by some sort of demonstration? Does it not contain a subtle insinuation that the foreign cause is a good one, that the Supreme Court will probably proclaim it to be just, and that gentlemen cannot safely or profitably negotiate with the State Department? We think it does. If the navy-yards agree with us, ought we not to punish this "preterition" by "vigorous action"?

We cannot take leave of this tedious business, of which the public is already very tired, without a word of friendly remonstrance to our naval friends, who have been mainly instrumental in diffusing the belief that there would be, and would have to be, war with Chili. There was a very significant sentence or two at the close of an article in the last number of the *Financial Chronicle*, apropos of the alarm of war which greatly disturbed business in Wall Street last week. It was this:

"Yet when an hysterical letter from the commander of one of our proudest ships down in Chilian waters, given out by the Navy Department, was published by the daily press, with lots of other warlike news, and when added to that the market opened with rumors of letters received from official sources by our most reputable banking-houses, asserting that war was inevitable, traders became alarmed, destructionists cultivated the apprehension, and a break followed. This condition of affairs was, however, but of short duration; *though it may be worth while to add that the country does not seem to take quite the same kind of interest in its navy that it did a week ago.*"

This means that the naval officers have been displaying great indiscretion in their way of making sure of large appropriations for the new navy. They have sought to back themselves up with the public and Congress, by pretending that all the activity in the navy-yards called for by the large additions now making to our naval force was preparation for war; and they have "stuffed" the newspaper correspondents, week after week, for this purpose with silly stories about the necessity and certainty of war. Some of them have injected themselves into the diplomatic controversy, and have, against all rules of military discipline and propriety, almost taken the stump in order to inflame the public mind against a small and friendly country at present laboring under great internal difficulties. Now the public—every civilized public in the world—resents, sooner or later, the efforts of military men to bring on a war. In all free countries the question of peace and war is reserved for solution by civilians. This country did not need to be stimulated into liberality towards the navy by any extravagant language and false pretences. The Navy has in this instance gone so far as to produce somewhat of a reaction, and prejudice the sober-minded portion of the community against it. Many people are disposed to day to say to Commander Schley, for instance, gallant officer and agreeable man though he be, what the Irish policeman said to the noisy man in the court-room: "Silence is all we want from you, and very little of that."

CONCERNING WAR AS A REMEDY.

IT was the generally accepted opinion of the well-to-do class, the class known as "gentlemen" in all European countries, even a century ago, that what was called an "insult" had to be, on pain of social disgrace, punished by the person insulted by fighting the insulter with some kind of weapon. An insult, under the "laws of honor," was any language or act expressive of contempt for the insulted, or likely to lessen the consideration in which he was held in the society in which he

lived. The history of the duel is so well known that there is no need, for our present purpose, to sketch it. It doubtless originated in the desire of the offended party to kill the offender, and in his belief that he could kill him, and thus satisfy his barbaric thirst for simple vengeance. It became after a while what we now see it—as it exists on the European continent and in the Southern States—a means of showing the public that the challenger is not deficient in physical courage, and that anybody who insults him incurs a certain risk in doing so. But it has died out completely in England and the Northern States, not only under the growth of humanitarianism in both countries, but under the increasing application of what is called common sense, or, in other words, reasonableness, to the conduct of life.

The *absurdity* of the duel as a remedy has, in fact, had more to do with its extinction in these countries than anything else. The Pope has set forth this absurdity admirably in a recent Allocution for the benefit of the Italians more particularly. For instance, a man publicly calls you a liar. The injury thus inflicted under the duelling code lies almost wholly in the imputation it casts, not on your truthfulness, but on your personal courage. It connotes an expectation on the part of the accuser that you would not resent it in arms. You disprove this by fighting him, and either killing or wounding him, or letting him kill or wound you. In either case you set yourself right under the code—that is, if he wounds you, he has given you as much "satisfaction" as if you had wounded him. But the question of your veracity remains exactly where it was before the duel was fought. A man elopes with your wife, which is a deadly insult also, inasmuch as it indicates his belief that he can do so with impunity, and you are therefore "dishonored" if you do not fight him. Your honor is restored if you kill him, but it is restored just as effectively if he kills you. But even if you kill him, it does not restore your wife or your domestic peace. We might go through the whole category of offences requiring what the French call "réparation par les armes," with like result. The duel proves nothing except that neither of the disputants is afraid to fight. It decides no other question of fact, and rights no wrong except an accusation of personal cowardice.

But it is quite plain that the old duelling view of honor, and of fighting as a remedy, is by no means extinct in the conduct of national affairs. A great many public men and a great many newspapers have talked of the requirements of the present Chilian crisis in the exact language in which the duty of offended individuals used to be described in the seventeenth and eighteenth centuries, showing that in politics the duelling tradition about "honor" still lingers. It is quite true that the position of a peaceably disposed nation in our day is not exactly analogous to that of a peaceably disposed citizen who has the courts and police to appeal to for defence against wrong-doers. A nation is rather in the position of a peaceably disposed American or Englishman living in a duelling or semi-barbarous community. It has to provide for its own protection against violence and robbery, and in some manner to diffuse among its neighbors the belief that it would be dangerous to inflict injury on it. For this reason it has to carry arms openly and make open display of its willingness and ability to use them if necessary.

But any use of arms beyond what is absolutely necessary for the spread and maintenance of this conviction, and, above all, any reliance on arms as a ready remedy for a past wrong, is a relic of barbarism. It is, of course, impossible to lay down rules beforehand which shall exactly define a *casus belli* for a highly civilized Power. A *casus belli*, in intercourse with a quarrelsome or uncivilized community which did not know the strength of a great Power, and might be led by such ignorance into subsequent attacks on its citizens or insults to its flag, may arise far more readily than a *casus belli* with a neighbor in the same stage of civilization, and possessing an intimate knowledge of its history and resources. But in every case it has to be remembered that war as a *remedy* for past wrongs is utterly illogical. For example, if we have had two sailors killed in a riot in Chili, the notion that this wrong can be made good by our killing several hundred Chilian sailors and letting them kill several hundred more of ours, is almost childish. There would be a slight thread of reason in it if we could kill the Chilian sailors without letting them kill ours, because it could at least be said that it satisfied the old human love of revenge, which makes the murderer who lies in wait for his enemy a far more rational man than the duellist. But in chastising a public enemy by war there has to be a battle, and about the same loss of life on both sides, so that, when the war was over, we should have to charge Chili with the killing and wounding not of twenty or thirty men by a mob in a riot, but with the killing and wounding, say, of one thousand, of malice aforethought, and under the deliberate order and direction of the best minds in the Chilian Republic.

If we take the riot at Valparaiso as an evidence of Chilian ill-will to the United States, we are no better off in case of war. Mr. Wharton, in our first despatch to the Chilian Government of October 23, 1891, complains that the mob ("as we must conclude"!) "were animated in their bloody work by hostility to these men as sailors of the United States." He further says that the people of the United States had been pained by the "killing and pitiless wounding" of the sailors at Valparaiso "more as an apparent expression of an unfriendliness towards this Government" than as anything else. If we consider war as a remedy for this unfriendliness, it becomes almost grotesque in its absurdity. Our threatening it for this reason strikingly resembles the French Jacobin's "Sois mon frère, ou je te tue" (Be fraternal, or I'll cut your throat). To sink the Chilian fleet, and bombard Chilian ports, and invade and lay waste Chilian territory in order to cure "unfriendliness," or "hostility," would far surpass in unreasonableness any war of either ancient or modern times. Governments in those days, when making preparations to attack an enemy, never complained of *his* disliking them. They never said they were going to kill him and lay waste his territory because he hated them, but because they hated him. They fought him for their own satisfaction, not for his moral elevation. "If I know myself," said one of Nelson's Englishmen, "I have no prejudices, but I do hate a Frenchman." It was his hatred of Frenchmen which kept him to his guns at Trafalgar, not a desire to make Frenchmen love him.

In short, the only evil we can remedy by a war with Chili is, if any, Chili's ignorance of our resources and of our formidableness as an armed antagonist. That any such ignorance exists among the governing class in Chili, no sensible man who knows anything of the country will believe. Our "honor," in the duelling sense, can hardly be involved, because no intelligent Chilian doubts our military courage. For Chilian hostility, as for the hostility of any civilized man, or body of men, the remedy is kindness and consideration. For the death of the sailors the remedy is some compensation to their families and to the wounded. But to prevent this being ridiculous it ought to be obtained by peaceable means. To get it by war is like spending $1,000 at law for the recovery of $5. That we could, in the presence of the armaments supported by sea and land by European Powers, gain any glory or a high position as a military bully by fighting Chili, is something which no intelligent man will affirm. Our fame in the international arena is to be maintained, as it has been acquired, by our success in getting what we want without the use of force. It is in this we show our civilization and our modernness, if we may use the term. Tamerlane gained his ends by cutting throats. We should gain ours by assuming that all our civilized neighbors are friendly and are amenable to reason, and are willing to right an unprovoked wrong when it is properly described to them. For this process hardly any delay is too long. Not a gun or ship should be moved until the powers of persuasion have been wholly exhausted in the estimation, not of naval and military men, but of the wisest, most peace-loving and right-doing portion of the community. The one thing an American statesman should keep foremost in his mind is that he can go to war at any time, but, the war once begun, he never can tell beforehand at what time he can make peace. "Immediate satisfaction, sir," or, "A written apolo-

gy, damn him," are duellists' phrases, not those of a politician. We can fight Chili a year hence as well as next month, and a year hence we may be sure we shall all see more clearly than we do now the merits of this quarrel. We waited seven years for the settlement of the *Alabama* claims, but they *were* settled without any naval fuming, and they cost no man's life, destroyed no man's home or property, and left our relations with Great Britain, as every one admits, better than they had been for three quarters of a century.

MR. SAXTON'S NEW CORRUPT-PRACTICES ACT.

SENATOR SAXTON has introduced his bill for the amendment of the Corrupt Practices Act, passed in 1890, and the changes which he proposes are of such importance as to amount practically to a new measure. He has made a careful study of the other laws and bills of the kind which have been considered in other American legislatures, and has embodied all their most desirable features in his amendments. The result is a far more comprehensive and stringent act against the corrupt and extravagant use of money in elections than has yet appeared in any part of this country. While it draws its leading principles from the English act of 1883, the application of those principles is adapted to American election methods.

The chief defects of the Act of 1890 were its failure to include campaign committees in the requirement for sworn publication of all expenditures of the election, and its failure to place limits to the expenditures of candidates. These defects Senator Saxton has remedied, and he has also provided against new abuses which were revealed in the last election. He has amended the provision which forbids any person directly or indirectly to use undue influence upon any voter in an election so as to make it include primaries, caucuses, and conventions, and to include also the offence of hiring a voter to refrain from registering. It is made a misdemeanor for any one to hire a voter to refrain from registering, or for any one to allow himself to be hired to so refrain. Both parties have charged that many voters were hired to stay away from the polls at the last election, and that many others were hired to withhold their names from the registry. The former method of bribing is forbidden by the present law, but nobody has ever tried to have the penalty enforced. The latter method was an invention of the last campaign, and furnishes the briber with a sure proof that the man he has bribed has kept his bargain in the absence of the latter's name from the registration lists.

Three new sections are proposed by Mr. Saxton, all of the highest importance. The first provides a maximum limit, not yet fixed, to the expenditures of all candidates, graded according to the importance of the office, and declares that "no candidate for judicial office shall pay or contribute directly or indirectly to any person, corporation, or political committee any sum or amount whatever, in money or its equivalent or other valuable thing, in aid of his nomination or election, or in aid of the nomination or election of any other candidate for office, or for campaign purposes, or to promote the success of a party ticket," and forbids any person, corporation, or political committee to ask or receive any contribution from a judicial candidate. This is a most desirable provision, and if enacted, it will put a stop to the practical sale of judicial nominations which Tammany has been making in this city for many years. No candidate for the bench can hope to receive the Tammany nomination unless he pay over from $5,000 to $25,000 to Tammany as the price of it. The surer he is of election after the nomination, the higher is the price levied, for the certainty of election enhances the value of the nomination.

The second new section proposed by Senator Saxton defines the lawful and unlawful uses which candidates may make of money, as follows:

"It shall be unlawful for a candidate for public office to pay, use, expend or contribute directly or indirectly any money or its equivalent or other valuable thing in aid of his nomination or election, or for any person, corporation, or political committee, to pay, use, expend or contribute directly or indirectly any money or its equivalent or other valuable thing in aid of the nomination or the election of such candidate, or for campaign expenses, or to promote the success of a party ticket except for the following purposes:

"(1.) The personal expenses of the candidate for travelling, postage, stationery, and clerk hire.

"(2.) Necessary committee and campaign-club expenses for rent, furniture, clerk hire, postage, and stationery.

"(3.) Necessary expenses of printing posters for use at public elections, unofficial ballots when they are required, and ballots for primary elections, caucuses, and conventions.

"(4.) Reasonable compensation for the services of watchers authorized by law at polling-places and places of holding primary elections and caucuses.

"(5.) Necessary expenses of printing and advertising, including the circulation of newspapers and the publication and distribution of pamphlets, circulars, addresses, and notices.

"(6.) A reasonable compensation to one person in each election district for making a canvass of voters.

"(7.) The necessary expenses of conveying poor and infirm voters to the polling places, and places of holding primary elections, caucuses, and conventions; but this shall not authorize the payment of any money or other valuable thing to such poor and infirm voter, or to any person as a compensation for procuring the attendance of such voter at the polls or place of holding the primary election, caucus, or convention.

"(8.) The necessary expenses for holding public meetings and conventions.

"(9.) The necessary expenses for providing uniforms and other paraphernalia for political clubs and music for street parades."

These provisions would be susceptible of gross abuse were they not coupled with the maximum limit to expenditures. Mr. Saxton, in addition to placing such limit, has drawn amendments to the section requiring sworn publication of expenses by candidates, which seem well calculated to prevent evasions similar to those which nearly all candidates committed in their statements after the last campaign. As amended, the section requires each candidate to file "an itemized statement showing in detail all the moneys which he has directly or indirectly, by himself or through any other person, paid or expended, or promised to contribute, pay, or expend, in aid of his nomination or election, or in aid of the nomination or election of any other person, or for campaign purposes, or to promote the success of a party ticket."

The third new section provides that "every political committee which aids in the nomination, election, or defeat of any candidate for public office, or assists in conducting a political campaign, or in promoting the success of the ticket of a political party, shall have a treasurer, and cause to be kept by him detailed accounts of all the money, securities, and equivalents of money received by or promised to such committee, and of the manner in which the same has been expended, and of all payments, liabilities, or promises of payment made by such committee, or any member thereof," and publish the same under oath after election. Any person not a member of such committee, or any person who is a member, who collects or disburses money in an election, or incurs liabilities to an amount exceeding five dollars, comes within the scope of this requirement.

The penalties for violation of the law remain the same as under the present act, with the exception that, in addition to imprisonment and loss of any office to which he may have been elected, a candidate convicted of any offence is disqualified for holding any kind of public office for five years.

REGISTRATION OF COPYRIGHT IN ENGLAND.

IN the development of legislation for the protection of literary and artistic property, there has been a noticeable tendency to make the statutory requirements for the securing and identifying of the copyright as little burdensome to the author or his assigns as possible. This has also been marked in the case of international agreements, and when the International Literary Property Convention was entered into, in 1887, after preliminary discussion of this point, it was agreed that an author, in order to secure full control of his copyright in the various countries of the Union, need only fulfil the conditions and formalities prescribed by law in his own country. But in England the law as to the registration of copyright and the deposit of copies is contained in what the *Law Quarterly Review* terms an " 'ungodly jumble' of statutes and orders in council," and is decidedly complicated, and a recent English decision has added to the perplexing and unsatisfactory state of the law.

The case of Fishburn vs. Hollingshead, briefly stated, was as follows: The proprietors of a panorama of "Jerusalem and the Crucifixion of Christ," painted by a Munich artist and copyrighted in Germany, assigned to the plaintiffs the copyright of the picture in the United King-

dom. The defendant attempted to exhibit a copy of the picture in London, and the questions for the determination of the court were, first, whether the panorama exhibited by Hollingshead was an infringement of the plaintiffs' copyright; secondly, whether the plaintiffs had secured the right to sue for an injunction, and, incidental to this last, whether registration in London is essential to the right to defend a foreigner's English copyright against infringement—a point of direct interest to all foreign authors who wish to obtain a valid copyright in Great Britain. The case was decided on February 4, 1891, and is reported in the Law Reports, 1891: Chancery Division, vol. ii., pp. 371–385. Mr. Justice Stirling, who rendered the decision, enters into an elaborate review of the stipulations as to registration contained in the various Copyright Statutes and Orders in Council, and arrives at the conclusion that, under the so-called International Copyright Acts, registration is not necessary unless distinctly provided for in the Order in Council under which aliens become the beneficiaries of the English copyright laws. But, to quote his own words, "Unless there is something in the Order which excepts the enactments with respect to registration contained in the General Copyright Acts, it seems to me that they must apply, and I have found nothing in the Convention or in the Order which makes any exception." In effect, the copyright proprietor must register in order to have the right to sue for the purpose of protecting his copyright property, and this because, "Unless express provision is made by the Order in Council for excepting from its operation some of its enactments, foreigners who claim copyright under the act are to be subject to the same obligations as are imposed by the statutes on British subjects"; and a passage from a decision by Lord Hatherley is quoted to show that if this were not so, "authors of foreign works would be placed in a better position than authors in this country, which certainly was not intended."

This reasoning seems not only narrow, but illogical, for under the operation of the Berne Convention, which requires of an author but one registration of his copyright for all the countries of the International Copyright Union, the English author loses nothing by the foreigner's exemption from registration in England, as he is given the reciprocal advantage of the remission of registration and deposit in all the countries of the Union except his own. Moreover, if each country of the Union should require a repetition of the registration and deposit in order to the securing of copyright within its own borders, the stipulation would be a very burdensome one. England's own plenipotentiaries, in their report on the Berne treaty, emphasize this, and say: "The only principle upon which an International Copyright Union can apparently be founded with any chance of success, is that the title to copyright shall be acquired in all States of the Union by the simple accomplishment of the formalities required by law in the country of origin."

In a note in the *Law Quarterly Review* for January, signed with the initials "T. E. S." (which we may safely assume stand for Thomas Edward Scrutton, author of 'The Law of Copyright,' 1883, second edition, 1890), British subjects are cautioned against republishing foreign literary or artistic works in England which they do not find registered at Stationers' Hall on the strength of the above case, as the learned Judge's opinion was clearly *obiter dictum*, he having decided that the work infringed had been properly registered. Mr. Scrutton briefly summarizes the various statutory provisions as to registration, and agrees that by reason of section 4 of the Act of 1886 the stipulations as to registry and delivery of copies do not apply to foreign works; but he contends that the provisions of the Act of 1844, instead of supplementing, superseded those of the Act of 1842, and that the Act of 1886 in turn superseded the Act of 1844, so that the new statutes do not revive the old provisions, but leave the foreign author to register in his own country, obtaining thereby copyright, by virtue of the International Convention, in all the countries of the International Union. We may add, as regards American authors who wish to obtain a valid copyright in England, that it would seem quite clear that their only safe plan is not only to register their claim of copyright, but also to deposit the five copies demanded by the English Copyright Law.

THE ACADEMY OF FINE ARTS.—I.

PARIS, January 7, 1892.

EACH of our Academies has what is called a Perpetual Secretary. Perpetual goes well with the name of Immortals, which is often applied, sometimes ironically, to the members of the French Academy of Letters. There is an Academy of Fine Arts, some members of which are as illustrious as the best-known members of the Academy of Letters. Our best sculptors, our best painters, our best musicians consider it an honor to be members of it. I will name for the present only Gounod, Meissonier, Gérôme, Paul Dubois, Bonnat, Baudry. This Academy of Fine Arts formed for nearly a century one of the divisions of the Institute of France, but for many years after its foundation (1795) it had no well-defined character or function. Its history has recently been written by Count Henri Delaborde, who is now its Perpetual Secretary.

Till the Revolution the "Royal Academy of Painting and Sculpture" could receive an unlimited number of members. It opened liberally its doors to all the notable artists, to women as well as to men; Mme. Vigée-Lebrun, the admirable portrait-painter of all the great ladies during the reign of Louis XVI., was a member of it, as well as thirteen other ladies, now forgotten. Among the members of this old company we find such names as Lebrun, Lesueur, Watteau, David; great amateurs like Mariette, archæologues like Caylus and Choiseul-Gouffier. After 1789, David turned against his colleagues, and referred to the Academy as another Bastille which should be demolished. In a memorial signed by him and twelve of his friends, he put this question: "Is it tolerable that an autocratic and permanent tribunal should receive, place, judge eminent artists?" In the name of liberty the Royal Academy was suppressed, though its statutes were conceived in a very liberal spirit and its doors opened to all. The action of David is all the more remarkable because he was not an envious, mediocre, unsuccessful artist, but a painter of immense and recognized talent.

The Convention suppressed all the academies, but in this respect its work was ephemeral; as soon as the revolutionary tide subsided, the Institute was founded by the efforts of Lakanal, Grégoire, and others. A division was reserved for "literature and the fine arts," a sort of Janus-like class, which received the writers as well as the artists; and this third division of the Institute was subdivided into eight sections, four for writers and savants, four for artists. These latter four went under the names of "painting, sculpture, architecture, music and declamation." Among the twenty-four members who filled these four sections, we find David, Houdon the sculptor, the musicians Méhul and Grétry. Who can go to the Théâtre-Français without admiring the sitting statue of Voltaire—the masterpiece of Houdon? He is well known also for his Diana, now in the museum of the Louvre, his busts of Franklin, Diderot, etc. Méhul is the author of an opera, "Joseph," which has great beauties, and of the celebrated "Chant du Départ," a second sort of "Marseillaise." Grétry had won a great reputation many years before.

The division of the classes of the Institute into sections still subsists, though the classes themselves have been reorganized. It sometimes puts great difficulties in the way of the best candidates; the members of some sections are too "immortal" at times, and will not give way to extraordinary rising men. In the Academy of Sciences, for instance, Élie de Beaumont, who was one of the fathers of modern geology, had to be elected in the section of astronomy. The number of the members was limited in the new organization, which was in this respect less liberal than the organization of the old "Royal Academy." The division into sections has another inconvenience: it makes a sort of Procrustean bed, in which it is sometimes difficult to find a place; it does not take into account, in the Academy of Science, the development of new sciences, in the Academy of Fine Arts, the composite character of many an artist; it lacks elasticity and pliability.

After the *coup d'état* of Fructidor, 1797, five of the members of the new Institute were proscribed. La Réveillère-Lepeaux, who was himself a member of the Institute, was among the proscribers. General Bonaparte took the place left empty by Carnot. After the campaigns of Italy there, was much discussion about the statues and pictures which Bonaparte wished to send to France. Quatremère de Quincy had the courage to say that the great works of art ought not to follow the fortune of war and of revolution; they were not common plunder, and ought to remain in the places for which they were made. Bonaparte and the Directors had decided otherwise; they intended to "make of Paris the universal museum of France and of Europe." To do justice to the French artists, eight members of the third class of the Institute (and David was among them) signed, with forty-three other artists, a petition to the Directory, in which they expressed their desire that the monuments of antiquity should not be removed

from Rome. Their wish was not regarded, and soon afterwards the Parisians had the amusement of a great fête given by the Directory (July 27, 1798) to celebrate the arrival of the colossal bronze horses of Venice, and a number of monuments, as well as plants and animals for the Jardin des Plantes, even lions, camels, and dromedaries, taken from the neighborhood of Pisa, immense carts full of books, manuscripts, and medals. Among the great monuments of art which had been *ceded* by the Pontifical Government were the Apollo Belvedere, the Laöcoon, the Dying Gladiator, the Virgin of Foligno, and the Transfiguration of Raphael, a number of pictures by Titian, Correggio, and Veronese. Few thought at the time that France was receiving all these objects only as a sort of deposit, and that a few years afterwards they would all return to Italy. I, for one, do not agree with Béranger, who protested in 1815 against the restitutions made by France, and "le vol fait par les rois."

The Institute was reorganized in 1803; the class of literature and fine arts was divided into two classes, one of which—the class of the fine arts—formed the fourth section of the Institute. An "arrête" of the Consuls determined the costume of the members of the Institute, a costume which has never been changed since. In all the sittings of the Institute we can admire what Arago called his "habit de perroquet" as the black coat—*la française*—is covered with embroidered green leaves of laurel. The Institute was transferred from the Louvre, where it sat at first, to the ancient college "des quatre nations," or Collège Mazarin. All the solemn sittings of the Institute take place in this building under the cupola which is familiar to all Parisians. Napoleon, when he became Emperor, founded, by a decree, great prizes, which were to be distributed by the Institute for the best works produced in science, letters, and arts.

Under the Restoration the fourth class of the Institute received its present name of Academy of Fine Arts. A class was created in it for "Académiciens libres"; this class was destined for distinguished amateurs, patrons of art, men who were not professional artists. There is, besides corresponding members, a class of members who are mostly foreigners. When the Academy of Fine Arts in 1816 received its definitive organization, we find among its members Houdon, Méhul, Denon, Gérard, Gros, Carle Vernet; the name of David does not figure on the list. David was one of "those regicides who had given their adherence to the *acte additionel* of April 22, 1815, accepted office from the usurper, and thus shown themselves irreconcilable enemies of France and of the Legitimate Government." These men had been condemned to perpetual banishment. David went to Decazes and asked for a passport. The Minister told him to remain. "This law is not made for you, M. David. The King does not intend to deprive France of the man who holds the sceptre of art. Stay in Paris; I promise you all security." David resisted these entreaties, and left for Brussels, where he died December 29, 1825. Louis XVIII. not only gave its final organization to the Academy of Fine Arts, he also was the real founder of the École des Beaux-Arts: the buildings of this new École, some of which are very remarkable, were, however, only finished by Duban under Louis Philippe. These buildings have even in our days received a great extension. Since 1824 it may be said that, notwithstanding several revolutions, the Academy of Fine Arts has always remained the same. Its constitution may be criticised—it is every day criticised by the young artists; but it has stood the test of time, and, with the École des Beaux-Arts and the École de Rome, which live, so to speak, under its patronage, has succeeded in giving to France a noble phalanx of great artists, some of whom have become world-famous.

During the reign of Charles X. the Academy opened its doors to Horace Vernet, to David d'Angers, to Ingres; at the very moment when Ingres was elected, the Academy, having to choose a musician as Académicien Libre out of a list of three candidates, chose Father Mattei, who was a good contrapuntist and had given lessons to Rossini, in preference to Beethoven. The great quarrel between the classicists and the romanticists filled the reign of Charles X., and had, of course, its echo in the Academy. The Academy became one of the favorite objects of the criticisms of the young school; its members were accused, many of them not unjustly, of a servile imitation of ancient forms and of an unjust contempt for nature. The romanticists studied life in living objects; they had men of great genius in their ranks, they despised tradition in every form of art.

The struggle continued under Louis Philippe; the romanticists found a strong ally in the eldest son of the King, the Duc d'Orléans, who encouraged rising artists and visited their studios; he bought for his gallery the "Stratonice" of Ingres and the "Assassination of the Duc de Guise" (both pictures are now in the galleries of the Duc d'Aumale at Chantilly). The King himself was more of a politician than an artist; he was fond of building, but was not happy in the choice of his architects. His children were almost all passionate for art, especially the Prince de Joinville, the Duc d'Aumale, and the Duc de Montpensier. Louis Philippe, however, much encouraged a great artist, Horace Vernet; it was because Vernet was an admirable painter of battles and helped the King in his splendid work of the restoration of the Palace of Versailles, which Louis Philippe intended to become a sort of illustration of the history of France. The historical galleries of the Palace of Versailles are now a monument of the greatest importance. Versailles gives to the visitor the best lesson in French history that can be given. Horace Vernet was a great favorite of Louis Philippe, who made him Director of the Academy of France at Rome, a post much envied, and very naturally envied, by all our artists.

COMMON SENSE IN NATIONAL ART GALLERIES.—II.

LONDON, January, 1892.

THE English has been one of the first national galleries to outgrow the period of fetishism. Even the Louvre, the Pitti, the Uffizi are centuries behind it in this respect; while in the Berlin Old Museum want of judgment in the selection and retention of pictures is as conspicuous as in the Dresden Zwinger. Indeed, the Berlin gallery has much the same good and bad points as the Dresden. It, too, is delightful in the plan of the building and arrangement of the rooms; by far the best impression being made when one enters from the Lustgarten, up the great stairway, into the Rotunda. Here the Raphael tapestries are more effective than in Dresden, though there is no difference in the hanging; but in Berlin the Rotunda serves as a palatial entrance hall, while in Dresden it merely cuts in two the line of long galleries. It may be a trifling matter to notice, but the care of the management is extended to the curtains, drawn in turn over each of the tapestries as the sunlight falls upon it from the cupola above, so that, though one or two or more may be covered, a few can be seen at all hours of the day. In the little room beyond leading to the passage to the new museum, beautiful old woodwork and bits of old church decoration adorn the walls; but in the galleries themselves decoration is of secondary importance to the pictures, as it should be. One might suggest, however, that the number of the room or the name of the school to which it is devoted, as in Vienna or London, would be more appropriate over the doors than gorgeous drapery. The light throughout, except in the narrow passages where pictures ought not to be, is good.

As in Dresden, pictures are arranged chronologically and according to schools, but with more thorough system and therefore with more satisfactory results. There is the same overflow into the cabinets, but these are fewer in number, while in them the order of periods and countries is more carefully observed. There may be many canvases which it ought to be the first duty of directors to get rid of, but, perhaps because the old masters of the Raczynski collection are in the National Gallery—more probably because there are really not so many—their numbers are less aggressive than in the Zwinger. It is now the guide-book platitude to say of Berlin that, if it has few masterpieces, its great merit is its historical completeness. But the best-ordered guide-book could not make good the first half of this platitude in comparing Berlin to Dresden. The Holbein at Berlin, the portrait of Gisze, with its simply marvellous detail, is no light rival to the "Morette" of Dresden. The little Crucifixion on the screen, the Bernard Van Orley, in the same collection are of minor interest by the side of the Berlin portraits of Moffel and Holzschuher, which make one wonder if perhaps Dürer may not have been a painter after all. The Ter Borchs of Dresden are not more Whistlerian and masterly, not better witnesses of the fact that in art as in literature there is nothing new, even in this very modern nineteenth century, than the luminous, harmonious little portraits which, if Ter Borch had painted them to-day, the world would call slavish imitations of Whistler. And what is there in Dresden finer than the deservedly famous Hille Bobbe of Franz Hals—the fishwife appears with much less success in the Dresden version—than his "Nurse and Child"? But to take one last supreme example, for it would be worse than useless to write a catalogue, what Sistine Madonna, what Rubens allegory, what Dutch or Flemish microscopic masterpiece, can approach the incomparable General Borro of Velasquez, the huge fat man, the Spanish Falstaff, ugly, gross, sensual, but, because he is alive on the canvas, a genuine man of unmistakable individuality and character? Because of the painter's achievement, he will be remembered when the great multitude of conventionally pretty ladies and conventionally fine gentlemen by Rubens and Van Dyck fade into one mental composite photograph, blurred and indistinct. This Velasquez is the great glory of the Berlin collection.

The other contention, that the Prussian gallery is the more historically complete of the two, is true enough. At Berlin there is no undue predominance of any one school or period, while the Italians and Spaniards are far more adequately represented, though there may be fewer examples of one or two individual artists. But in historical value the Berlin Museum cannot compete with the London National Gal-

lery. In the latter, the student not only follows quite as well the development of the art of painting throughout the centuries and in all countries, but he is shown some of the best results of this development in every period, and is spared much of the usual trash not yet swept from Berlin. There is hardly a school whose greatest master cannot be seen in at least one of his greatest pictures in London. But this cannot always be said of Berlin, while as a rule the Berlin masterpieces are eclipsed by those of London. To prove the truth of this assertion, take two or three of the most famous Italians, since it is impossible to go through the entire list. There is not one of the seven Botticellis, beautiful though the Virgin and Child surrounded by torch-bearing, flower-laden angels may be, which is as truly characteristic and full of Botticelli's decorative charm as that London Madonna, with the angels, in the circular frame. Fine as are two of the Titian portraits (Admiral Moro in the delightfully rendered armor, and the nameless young man in black and gold), the "Bacchus and Ariadne" is infinitely finer. And even Moroni's stunning portrait of himself against the beautiful greenish background must yield the palm to his unrivalled "Tailor."

It must be granted that with some of the lesser masters Berlin holds its own. It is there, and not in London, that you learn how well such men as Bronzino and Pollaiuolo could sometimes paint, while Giorgione's color could not be more gorgeous than in the Venetian youth arrayed in royal purple, with hair hanging straight over his ears and around his face. These, however, are exceptions. There are many Rembrandts at Berlin—too many, for every canvas the master signed is not a genuine Rembrandt in the artistic sense, and not the distinction of a star and Baedeker's borrowed dogmatism can make a picture like the "Susannah" one of his greatest and most mature productions. But even the "Saskia" and "Hendrickje Stoffels," which the artist, guide- and catalogueless, will find at once, would scarce be a fair exchange for the portraits of the old lady and himself in Trafalgar Square. Indeed, I think it doubtful if one would give up Franz Hals's young man in the same collection for the more famous "Hille Bobbe." The Lorraines and Poussins, too, are finer in London. And when it comes to the English school, no question of comparison can arise—there is no English work in Berlin; there is next to none anywhere on the Continent.

But to go further into detail would be to vie with Baedeker or the author of that prize puzzle, the Berlin Catalogue. I aim at nothing more ambitious than to point out what struck me as the chief characteristics, good and bad, of the Berlin Old Museum. The next visitor probably will differ from me; so much the better if he but base his opinions on his own observation, and not on ready-made cheap criticism. To pretend that directors should be influenced by the fancies of any and every one who goes through their galleries would be sheer nonsense. But if we defer to the literary man in questions of literature, the artist certainly should be thought competent to judge in matters of art; and one fact upon which all artists will agree is, that the sale value of a picture lies in its artistic qualities. Judged by this standard, the collection of Berlin would be no less improved by the judicious removal of scores of wholly valueless canvases now disfiguring the walls than that of Dresden. London has shown, in a measure, how this can be done. The great trouble at the present day is that directors are not artists, and that galleries which should be held sacred as legacies for artists and art students, are run for the amusement of the tourist. If a gallery is of no use to an artist, it is of no value whatever. Now that art is on the town, however, only the Young Person, whether from England or America, is considered.

The Old Pinakothek of Munich is, next to the Louvre, the gallery which the modern artist knows best, since nowadays the student who does not go to Paris is almost sure to study in Munich. And in the Old Pinakothek, while he would be the last to complain if a hundred years ago the French had made a clean sweep of second-rate masterpieces not thought of sufficient importance to be reclaimed, still the pictures of absolutely no use to him are not so aggressively conspicuous. In the first place, there are about half the number of canvases of which Dresden boasts; in the second, the historical arrangement is more perfectly carried out and the hanging better than in Berlin, so that the impression made is less confusing. If architecturally the building may not be as striking, the galleries themselves are as well designed, as well lighted, and as well decorated as those of Dresden and Berlin, and my experience is that they are less exhausting physically and mentally, which is no small test of their power to interest. The great work is seen to advantage; the careful historical sequence observed helps to reconcile one here more than elsewhere to the survival of much that is bad and more that is commonplace. Certainly there seems better reason in Munich for the honors invariably paid to the primitives, chiefly because one begins at the beginning, walking at once into the rooms devoted to early German and Netherlandish schools, instead of coming upon them after looking at the work of abler draughtsmen and painters of greater artistic breadth; partly because of the excellence of many of these primitives.

There is always more or less of the conventional in art, but necessarily it must be more when the convention does not originate with the painter, but is forced upon him by social or religious influences, as it was in the fourteenth and fifteenth centuries. But, hampered as he then was by his patrons in the Church, and immature as were his methods and knowledge, he could always show his artistic feeling and scope by the individual decorative quality he gave to the treatment of the motives he shared with all artists. It was not his shortcomings and his unavoidable defects that made him an artist, as a modern primitive like Holman Hunt seems to think. But the latter has not worked in vain, for, to compare his affected imitation of the earlier painters' defects, devoid of their compensating beauty, with the delightfully decorative altar-pieces, sincere in their crude draughtsmanship and perspective and conventional composition, by unknown Cologne masters, by mere copyists of Van Eyck, or by such men as Burgkmair and Wolgemut, as one sees them at Munich, is to understand more fully wherein they excelled. As a rule, however, the large church panels and triptychs exhibited out of their proper place serve but to confirm the fact, if confirmation were needed, that a picture-gallery is the most artless of inventions. Perhaps I was specially struck with this in Munich because I had just come from Schwabach, a town occupying too little space in Baedeker to attract many tourists from near Nuremberg, but where there is an old church with a marvellous altar-piece by Wolgemut, which, seen where he intended it should be seen, is twice or three times as effective as his "Resurrection" in the Old Pinakothek, though the latter may have held its own before it was taken from the altar at Hof.

But, on the whole, in Munich, the lesser-known earlier men suffer less than the more famous painters, whose work illustrates a still more inartistic tendency of the modern picture gallery—that is, to preserve and lend undue importance to canvases which can add nothing to the reputation of the artist, and at times must detract from it. To those who know something about art and can think for themselves, it is evident that too many of the Dürers, if they are really his, are but pot-boilers (I am not sure that I would except even the portrait of himself over which every well-informed visitor goes into the correct ecstasy); that the two Holbeins are to be counted among this painter's failures; that the one Franz Hals and the greater number of the Rembrandts can but remind one how very uneven both were in their work (it is only fair to remember, however, that the genuineness of the former's "Group of Family Portraits" has been questioned); and that a couple of Van der Werffs or Breughels, of Tenierses or even Ruysdaels, would have more than satisfied the reasonable man.

This may sound very like heresy. It is easier to be orthodox where Rubens is concerned. I remember once being in Venice when a group of young students from Munich came there to see its art treasures, and went back quickly, scoffing at Titian and Tintoretto and Veronese. "They would rather have Rubens every time," was their verdict, more candid than elegant. And though not to be endorsed unconditionally, it must be acknowledged that in Munich the genius of Rubens asserts itself most powerfully, and that the Old Pinakothek calls, less than any other gallery, for a wholesale reduction in the wall space devoted to the productions of his workshop. Rubens himself is seen rather than the pupils and assistants who did too much of his work for him. One recognizes not only the touch of the master, but the master's study of problems not to be solved by the conventions and traditions of the schools. Here are, not the St. Jeromes thrown off to meet the expenses of an Antwerp palace, but Christs and angels and other stock Scriptural subjects treated as means to a great decorative end; here are the smaller sketches, vigorous, rich, suggestive as the Dresden studies; here the satyrs which have since given inspiration to Böcklin, and here, too, portraits almost as fresh and clean as a good Franz Hals—"ripping," is what the artist calls his "Doctor Van Thulden"—and an astonishing landscape, with a rainbow, like a Constable in composition and color-scheme, though naturally not in treatment. Rubens painted so often simply to fill orders that it is a delight to find him, as in Munich, painting for his own pleasure. But how difficult it was for him to preserve his independence has a curious illustration in his portrait of Philip IV. of Spain, whose face Velasquez has made as familiar as that of any public man of to-day, but whose main characteristics Rubens has toned down, whose face he has sweetened, not daring to look at royalty with eyes free from the spectacles of convention or to represent it with the unflinching realism of Velasquez.

The preëminence of Rubens may be partly due to the poverty of the Italian sections, for Munich has but few fine canvases of Italian masters, none of those Venetians who rival him in decorative splendor. Nor can he lose by comparison with the Spaniards. The two Ve-

lasquezes are interesting necessarily—Velasquez could paint nothing that was not of interest; but they do not reach the standard of the "General Borro" in Berlin, of the "Philip" in London; while the Murillos, though popular, owing to the many engravings from them, and though all well-read American young ladies would call them sweet, are but prototypes of to-day's sentimental picture that tells a story. Rubens's competitors in Munich are his own countrymen. The painters who, after him, support the Old Pinakothek's claim to rank with the great galleries of the world, are the Fleming of his own age—Van Dyck, who not often is so free from conventionality, so much readier to paint his sitters as they looked to him than as they would have liked him to fancy them; Snyders, Boel, Fyt, De Vos—men whose work is never very interesting, but who are seen at their best here.

The directors at Munich have known not only how to classify and hang their pictures, but how to catalogue them, and a good catalogue is not made every day. In it the pictures are placed and numbered as on the walls; to pass from one to the next does not mean to turn over a hundred and more pages in the book in your hand. Herr Bode has devoted, I believe, long months to the catalogues of the Berlin collections, and has received great credit for them; here the names of the painters are given alphabetically, there are indexes and references and every elaborate aid to the proper understanding of the system adopted—everything, in fact, but the one simple requirement, which is, that the picture should be as readily found in the catalogue as on the walls. In the Dresden catalogue the arrangement is according to schools and painters, which would be admirable if all the works of one school or of one man occurred together in the gallery also; but they do not, and confusion is the result. If catalogues are published and sold for the greater convenience of the student or visitor, simplicity should be the one and only end aimed at in their construction. As it is, the chief object seems to be to give evidence of the compiler's learning, so that, the more complicated they are, the more honor they reflect upon him. Whoever has gone from the Salon, with its alphabetical catalogue, to the Royal Academy, with its plain, straightforward list of contributions arranged in the exact order in which they hang, with an alphabetical index of artists' names following, can appreciate the relief of the Munich catalogue after those of Dresden and Berlin.

The Young Person, who knows beforehand what to see, what to admire, what to worship in every collection of pictures, has a soul above such trifles as a poor catalogue and a worse arranged gallery. But to the man to whom love of art does not mean loss of common sense, these are evils the more irritating because they might be so easily remedied were it not for modern superstition and sentiment. Honest criticism of long-established institutions is at times more wholesome than repetition of traditional praise. N. N.

Correspondence.

THE MILITARY POINT OF VIEW.

To the Editor of The Nation:

Sir: Whether we shall be justified or not in making war on Chili is a question not yet ripe for decision, depending, first, on full and accurate knowledge of what has really taken place; and, secondly, on what Chili may decide to do in the matter. But some of our public men are reported as having prejudged the question. Says Senator Kyle: "The sentiment of the people I represent is against any war with Chili. Such a contest would be a national disgrace. The bare idea of going to war with a country smaller than one of our States is criminally ludicrous" (Washington *Star* of January 19). Says Senator Peffer: "The statement that 60,000,000 of people—the biggest, richest, and most prosperous nation on earth—should entertain the idea of war with a little country like Chili, is an absurdity" (Washington *Star* of January 19). Other public men have been reported as insisting that the case is a proper one for arbitration; and others, again, have expressed the opinion that if Chili has instituted and completed a judicial inquiry into the facts according to her own forms of procedure, she has fulfilled her international obligations in the matter, and if the result shows that there is no just cause for our demand for reparation, we are bound by the decision.

Every one of these positions appears to me erroneous. According to the doctrine of Senators Peffer and Kyle, any nation much less powerful than our own has *carte blanche* to commit outrages upon our citizens without fear of being compelled to make reparation. In other words, American sailors cannot claim of their Government protection from outrages that may be committed on them in a port of a nation comparatively feeble—that is to say, in the far greater number of foreign countries.

As for a resort to arbitration, the objection is substantially the same. Would the United States Government dare to say to its sailors that, whether an outrage committed on them by some savage tribe, or in the port of some comparatively feeble nation, shall be atoned for or not, will depend on the decision—after proceedings more or less dilatory—of some foreign Government?

Finally, as to the result judicially arrived at in the country of which reparation is claimed being conclusive: such a doctrine has no shadow of foundation in international law. It means that, however overwhelming the evidence that the finding of facts by the foreign tribunal is contrary to the truth—whether owing to the perjury of witnesses, or the over-awing of officials by the populace, or their own hostile feelings—the complaining Government can have no redress.—Respectfully yours,

Francis J. Lippitt.

Washington, D. C., January 20, 1892.

[What would you do if the result of a judicial inquiry "showed there was no just cause for our demand for reparation"? Would you use your superior strength to exact reparation if the cause was unjust or inadequate? Surely not. Where did you get the notion that a civilized, Christian government did *not* fulfil its "international obligations," in case of outrages on foreigners on its soil, by a fair trial of the offenders according to the law of the land in which the offence was committed? Do you not know that this is a long-established principle and practice of international law, and was fully set out and adhered to and relied upon by us in our controversy with Italy over the New Orleans massacre? You surely do not suppose that Senator Peffer started it. International law offers no impunity either for small or for large States in case the trial is marked by manifest injustice. If it should be improperly conducted, however, and end in a failure of justice, there should be no greater display of resentment towards a small than a large State—in other words, no bullying. If the wrong be manifest, Chili ought to get no worse treatment than England. What you mean by your objection to arbitration we do not exactly know. In so far as we understand it, it applies to all trials of disputes before an impartial tribunal. Your interpretation, in the last paragraph, of the doctrine that the judicial findings of foreign tribunals in criminal acts committed within their jurisdiction are conclusive on all concerned, sounds so like burlesque that we pass it without remark. Nobody that we know of outside a lunatic asylum has put your construction on it.—Ed. Nation.]

ANGLOPHOBIA.

To the Editor of The Nation:

Sir: Prophesying is dangerous work, and if three-score years have done nothing else, they have at least taught me wariness in this respect. But sometimes there comes the luxury of saying, "I told you so."

On first reading the plan of governing London by a County Council, I said that if that could be made to work successfully, I must either give up all my theories of administration, or assume that the human material in London was very different from anything in this country. Mr. R. B. Carter, a member of the Council, has written a letter to the *Times* declining reëlection and stating his views, upon which the *Spectator* comments as follows:

"London has no visible Executive Government. So far as such a function has been intrusted to the County Council, it is not performed by visible persons at all, but by nineteen ordinary and five special committees of varying numbers—one containing the preposterous number of sixty members—varying attendances, and varying methods of selection, some being filled up from political motives, some because competent men are indispensable, and some because certain Councillors given to fads are urgent to be placed on those committees. The Executive Government is, in fact, intrusted to minute or large but always changeable groups of Councillors, who may be competent and industrious or incompetent and lazy, but who make up in either case formless bodies of men, whose names, ideas, and work are all equally unknown to their constituents."

What follows has a familiar sound:

"But if the electors will not attend the polls, or are taken in by false professions, or suffer themselves to be 'jockeyed' in any way, they must consent to bear the consequences of their own indifference or silliness."

Reconsideration, however, comes later on:

"We accept democracy in fact, but that is no reason why democracy should choose for itself an absurd method of selecting the men who are to do its executive work. There is nothing democratic about a committee which a ministry does not share; or, rather, a committee is the least democratic of the two, because the democracy cannot watch it, does not know its character, and cannot either dismiss it or send it before a tribunal to be sentenced. A committee with the powers of the Chancellor of the Exchequer would be the least democratic and most inefficient authority on finance conceivable, and it is through such a body that the London Council in every department elects to work.

"Busy men will not enter the Council to be forced to sit on those secret committees, and the representation of London will gradually be

left to idlers, to men whose trade is politics, and to men who hope indirectly to make money out of the position."

Of course, we have no cities organized on just this plan, but the argument is just as good for our boards and commissions, and for our Legislatures, both State and national. In this case, however, I will leave your readers to point the moral for themselves. G. B.

BOSTON, January 23, 1892.

ARCHÆOLOGICAL FORGERIES AT WYMAN, MICHIGAN.

TO THE EDITOR OF THE NATION:

SIR: Wyman, Mich., is a small village on the Stanton branch of the Detroit, Lansing and Northern Railroad, about sixty miles northwest of Lansing. It is in a region from which in recent years the pine woods have been cut away. Only a small portion of the land is under cultivation, and as the sawmills have been removed, the country presents a desolate appearance. The ground is covered with low, rounded elevations a few feet across, most of which were produced by the uprooting of trees in past times and the decaying of roots in the soil thrown up by them. Among these there are larger, sepulchral mounds of an aboriginal population, which yield human bones and a few neolithic remains of the common sort. The soil is sandy.

In October, 1890, a man digging postholes in a field near Wyman found a small cup of unbaked clay. In the spring and summer of 1891 other discoveries were made, and the inhabitants of the region passed into a state of great excitement, which has hardly yet subsided. In the enthusiasm for excavating, many hundreds of mounds and elevations were dug into. One man, while digging at a greater depth than usual, was caught and killed by the caving in of the sand at the sides of the pit. In a number of instances the excavations brought to light objects surprisingly unlike what might be expected from the archæological environment. The discoveries were made over an area three or four miles in diameter, the greater number within a mile and a half from Wyman; it is said that a few things have been found four or five miles distant. Some of the objects were taken from mounds, others from ground more nearly level, where no evidences of the former existence of mounds were apparent. The things unearthed lay at a depth varying from eighteen inches to three or four feet below the surface. They are nearly all of clay. The discoveries are attested by the number and credibility of the participants and witnesses, who in several instances have substantiated their statements by affidavits. That the objects were really taken from the ground as represented is beyond question. It is reported that some of the specimens were so connected with the roots of trees as to give the excavators the impression that they are of great antiquity.

The objects thus brought to light are numerous, and comprise a variety of classes. The most noteworthy are the cists, or caskets, of which it is said that about thirty have been found up to date. They are oblong, measuring from a foot to thirty inches in length, with a width of six to ten inches and height to correspond. The sides are generally covered with hieroglyphics and alphabetic characters drawn apparently from several ancient alphabets and stamped in the clay when soft. These signs sometimes run across the sides; in other cases they are grouped in panels. Several of the cists are adorned with human figures in rude outline; the circle and the pyramid are also favorite designs for decoration. The lids carry forms in heavy modelling. One has a city wall with towers and a high pylon. Another is embellished with a figure probably intended to represent a bull. Several have recumbent lions. One shows an upturned face, with an elaborate head-dress. No ashes were found in the cists; instead there were tablets and a few other objects. In one there were found fifteen of the stamps, or dies, of the characters stamped on the outside. The tablets from the cists, and those discovered by themselves, number perhaps seventy-five in all. They vary greatly in size and shape, most of them being of a size convenient for the hand. They are covered with characters like those of the cists. Besides these, a number of rude vases and smaller objects have been discovered. Among them are a few coins of copper beaten out thin, and adorned with various alphabetic signs. The weight of two coins which have been examined is suspiciously near that of our one-cent pieces.

Three or four archæologists have pronounced the relics forgeries; yet a considerable number of people believe in them, and are improving every opportunity to spread before the public information regarding the alleged marvellous discoveries. The favorite explanation is that these objects are the remains of a colony that in a remote period found its way to Michigan from the valley of the Tigris and Euphrates. As one writer naïvely remarks (in the *Christian Herald*): "They [the colony] must have left there in a period of remote antiquity. It must have been before the Exodus, for Moses speaks of the iron furnace and the iron bedstead of Og, King of Bashan. But these people used bronze or copper instead of iron, showing that the arts of iron were not known to them."

Three pieces, a sphinx, a vase, and a tablet, have recently come into the possession of the University of Michigan. They were taken from a low mound 150 rods northeast of Wyman. In view of the determined effort to palm off the Wyman finds as genuine, it was thought best to subject these specimens to a more than cursory examination, and to make public the results. The sphinx rests upon a thin base, fourteen inches long and six wide, rounded at the corners, and ornamented with a stamped figure repeated about the margin at the rear and sides; the figure is like a V followed by a circle. The sphinx itself measures about ten inches from throat to tail, and is six inches in height to the top of the head-dress, which hangs down on both sides, and is adorned with a figure like an arrow-head repeated in seven vertical rows. The modelling is crude in the extreme, particularly in the legs, haunches, and face. The maker has failed in just the point in which the primitive artist rarely fails, the emphasis of prominent features. In this respect the modelling is far inferior to the carving of the prehistoric stone pipes occasionally found in this State. It is the crude bungling of an unintelligent imitator, who had seen only pictures of a sphinx.

The vase, which might pass for an odd-shaped candlestick, has a flat circular base five inches in diameter. From the central portion two wings project in opposite directions. These measure eight inches between extreme points; the vessel is also eight inches high. The wings and body are ornamented with triangular stamped impressions. After these were made, a cloth was rubbed over them to remove the irregularities of the surface, leaving marks made by the texture.

The tablet is oblong, rounded at one end. It is four inches long at the edges, nearly five across (the centre), and three inches wide. It has the thickness of an inch at the square end, of half an inch at the other end. It was pressed in a frame of machine-sawed boards, as may be seen from the edges, which were not rubbed down enough to remove the impressions of the splinters. It is crowded with characters stamped close together. There were seven stamps used, which were so repeated as to give nineteen impressions on one side, twenty-four on the other, without any apparent relation to one another.

The material of the three pieces is a light-colored clay, containing a large percentage of drift sand. They were dried either in the sun or in contact with mild heat. In drying, the clay opened in cracks, the edges of which are sharp and fresh. The surface shows no traces of discoloration. Fragments of the clay dissolve immediately in water. In view of the perishable character of the material, the slight elevation of the mound, the nearness of the objects to the surface, and the amount of the yearly rainfall in this region, it is clear that the objects could not have been in the ground more than one year.

Here is evidence, then, of a deliberate and laborious attempt at imposition. There must have been a stronger motive than the mere desire to mystify people. Is this the work of an unbalanced religious fanatic, for whom some prophet will arise in due time and interpret the supposed mystic symbols into a new creed? More likely the fabrication is to be credited to a thorough villain, who has thought thus to palm off his crude work at a profit, and trifle with sacred human interests at the same time. On either supposition there is no reason why honest people should be deceived any longer as to the true character of these forgeries, or be misled by the fanciful interpretations of misguided enthusiasts. FRANCIS W. KELSEY.

ANN ARBOR, MICH., January 16, 1892.

TO THE EDITOR OF THE NATION:

SIR: In view of the wide publicity given to the report of the discovery of "Assyrian" antiquities in a Michigan mound, I beg of you to announce that the tablets and monuments claimed to have been excavated are wilful forgeries, remarkable only for their clumsy character and the great ignorance betrayed by the forger. Photographs of the objects have been sent me, and a glance is sufficient to reveal the true character of the "find." The inscriptions are largely a horrible mixture of Phœnician, Egyptian, and ancient Greek characters taken at random from a comparative table of alphabets such as is found at the back of Webster's Dictionary. As for the cuneiform characters found on some of the tablets, they are, in the main, variations of a single character which the forger happened to have stumbled across, perhaps in the article "Cuneiform" of Appletons' Encyclopædia, while the sculptures, which include a sphinx of an "Irish" cast of features, are evidently copied from some illustrated hand-book of archæology, or from illustrations in encyclopædic articles.

The purpose of the forger is also clear, for one of the tablets contains a pictorial representation of the "Deluge," divided into three sections—the catastrophe, the ark, and the exit of Noah, his family, and the animals out of the ark; all in conventional style, though very crude and awkward. Again, a number of the monuments have the traditional shape of the two Hebrew tablets of stone; and the numerals from one to ten on these tablets, indicated now by a series of dots and again by lines placed in

fanciful positions, clearly reveal the thought in the mind of the forger.

It is surprising that any sensible person should have been for one moment deceived by so evident a fraud, and yet a correspondent writes that there are fifty-seven affidavits in existence testifying to the genuineness of the discovery—just fifty-six more than there ought to be, for I am perfectly ready to accept the affidavit of the forger that he found underneath the ground what he had been careful to place there.—Very truly yours,

MORRIS JASTROW, JR.

UNIVERSITY OF PENNSYLVANIA, January 19, 1892.

WOMEN IN THE UNIVERSITY.

TO THE EDITOR OF THE NATION:

SIR: Your Zürich correspondent has no doubt already informed you not only that women *may* become Privat-docenten at Zürich, but that, after due consideration of her trial lecture, the Faculty of that University has granted to Dr. Emilie Kempin the *venia legendi* for Roman, English, and American law. Another lady, a German, from Stuttgart, has recently taken her degree of Doctor of Philosophy at Zürich with so much distinction that there was no doubt of her rapidly passing on to a professorship. She decided, however, to modify her career by marrying a Zürich professor. The world moves so rapidly now in regard to the woman question that it is hard to keep pace with it. The sneer of the *Saturday Review*—"Who will be found to marry these learned women?"—sounds already as old-fashioned as a quotation from 'Evelina'; as this passage, for instance:

"'But I am a sad, weak creature; don't you think I am, my lord?'

"'O, by no means,' answered he; 'your ladyship is merely delicate; and devil take me if ever I had the least passion for an Amazon!'

"'I have the honor to be quite of your lordship's opinion,' said Mr. Lovel, 'for I have an insuperable aversion to strength, either of body or mind, in a female.'" X.

BOBBIN AND LATCH-STRING.

TO THE EDITOR OF THE NATION:

SIR: The question raised by "W. H.W." in No. 1383 of the *Nation* with regard to "bobbin" and "latch-string" is an exceedingly interesting one, but information on the subject seems to be very hard to obtain. The lexicographical authorities within my reach have but one reference. Larousse and Littré quote the passage from Perrault, and the American and English dictionaries merely give a translation of this passage.

As to the mode of fastening the door in France by means of the *chevillette*, it can be shown to be 600 years old at least. Adenès le Roi, who lived and wrote in the latter part of the thirteenth century, uses *chevillette* as a door-fastener in one of his poems entitled "Cleomades." The hero, as he travels along, sees a magnificent castle, approaches and resolves to enter it. Then

"Les chevillettes si tourna
Que droit sour la tour aresta."

That is, he turned the pegs until he stopped right on the tower. That a method of fastening radically different from that of Perrault is here intended is evident from the two verbs *tourner* and *tirer*. And so in England and America we have used both these methods of fastening. Mary Howitt says in one of her poems:

"Our good old friend he tirled the pin,
He opened the door and entered in."

As for the latch-string, it is familiar to our rural denizens all over the country. One of the earliest recollections of my childhood is a leathern thong which hung outside our kitchen door, and which was always pulled in at night. Our negro "quarters" were also fastened in the same way; and this seems to have been the customary form of door-latch from a very early period of our history, as I remember to have read somewhere that some one of our colonial celebrities (possibly William Penn or Roger Williams) was in the habit of leaving his latch-string on the outside, both night and day, to show the Indians how completely he trusted them.

As regards the *turning* latch, we undoubtedly have its survival in our present door-knob. We now twirl the knob, and the latch springs back; but the direct descendant of the *chevillette* and *bobinette* was the lock in which, when the knob was turned, the latch was raised over the catch. This is still to be seen in some of our older houses.—Yours respectfully,

SAMUEL GARNER.

ANNAPOLIS, MD., January 20, 1892.

Notes.

MR. M. D. CONWAY'S 'Life of Thomas Paine' heads the list of forthcoming publications by the Messrs. Putnam. It will form two octavo volumes. Other announcements are the 'Writings of Thomas Jefferson,' edited by Paul Leicester Ford, in uniformity with the Hamilton, Franklin, Jay, and Washington; the 'Life of George Mason,' by Kate Mason Rowland; the fifth and concluding volume of Talleyrand's Memoirs; 'Primitive Man in Ohio,' by Warren K. Moorhead; a translation of the Marquis de Nadaillac's 'Customs and Monuments of Prehistoric Peoples'; the second of four volumes of Evelyn Abbott's 'History of Greece'; 'Outlines of Roman History,' by Prof. Henry F. Pelham of Oxford; 'Pagan Residuum in Christianity,' by Abram Herbert Lewis, D.D.; 'Walter Savage Landor,' a critical study, by Edward Waterman Evans, jr.; 'The Odes and Epodes of Horace,' translated into English verse beside the Latin text, by John B. Hague; 'The English Language and English Grammar,' by Samuel Ramsey; 'From Palm to Glacier,' travels in Brazil, Bermuda, and Alaska, by Mrs. Alice Wellington Rollins; 'Politics and Pen Pictures,' by the Hon. Henry W. Hilliard, of Georgia; and 'Three Hundred and Sixty-six Dinners,' by Mary E. Nicol.

D. Appleton & Co. are about to begin a Holland Fiction Series for the refreshment of jaded palates, the first number being 'Eline Vere,' by Louis Couperus, with an introduction by Edmund Gosse. They also announce 'Evolution in Science, Philosophy, and Art,' lectures before the Brooklyn Ethical Association by John Fiske and others; 'New Fragments,' scientific mostly, but with personal recollections of Carlyle, by Prof. Tyndall; 'The Horse: A Study in Natural History,' by Prof. W. H. Flower of the British Natural History Museum; and 'Moral Teachings of Science,' by Arabella B. Buckley.

Harper & Bros. will publish immediately 'Lyrics,' by the late Cora Fabbri; and 'The Marquis of Salisbury,' by H. D. Traill.

A translation of Prof. W. Windelhard's 'Geschichte der Philosophie' is in the press of Henry Holt & Co.

'Wagner as I Knew Him,' by the late Dr. Ferdinand Praeger, and a translation of the Abbé Fouard's 'St. Peter and the First Years of Christianity,' are nearly ready to be issued by the Messrs. Longman.

The Historical Printing Co., 97 Clark Street, Brooklyn, N. Y., is printing a limited edition of unpublished writings of men of the Revolution, under the title 'Fragments of Revolutionary History,' and editorship of Gaillard Hunt.

Sampson Low & Co., London, propose to publish by subscription a work on 'The History of Engraving in England,' edited by Louis Fagan of the British Museum, with 100 illustrations in photogravure.

The fifth volume of the new Cambridge Shakspere (Macmillan) contains "Henry VI.," "Richard III.," and "Henry VIII." In the preface, a new note discusses briefly the relation of the quarto and folio of "Richard III.," bringing the subject down to date and giving the authorities. We have already called attention, as each volume appeared, to the merits of this edition, and in particular to its adaptability for the library; but we cannot neglect any opportunity of repeating our commendation.

Mr. Oscar Browning contributes to the Dilettante Library two monographs on 'Dante' and 'Goethe' (Macmillan), being expansions of articles in the last edition of the 'Encyclopædia Britannica.' They do not aim at perfection beyond that natural to their original purpose, and are frankly biographical and bibliographical, without refinements of criticism or philosophy. They contain a sound and simple account of the lives and works of these authors, and indicate sufficiently well the typical place that each holds in culture and civilization. One seeking such an introduction cannot do better than consult these convenient handbooks.

Books in elucidation of Browning continue to fall from the press, and distinguished among the rest is a really excellent, if late-born, 'Primer' (Macmillan). The author, F. Mary Wilson, confines the introductory portion to a short sketch of Browning's life, and a somewhat longer one of his genius, more remarkable for frankness than for originality; the remainder, that is to say, four-fifths of the volume, is occupied with introductions to the separate poems, in which each is described and its relation to the philosophy of Browning, as understood by her, is set forth. The volume is the result of careful study, and unites with an admirable simplicity a very welcome freedom from obtrusive hero-worship.

An empty place among our anthologies is filled by 'Political Verse,' edited by George Saintsbury, in the Pocket Library (Macmillan). He begins with Skelton, but soon gets into the period of party government and makes the body of his volume out of the last two centuries. On the list we find Rochester, "The State Poems," Defoe, Prior, Glover, Churchill, the 'Rolliad,' Peter Pindar, the 'Anti-Jacobin,' Scott, Canning, Byron, and a great deal from Moore and Praed, besides extracts from Ebenezer Elliott, Mackay, Mansel, and more particularly Mr. H. D. Traill, for whose inclusion, in a work otherwise confined to writers not living, there is no excuse but friendship. The volume is curious rather than interesting, and is chiefly valuable for a few odds and ends, not easily come by, being usually confined to the library of the special literary student.

The series of attractive classics, beautifully printed and admirable in every point of the book-maker's art, now issuing as the Temple Library, adds to its previous volumes Goldsmith's 'Citizen of the World,' under the competent editorship of Austin Dobson (London:

J. M. Dent & Co.; New York: Macmillan). Mr. Railton furnishes some small, pretty etchings, which distinctly add to the charm of the two volumes. Mr. Dobson finds the original suggestion of Goldsmith's work in a squib by Horace Walpole upon Admiral Byng's trial, and his theory in respect to the matter is certainly plausible. As to the body of the work, the editor emphasizes its principal interest as Goldsmith's commentary upon London, of which he was a good observer, and points out what it contains of the germs of Goldsmith's later works, particularly in the delineation of humorous characters forecasting the 'Vicar' and the comedies; he calls attention also to some passages which Goldsmith worked over and reproduced afterwards. It is to be hoped that this edition of a neglected work may serve to bring it forward as from the same hand, if not of the same rank, as more finished productions, and worthy of a more familiar place on the shelves of literary students than it has lately held.

Out of two series of Sunday lectures delivered at South Place Institute, London, during the past three years, has been made the volume 'Religious Systems of the World,' which comes to us in a second, revised and enlarged, edition from Macmillan. Brief sketches or expositions are given in Part I. of twenty-seven "Pre-Christian and non-Christian" religions—counting "The Religions of Ancient America" as one. Then comes like treatment of thirty-two "Christian, theistic, and philosophic" systems, including "The Religion of Dante," "Mysticism," "The Evolution Theory," "Secularism," etc. In Part I. the writers are nearly all recognized authorities in their several subjects, and their method is objective and critical; in the second part an advocate expounds each system, with sympathy as the resultant note too often, rather than impartiality. The book is necessarily fragmentary; but the collection and juxtaposition are curious, and the whole may be fairly said to merit the sub-title, "A Contribution to the Study of Comparative Religion."

'Argentina and the Argentines,' by Thomas A. Turner (Scribners), professes to be only "notes and impressions of a five years' sojourn in the Argentine Republic," yet it is a thoroughly readable and distinctly veracious and illuminating book. Without any comprehensive plan, the successive chapters give a good insight into the social, and particularly the political, life of Argentina, while the pages devoted to the period of mad financial legislation and insane speculation throw a great amount of light upon a catastrophe of which some competent hand ought to write the entire history. Occasionally one hears the genuine English snort of contempt for things not liked or understood; but, after all, this is only part of the author's personality which, on the whole, lends interest and pleasure to what he writes.

Under the title of 'A Conversation on Music,' we have received from C. F. Tretbar, Steinway Hall, an English version of Rubinstein's new book, reviewed in this journal two weeks ago. The translation, by Mrs. J. P. Morgan, can hardly be termed elegant or idiomatic, but it will give those who cannot read German or Russian a chance to study the "paradoxical opinions" of Rubinstein, as he himself calls them.

A volume on the 'Historic Storms of New England,' by Sidney Perley, comes from the Salem (Mass.) Press. It is a diligent compilation of accounts of violent gales and distressing wrecks, of floods, snows, and tornadoes, with liberal additions on yellow and dark days, comets and earthquakes. The book is distinctly historical, not meteorological, the greater part being narrative of the effects produced by the storms. The omission of all indication of the sources of information lessens the value of the work as a guide for further study. Although no quotation marks are used, the descriptions appear to be but little changed from ancient and modern records. The terminology adopted is not uniform, as hurricane, whirlwind, cyclone, and tornado are all applied to storms properly designated by the last of these names.

By order of the Grand Duke of Baden, all the universities of that principality have just been opened to women in the departments of science and mathematics. Women were already admitted as students in all departments at Freiburg and at the Polytechnical School at Karlsruhe, and hence the new order has to take effect on Heidelberg alone, but this, of course, is of very great importance. The Swiss universities have long been open to women; at Leipzig, women have for some time studied by the side of men exactly as if that had been the order of nature from the beginning of the world; Heidelberg, Berlin (and probably Göttingen, too) have succumbed this year; Oxford and Cambridge are victories of an older date. In face of this Old World progress, one may read in the last Harvard University Bulletin, from the records of the Corporation, acknowledgments (three times) to Mrs. Henry Draper for $833 given towards the expenses of the Observatory, and to Miss Catherine W. Bruce for $500 towards astronomical publications, and the following entry: "The petition of Miss Marion Hamilton Carter, that she be allowed to take the graduate course in psychology with Prof. James this year, was considered, and the Secretary was directed to say to Miss Carter that such a request cannot now be granted by the University."

The high marks scored by women in the recent Honors Examinations held at London University indicate the quality of intellectual work being done by English college women. Of the six B.A.'s who won a "first class" in classics, five were women; of the four rated "first class" in French and in German, three were women, the "inferior" sex also contributing four out of five post-graduate students bracketed as "first class" in the Art, Theory, and History of Teaching.

There still exists, notoriously, a very widespread inequality between the salaries of men and women holding identical posts in our public schools. A special committee appointed more than a year ago in Baltimore to consider the regrading and equitable adjustment of the salaries of public-school teachers, has just made its report, and the most significant item in the proposed new schedule of pay is the equality in the salaries of male and female assistants in all grammar schools.

Oberlin College has resolved to follow the fashion of Library Bulletins. Its first number, for the current month, is a "Popular Bibliography of Sociology," by John R. Commons, Associate Professor of Political Economy. It can be had free on application to A. S. Root, Librarian. Prof. Commons has aimed to "furnish the general reader, especially the Christian minister and worker, a list of the best available books on important Sociological problems." Each title is annotated.

We have already mentioned part of the contents of the January Bulletin of the Boston Public Library. It remains to call attention to the first instalment of a third and enlarged edition of this Library's important 'Chronological Index to Historical Fiction,' including prose fiction, plays, and poems. The list embraces titles of works not owned by the Library, and these it wishes to procure. It appears that an extensive demand exists for the new edition, which is in charge of Mr. James L. Whitney, as its predecessors were of Mr. Justin Winsor.

Prof. William Morris Davis, of Harvard, issues from the "Geographical Laboratory, Department of Geology," at Cambridge, Mass., a circular of great interest both to professional and to amateur photographers. In brief, he offers to examine, with a view to buying, landscape views as particularized, and indicates how to cater to his wants. The prints should not be smaller than 5x8 inches. Cost of transportation is liberally provided for. Gifts, of course, will be welcomed. The circular will be sent to anybody, and ought to prove a great stimulus to scientific photography from nature, the aim being to accumulate material for the broadest illustration of the physical geography and geology of the United States.

It is a pleasure to greet the Bulletin of the State Library of New York for January, containing the second comparative summary and index of State legislation all over the Union (for 1891). This remarkable contribution to coherent, scientific law-making was conceived by the "ingenious" Mr. Melvil Dewey, as our forefathers would have dubbed him, and has been executed by his assistant, Mr. W. B. Shaw. The Albany lawmakers, having access to the MS. card catalogue from which this Bulletin is finally printed, have a temporary advantage which ought to be apparent in their work.

The *Revue Bleue* of December 26—the last number of the year—published as usual its table of contents and of writers of the last semester, and thus gave occasion to speak of the wide and varied excellence of both. Readers of the review feel this more or less consciously from week to week, but a backward look over a six months' space brings it out in a way that is most striking. One might go very far before finding better criticism than here appears in the work of MM. Henry Bérenger and Édouard Rod; or more solid and weighty political and historical articles than those of M. Alfred Rambaud; or pleasanter sketches of travel than M. Maurice Bouchor's; or more abounding wit and fun than one gets from M. Alfred Capus and M. Ferdinand Vandérem. Yet these are only half-a-dozen of the hundred names before us, and not by any means the names that are most widely known.

—The city of Boston has in preparation a series of biographies of deceased members of its City Council, a task for which its Record Commissioners stood ready constituted. The plates have been finished for a chronological list of all the members, showing their entry into and term of service in either branch, and these have just been used as the first 116 pages of a 'List of Members of the City Councils of Boston, Roxbury, and Charlestown, 1822-1890,' issued at the close of last year. The second part consists of the officers of government displayed for each year. Indexes furnish a clue to the several divisions, and the dead are starred. The bulk of this great labor has fallen on Mr. W. H. Whitmore, Chairman of the Commission. So far as Boston proper is concerned, the lists are, to the initiated, eloquent as mere names; but, also, any one may study the fixity of tenure, the rise by promotion, the changes in the nationality of the population. Beginning in 1822 with the father of Wendell Phillips, Boston has had 29 Mayors, of whom several have been members of Congress and

Governors of Massachusetts. Harrison Gray Otis took office at the age of 64, and held it for three years; Jonathan Chapman at 33, the present Mayor at 37, his predecessor at 60; but the average has been 50. Josiah Quincy had six annual terms, but no other Mayor has had more than four, and ten have had but one; only three have been reëlected after an interval. Only six were born out of the State, and five of these were New Englanders; the sixth was a native of Ireland brought young to Boston and educated in her common schools. It was not till 1868 that a "dyed-in-the-wool" Democrat was elected Mayor. Three chairmen of the Board of Aldermen, as many presidents of the Common Council, were advanced to the mayoralty. In 1837, under Mayor Eliot, occurred the famous Broad Street riot between the firemen and the despised Irish population; nine years later the Irish famine increased enormously the emigration, but not till 1859 does a distinctively Irish name appear in the list of the Common Council, where four, and perhaps five, make their début at once—Doherty, Mooney, McCarthy, Riley, and(?) Kelly. Hugh O'Brien, the future Mayor (1885-1888), became an Alderman in 1875—the first, we guess, of his race, unless his colleague, James Power, who reached the Board in 1873, deserves the distinction. In 1890 we reckon in the city government three Irish Aldermen, and at least fifteen Irish Councilmen (out of 74), besides a Rosnosky, a Ratshesky, a Von L. Meyer, side by side with old Boston names like Lowell, Sprague, Parker, Brooks, Bryant, Talbot, Park—to mention no others. Through all these years there have been but six city clerks, a father and son having held the office for sixty consecutive years (1822-1852, 1852-1882).

—A new edition of Gray's poems might seem an impertinence, but Dr. Bradshaw's Aldine edition, 'The Poetical Works of Thomas Gray, English and Latin, edited with an Introduction, Life, Notes, and a Bibliography' (London: Geo. Bell & Sons), claims greater accuracy in the text and fulness in the contents than any previous issue, and the claim is well supported. The corruption of Gray's text is well known, and his poems are misprinted, both in his own works and in all anthologies; for example, not less than six errors in the "Elegy" alone are noted by the present editor as appearing in some one or other of such careful collections as Ward's 'English Poets' and Palgrave's 'Golden Treasury.' It was to be presumed, however, that Mr. Gosse's late edition would be final; on the contrary, the present editor says that in it "the text of the poems is far from accurate"; and also, while paying the compliment to Mr. Gosse of calling his biography "the most complete yet published," he states that "it contains many inaccuracies." Those who recall our review of the Rev. E. C. Tovey's interesting and valuable volume, 'Gray and His Friends,' will be prepared for some increase in the volume of the text. Dr. Bradshaw has made use of these additions, and it is fairly to be said that, in the present work, we have for the first time all of Gray's verse in an exact text. He tells us, however, that "a great deal of Gray's work still remains unedited," despite the preface to Mr. Gosse's edition. It consists of notes and essays in Gray's commonplace books at Pembroke College, and something also exists in manuscripts in the British Museum, where with the rest are some verses said by Cole to be by Gray. These verses, which were discovered too late to be included among the doubtful poems, will be found in Dr. Bradshaw's introduction, but all the other matter remains unpublished. The editor's notes are very full, and are especially interesting from the number of parallel passages quoted, and various readings, mostly from the original manuscripts. It is not necessary to add that, for the student, this edition must supersede all others.

—In the *Revue Historique* for January-February, Jules Flammermont renews the discussion of the authenticity of Talleyrand's memoirs. His especial object is to demolish the theory that the memoirs, in regular form, never existed, the supposed memoirs consisting, previous to the preparation of Bacourt's "copy," only of a mass of MS. in the shape of loose sheets written at odd times, during a long course of years, as the impulse to write seized their distinguished author. Against this view, the *Revue* writer cites Vitrolles, who says that Talleyrand read him long extracts, sixty or eighty pages at a time, from "large blank-books." This was in 1814, and Talleyrand's object in preparing and privately publishing the memoirs was to persuade the royal family that he had always been a friend of their cause. He hoped to use Vitrolles as a vehicle of communication. Now, the Duc de Broglie says he never received anything except Bacourt's copy, and that the present family representatives of Talleyrand never had any MSS. This being the case, what became of the "large blank-books"? They were destroyed, M. Flammermont thinks, in order that the interpolations and suppressions which Bacourt made at the request of the Duchess of Dino might not be discovered. We have not mentioned all the evidence, but Vitrolles's testimony is the most important.

—In the Paris *Chronique des Arts* of December 26, 1891, M. Adolphe Guillon, correspondent in Paris of the English Society for the Protection of Ancient Buildings, is of the opinion that a communication from "T. B." in the *Nation* of November 19 does injustice to Mr. Ruskin. "Il proteste," says M. Guillon, "contre la doctrine de M. Ruskin, qui voudrait qu'on ne touchât jamais à un ancien monument." Thereupon, though heartily approving most of what our correspondent says, he maintains that Mr. Ruskin does *not* ask to suffer old buildings to fall down without touching them, but merely that they shall not be completely made over under the pretext of restoring them. To show that this is the extent of Mr. Ruskin's demand, he quotes several sentences from "une note intitulée: 'Restauration ou Destruction.'" M. Guillon seems to us to misapprehend both our correspondent and Mr. Ruskin. We do not understand the former to allow uncontrolled license to such "restoration" as means destruction and reconstruction, but to vindicate the replacement of a ruined stone which has lost its artistic value and its structural utility, by another which shall check dilapidation and shall at the same time, so far as archæology and art permit, serve the æsthetic purposes of the former—and this, if need be, on the large scale. We find, however, the passages quoted from "a note" of Mr. Ruskin—in which, no doubt, he urges conservation of whatever there is to conserve—to be merely extracts from paragraph xix. of the "Lamp of Memory" in the 'Seven Lamps.' But the same paragraph contains these much-quoted sentences:

"Do not let us talk, then, of restoration. The thing is a Lie from beginning to end. You may make a model of a building as you may of a corpse, and your model may have the shell of the old walls within it, as your cast might have the skeleton, with what advantage I neither see nor care; but the old building is destroyed, and that more totally and mercilessly than if it had sunk into a heap of dust or melted into a mass of clay. . . . But, it is said, there may come a necessity for restoration! Granted. Look the necessity full in the face, and understand it on its own terms. It is a necessity for destruction. Accept it as such, pull the building down, throw its stones into neglected corners, make ballast of them, or mortar, if you will; but do it honestly, and do not set up a Lie in their place."

So when he allows us only to "bind it together with iron," or to "stay it with timber," we can hardly be blamed, notwithstanding his explosive manner of speech, for taking him at his word.

—Some years ago Dr. Gustav Wustmann, librarian of the city of Leipzig, delighted the lovers of literature by publishing, under the singular title 'Als der Grossvater die Grossmutter nahm,' an equally singular book: a collection of old-fashioned songs, nursery rhymes, ballads, librettos, tales, which formed the stock of popular quotations in the Germany of two or three generations ago. Just now he has come forward again, and again (as was to be expected) in the part of *laudator temporis acti*. In a little volume, entitled 'Allerhand Sprachdummheiten' (Leipzig: Grunow), he vents his wrath and indignation on what he calls the maltreatment and desecration of the German language by contemporary writers. He thinks that the German language never was in more imminent danger of complete degeneracy than now; that it is flooded with provincialisms, permeated with official absurdities, encumbered with foreign monstrosities; and that, if the present tendency is allowed to go on unchecked, the classic language of the great eighteenth-century writers will soon sound like a foreign tongue to German ears. The degree of exasperation felt by the writer may be imagined from the following astounding proposition: "Take at random from the shop-window of a bookseller a new book written in German prose, no matter on what subject, no matter by whom composed—a professor, a teacher, an official, an architect, a musician, a manufacturer, a 'leading' author, a bluestocking; open it where you will, and put your finger on any part of the page—within a circle of five centimetres diameter around the point of your finger you will find at least one gross grammatical blunder. That is what we have come to." One may be disposed to doubt the wisdom of such exaggerated statements as these, one may be inclined to see in a large part of what Dr. Wustmann calls symptoms of linguistic decay nothing but a natural growth; but there is at least one point in which he will meet the approval of all thinking men, not only in Germany but everywhere, because it touches a question of international importance: the baneful influence of newspaper language upon the common speech.

—One of the most amusing instances of the effects of slipshod newspaper style given by Dr. Wustmann is the change which the verb *bedingen* has undergone during the last forty years. Grimm's Dictionary (1854) gives the following definitions: *aushalten* (*vorbehalten*), *bestimmen*, *ausnehmen*. Sanders (1860) adds to these: *beschränken*, *von etwas abhängig machen*, *erfordern*. At present it is approved fashion to say: "It is a fact that certain emotions *bedingen* (bring about) stammering," "This corset *bedingt* (insures) a well fitting dress," "With Lessing, critical insight *bedingte* (influenced) his poetical production," "The tension of Laocoon's mus-

cles *wird bedingt* (is explained) by bodily suffering," "The growth of Berlin *wurde bedingt* (was made possible) through political events." In short, as Dr. Wustmann says, whenever a writer entertains a dim suspicion that two things have some connection with each other, without being able or inclined to define to himself or others the nature of this connection, he says: This thing *bedingt* that thing. In what order the two things are mentioned—whether he says, Power *bedingt* heat, or Heat *bedingt* power—is a matter of absolute indifference to him. We hope Dr. Wustmann's little book will find many and careful readers. It cannot fail to further linguistic tact and literary refinement even in those who have no immediate interest in the subject with which it deals.

SCHOULER'S UNITED STATES UNDER THE CONSTITUTION.

History of the United States of America under the Constitution. By James Schouler. Vol. V. (1847–1861). Dodd, Mead & Co. 1891.

In this volume, the fifth and concluding volume in his projected series, Mr. Schouler covers that stirring period in the political history of the country which extends from May, 1846, under the Administration of President Polk, to March, 1861, under the Administration of President Buchanan. The author claims, and justly claims, to have been the first who has traced out, with "historical painstaking," and with "consecutive research," the nexus of the events that fall under the first era of our national existence, and to have thus bridged over the long intervening chasm which stretches from the Revolution to the Civil War. It is a task which has called for breadth of view, for lucidity of treatment, and for condensation of style. Even those who may find themselves constrained, at many points, to dissent from Mr. Schouler's political prepossessions and from the color which they give to his narrative, will none the less be frank to admit that he has brought to his *magnum opus* a commendable industry in the compilation of his materials, a rare talent for consecutive exposition, a large share of that "ignited logic" which is skilled to fuse the most intractable materials into literary form, and a vivacity of phrase which is never dull because it sometimes errs on the side of excessive piquancy.

In the present volume he is called, like Pollio in the verse of Horace, to walk over the embers of civic feuds that still glow beneath the ashes under which they are covered from sight; and it is hardly to be expected that any historian, however circumspect and wary, should be able to pick his way among these scoriæ of the volcanic period in our politics, without dashing his foot ever and anon against some of the live coals which still hold their wonted fires. And Mr. Schouler takes no pains to conceal the fact that the same set of ideas which seemed pleasing to him in the fluid forms of a once current politics, do but seem still more pleasing to him now that those fluid forms have hardened into the rigid outlines of our *ante-bellum* history. If "history," in the familiar phrase of Freeman, "is past politics, and politics present history," it should not surprise us that the same projections of honest thought are found habitually to reappear in each.

Mr. Schouler makes it abundantly clear that in the great leading differentiations of political opinion among the people of the United States before our civil war, there is one party, and only one, which deserves his approbation as an historian. It is that party which, at any given juncture, adhered tenaciously to the Constitution and its compromises, but sought, as far as practicable, with an opportunism born of the moment, to conciliate submission to law with the aspirations of humanity. Even when the organic law was at variance with the moral order of the world, he seems to think it was entitled to political respect, in the faith or hope that the ameliorations wrought in public opinion by the incidental discussion of this variance would eventually lend a stimulus towards changing the law, so far as it was in conflict with "Divine injunction." With this working hypothesis he finds it easy to demonstrate that the "Conscience Whigs" and the Republicans must be held to have rightly divided the word of truth and found the way of wisdom in each new emergency of our politics from 1846 to 1861, while the Democrats, the "Cotton Whigs," and the Garrisonian Abolitionists, for reasons peculiar to each, were evil continually.

Mr. Schouler sees very clearly that the way of the political compromisers was always hard under the difficulties imposed on them by the presence and antagonism of two distinct social and economic systems in our civil polity. He sees, too, very clearly that the attempt to erect, on the unstable equilibrium created by these conflicting systems, any sentiment and standard of constitutionalism which should be above and beyond the sentiments and standards based on the moral law, was foredoomed to failure. In the case, therefore, of the Democrats and of the "Cotton Whigs," he is able to discern in every instance that their sense of "constitutionalism" was to them a potent source of illusion; and that even when they supposed themselves to be yielding to the most exigent considerations of patriotic duty, they were only blinding their eyes to the eternal verities. With all his admiration for Henry Clay, Mr. Schouler cannot forbear to remark that "this wonderful old shepherd of the people" was too much given to schemes for "log-rolling the moralities," and that, in pursuing a devious way "along the narrow path of national conciliation," he was liable to stumble into the snares and pitfalls set by politicians of the baser sort, who were bent on political gain where he was bent on the public weal. But while Mr. Schouler is severe on Clay and Webster for "log-rolling the moralities," and for having a "slippery grasp of moral differences," he is also severe on the impracticable virtue of the Garrisonian Abolitionists, because they would not "log-roll the moralities" at all, and because, in standing "upon the high platform of moral assertion," they stood too much aloof from the sphere of concrete politics. When Garrison refused with scorn to take part with slaveholders in a Boston course of lectures on slavery, it seems to Mr. Schouler that he acted "as one who kept truth clear of the contamination of free discussion." Between the parties which were too ready to make compromises, and the Garrisonian Abolitionists who would not compromise at all, Mr. Schouler finds, as we have already hinted, that the *via media* was chosen by the "Conscience Whigs," and by the Republican party after the latter had organized itself for the exclusive purpose of preventing the spread of slavery over the free territory of the Union.

Compromise, in matters outside of morals, is of the very essence of politics. "Republics," says the author, "incline to temporize with problems which are found difficult to manage, and temporizing is the essence of all government which is carried on by popular assemblies." The slavery question, because it was a complex of moral and political forces, became the permanent seed-plot of ever-germinant and springing compromises in our civil annals. The problems grew so difficult and so numerous that the people were fatigued by them into the acceptance of any make-shift solution for the pressing emergency. After the compromises of 1850, hollow as was the truce they effected, "the country grew sick of the slavery question," says Mr. Schouler, "and wished agitators at the devil. Good men, North and South, made the Constitution their fetish more than ever, and, like a prudent husband who is yoked with an irritable spouse, they forced themselves to love for the sake of quiet." With the advent of Pierce, and even at a later date with the advent of Buchanan to the Presidency, the great mass of the people, says Mr. Schouler, grew speedily responsive to every prospect of peace, because they "wearied of this moral agitation, and wished to change the subject."

In so writing, Mr. Schouler might have found a natural reason for the existence of the compromisers whom he condemns. It might be supposed, too, that where a false constitutionalism was perpetually crying peace when there was no peace, he would have found some use for the austere prophets and restless agitators who, in season and out of season, set their faces like flint against all compromises outside of the moral law. But he has a more optimistic view than this. He prefers to believe that the very compromises of the Constitution which, in the matter of slavery, were perpetually generating a *false* constitutionalism that wrought to the confusion of Democrats and "Cotton Whigs," served in the end to generate a *true* constitutionalism, which, in the hands of the Republican party, became the very *vis medicatrix* of the nation. This *vis medicatrix*, when used as a salve to mollify the *vulnus immedicabile* of the Republic, had worked like poison; but when used, in the natural selection of events, as a single specific against the extension of slavery, it wrought more potently and more efficaciously, Mr. Schouler thinks, than any affiliation with what he calls "the mischievous agitators who preached down the Union and its restraints." Mr. Schouler is quick to perceive and denounce the constitutionalism of those who undertook to serve two masters under the Fugitive-Slave Law of 1850—that is, to serve the State, which passed "Liberty bills," and the Government of the United States, which passed a bill for the speediest possible recapture of runaway slaves. "Massachusetts," he says, "would not tolerate the idea that any one holding an office of honor or emolument under her should earn the blood-money of slave-hunters." Yet he records it as a homage justly due to the constitutionalism of the Northern opponents of slavery-extension that "they never meant to meddle or interfere with slavery in its local domains." Mr. Lincoln, we know, accepted this constitutionalism in all its length and breadth; and, while professing, in his debates with Douglas, that he had "no taste for catching niggers," he yet said that he yielded his support to *a* fugitive-slave law "because he did not understand that the Constitution which guaranteed that right could be supported without it." This was constitutionalism pure and simple.

It is easy enough to see how the "Cotton Whigs" could justify themselves in supporting the compromises of the Constitution, even when some of its engagements seemed to impinge on the moral law, for they had a "slippery grasp," so Mr. Schouler holds, on moral

differences; but it would have been interesting if he had explained how it was that the "Conscience Whigs" could justify themselves in making concessions to slavery, on the simple ground that slavery was entrenched behind the muniments of the Constitution. In so doing they joined hands with "Cotton Whigs" in making the Constitution "a fetish," as Mr. Schouler phrases it. This was the point of view which used to trouble Garrison when he was called to interpret the attitude even of "Conscience Whigs" in the light of the "moralities," and we regret to say that this is a point of view which Mr. Schouler leaves out of sight, while strict to mark the iniquity of the men who had *no* conscience in the service of slavery. He even complains that Calhoun was bitterly unjust to the North on this point. The complaint against Garrison is that, taking the people of the North at their word, and seeing no prospect of putting an end to slavery behind the defences of the Constitution, where "Conscience Whigs" joined hands with "Cotton Whigs" in protecting it, he felt constrained to uphold the "moralities" with what Mr. Schouler calls "his customary Catonian utterance, 'The Union must be destroyed.'"

Without coming to any clarification of ideas under this head, where a clarification was greatly to be desiderated, the author inclines to believe that it was the Mexican war, with its exposure of a Southern ambition to preponderate in the Union, which gave to the moral agitation against slavery a greater force than any inspired by Garrison. What seemed to Garrison a defect in the Republican attitude, because it shuffled moral forces out of sight as against slavery in the States and under the Constitution, or at least masked those forces behind a simply defensive tactics against the extension of slavery, seems to Mr. Schouler a piece of good fortune for the country, however equivocal it may have been in strict ethics. For while this obscurer process of quasi-moral and quasi-political agitation was working in the medley and muddle of public opinion, the Union, he says, was unconsciously nearing the great crisis of our civil war, which was destined to "melt up infallibly all national prepossessions on the subject of domestic systems of labor, and remit the [then] existing era to the irrevocable past." It was at this point that the intense constitutionalism in which the country had been educated was turned into a coigne of vantage and tower of strength for the preservation of the Union. The idea is not novel, but Mr. Schouler gives it a forcible expression in the following words: "So admirable had been the general training and influence of our solid institutions, so deeply loyal and affectionate to the cause of national unity had become the great mass of our American people, that an unseen force bore the Constitution and the vast confederacy bravely and buoyantly through a strife which demolished violently the whole false fabric of race oppression that fifteen States had constructed society upon."

In pointing the moral of his long and interesting story, Mr. Schouler reminds his readers that the rebellion which came in 1861 to try the strength of the Union "had been ripening ever since slavery became a growing force in our Union, partaking of the national spirit of expansion." The collision which compromises had but temporarily postponed was, he sees, "sooner or later inevitable," but he thinks there was an opportunism in the date at which the crisis came, and in the mixed modes under which it emerged. It came when the force of compromise could go no further, and it came in a shape which gave to the "moral agitators their share in the glory of results."

It is not until the reader clearly apprehends the point of view taken by the historian, in so completely subordinating the moral aspects of the anti-slavery agitation to the political, that he can understand why it is that Mr. Schouler practises a good degree of lenity towards compromises when they were made by President Taylor, and looks with allowance on prudent *ménagements* when they emanated from Seward and Lincoln. He denounces the Whigs of the Old School as "trimmers from instinct," who "placed prudent limitations to the contest they waged against slave extension and inhumanity"; but he applauds President Taylor for the prudence with which that chieftain headed off the Wilmot Proviso. The friends of Taylor avowed at the time that his whole policy for the admission of California into the Union, without waiting for an enabling act to be passed by Congress, was in its essence, as Crittenden phrased it, the sum and the substance as well as the foundation of all the other trimming policies devised at that juncture; because, in common with them all, it sought to *avoid* the Wilmot Proviso. Yet this policy commands the approval of Mr. Schouler. The "defection" of Webster, in his "7th of March speech," is roundly scored in the volume before us, but what seemed to many the "defection" of Seward, in *his* "compromise speech" of January 12, 1861, on the eve of the Rebellion, seems to Mr. Schouler an eloquent plea made in the cause of "kindness and conciliation." Yet Mr. Seward confessed in that speech that he was far from having suggested in it "what would have been in harmony with cherished convictions of his own." That is, he was willing to compromise.

It is to be regretted that in giving expression to his contrasted judgments on the men and measures here passed in review, the author should have sometimes indulged in an objurgatory tone which transcends the judicial summing up of candid and impartial history, however germane it may be to the dialect of contemporary politics, in journals of a certain sort. The cause of truth does not gain by embalming in Mr. Schouler's historical amber the gad-flies of an obsolete political vituperation. In the case of a public functionary who has so many other sins to answer for, it seems hardly necessary that the finger of scorn should be three times pointed at Franklin Pierce in this narrative as the hero who fainted on the battle-field of Churubusco, when nothing was proved by that historical syncope save that he was over-forward in rising from a sick-bed at the call of military duty. We are far from sharing in the admiration awarded to Lewis Cass by his latest biographer, but Mr. Schouler exceeds, we submit, the limits of dignified criticism when, after putting that worthy in a pillory as the man who "truckled contemptibly to slaveholders," who "trained among Northern doughfaces," who was "always ready to turn a popular penny with the South," and who, "not content to lick the dust," sometimes "rolled over and over in it," to do obeisance to the Slave Power, he continues to pelt his hapless quarry with the epithets of "doughty," "blinking," "tremulous," "somnolent," etc., etc. Such acrimony of style defeats the ends of just condemnation.

The proof-reading of the volume leaves room for correction. "Soubriquet" does duty for *sobriquet*, and "pronunciamento" for *pronunciamiento*. "Paixham guns" is written instead of Paixhan guns. Gen. Cadwalader is treated to a superfluous "l" in his name. Nicholas P. Trist, Polk's roving diplomatist, is once styled Nicholas B. Trist. William B. Preston of Virginia, President Taylor's Secretary of the Navy, is assigned to South Carolina. Humphrey Marshall of Kentucky is classified in 1855 as a "Democrat and Know-nothing." We believe that at that time he was an "Old Line Whig" and Knownothing. It was not until a later date that he was graduated as a "Breckinridge Democrat." The reference to "Schmucker's Chase" should of course be to Schuckers's 'Chase,' etc., etc.

On the Border with Crook. By Capt. John G. Bourke, Third Cavalry, U. S. A. Charles Scribner's Sons. 1891.

THIS handsomely illustrated volume of 491 pages is devoted to a purpose which does Capt. Bourke great credit. An ardent admirer of the late Gen. Crook, under whose orders he served in the Southwest, he has in these pages reared to the memory of that distinguished soldier (equally distinguished by his private character) a monument of respect and of gratitude which could neither be better deserved nor more ably framed. Capt. Bourke accompanied Crook through most of that general's career in the West, and his statements acquire the greater value since in most instances he speaks as an eye-witness of the events which he relates. Many of these events are depicted with a vividity and freshness quite in accordance with the author's former publications. He takes us from New Mexico to Arizona, thence to the Platte. From the Apaches and Moquis we are led among the Sioux and the Shoshones; finally to the Apaches again in Sonora and Chihuahua, on Crook's remarkable "armed peace-mission" into the Sierra Madre. Along with all this we find numberless personal reminiscences, with kindly mention of men who have served well in the army or who have otherwise made themselves prominent. We also find descriptions of local scenes and customs, and especially much in relation to the Indian tribes among which Gen. Crook had to command, to watch, and to fight—an armed peace-maker, and, at the same time, from the impulses of his generous and humane nature, an educator for the savage. It cannot be denied that the "Indian policy" pursued by Crook was one of the most beneficial ever adopted in this country towards the aborigines, and it is only to be regretted that he was not always allowed to carry it out for a sufficient length of time. Capt. Bourke, very naturally, also tries to relieve the regular army of many a reproach brought against it by outsiders, and especially by such as have never found themselves in the trying positions in which our soldiers (and chiefly the officers) are often placed. He is usually successful, but his zeal in that direction also leads him gravely astray.

The marked defect of his book is the same which appears so glaringly in the 'Apache Campaign' published by him a few years ago. In his desire to be the champion of the Army of the United States, he becomes too much of a champion of the Apache. There is an honorable feeling at the bottom of this extreme—the feeling of respect towards a foe who has defended well, or at least tenaciously, his range, and who has at last been subdued. But generosity should not entail injustice to others. The Apaches are not, and have not been, innocent sufferers, except in a few instances, and it is unjust, unhistorical, and untrue to place the blame for the devastations committed by the Apaches on the Spanish régime. If Capt. Bourke would study the Spanish history of the

Southwest thoroughly, and not merely consult an occasional source at random for the sake of "points," he would understand the insuperable difficulties of living at peace with that tribe, under which the Spaniards labored from the very beginning of their colonizing efforts. He also misconceives the nature of the Apache, his true tribal relations.

The Apache was only a detached fragment of the southwestern Tinneh stock; his bands only outlying hordes, more or less original outcasts, of their mother-tribe, the Navajos, with whom they nearly always were at war. Their entire subsistence was derived from plunder, murder, and rapine, and that before the Spanish entered the North American Southwest. After the first colony had been planted upon New Mexican soil, the Apaches showed an inclination to live at peace with the whites, but on one condition, namely, that they should be free to prey upon the Pueblo Indians, as had been their custom from time immemorial. This the Spaniards could not consent to; and hence the constant warfare which has desolated the Southwest until the United States, with ample power and ample means at their disposal, succeeded in subduing the unruly savage. There is not the slightest doubt that during the nearly three centuries of warfare between the Spaniards and the Apaches, the former committed many wrongs; but then, exasperation may be pleaded as well for the Spaniard as for the settlers of any part of English America.

Captain Bourke is careful not to touch upon pages of the modern history of Arizona and New Mexico which find a worthy place by the side of his quotations regarding Spanish cruelties. His version of the Arivaypa massacre omits a very essential point. It is true that women and children were the majority of sufferers, but it should also be stated that the Papagos had been cruelly worried for a long time previous by the Apaches, and that they were anxious to take some terrible revenge. That revenge accidentally fell upon non-combatants, but only accidentally, and not intentionally. Captain Bourke is careful, again, in his book not to mention such occurrences as the "Pinole treaties," the killing of Mangas Coloradas, and the attempt to seize Chis (Cachise) undertaken by an officer of the United States Army. He lays all the blame of Apache hostilities upon the Spaniards. Only ignorance of well-established historical facts can excuse this injustice on his part.

We have now indicated the weak side of Capt. Bourke's otherwise very interesting and, for contemporaneous history, valuable book. The weak points cover but a few pages, comparatively speaking. The remainder is, as already stated, an interesting sketch of the life of a good man, written by one who was associated with his labors for some time and often under very trying circumstances. For a knowledge of life in the Southwest, too, the book is a valuable contribution.

Jerusalem, the Holy City; Its History and Hope. By Mrs. Oliphant. With wood-engravings from drawings by Hamilton Aidé and photographs by F. M. Good. Macmillan & Co. 1891.

Mrs. Oliphant has often before now abused the confidence of a generous public, but she has never heretofore done anything so unworthy of herself as is her latest book. For the critical study of the Bible and for its results, she has an unqualified contempt, and has not allowed them to affect her rhetorical improvisation in the least degree. "I have no claim," she says, "to set myself forth as one who has any authority in these matters, but I may say on my own part, what every individual has a right to say, that to transfer my faith and confidence from the writers of the Old Testament to the Herrn Wellhausen, Kuenen, etc., would seem to me the wildest insanity. Moses and Samuel I know, but who are these?" It is not to be expected that a lady who enjoys a personal acquaintance with Moses and Samuel should care much for modern scholars; but if there is any further excuse for her ill opinion of these, it is that it is based, apparently, upon an almost exclusive acquaintance, however moderate, with Renan. What she says of his spiritual incapacity is true, but she has no right to impute it to the whole company of scholars. The most presumptuous of them does not presume so much as she in her assertion that in the Old Testament stories we have "the unvarnished record" of the lives of Abraham and David and other heroes of antiquity. Such catering to ignorance and prejudice is very pitiful in a woman who need not strain beyond her sphere to win an honorable fame.

The erudite are warned away: "Let them not lose ten tickings of their watch on this unprofitable writing." But the unlearned people could go further and fare better. This hasty paraphrase is of the "easy writing" sort that "makes hard reading." For interest and attraction it does not compare with the semi-critical and immensely picturesque pages of Dean Stanley, covering the Old Testament and Maccabean parts. In the first chapters the author has imposed no restraint upon her intolerable diffusiveness. David has 142 pages. It was evident that, like the sudden increase of the Frenchman's family, "this must be stopped," and consequently we have 100 pages for the prophets and 139 pages for Jesus. Renan could hardly show less incapacity than this for spiritual appreciation of relative values. The upshot of the whole matter would appear to be that, if criticism is to be absolutely discarded, there is no occasion for such books as this. The style is no improvement on that of the Scriptures, and the windy paraphrase and expansion of their simplicity and homely beauty find us often wondering why a gifted woman should have taken so much trouble to rewrite what is written so perfectly. Few, if any, of the critics have done the Bible worse irreverence.

John Winthrop. ["Makers of America."] By Joseph Hopkins Twitchell. Dodd, Mead & Co. 16mo, pp. 245.

The list of persons to be portrayed in this series contains several to whose right in it exception will be taken, but no one will dispute the claim of John Winthrop to a prominent place. Gov. Bradford, in Plymouth, is his only rival, and that colony had very little influence upon later times. But not only was Winthrop the leader in Massachusetts by virtue of his wealth and position in England, he was the best type of the earnest, devout, yet practical Puritan. We feel instinctively that had he appeared in any subsequent generation he would have been a prominent man, in full sympathy with each successive development of the Puritan character.

It would be absurd to attempt to write even a brief sketch of Winthrop's life, apropos of this memoir. The pious care of Robert C. Winthrop, in his two volumes of the Life of his great ancestor, has furnished us with a well-nigh complete record. This sketch is merely a recasting of old materials, giving also some desirable information as to the surroundings of the central figure. Unlike the previous volume on the Rev. Francis Higginson, this volume covers a subject on which retrenchment and condensation are to be studied; and the compiler has certainly done his work with good judgment.

We cannot refrain from criticising the plan which selects Winthrop, Higginson, and Cotton Mather as the three "makers" for Massachusetts. If Increase Mather had been selected instead of his preposterous son, we should gladly assent. But among "makers" we should certainly prefer to see Shirley for colonial times, Hancock and the two Adamses for Revolutionary times, and Josiah Quincy, the great Mayor, for later times. However, "Makers" is a catching phrase, and need not be too closely examined. All the names on the publisher's list are worth consideration, and the series will doubtless furnish sound instruction to readers everywhere.

The Theory of Credit. By Henry Dunning Macleod. Vol. II., Part II. Longmans, Green & Co. 1891.

In some respects this portion of Mr. Macleod's book shows no improvement upon those which have preceded it. There is the same reckless abuse of all other writers who have presumed to enter this field, the same furious denunciation of views advanced a hundred years ago and now utterly without influence or entirely forgotten, the same intolerable deal of repetition. These faults, too, are less excusable because in almost all that is sound in his conclusions the author has been anticipated by Mr. Bagehot, whose work he never mentions. For a clear idea of the development of deposit banking, of the part played by the Bank of England in the financial history of that country, of the causes of panics, and of the policy, forced by experience upon the managers of the Bank, to be adopted in dealing with panics, we should recommend 'Lombard Street' rather than 'The Theory of Credit.'

Yet those who are interested in following the progress of financial theory in its historical development will find a great deal that is valuable in this book, if they will be at the pains to separate it from the masses of "scandalous and irrelevant matter" in which it is embedded. The substance of most of the statutes affecting banking in England generally, as well as of those relating particularly to the Banks of England, Scotland, and Ireland, is given, and is for the most part intelligently summarized. The details of the great panics for a century past, their causes, progress, and termination, are stated so as to exhibit effectively the disastrous working of false theories and the beneficial effects of those which are sound. It is impossible not to be impressed, as we review these incidents, with the wonderful advances made in monetary science during this period, although, so far as our own country is concerned, our legislators have not displayed great proficiency in the art. Nor are we disposed to disagree with Mr. Macleod, except as to tone and manner of expression, in his animadversions upon the wisdom of Parliament in retaining the act of 1844, under which the Bank has failed three times, while compelled to keep £10,000,000 in gold in its vaults which it was unable to touch.

In one respect, we think that Mr. Macleod has added to the principles that should govern the Bank in dealing with a financial panic. He points out, in describing the crisis of 1890, that raising the rate of discount is too slow a

remedy for sudden emergencies, and that if Mr. Lidderdale had waited for Barings to fail, with their £21,000,000 of liabilities, the Bank could not have withstood the strain that would have come upon it. But by borrowing £5,000,000 gold on the Continent, it put itself in so strong a position that apprehension was allayed before it had time to become uncontrollable, while at the same time the other banks of the United Kingdom were called upon to join in subscribing for a guarantee fund. From this Mr. Macleod deduces the conclusion that, with its present limitations on issue, it may happen that the Bank may encounter danger in applying the ordinarily safe rule of raising the rate of discount, as too great a rise might aggravate the panic and bring on a run for notes and gold. He also argues that hereafter it should be the rule in serious emergencies for all the banks to combine. These conclusions seem unexceptionable, and mark a distinct advance in the evolution of banking; not only a change from remedial to preventive treatment, but also a broadening to an international basis. It is, perhaps, unnecessary to go so far as to maintain, as Mr. Macleod does, that there should be no restriction whatever on the power of the Bank to issue notes. He has abundantly shown that such a power is liable to dangerous abuse.

Short Studies in Literature. By Hamilton Wright Mabie. Dodd, Mead & Co. 1891.

MR. MABIE in his preface expresses a hope that this volume of essays may prove "a book of insight, rather than a contribution to the large and invaluable mass of books of literary scholarship." He appears to mean by this that he deals with literature in general, rather than with particular authors, and uses the latter purely for purposes of illustration. The ideas which he brings forward make no pretence of originality. He treats of material and form, of race and personality, of nature and the spirit of the age, of naturalism, classicism, and romanticism, of the epic, the drama, and the lyric, of criticism and the novel, and of the interaction of one nation upon another in the world's literature. He thus passes in review the whole historic field of literary form, and examines the watchwords of all critical schools. In general, his presentation is just, his illustrations sufficiently apt, and his own remarks show both a tolerant and progressive spirit. As an introduction to the general ideas which are involved in the knowledge of literature and the critical appreciation of it, his work could hardly be bettered. It is a first-book for the more reflective class of readers. He succeeds in the rather difficult task of attempting to throw into a popular and easily apprehended shape notions which for their full understanding require large knowledge, but which nevertheless are useful as guides, even in crude form, from the start. Perhaps those chapters which deal with the history of the poetry of nature, and which define the epic as a form of popular poetry created by the imagination and life of a race, have higher usefulness, owing to their greater definiteness; but even in the more abstruse portions relating to form and spirit, what he has to say is distinctly suggestive, and should prove valuable.

Personal Recollections of the War of the Rebellion. Addresses delivered before the New York Commandery of the Loyal Legion of the United States, 1883-1891. Edited by James Grant Wilson and Titus Munson Coan, M.D. Published by the Commandery.

THE danger in editing these volumes is that stale or trifling matter be admitted. The typical papers which contain the authentic personal recollections of officers who served in the civil war cannot be too highly estimated. In the present volume, the paper on Gettysburg, by Col. Rafferty; the Red River Dam, by Gen. J. G. Wilson; the Sassacus and the Albemarle, by Dr. Edgar Holden; and the Mortar Flotilla in the Mississippi, by Lieut. Brown, are all of the highest order in value, and the stories are well told. The paper by Gen. Swayne on the Fruition of the Ordinance of 1787, though not immediately connected with the war history, is an able résumé of the history of the great Act of Congress which was at the foundation of the free-State policy whose ultimate fruition was the abolition of slavery at the close of the great convulsion. Gen. Burnett's two papers on the trial of President Lincoln's assassins preserve important facts as seen from the inside by a responsible officer of the Judge Advocate's department. Several of the obituary addresses must be regarded as excerpts already published elsewhere; and interesting as they are, it is questionable whether the rigid rule of admitting to these volumes nothing but original matter first read before the Commandery ought to be relaxed.

The volume is a handsome octavo of 400 pages, in the bright blue and gold, with the cross of the Legion on the cover, which the Ohio Commandery first adopted. It would be well if all the Loyal Legion publications should be put in this uniform, as they are the papers of one society, and the necessary distinction of commanderies could be indicated in the titles.

BOOKS OF THE WEEK.

Barker's Facts and Figures for 1892. Frederick Warne & Co. 50 cents.
Brief Counsels concerning Business. F. H. Revell Co. $1.
Choate, I. B. Wells of English. Boston: Roberts Bros. $1.50.
Corson, Prof. H. An Introduction to the Study of Robert Browning's Poetry. 2d ed. Boston: D. C. Heath & Co.
Credo and Credulity. Charles T. Dillingham. $1.50.
Crump, C. G. Landor's Imaginary Conversations. Vol. IV. London: J. M. Dent & Co.; New York: Macmillan. $1.25.
Cumming, C. F. G. Two Happy Years in Ceylon. 2 vols. Scribners. $9.
Cyclopædia of the Manufactures and Products of the U. S. 2d ed. Seeger & Guernsey Co.
Gosse, Edmund. Gossip in a Library. John W. Lovell Co.
Hopkins, A. A. The *Scientific American* Cyclopædia of Receipts, Notes and Queries. Munn & Co. $5.
Infantry Drill Regulations, U. S. Army. Appletons.
Jokai, Maurus. Pretty Michal. Cassell Publishing Co. 50 cents.
Joynes, Prof. E. S. French Fairy Tales. Boston: D. C. Heath & Co. 35 cents.
Keene, H. G. The Literature of France. [University Extension Series.] Scribners. $1.
Keener, Prof. W. A. Selections from Leake's Elements of the Law of Contracts, etc. 2 vols. Baker, Voorhis & Co.
La Brête, Jean de. Mon Oncle et Mon Curé. William R. Jenkins. 60 cents.
Ladd, H. O. The Story of New Mexico. Boston: D. Lothrop Co. $1.50.
Littell's Living Age. Oct.–Dec., 1891. Boston: Littell & Co.
Long, George. A Selection from the Discourses of Epictetus, with the Encheiridion. [Knickerbocker Nuggets.] G. P. Putnam's Sons. $1.
Marshall, G. L. O'er Rail and Cross-Ties with Gripsack. G. W. Dillingham.
Maspéro, G. Life in Ancient Egypt and Assyria. Appletons.
McKillop, D. Shorthand and Typewriting. New York: Fowler & Wells Co.
Mendeléeff, D. The Principles of Chemistry. 2 vols. Longmans, Green & Co. $10.
Meredith, George. The Tragic Comedians: A Study in a Well-known Story. Roberts Bros. $1.50.
Middleton, E. S. A Study in Girls. G. W. Dillingham.
Mills, Wesley. The Dog in Health and in Disease. Appletons.
Morley, Charles. Teufel the Terrier. G. P. Putnam's Sons. 75 cents.
Morris, William. The Story of the Glittering Plain. Boston: Roberts Bros. $1.50.
Perley, Sidney. Historic Storms of New England. Salem, Mass.: Salem Press Publishing and Printing Co.
Pinero, A. W. The Cabinet Minister. J. W. Lovell Co. $1.25.
Purves, John. Selections from the Dialogues of Plato. Oxford: Clarendon Press; New York: Macmillan. $1.25.
Religious Systems of the World. 2d ed., enlarged. London: Swan Sonnenschein & Co.; New York: Macmillan. $4.50.
Richardson, Warren. Dr. Zell and the Princess Charlotte. L. Kabis & Co.
Ritter, Fanny R. Lyre, Pen and Pencil. Edward Schuberth & Co.
Robida, A. "Yester-Year": Ten Centuries of Toilette. London: Richard Clay & Sons; New York: Charles Scribner's Sons. $2.50.

The Nation.

NEW YORK, THURSDAY, FEBRUARY 4, 1892.

The Week.

HILL is giving the country a perfect exhibition of what Hillism really is. Having had his State Committee call the State Convention in February to choose delegates to the Democratic National Convention of next June, he has begun grinding out delegations to this State Convention before the end of January. The call for the Convention was issued on the afternoon of January 25, and on January 27 the Hill managers in Hornellsville went through the form of holding primaries, and elected a "solid delegation for Hill." It is also given out that the Hill machine proposes to abandon the old Democratic plan of selecting delegates to the National Convention (outside the delegates-at-large) by Congressional districts, and to have them all chosen in bulk, and that the men who are to represent districts in the central part of the State have already been picked out in this city. Believers in decent politics cannot be too grateful to Hill for thus giving the nation an exact measure of himself. All that was necessary to make the Democrats of the United States understand what a cheap wire-puller he really is, and how preposterous is the idea of nominating him for President, was an exhibition of his methods such as he is now giving.

The meeting of Democrats in this city on Friday evening, which resulted in a formal protest against the Hill "snap" Convention, and a call for a mass-meeting on the 11th inst. to "consider and decide upon the necessary measures to secure the best interests of the Democratic party," is an encouraging sign that the spirit of manliness and honesty yet exists in the Democratic party in this city and State. Surely if that spirit did not manifest itself now, it never would. The party has been seized by the throat by a political highwayman whose character is so despised by respectable Democrats that they never think of inviting him to their houses or attending receptions at clubs, or elsewhere, which Tammany organizes in his honor; yet these same respectable Democrats have been allowing him for seven years gradually to take complete control of their party organization, and to fill the offices of the State with his "pals" and heelers, without lifting their voices in any except the feeblest and most timid protest. We trust that the present movement means a new departure, and that from this time on the intelligence and manhood of the party will not merely demand but will openly assume control of its councils. That is the only kind of opposition within the party that Hill dreads. The moment all efforts to remain harmonious and friendly with him are abandoned and his debasing and demoralizing leadership is repudiated, the beginning of the end of his boss-ship will have come. Friendliness with him before election means always the same thing after election—contemptuous treatment of all the decent men in the party, and rewards for all its tricksters and cheats.

The main business of the Senate at Washington thus far has been passing bills for public buildings. Loaded upon the calendar in hot haste, they are taken up through the instrumentality of "Senatorial courtesy," and passed on the well-understood system of "Vote for my bill if you expect me to vote for yours." One of the tricks of the trade is a voluntary reduction of the amount originally asked for. Thus, Senator Stewart introduced a bill for a $100,000 public building at that well-known metropolis of 5,000 souls in Nevada named Reno. The Committee cut the amount down to $75,000, and when even that amount was objected to in the Senate, the Senator from Nevada generously exclaimed: "We will agree to reduce it to $60,000." This reminds one of Webster calling, in a moment of spirituous elevation, for the amount of the national debt, and offering to pay it himself. But the thing is to get an appropriation once made and the building started; then the deficiency can be made up easily enough, for is it to be supposed that the Government will carry a building up to the third story, and then let the walls crumble for lack of money to put on the roof and a statue of the Goddess of Liberty?

The trouble with the Senators is, as Messrs. McPherson and Allison had to remind them last week, that they wish to continue the methods of the flush days of the Treasury in these poverty-stricken times. When the surplus was upwards of $100,000,000, and kept averaging that for a series of years, the money was fairly aching to be appropriated, and the readiest way of "getting it into circulation again" was in public-building bills. They were the easiest to slip through Congress, inasmuch as the most rigorous economist in matters of general public expenditure would always have some modest little bill for his own "deestrict" on the anxious list, and would know that he must be tolerant of other people's schemes of the sort if he was to get his own through. There can be no question that, under the constant temptation of the surplus and the perfecting of the log-rolling method, the evil of appropriations for unnecessary public buildings grew alarmingly. President Cleveland did much to check it by his vetoes, and President Harrison has followed his example in that particular, though with halting steps. He may now, however, be expected to display much greater severity towards such measures, since the condition of the Treasury will admit of no raiding.

When Secretary Foster sent in his annual report to Congress on December 7, he gave the estimate for pensions during the fiscal year 1893 as $147,064,550. This was among the estimates "as submitted by the several Executive Departments and offices," and came, of course, from Commissioner Raum. Yet that gentleman informed the Committee on Pensions last week that he should need $160,000,000 for the year in question. An estimate which is $13,000,000 out of the way is highly valuable for a Secretary of the Treasury to figure on, and makes his estimated surplus of but $14,000,000 look particularly silly. It is only another instance of the thoroughly muddled condition of our present Treasury reports.

Senator Hale made a labored attempt on Thursday to disprove the fact that Mr. Blaine's original reciprocity schemes were flouted by the Republicans in the Senate. He admitted explicitly, what of course everybody knew before, that the amendment which he introduced on June 19 "had been prepared in the State Department." But he proceeded to say:

> "As some attempt has been made to show that the original reciprocity amendment received rude treatment at the hands of the Senate, and that its original authors were not considered in the legislation of Congress, I may state here that, after the changed condition resulting from the repeal of nearly all of the sugar duty, the Aldrich amendment was heartily accepted by the friends of the original amendment in the Senate, by the Secretary of State, and by the President. The basis of the original amendment was the retention of the sugar duty till reciprocal treaties could be negotiated. When that basis was changed and the repeal became a fixed fact, it is difficult to see what other plan than the Aldrich amendment could be devised."

This is delightful. When did this "changed condition resulting from the repeal of nearly all of the sugar duty" appear? On May 21, the date the McKinley Bill passed the House. It was nearly a month later, June 19, that Senator Hale introduced the Blaine amendment. It was not called up and debated till September 2, over three months after the time when, Senator Hale now says, its "basis was changed and the repeal became a fixed fact." The very point and force of the amendment was to avert that repeal. What Mr. Hale really says, therefore, is that Mr. Blaine's plan did not receive "rude treatment" in the Senate, because after that plan had failed to receive a single Republican vote, after its author had thus been trampled upon in the house of his own friends, he gathered himself together, in his customary "here

we are again" style, and loudly claimed as his own a measure which he had bitterly fought, but which was crammed down his throat. Senator Hale will have to try again.

Those whose memories reach back to 1876 will have no difficulty in understanding how Mr. Blaine has come to have a constitutional dread of facing documentary evidence. If his agreements cannot be produced against him in writing, he feels at entire liberty to repudiate them, even when the other evidence against him is conclusive. His reply to the Chilian Minister is very like the one he made last spring to the Brazilian Minister. When the latter, at the time the Spanish Treaty was announced, sent a messenger to Mr. Blaine with bitter reproaches for having deceived him into assuring his Government that the United States would make no agreement with Spain affecting Cuban sugar, the Secretary's ready answer was: "Does he claim to have any formal and written assurance of mine in that matter?" So important did he regard this that he got Gen. Foster to obtain from Minister Mendonça, as an "anchor to windward," a letter admitting that no formal promise on the subject was passed. The inference is that Mr. Blaine considers a clear understanding between gentlemen as of no binding force whatever unless reduced to writing. He fooled and then flung over Mr. Mendonça, and now tries to do the same thing with Minister Montt. At this rate he will soon have in every country of "Pan-America" a victim of misplaced confidence in his honor.

Some of our contemporaries, and the President himself, seem disposed to throw the blame of the President's ignorance of the receipt of Mr. Montt's note at the State Department on Monday week, before he sent in his War Message, on Mr. Blaine solely. But this will hardly hold water. Mr. Blaine was undoubtedly guilty of negligence that looks malicious in not warning the President that a Chilian despatch had been received and was undergoing translation, knowing, as he certainly must have known, that a war message had been prepared. But the President knew well that some such communication was *probably* on the way, for he had sent his "ultimatum" on the previous Thursday, and had been asked for and had conceded two days' delay for the answer. Now, a peaceable man, seeking peace and prizing it, would have grasped at every known chance of peace, and waited patiently for every possible excuse for delaying warlike action. There was no date on which war *had* to be declared. A quarrelsome man, bent on a fight, would, on the other hand, have done just what the President did —hasten any action that would be likely to cut off negotiations. His eagerness, in fact, to get in with his message, *coûte que coûte*, as the *Tribune* would say, was well revealed by his Sabbath-breaking on Sunday, for, according to Mr. Allen, he kept the compositors at work on that day setting up a document which was certainly far from sacred. No Presbyterian Elder would do this in order to increase the chances of a bloody war, who was not nearly beside himself with martial ardor. Poor Mr. Blaine has burdens enough of his own to bear without having to shoulder the whole of this one.

In the course of a little cooing between the "gentlemanly" *Tribune* and the "high-minded *Sun*," the former concurs with the latter in the following pregnant observation:

> "It is worth a hundred millions to have the world know that there is a united country behind the flag, and it is also worth a great many millions to have public men in this country know that there must be a united country behind any Administration in any sincere and wise endeavor to promote the public welfare."

If it be really true, Simplex, that "the world" did not know until we had this squabble with Chili that there was "a united country behind the [American] flag," and if "public men" were ignorant of the fact that "there must be a united country behind any Administration" in order to make its blunders conducive to its continuance in office, your estimate of the money value of the Chilian squabble is ridiculously low. We should put it, were we in your place, at five million millions of dollars, and we would refuse to lower it except under physical compulsion. We thought the world had been made acquainted with the fighting capacity of the American people in the years 1861-1865, at an expense of $4,000,000,000, or thereabouts. If that lesson has been already forgotten in twenty-five years, how long would a $100,000,000 advertisement retain its virtue? Why, only seven months and two weeks, and we should have to have a squabble with some other Power next fall in order to retain the respect of "the world."

The dreary and long-spun-out Connecticut deadlock appears to have reached a final phase of partisan scandal likely to continue until next January. When, some three weeks ago, the Supreme Court of the State gave its too vague decision in the Morris-Bulkeley suit, it implied in one part of its finding that the "two-day" limit had cut off a declaration of State officers, while in another part it suggested that the Legislature might yet declare them. The Democratic Senate then brought up the case of Phelan, who received at the last election a clear majority of 544 votes for Secretary of State, and asked the Republican House for a conference committee. This committee disagreed, but before its House members could report, the Bulkeley men flung in a resolution giving the Speaker power to "recess" the House for two months in any absence of a quorum. To defeat this, the Democratic members of the House broke the quorum by going out into the lobby, and the Speaker declared a recess for one week, as the existing House rules allow him to do. Thereupon, the private secretary of Gov. Bulkeley, who is also Secretary of the Republican State Committee, sent notice to the Republican majority not to come back until ordered to do so. At present, therefore, each Wednesday the Speaker goes to an almost empty House and declares "no quorum" and a recess from week to week. His "sharp" tactics also tend to prevent the Democratic claimants from taking the Supreme Court's advice and going under the common law to the Superior Court, as there the Republicans can now raise the technical plea that the Legislature, being in session, may yet "declare" the State officers. Thus the deadlock is complete, and the two houses apparently must sooner or later adjourn to draw their pay for work they have not done.

The decision of the Supreme Court of the United States, that Boyd, the Democrat who was elected Governor of Nebraska a year ago last November, is entitled to the office out of which he has been cheated most of the time since his term began, accords with the popular sense of fair play. Boyd came to this country when a boy, and always supposed that his father had perfected his naturalization papers so that the son was a full-fledged citizen. Moreover, he had served as a soldier in the Union army and had held various offices, including the Mayoralty of Omaha, without any question ever being raised as to his full rights. It therefore seemed a peculiarly mean piece of business that the Republican politicians of his State should try to keep him out of the Governorship, to which he had been fairly elected, by bringing up a technical point against the regularity of his father's naturalization papers, and should succeed for about a year by securing a decision in their favor from the Republican Judges who constituted a majority of the State Supreme Court. All but one of the judges of the United States Supreme Court, five Republicans and two Democrats, concur in deciding that the State Supreme Court was wrong, in reversing its judgment, and in remanding the cause, "to be proceeded in according to law and in conformity with this opinion."

But while this decision accords with the popular sense of fair play, it must be admitted that there is great force in the dissenting opinion of Justice Field, the veteran Democratic member of the bench. He takes the ground that the Supreme Court of the United States has no jurisdiction to determine a disputed question as to the right to the Governorship of a State, however the question may be decided by its authorities, right or wrong. He holds that the States, by the express declaration

of the tenth amendment to the Constitution, are independent political communities, except as to such powers as are ceded to the General Government or prohibited to them by the Constitution; and that the powers of the General Government to interfere with the administration of affairs of a State and its officers extend only so far as may be necessary to secure to it a republican form of government, or to protect it against invasion and domestic violence. Nor does Justice Field consider that the fact that one of the qualifications prescribed by a State for its officers can only be ascertained and established by considering the provisions of a law of the United States, authorizes interference by the General Government with the action of the State. These theoretical objections of the dissenting Justice to the position taken by the majority of the court are sustained by the practical consideration which he suggests, that there is no power to enforce upon the State of Nebraska the decision of the Supreme Court of the United States. "How could this court," he asked, "in case of refusal of the incumbent to vacate his office, enforce its order? An attempt to do so by force would not be sustained by the Executive, or by Congress, or by the people. He could see only mischief and trouble to follow from the assertion of any such power over the authorities of a State as is claimed in this case." It is difficult to impugn the force of this reasoning.

The Supreme Court rendered another important decision on Monday, in which all of its members concurred—a somewhat unusual circumstance. It upholds the law of Congress which prohibits the sending through the mails of newspapers containing lottery advertisements. The New Orleans lottery people have fought this law with the greatest persistence, and employed the ablest lawyers to argue against its constitutionality. It is easy to understand why they wanted to overthrow it. The advertisement in the newspaper—and particularly when it appeared in that most deceptive of guises known to the counting-room but not to the ingenuous subscriber as a "reading notice"—was the surest way of luring the unsuspicious into their toils. It would be difficult to exaggerate the amount of patronage which was secured by those seductive stories appearing in the columns devoted to selected matter, telling how a grocer in one distant city, a clerk in a second, and a shoe-maker in a third, had drawn large prizes, and received the money from New Orleans by express-package. Prohibition of any use of the newspapers is a terrible blow at any business in this age of newspapers, and it is no wonder the lottery people dreaded the application of such a rule. The moral effect of such a decision in helping the opposition to the lottery in the pending campaign in Louisiana must be great.

The arrest of Henry H. Yard on freshly discovered evidence of complicity with Marsh, the fugitive President of the Keystone Bank, may possibly lead to interesting developments in the carefully hushed-up Philadelphia scandal. Yard is already resting untried under two indictments for conspiracy with Bardsley for the unlawful use of public funds. It came out during the investigation in June last that Yard was a partner with Lucas, the former President of the Keystone Bank, who was discovered after his death to have robbed it of $998,000. He joined Lucas in some real-estate speculation, as good Mr. Wanamaker joined him in some speculations in Reading stock. It came out, also, that Yard raised money for some of his speculations on one of the bogus certificates of Keystone Bank stock which Wanamaker had sworn that he had received from Lucas as security for money advanced and had never allowed to go out of his pocket-book. Yard in some mysterious manner got possession of one of them, even as Wanamaker's brokers got possession of others, and used them to raise money on. Yard has never been forced to trial on his first indictments, but he may be on the new evidence which is now said to have been discovered by a United States Secret-Service officer who has been engaged with experts on the Keystone books. On this evidence he is charged with aiding and abetting Marsh in the misappropriation of nearly $70,000 of the bank's funds. We trust that his trial will be pushed, for as a connecting link between Lucas and Wanamaker on the one hand, and between Bardsley, Marsh, and Lucas on the other, he has from the first been a most interesting figure in the scandal.

The opposition in Spain to the reciprocity agreement with the United States has found expression in the Cortes, and the Government has consented to the appointment of a committee to investigate the whole question. The arrangement is most stoutly attacked by Spanish protectionists, and as the present Administration came into power upon an ultra-protectionist platform, the choicest dialectics of protection will have to be put into play to show how an arrangement which makes trade freer is really a protectionist measure. The Spanish Premier could learn a valuable lesson in this matter from some of our own Irrefragable Doctors of protection of the new school. But it is going to be exceedingly awkward for him to risk incurring the enmity of the group of unattached protectionists, of whom Gamazo is the mouthpiece, and who distinctly notify him that he can count upon their votes only as long as he gives their constituents all manner of protective duties. Perhaps the Investigating Committee will bring out the actual circumstances under which the treaty was originally forced upon Spain. The secret history of that affair would show that the Government of the United States gave Spain an "ultimatum," as well as Chili, and that a scheme of international brigandage affecting Cuba was sedulously cultivated by some of the finest patriots among us.

The embarrassment in which the Germans are placed by the eccentricities of their Emperor steadily increases. That the son of his father, educated as he has been, in the latter part of the nineteenth century, in perhaps the most highly cultivated community in the world, should have, at the age of thirty, the opinion he has of his own power and wisdom, seems to a growing number of his subjects hardly consistent with perfect mental sanity. His mind is apparently that of a fourteenth or fifteenth-century king. Many of his accounts of his own mission to the German people and of his responsibilities on their account seem strongly symptomatic of that form of lunacy which consists in an inordinate self-importance, known technically as megalomania. He has tried the public patience a good deal already by his claims to almost superhuman knowledge and sagacity, but none of his legislative undertakings has been quite so serious as his Educational Bill, now before the Reichstag, providing for the religious education of the children in the public schools in such creeds as the Government approves of; or, in other words, the transfer of the children of Jews, Turks, and infidels to the cure of the Christian clergy. The object of this legislation is, according to the Emperor, to abolish "atheism" among his subjects, and bring them all into a religious fold specially constructed by himself or under his approval. The number of atheists in Germany is very large. The number of sceptics—that is, of persons who have a private religion of their own, the nature of which they consider nobody else's business—is still larger. But larger than all is the class who dislike and despise the clergy, and will on no account permit them to educate their children. All these classes together include a very large proportion of the German culture and intelligence. To attempt to force an official religious creed on them, after the fashion of Queen Elizabeth or King Charles I., is one of those fantastic ventures which shake thrones to their foundation. There is probably no country in Europe in which it would be more preposterous than in Germany, for in none have the commercial and professional men got so far away from the Church. They have, in fact, got so far away that to the great bulk of them American and English piety is absolutely incomprehensible. To attack these classes on their tenderest point, in the character of "the Lord's anointed," may fairly be considered evidence of some kind of unsoundness.

THE SHAME OF IT.

We presume no gentleman in the United States will read these remarks of Mr. Blount, Chairman of the House Committee on Foreign Affairs, on the Chilian apology without hearty concurrence: "I was almost smitten with a feeling of pity that people who seemed to be animated by such generous sentiments should be placed in the position of making so humble an apology." But we are sure that every gentleman who agrees with Mr. Blount will feel something besides pity, namely, shame over the means employed to extract this apology. No episode nearly so discreditable is to be found in the annals of American diplomacy. The President is at this moment an object of ridicule in Congress, and in fact all over the world, for having sent a war message to Congress without waiting for the answer to an "ultimatum," as the Warriors called it, which he had sent to Chili.

The ultimatum was sent on Thursday, January 21. It was not received at the Foreign Office in Santiago till the 23d. Answer was at once made asking for two days' delay in replying—*i. e.*, until Monday—as President Montt was absent in the mountains. This ultimatum, as is well known, made peremptory demands, compliance with which was sure to be felt as more or less humiliating by a high-spirited and martial people. It was, in fact, the communication of a duellist asking for "satisfaction." But it did not emanate from a duellist: it emanated from the President of a peaceful Christian republic, himself a prominent church member, and was addressed to a little republic just emerging from a bloody civil war. As Mr. Allen of Mississippi—himself a member of a duelling community—pointed out in Congress on Thursday, a duellist in his State is bound to wait a reasonable time, on pain of social disgrace, for an answer to a "hostile message." But our President did not obey even the duelling code. After having received this request for a brief delay on Saturday, he deliberately sent a message to Congress on Monday, the 25th, virtually asking for authority to attack the Chilians with his fleet, and bristling with gross insults to the Chilian Government. He gave the lie to nearly all its assertions touching matters of fact, and discredited the decisions of its courts of law. It was, in fact, such a communication as is never addressed to a disputant or antagonist, even by duellists, except with the view of forcing a quarrel.

More than this: he sent this warlike message to Congress at twelve o'clock on Monday, either knowing or not knowing that an important communication had been received that morning at the State Department from the Chilian Minister in Washington, touching the matter in hand. If he knew it was there, but was determined not to wait for it, having his own document all ready, his conduct deserves to be characterized in stronger terms than we care to use. If he did not know of it, and failed to make any inquiry about it before launching a missive which might consign thousands of men to destruction, what are we to say of the way in which he and his Secretary of State conduct the business of a great nation on a question of peace or war? Think of an elder in a Christian church getting up on Monday morning, after a Sabbath's reflection, and deliberately suggesting a bloody war to Congress without asking, up to noon, whether the enemy, *from whom he was expecting to hear*, had been heard from. What are we to call this in the United States in the year of our Lord one thousand eight hundred and ninety-two?

There could hardly be stronger evidence than this, taken in connection with previous events, of a determination to force a quarrel on a weak antagonist. If the management of this quarrel with Chili had previously been gentlemanly, considerate, forbearing, it might be treated as the blunder of a small and nervous man, brought suddenly face to face with a serious and novel crisis. But, as President Harrison's ill-luck will have it, his unseemly haste with the ultimatum is a perfectly fitting close to the controversy as it has been carried on from the beginning.

We began the process of alienating and irritating the Chilians by the appointment of Egan as our Minister—in itself contemptuous to the verge of insult. We continued it by open displays of sympathy with Balmaceda during the civil war; by our seizure and pursuit of the *Itata*, in disregard of the law as laid down by our State Department; by permitting our naval officers during four months to sneer at, abuse, defy, and threaten the Chilians, with the permission or approval of our Navy Department and the loud encouragement of our Government press. When the riot occurred, we forced on the Chilians, with an absolute disregard of the decencies of diplomatic intercourse, a view of governmental responsibility for mob violence which we had ourselves a short time previously utterly repudiated. That all this should end in an attempt to forestall an apology by a snap declaration of war, is simply what consistency called for.

The Chilians, with the exception of Señor Matta, have acted all through as gentlemen and men of sense. They have gone through the agony of a civil war, and borne our insults and abuse with patient courage. They have promptly responded to a demand for "satisfaction" in terms which ought to be read with shame and compunction in every Presbyterian church in the country. The exception of Matta ought not to count against them when we remember that he is a journalistic Warrior—for of course Chili has her journalistic Warriors also—suddenly and for a brief period put in an office evidently too high for him, at the close of the Civil War, in a provisional government. This indiscretion was promptly atoned for when it was found to have given offence. And it must be remembered that the Chilian Government has behind it a martial, proud, and very ignorant population, whose susceptibilities in making concessions to foreign Powers have to be consulted. It would seem as if, in exacting concessions from it, the Ministers of a sister republic would have borne this fact in mind, and have had chivalry and magnanimity enough and sympathy enough to avoid all language which would make its task more difficult. It is not too late for the display of these qualities now. If the President and Mr. Blaine do not exactly know how gentlemen settle misunderstandings with unfortunate and erring friends, they ought to ask somebody in Washington who has had a larger and nobler experience.

PATRIOTISM.

In the military ages—that is, in all the ages before our own—when war was the principal business of the Government, and the soldiers were *ex officio* the chief class in the State, the patriot was necessarily and inevitably the man who was ready to fight and, if need be, die for his country on the battlefield. There is hardly any other definition of patriot to be found in Greek or Roman or mediæval literature. The attempt in Dr. Johnson's day to apply the term in English party politics to the man who opposed a corrupt ministry and tried to effect some sort of reform in the Government, excited his good old Tory wrath, and led him to describe patriotism as "the last refuge of a scoundrel," and the patriot consequently as a scoundrel at the end of his tether.

The modern Christian and industrial definition is something wholly different. The patriot in our day, and especially in the United States, is the just man, and not the fighting man of the ancients. He is the man who, in a private station, lives honestly, injures no one, and gives everybody his due, does the best work he can in his calling, is helpful and kindly to his neighbors and friends; who, in a public station, discharges the duties of his office as faithfully and efficiently as he knows how, without fear or favor, and indifferently between rich and poor; who makes no profit beyond his lawful salary, and obliges no friend or relative at the public expense; who acts in all things with a single eye, not to his own interest or that of his party, but to the public interest, and, in fact, in his whole walk and conversation so conducts himself that his fellow-citizens can point to him with pride, and that, in the eyes of foreigners, he reflects honor on his country and on his government. If he is a newspaper editor in a democratic country, in which public opinion is all-powerful and is largely shaped, on the issues of peace and war, by the press, he writes and collects news in such manner as, if possible, to deceive nobody about matters of fact, and mislead nobody in matters of opinion, to secure full and careful deliberation on all great matters of public

concern, to bring the best thought of the world and the experience of the human race to bear on them, and to protect national decisions at great crises from the influence of pride, passion, ignorance, animal combativeness, and selfishness. In other words, he is above all things loyal to civilization, and includes under this head everything which brings human affairs under the control of reason, and fosters the larger hopes of the race for the good time coming when the war-drum shall beat no longer, and the battle-flags be furled.

If the above definition of patriotism be correct—and we think few will question it—it will be readily seen that it is no easy matter to be a patriot, and it will be readily seen, too, why real patriots do not abound. It also does something to fortify Dr. Johnson's definition, for every country swarms with men in search of the means of being considered patriots with the smallest possible outlay of labor and sacrifice. The great drones and malefactors, the whole tribe of corruptionists and shirks and charlatans, in and out of politics, are naturally the most eager in this quest. They want to be good patriots without giving up cheating at the polls; without ceasing to sell their votes in the Legislature; without ceasing to defraud the Government in their offices or in their contracts; without ceasing to trade for their own profit on popular passion, or prejudice, or ignorance; without ceasing to invent bogus news, or write disingenuous or silly or reckless articles, in order to sell their paper; without ceasing to sand their sugar or unload worthless stocks on the innocent, or to wreck railroads; or, to sum up, without ceasing to disappoint the hopes of all the generous spirits who look to see their country stand before the world for law, for reason, for "truth and justice, religion and piety."

Now nothing suits this class so well as a definition of patriotism which makes it consist in readiness to go to war to avenge slights and insults under the duellist's code. Patriotism does in this sense furnish a ready refuge to the greatest scoundrel, because he can be a patriot without desisting for one moment from his ordinary avocations, or making the smallest sacrifice of his comfort. A patriot of this kind can air his patriotism without the smallest abatement of his nefarious activity. He is not restrained, as the ancient patriots were, by having to take arms in wars of his own making, for he hires other men to fight, and can make money by betting in the stock market and by selling "extras" of his paper on their battles, sieges, and fortunes, on the devastation of fertile lands, the destruction of great cities, the multiplication of widows and orphans, and the crowding of hospitals, and by filling the breasts of his fellow-citizens with the savage joy of the Red Indian over other people's death and ruin and humiliation. He can show patriotism of this sort while lying on a sofa smoking cigarettes, or drinking brandy and water in a café, or playing poker in a gambling-house. In short, there is no one so criminal, or so vicious, or so silly or empty-headed that he cannot be a patriot by longing and "hollering" for war, and feeling "insulted" by some foreigner, and wanting to have the insult washed out in somebody else's blood in a fight of which he will be a spectator merely.

As this nation grows in strength and size, these patriots are sure to grow more numerous and active. When it numbers 200,000,000, as it will before very long, and possesses, as it probably will, one of the greatest fleets, and possibly armies, in the world, the force which "patriotic" charlatans will have within their reach for offences against law and morality will be tremendous if those Americans who wish to see their country continue to be the great exemplar of the higher modern civilization, as it has been hitherto, do not cultivate the courage of their opinions. The timid silence which good people maintain while the "Patriots" are yelping for some sort of external trouble that will turn attention away from their own treasons, stratagems, and spoils—the fear of even honest and good men of raising their voices against a war they know to be unjust, lest they should "get left" and have the Scoundrels call them names—is an unhappy and dangerous sign of the times. They should remember that in a modern republic, and above all in a modern democracy, the presumptions are all in favor of peace. There is nothing in our day rarer than a "just and necessary war." There has not been one such offensive war, in our estimation, since 1640, except the Revolutionary War and the Civil War of 1861. The burden of proof lies always on the Warriors. It is for them to make out their case; it is for them to stammer, and hesitate, and shrink, and justify themselves in the presence of that great tribunal, the Conscience of a Christian Nation. It is the solemn duty of that tribunal to see that their proofs are perfect.

MODERN CHURCH-MEMBERSHIP.

CONSIDERABLE stir was excited a short time ago when the best-known church in Brooklyn received an application for membership from a man who had just been on trial for murder. He had killed a man in the rooms of a disreputable woman, but was acquitted on the ground of self-defence. Before his trial came on, he had professed conversion in jail, and immediately on securing his liberty expressed his desire to join the church in question. Its pastor has declared himself favorable to the application, though it yet has to be passed upon finally.

Now, taking into account the fundamental theories of Christianity and the original practice of the Christian Church, the sensation made by this incident is wholly inexplicable, and the idea that a church should hesitate for a moment in receiving such a candidate is altogether preposterous. It is impossible to conceive of the Apostles making any account whatever of the previous character of a convert so long as he would heartily accept the tenets they preached. As a matter of fact, we know that the primitive Christian Church counted many among its membership who had been open criminals and debauchees. Writing to one early Christian community, the Apostle Paul catalogues a long list of offenders against the civil and the moral law—some of the vices being now unnamable — and adds with perfect naturalness, "and such were some of you." And throughout the Christian literature of the first two centuries there runs the unmistakable implication that Christianity made its first and greatest conquests among what we should now call the lower classes of society, including many from the criminal or vicious class. That any church of those days could have feared lest its reputation should be damaged by receiving a member who had been guilty of gross licentiousness and homicide, is quite impossible. The theory of the new religion called for the reception of such a man as an equal and a brother, and the practice of the new religion made such receptions the common thing.

The theory has persisted, and it is that which compels a Christian minister to-day to maintain that foregoing bad character must be no bar to admission into the Church; but the practice has greatly changed, and it is this which makes the sensation among church-members who are asked to receive into their fellowship a man whom a great many of them would certainly not receive into their houses. However one may explain it, the fact is patent that the churches have come to stand more and more exclusively for the respectable classes in society. This is one of their greatest merits. They are the result of a long-continued moral selection. They represent the effects of a good moral environment upon successive generations—of the highest ideals of Christianity and civilization handed down from father to son. It is unfortunately true that a great deal of social conventionality has now got mixed with all this, so that wealth and standing, having so long been associated with good character, have come to be identified with it or taken as a substitute for it. Just here comes in the danger that people may seek entrance into a church for the sake of the commercial and social value of a certificate of membership. In the days of the early Church, a man's social position was sacrificed and suspicion thrown upon his character by his becoming known as a Christian; now, it is all the other way. But the fact remains that the churches, as a whole, do embrace selected individuals and families, morally speaking, in whom the fruits of carefully guarded associations and inspiring examples and excellent teaching are manifest.

Is it surprising that such organizations should be startled at the thought of re-

ceiving alien and possibly dangerous elements into their membership—elements that would in so far impair the great value of the churches as the home of unexceptionable influences? Admitting that the original theory of the Christian Church knows nothing of such moral exclusiveness, the view advanced by the late Dr. Hatch in another connection becomes pertinent. He said that a great deal of discussion had been expended on the question whether the restoration of primitive Christianity were possible, when the more pressing question is whether such a restoration is desirable. Having in mind the vital and now universally admitted truths regarding the power of habit and heredity, the slow and dubious recovery from the grip of the grosser vices, the insidious moral contamination of bad companionships—even of a bad reputation—it is at least debatable whether more would not be lost than gained by a reversion to the methods of the early Church in this particular.

This is not the sentimental view or the ecclesiastical view, we are fully aware. In the few actual cases of the kind occurring nowadays, we suppose that the sentimental and the ecclesiastical view will prevail. The candidate will be received with great professions of brotherly feeling, and then the good fathers and mothers of the church will quietly avoid the new member and enjoin their children to shun him as they would a pestilence. The instances of the sort are too rare to have much practical effect. There is no likelihood that modern Christians—unless it be in missionary lands—may be regarded, as the early Christians were regarded by the stern moralists of Rome, in the light of social and moral inferiors. But on general principles we think it would be a great pity for the churches to do anything to destroy or weaken the reputation they have won as selected social centres of moral influence.

THE SOCIALIST MILLENNIUM.

ONE of the leading German Liberals, Eugene Richter, has written a satire, somewhat in the style of Bellamy's 'Looking Backward' ('Sozialdemokratische Zukunftsbilder'), on Socialism in the shape of a picture of what is to happen after the Social Democrats get possession of the German Empire. It consists of the history, during the Social revolution, of the family of a bookbinder employing a few men in a small business and living in a flat in a populous quarter of Berlin. The capitalists are in the first place driven out of the country. Then all the buildings and machinery of transportation and manufacture are seized by "the State," represented by a committee, consisting of the Socialist members of Parliament. Private property of all kinds is abolished. Labor is made obligatory on all persons of both sexes between the ages of twenty-one and sixty-five, and each person continues to follow the calling in which he is actually engaged until further orders, the product of his labor being, of course, the property of the State. Everybody has to make and deliver to the authorities an inventory of all movable property in his possession and to surrender all gold. The army is disbanded and taxes, of course, abolished. Doctors and lawyers practise gratuitously, their board, lodging, and clothing being supplied by the State. Every person between twenty-one and sixty-five, who has no occupation already, has to choose a trade and register him or herself as following it. Women are relieved from the care of children and all other domestic labor. The children are brought up in State nurseries. Everybody eats at a public restaurant, and the washing is done in State laundries. The ministry of religion as a profession is forbidden.

The applications for places in the service of the State are innumerable. The pressure for light work, such as inspectors, and bookkeepers, and policemen, and coachmen or teamsters, is great, but very few want to excavate, or clean or pave streets or do any dirty or hard work. So the State makes all draw lots, and those who draw the bad numbers have to do the dirty jobs. The State issues orders on the public storehouses, in lieu of money, in payment of services, and things promise very well for a few weeks. But an army has speedily to be organized in order to subdue the farmers, who absolutely refuse to surrender their land, buildings, and cattle and implements, and they have to be subjugated by force. The agricultural laborers then, hearing of the fine times people are having in the city, start in throngs for Berlin, so that there is no one left in the country to cultivate the land. They have to be sent back to their villages under military escort and told to stay there. All houses and apartments in Berlin become State lodgings, and are distributed by lot, but nobody is allowed to have more furniture in his lodgings than is absolutely necessary. Luxuries are not permissible, because there cannot be enough for all, and equality in all things is the law of the State. Everybody has to get his photograph taken and lodged with the State so as to prevent his cheating when drawing his rations. All the public restaurants have the same menu each day, which is drafted by a public functionary. In order to make room for all, each person is invited by an inspector to eat diligently and leave when he has finished; the menus are based on scientific data, so as to supply each person with the proper quantity of albumen and nitrogen, etc. These menus form an "issue" at the elections, as does also marriage, which cannot be contracted without permission, and the young men and the girls chafe under these restraints.

All these absurdities, and many others which we have not space to enumerate, are fairly deducible from the platform adopted by the Socialist Congress at Erfurt in 1891, which included the transfer to the State of all the instruments of production, including, of course, the capital or the savings from past production. Minute regulation of the lives of individuals is, in other words, a necessary consequence of the fundamental principles of Socialism. On a certain day named by law, "the State" must begin to direct the activity of every man and woman in the community, and see that every one gets his fair share of the results of the industry of all. No Socialist writer except Mr. Bellamy, so far as we know, has traced out in detail the way this system would work. These writers content themselves, as a rule, with demonstrating the failure, from the humanitarian point of view, of the régime of competition, and then assume that the fraternal system would only need to be started in order to run on satisfactorily. The great success of Mr. Bellamy's book was due in large part to its furnishing a picture of the Socialist's day in the New Jerusalem, by describing the exact way in which he would get his clothes, food, and amusement.

Of course this picture is made possible only by ignoring human nature as now constituted—that is, by assuming that a keen capacity for the enjoyment of carnal pleasures would survive the total extinction of animal selfishness. It is, therefore, easily disposed of by a picture like this of Herr Richter's, in which this selfishness is made to play in the Social organization the part which it now plays, and which it will play in almost as great a degree as now, it is reasonable to suppose, within any period worth thinking about. But this is, after all, not really the weakest point in the Socialist programme. The point at which the Socialists are really most assailable is one which they never take the trouble to defend. In none of their books or pictures do they explain where they are to get the talent and experience necessary for directing all the individuals of large communities in the whole conduct of their lives. Herr Richter ridicules a great many absurdities, but he does not touch on that greatest of all, which assumes the existence in any country of a Council, Committee, or Parliament, or dictator, capable of taking charge of all affairs, both public and private, and seeing that each man does his duty and gets his share; of discharging the duties of the general of an army, of a great manufacturer, of the head of a large retail store, of the head master of an immense school, of the father of a large family, of the prime minister of an empire, and of a hotel-keeper, all in one. There are no such persons in any State. This is what gives an air of farce to all Socialistic schemes.

LABOR AND TARIFF PROBLEMS IN NEW SOUTH WALES.

SYDNEY, December 28, 1891.

THE year 1891 saw the end of the strike by nearly all the unions of laboring men in Australia. The funds of the societies were exhausted; the situations vacated by unionists

were being rapidly filled by non-unionists; members of the unions were quietly deserting the organizations whose leaders had so misled them; these leaders, therefore, seeing their power at an end, ordered a surrender all along the line. As there had been no question of wages at issue, the only concession the laborer had to make was that his employer should have the right to hire whom he chose, unionist or not.

Though this particular conflict was over, the opposition of labor to capital was as marked as ever. The next steps in the campaign are not without interest to other parts of the world. In New South Wales the progress of events has been more rapid than in the other colonies of Australia; hence here it can best be traced. However mistaken the labor leaders may have been in the conduct of their great strike, they were not long in appreciating where their weakness lay. All through Australia the railways are run by the governments, and however much a government may favor any particular party, it must act to preserve order and prevent violence. It cannot prevent a unionist from refusing to work, but it can and must prevent his refusing to allow another to work. While the railways were running and non-unionists could work, the unions could never have the country at their mercy. The labor leaders, therefore, decided that their next step must be to control the Government; and, as a general election was near at hand, they decided to stand for Parliament.

Labor matters being quiet on the surface for the moment, the special questions before the people were free trade (the then prevailing policy) and protection; also, the system of allotting votes. Manhood suffrage prevails here for the elections to the lower house; but apart from the vote in the district where a voter resides, one additional vote is given in each electorate to any one owning or leasing a piece of property having an annual value of £10. Under this rule, some men have eight or ten votes in all; but the districts are usually so far apart that not all could be availed of within the time given for an election.

The labor party were strongest in sections where most of those engaged as stevedores and dock laborers lived; hence their sympathy was with foreign trade and all that brought shipping to the port. Their cry was, "Free trade" and, "One man one vote"; and on these issues thirty of the labor party were elected to a House of about 150 members. The other members were nearly equally divided between free-traders and protectionists; the labor party were thus holders of the balance of power, and for a time gave their support to the free-trade Ministry of Sir Henry Parkes. Soon a bill came up making eight hours the legal limit of a day's work. Though the limit is recognized fully by custom, there is no law to this effect, and Sir Henry was not in favor of one. On this point the labor party deserted him, and, beaten on a division, Sir Henry at once resigned.

The Opposition leader formed a Ministry avowedly protectionist. The new Treasurer immediately proposed a customs tariff, alleging that the public finances were in such a state that new taxation was necessary. To prove this he maintained that the current year would show a deficit of about $3,000,000. This the former Treasurer denies, stating that there is really a surplus of at least $1,500,000. The annual expenditure of New South Wales is about $50,000,000, and it seems to be largely a matter of bookkeeping which statement is correct, the point involved being what items are properly chargeable to this year. This expenditure is entirely apart from the money borrowed in London, which is chiefly spent on reproductive works—railways, common roads, etc. The question for the labor leaders to decide was, therefore, whether to vote for protection pure and simple, or to be loyal to their promises and vote with the free traders. It would seem to have been an easy position, but a vote for free trade now meant a victory for the Opposition, and therefore a general election. On this the party fell. Members of the House receive £300 per annum, railway passes, etc., and still have time to attend largely to their regular occupations. Reëlection was by no means sure for many who had promised much and performed little. The majority of the thirty decided to "stay in" at all costs, and threw in their lot with the protectionists. Later they again voted against a proposal of the free-traders, that no change should be made in taxation till a House had been elected on the principle of "One man one vote."

Thus the old story repeats itself: the labor party is betrayed by its leaders, who seek only their own aggrandizement. Such it must ever be till a new generation arises and laborers choose as their leaders men very different from the loud-voiced, much-promising demagogues who at present seem everywhere to secure their confidence. The tariff now passed, thanks to the labor-leaders' votes, places a duty on wheat and many food products which New South Wales does not fully supply itself with. This is doubly bitter to the wharf laborers, who will have fewer produce cargoes to unload and more to pay for their own food. The colony has too long enjoyed free trade to suffer protection for more than a short period, and this is too well understood for many capitalists to embark in any of the protected industries. One curious incident is that shopkeepers are charging many goods at the old prices, adding in a separate line, at the foot of the bill, the amount of the duty—a very effective object-lesson.

Changes are rapid here. A year ago the labor party was entering on a gigantic struggle with capital, with as fair prospects of success as it can ever have. Now it has its second defeat to face—a defeat due, even more directly than the last, to the bad faith of its leaders.

J. E. Bullard.

PARLIAMENTARY AFFAIRS IN JAPAN.

Tokio, December 26, 1891.

The Parliamentary crisis has come sooner than was expected, and the members of the lower house find themselves

"Shipped, dissolved, and loosed"

by a Cabinet ready to face affairs boldly, and to go to the country upon the merits of the issue. Yesterday (Christmas Day), at 6:50 P. M., the House adjourned for the New Year's recess, and at seven o'clock the Cabinet, which had been deliberating since four, sent down an Imperial order dissolving the lower house and proroguing the upper.

Such a result had been often talked of, but few believed it to be so near. The situation during the last month (Parliament opened November 27) has been this: The Opposition, which, by the defection of certain Moderates, gained but a partial victory in the last session, found itself much stronger at the opening of the present session. The chief reason was the definite accession of Count Okuma (the victim of attempted assassination in 1889) to their ranks, and his elevation to the real leadership. This again was due to the positive and final breach, during the summer, between Count Okuma and his old associates, Ito and the others. When Okuma's Treaty-Revision plan was defeated in 1889 by the jealous obstruction of rivals, no definite break ensued in the coterie of Restoration leaders. The Count was given a place in the Privy Council, and thus remained in effect in the Government. But there is no doubt that, during the interval, he and his aids have increased their efforts to embarrass the Government in all ways. Certain allies of his—but let us say without his knowledge—have taken satisfaction, for example, in throwing the financial affairs of the country into confusion, and creating mercantile distrust. An open effort at conference with Count Itagaki, the time-honored leader of the Radicals, finally made it necessary for the Government to notice these doings, and Count Okuma, alleging illness, retired from the Privy Council. Since that time he has effected a union of the so-called Progressists (*Kaishin-to*) and Radicals (*Jiyu-to*), and they have been enabled to heal their dissensions and work together in the Diet. The master hand of Count Okuma could easily be seen in the almost machine-like method in which the various Budget items were treated. The Budget Committee recommended an impossible reduction of some eight millions out of ninety-odd, and the report of the Committee was in almost every case accepted and voted without even a semblance of debate. The report of the proceedings during the past week read something like this:

"The estimates for the Foreign Department were then taken up. Mr. Takahashi, Government delegate, explained that the reductions proposed by the Committee were absolutely inconsistent with the interest of good government. The closure was moved, and the items were passed as amended by the Committee. The Finance Department was next taken up. Mr. Suzuki, Government delegate, protested that the proposed reductions were out of the question. The closure was moved, and the report of the Committee was accepted."

This went on for several days. The Opposition presented a solid phalanx. No words were given or taken. If once in a while a clearly unreasonable reduction was voted, and a moral necessity for explanation arose, it was usually said that the Government was not to be trusted. Other Government bills, the rejection of which was a plain inconsistency on the part of the House, were rejected without greater ceremony. The not unnatural, yet somewhat precipitate, consequence was the dissolution of yesterday. A new election must take place within five months.

An issue has thus been squarely raised between the Government and the Opposition. But there are necessarily two aspects to the contest. There was last year an equally vital Opposition, but there was conspicuously no definite practical issue. The antagonism was quite independent of particular policies or measures. It was a struggle by certain sections unrecognized in the make-up of the Government to secure a place there for their representatives. The clans of Satsuma and Choshu had, since the Restoration, practically monopolized the power. The feeling was that this had gone on long enough, and that a compromise must be reached on the basis of a coalition clan-Cabinet or of party government. But without issues of policy the latter was impossible. To-day, however, issues have arisen. A clan coalition is now an idea of the past; Count Okuma (of the Hizen clan) declares that he will not accept office on that basis. Yet, though definite popu-

lar issues outwardly exist, the historical origin of the Opposition—personal and clan antagonism—cannot be forgotten. It still underlies all politics. It thus forms the second or inside aspect of the situation, and a few words upon it are necessary.

The difficult question is, Does a desire to oust the individuals—Count Ito and the lesser lights—who now control the Government, form the chief motive of the Opposition, and are the ostensible issues of policy (which will be mentioned later) a mere pretence? On this question I must first present you the statement of Count Okuma, as furnished by him to-day especially for the *Nation*. He says:

"The real point of attack is not the Sat-cho combination, but their deeds during the past twenty-four years. The Opposition thinks that the commercial and industrial policy of the Sat-cho men has on the whole been detrimental to the national interests. They have undertaken works which might better have been left to private enterprise, and the result has for the most part been complete failure. They have favored a few capitalists, selling them Government plants at low prices. They have aimed to further their own prosperity and security, instead of the interests of the people, and have corrupted political morality. They have used Government patronage to crush private competition, by starting new enterprises on a large scale and then selling out to their favorites. Now the Opposition wants, first, to oust the men who are responsible for this; and, second, to reverse this paternal policy and try *laissez-faire* for a while. These undertakings, even if rightly carried out, cost money, and expenditures must be decreased without delay. The Opposition does not desire to forego works of construction absolutely, but to make some opening for a reduction of taxes. Thus, the reduction of the land tax will be the great issue upon which we shall go to the electors. The farmers are in debt to the extent of two hundred millions merely for the necessaries of life, and both the valuation of their lands and the rate of the tax must be lowered. But the Opposition, it must be understood, does not see any reason for changing the Government policy as to expenditures necessary to promote amity with foreign nations. For example, it voted, without hesitation, 650,000 yen for the representation of Japan at the Columbian Exposition. The Opposition will undertake to revise the present treaties, but on a basis of reciprocity."

The Count, as might be expected, refused to prophesy as to the membership of the new Cabinet in the event of a change. It is of course not for me, a disinterested spectator, to question the direct statements of Count Okuma. But those who represent the Government would doubtless say that the historical element of personal and clan antagonism has not yet been entirely eliminated. There is certainly a widespread feeling, they would affirm, that the Sat-cho men have held office long enough, that it is time for them to step down and out, and that the issues of to-day, even though they be real ones, are merely fortunate pretexts upon which to appeal to the people. But even supposing this view to be true, it does not necessarily cast a stigma upon the Opposition. In the opinion of Count Okuma, the time has come when party government is best for the country. He believes that his following commands the national support, and that a change of Government is therefore proper, morally and politically. He is justified, he would say, in employing all legitimate parliamentary tactics to gain his end. On the other hand, the present Government is, from its own point of view, equally justified in not yielding. While doubtless its members are not without the self-regarding sentiments of all men, and, having tasted power, hesitate to resign the hold they have obtained, their argument is that the Opposition is not competent to take the helm; that on the one side are experience and proved capacity, on the other side superficial demagogy and crude impracticability. But, whatever be the true extent of this element of personal rivalry, the parliamentary institution has now forced the contestants to offer to the nation reasons for their respective claims; and here we come to the outward aspect of the situation, the practical issues. With this topic is closely connected the question of the probable decision of the people and the result upon the Cabinet; for it seems to be generally conceded that if the electors do pronounce positively in favor of the Opposition, the present Government will not hesitate to yield.

First and foremost among the living questions is the reduction of the land tax. Here, no doubt, the Opposition has an immense advantage. It requires very little argument to make a voter believe that the party which will reduce a direct tax on his product is the better party. Moreover, the only agricultural voters here will be the rich land-owners, who alone would benefit by the reduction. The tenants and small farmers, who are greatly in the majority, but would be little helped by it, have no appreciable vote. As to the economics of the land tax, I have little doubt that the Opposition seeks a fallacious benefit. The Japanese peasant is no doubt living close to the margin of decent subsistence, sometimes below it. He is a proletarian. But his real bugbears are rent and interest, not taxes. The best opinion, I think I may say, is that the reduction of the land tax would give a scarcely appreciable and at best temporary relief to the cultivator of the soil. The lapse of the small owner into tenancy, the hold of the money-lender upon those who still retain nominal ownership—these are the disheartening economic facts which it will take real statesmanship to deal with. But these facts give no chance for making political capital, and the reduction of the land tax does. Again, the revaluation of the land was the subject of a bill passed last week by the Lower House. This is a living issue, but the advantage here is not entirely with the Opposition. In many districts the valuation is too low, and, although this bill provided that the valuation should nowhere be increased, these localities would lose, under the readjustment, the advantage they now have. With them the lower house has not helped its cause.

On still another bill, that for the Relief of Earthquake-Damaged Districts, the Opposition has made a bad blunder. The Government, during the long recess, appropriated several millions for repairs of dikes, etc., destroyed by the earthquake. But the popular party raised the technical objection that the occasion was not an "emergency" within the meaning of the Constitution, and this item, when laid before the House, was pigeon-holed in committee. A supplementary appropriation for the same purpose was cut down one-third because the estimates were not sufficiently detailed. The Government, however, has refused to abide by this action, and has put both appropriations into force, as it is entitled to do. All this has set the people against the parliamentary Oppositionists; and certainly one cannot imagine a Western party making such a mistake of policy on a non-essential point.

The Government bill for the issue of bonds to aid the purchase of private railways by the State was also rejected by the House. This bill would have released a large amount of capital now locked up in private and unprofitable roads; and, whatever the permanent economic benefit, it would have commanded the support of the commercial class. With them the Opposition has weakened itself. Moreover, Iwasaki, Japan's chief millionaire, is heavily interested in this class of securities, and as he is a co-mate of Count Okuma's, the vote of the House must have proved to him that the Count does not absolutely control the Opposition. Finally, as to the issue above spoken of, that the Sat-cho combination has lined its own pockets by creating favorites on whom patronage is bestowed, it can only be said that Count Okuma himself, up to 1881, was a member of the combination; that the Iwasaki firm, the most prominent example of Government-made merchant princes, notoriously owe their prosperity to the Count's own influence. No doubt there have been good grounds for too many scandals, and no doubt that Okuma, who is now by no means a rich man, is above suspicion of personal profit in such matters. But, in the first place, it is a subject as to which no Japanese leader is able to cast the first stone, and, secondly, the policy in question has, on the whole, developed the resources of the country as no other policy, even though more straightforward, could have done. On the whole, therefore, the Diet has been dissolved at a moment most favorable to the Government, but how far the latter can diminish the present large majority of the Opposition, no one can yet tell.

The interesting query of course is, Who will go in should the Cabinet be changed? Whether Okuma alone will have the making of it, or whether he with Ito will make a joint arrangement, is impossible to say. The former result would be not unlikely, in case a very clear national endorsement should be given; but the difficulty is to find strong men enough to go in with him from the Opposition ranks. The general opinion is that the men who have been talking themselves to the front—such as the long-haired Tanaka, the voluble Arai, the seditious Oi—would never be trusted by the people in office. In Ministerial seats they would be the butt of Tokio. It is a sign of the good sense and sobriety of the people that the political sheets called newspapers have only one-quarter or one-third the circulation of the great commercial news purveyors, the Tokio *Ji-Ji Shimpo* and the Yokohama *Boyeki Shimbun*. The average citizen still venerates the man of experience and fame, the man of the Restoration, as his leader, and such a one he has in Okuma, but in no one else in the Opposition forces (except Count Itagaki, the great agitator for the Constitution in the seventies). With Okuma at the helm, however, the country is safe. His talents as a practical statesman are excelled by no living man in Japan. Who his colleagues in office will be, when he himself will reach that goal, no one can foretell. But party government is coming nearer, as an inevitable step in the evolution of Japanese politics; and the man who will control the first party cabinet will probably be the man who first had the keenness and ingenuity to apply the fable of the bundle of fagots to the problem of Treaty Revision, and, taking the western nations one by one, to try to break the bonds of international compact which still chafe the sensitive spirit of his countrymen.

Correspondence.

THE RIGHT TO GO TO WAR.

To the Editor of The Nation:

Sir: As your comments on my letter touch-

ing the Chilian imbroglio might give the impression of my being an escaped lunatic, I doubt not that the *Nation* will allow me space to set myself right with its readers.

(1.) I agree with you (and have intimated nothing to the contrary) that "if the wrong be manifest, Chili ought to get no worse treatment than England."

(2.) You assert that by a fair trial in the offending country its government has fulfilled its international obligations. But that is not the point. My contention is, that the result of such a trial is not necessarily conclusive on the complaining government; that if it be so (permit me to repeat my words), "however overwhelming the evidence that the finding of facts by the foreign tribunal is contrary to the truth—whether owing to the perjury of witnesses, or the overawing of officials by the populace, or to their own hostile feelings—the complaining government can have no redress."

Chili and the United States being independent nations, you cannot mean that the judgment of a tribunal in one of them is, in the ordinary, technical sense, binding on the other. You refer, of course, to those principles established by the usage of civilized nations that constitute what is known as "international law." But even in this enlarged sense, your position is not tenable. One instance for illustration: A national cruiser captures a vessel of a neutral. The neutral nation claims restitution on the ground that the capture was illegal. The Admiralty court of the cruiser's nation decides, under provisions of its municipal law, that the capture was valid. This judgment, it is well settled, is not binding on the complaining nation.

If you think this case not applicable, here is another illustration: A dispute between two nations is left to arbitration, as in the case of a mixed commission. The arbitrators or the commission constitute an international tribunal, to whose jurisdiction both parties have voluntarily submitted themselves. Here is a case where, if anywhere, the decision should absolutely conclude both parties. But this is the doctrine of our own Government:

> "An award under a treaty, even where the arbitrators have judicial powers, is not binding if shown to be unconscionable and unjust." (Secretary Bayard, Pelletier's Case, January 20, 1887.)

But on this point there is, after all, no disagreement between us. You candidly admit the inconclusiveness of the trial, "if it should be improperly conducted and end in a failure of justice." And you must admit, I think, that if it end in a failure of justice, even if not improperly conducted, the aggrieved nation should not be bound by it.

So much for my interpretation of the doctrine touching the conclusiveness of judgments under international law, which to you seems "so like burlesque."

As to the remedy by arbitration, which you understand to apply "to all trials or disputes before an impartial tribunal," I have only to say that its applicability in any particular case is not a question of international law, but of international ethics, about which there may fairly be two opinions. Let me illustrate: John Doe deals Richard Roe a severe blow. While Richard Roe is drawing back to return the blow with interest, John Doe exclaims, "Let's leave it to arbitration!" The only question is, By which course will Richard Roe be most likely to protect himself against future insults of a similar kind—by returning the blow, or by agreeing to the arbitration?

FRANCIS J. LIPPITT.

WASHINGTON, January 30, 1892.

[What Gen. Lippitt seems to be contending for is the right of every nation to go to war if it pleases, all international rules, usages, or precedents to the contrary notwithstanding. No intelligent person, so far as our knowledge goes, has ever denied this. No nation submits to arbitration, or any other form of settlement, unconditionally. There is, in the forum of international law, no power charged with the duty of enforcing the decisions of any tribunal whatever. Submission to them is a voluntary act always. If we are satisfied that in any arbitration, or in any trial before an admiralty or municipal court, we have been treated with gross injustice, we can always appeal to the sword. This is so plain and well known, so generally assumed in all international controversies, that we have been unable to understand Gen. Lippitt's object in arguing it.—ED. NATION.]

THE ADVENT OF THE AUSTRALIAN BALLOT.

TO THE EDITOR OF THE NATION:

SIR: In the *Nation* of January 14, 1892, appeared a letter from Mr. L. N. Dembitz, in which he claims "the authorship of the first Australian Ballot-Law in the United States"—referring to the Kentucky Act of February 18, 1888, relative to elections in the city of Louisville. This act is familiarly spoken of in Kentucky as "the Wallace Law"; it was introduced by me, and I have been commonly regarded as having had some part in its authorship. As I have without protest permitted this opinion to be entertained, Mr. Dembitz's letter places me in the attitude of having claimed credit which I do not deserve. This is an attitude which I cannot permit myself to occupy. I have never claimed to be the *sole* author of the act mentioned, but have repeatedly and publicly sought to divide such credit as attaches to its authorship with Judge B. F. Buckner, the Hon. Frank Straus, and Mr. L. N. Dembitz. These three gentlemen, together with myself, are the authors of the law, and no one man has the right to make an exclusive claim to its authorship. You will find enclosed herewith an interview on the subject, which appeared in the *Courier-Journal* of January 24 last, and which fully states how and when the Louisville Australian Ballot Law was first conceived by me, and the manner in which, and by whom, it was drawn.

Very truly, ARTHUR M. WALLACE.

LOUISVILLE, KY., January 30, 1892.

[The significant part of the interview referred to is to be found in this extract.—ED. NATION.]

"The fact of the matter is," says Mr. Wallace, "that I got my first idea of applying the Australian ballot system to our elections from an article by Mr. Henry George in the *North American Review* some months before my election to the Legislature. About that time I spoke to Hon F. P. Straus about the matter, and he promised to aid me in drawing such a law if I were elected in the ensuing August election. I next asked Judge B. F. Buckner to give me his opinion on the constitutionality of such a measure, which he did, citing authorities in its favor. . . . We had worked at the bill for fully six weeks when Mr. Dembitz happened in Mr. Straus's office on business. . . . I have only the kindest feeling for Mr. Dembitz, and duly appreciate his interest and valuable aid in assisting me to draw up the bill."

LEE AND EWELL AT GETTYSBURG.

TO THE EDITOR OF THE NATION:

SIR: In your issue of January 7, reviewing Drake's 'Battle of Gettysburg,' you question the statement made by the author that Gen. Lee went to Ewell on the evening of July 1 to see if the latter could not carry Cemetery Hill, and also the further statement that at the end of the second day Gen. Lee shook his clinched fist at Cemetery Hill. You refer to the matter again in your issue of January 21. You did well to question both statements, for both are erroneous and one absurd.

I was at the time Assistant Adjutant-General of Johnson's division, formerly commanded by Gen. Jackson and called the "Stonewall Division." Late in the afternoon of the 1st, as the division approached Gettysburg, and when it was several miles from the town, Gen. Johnson sent me hurriedly to Gen. Ewell to announce the approach of the division, and to say that he would be ready to attack as soon as he could be put in position. After some miles' ride across country, I found Gen. Ewell and several general officers and his staff with him on a hill overlooking Gettysburg. I remember that Gen. Gordon (now Senator from Georgia) was one of the officers, for, standing by as I gave Johnson's message to Gen. Ewell, he added that if he should be allowed to place his brigade with Johnson's division, they could take that hill (pointing to Cemetery Hill) before dark. Gen. Ewell was, it seemed to me, unusually grave and silent; but, after telling me to direct Gen. Johnson when he got well to the front to wait for orders, he added, "*Gen. Lee is still at Cashtown, six miles in rear.* He directed me to come to Gettysburg, and I have done so. I do not feel like going further or making an attack without orders from him."

No orders to Gen. Johnson looking to an attack that night were issued. What time Gen. Lee reached the town of Gettysburg and met Gen. Ewell, if at all, that night, I do not know—certainly not until after dark. I remember the feeling of disappointment that I and those around me felt at the remarks of Gen. Ewell, put impetuously into words by an officer who had been with me on Gen. Jackson's staff: "Oh, for the presence and inspiration of Old Jack for just one hour!" But Jackson was dead; it took Gettysburg to convince Gen. Lee and the Confederacy of that fateful fact.

As to the little romance anent Gen. Lee's fist-shaking at Cemetery, it is too absurd to be seriously combated. Gen. Lee was doubtless the loftiest, most dignified, self-contained, non-explosive, un-Don-Quixotic gentleman who commanded an army during the war. He would no more have made such an aimless demonstration than Stonewall Jackson would have danced a jig on Sunday. H. K. D.

HAGERSTOWN MD., February 1, 1892.

Notes.

CHARLES SCRIBNER'S SONS announce 'A Dictionary of Hymnology,' edited by John Julian; 'The Pauline Theology,' by Prof. Geo. B. Stevens; 'The Realm of Nature,' by Hugh R. Mill; 'Germanic Origins: A Study in Primitive Culture,' by Prof. Francis B. Gummere;

'Oriental Religions and Christianity,' by the Rev. F. F. Ellinwood; and 'Vain Fortune,' a new novel by George Moore.

A. C. Armstrong & Son have nearly ready two new volumes by Perrot and Chipiez, 'History of Art in Persia, Phrygia, Lydia, Caria, and Lycia,' with some 500 illustrations.

Macmillan & Co. are about to issue 'A Guide to Electric Lighting for Householders and Amateurs,' by S. R. Bottone. Mr. John Morley's 'Chatham' and Prof. Beesley's 'Queen Elizabeth' are to be the next volumes in the series of "Twelve English Statesmen."

John Wiley & Sons have in preparation 'Valve-Gears for the Steam-Engine,' by Prof. C. H. Peabody.

Those who remember with pleasure, or remember at all, 'The Recreations of a Country Parson,' by Mr. A. K. H. Boyd—a book of essays somewhat in vogue thirty years ago, but flat as Salisbury Plain, written "Concerning" a number of matters that never were of concern to anybody—may be willing to hear that the reverend author has in press his reminiscences of St. Andrews. The first volume of these, covering the period from 1865 to 1878, will be published at once by Messrs. Longman.

The greater attention given to the subject of English composition in our schools and colleges is shown by the increase of manuals endeavoring to simplify the subject and render it practical. Altogether the best of these recent attempts is Prof. Carpenter's 'Exercises in Rhetoric and English Composition' (Boston: Willard Small). This is a series of sixteen exercises, each on a particular topic, preceded by a summary of the rules and principles applicable to the particular subject in hand. The text thus represents the substance of teaching which a freshman may fairly be expected to compass, and it is set forth with clearness and directness, and brevity so admirable as to make the volume seem almost the realization of that impossible short method of learning to write which has been often sought for, but never with a nearer approach to being found. The author modestly ascribes all this excellence to his own teachers, but older heads are not to be so deceived, and will give him credit for a condensation and arrangement and unfailing practicality which are so rare in such manuals, and at the same time so indispensable, that we do not hesitate to give unreserved commendation to this little book.

Prof. Gilmore also publishes on the same subject a work of somewhat wider scope, 'Outlines of Rhetoric for Schools and Colleges' (Leach, Shewell & Sanborn). He follows more closely the older method, and reduces it to a more formal procedure, which is sufficiently indicated by saying that he divides the subject into inventive rhetoric, founded on logic, and having to do with matter; æsthetic rhetoric, founded on æsthetics, and having to do with form; and ethical rhetoric, founded on ethics, and having to do with the purpose of discourse. Under these various heads he covers the old ground of the nature of argument, of clearness and force and purity, and of figurative language, and he illustrates these matters with well-chosen examples. Such a formal treatment renders the subject more dry, and in our judgment more harsh, than a freer and more plastic treatment, but it shows a clear advance on manuals of the old style.

Private students of literature, as well as college classes, are appealed to by a new advisory volume, similar to several which have already received attention, of which the purpose is to lay down courses of study in such a way that they can be followed to good advantage without personal instruction. The little book by Prof. Winchester, entitled 'Five Short Courses of Reading in English Literature, with Biographical and Critical References' (Boston: Ginn & Co.), takes up courses from Marlowe to Milton, Dryden to Pope, Gray to Burns, Wordsworth to Keats, and Carlyle to Tennyson. First is given a selection of the author's works advised to be read; second, editions are recommended, with additional works to be read; third, works of reference, general, biographical, and critical, are named for each author. Good judgment is shown in the selection, and scholarly information in the survey of works of reference, though perhaps the caution may be excused against minor essayists, whose criticism appears to be referred to rather because it is recent than because it has been found to be sound. The book is free from all unnecessary matter, and, with its blank pages for additional notes, and its specimen examination papers, will be a convenience to instructors as well as to students.

The literature of the theatre is enriched by a sumptuous edition of Churchill's 'Rosciad' and 'Apology' (London: Lawrence & Bullen), with editorial preface and notes by Mr. Robert W. Lowe, and eight full-page illustrations. The editor has done his work with most commendable thoroughness. He has presented the dramatic conditions under which the satire was produced with almost contemporary nearness, restored in the notes the suppressed passages, and recorded the changes made in successive editions, and elucidated the allusions that have grown dark with time. The article in the *Critical Review* which gave rise to the 'Apology,' the sequel of the 'Rosciad,' is reprinted, and there is a useful index of names. The illustrations include portraits of Churchill, Mrs. Pritchard, James Quin, and Mrs. Yates, and of Garrick as *Hamlet* and *Kitely*, Barry as *Macbeth*, and Mrs. Clive as *A Shepherdess*. The edition, which is limited to 400 copies, reaches the acme of "luxury" in fine book-making, being perfect in all material details; and as to the substance of the work, Churchill is certainly represented here at his best, with a satirical talent vigorous though coarse, with a perceptible regard to justice, no little irascibility of temper, and a certain grossness of organization and rude respect that allies him with Dr. Johnson. It is rather as a page of theatrical annals, however, than as literature that the work is interesting, there being more of history and manners in it than of style.

'Selected Poems of Robert Burns' (Scribners), edited by Mr. Andrew Lang, gathers into a beautiful little volume the best of Burns's lyrics and songs, a service well worth attempting for the sake of both poet and reader. Mr. Lang's prefatory essay is a more careful production than is his wont, and, though it strikes one as too apologetic in tone, is an admirable estimate of the man and his work. Mr. Lang seems to think it needful to fall into a quasi-quarrel in behalf of Scott as a rival genius of his native land, and observes that Sir Walter was a man of broader patriotism than Burns and represents more of his country, that he was more kindly, and so on; but the world beyond the Tweed can only look on this as an amusing neighborhood difference, and will take both Scott and Burns without any ado as to which should be dearer to their own people. Similarly, Mr. Lang compares him with Homer, mainly by way of negatives; but to what end? Apollo should not be summoned to hold a sessions of this sort without more excuse. In marking the traits of Burns and the naturalness of his mixed spirit, Mr. Lang is more happy, and in his criticism he makes one or two suggestions of historical interest, as in the paragraph on Ossian as one of the elements in the burst of national feeling which culminated in the two men of genius in Scotch literature; but he gives his praise somewhat as if he deprecated the national enthusiasm for Burns, and were bidding his countrymen not be so obstreperous. Now Burns is not a poet who is best read on one's guard against being carried away.

Mr. William Black has undertaken to assist in producing a uniform edition of his novels, with a little touching up, and the series is begun with 'A Daughter of Heth' (Harpers). The form is handy and the type large; in other respects the manufacture is inexpensive. A photogravure portrait of the author serves as frontispiece.

The fourth of the very beautiful volumes of Landor's 'Imaginary Conversations' as reprinted by J. M. Dent & Co. (New York: Macmillan) and edited by Charles Crump, is before us, leaving but two to come. A most characteristic portrait of Landor at the age of sixty-five from a daguerreotype precedes the continuation of the Dialogues of Literary Men, in three of which he himself figures, with Southey and Archdeacon Hare; the last possessing still a curious interest for purists in the English language and for reformers well or ill advised. Landor stands up for the (American) usage of dropping the *u* in *favor*, *honor*, etc., and writing (with Webster) *theater*, etc., "in their English form." On his part, Archdeacon Hare says, "To *repudiate* was formerly to put away what disgraced us: it now signifies (in America, at least) to reject the claims of justice and honor." Nor is the judgment of contemporary poets in the same dialogue to be overlooked.

A number of annual publications having an approved reputation lie on our table. Seeger & Guernsey's 'Cyclopædia of the Manufactures and Products of the United States' (New York) appears in a second edition for 1891, and has been completely overhauled and reset. It aims to be comprehensive as to the articles produced in this country, with a select list of the firms that make them. In a case like this, the accompanying advertisements very much enhance the value of the work. The 'Cyclopædia' is beautifully printed. It is sufficient to name the 'Banker's Almanac and Register and Legal Directory for 1892' (Homans Publishing Co.), now in its forty-second year; 'Dod's Peerage, Baronetage, and Knightage of Great Britain and Ireland' (Macmillan), now in its fifty-second year, and ranging from princes and peers down to "all persons styled Lord, Lady, or Honorable"; and 'Barker's Facts and Figures' (Frederick Warne & Co.), launched in 1890, but recognized at once as a welcome addition to statistical hand-books. The present issue contains the census of the United Kingdom for April 6, 1891, and the Parliamentary pollings in 1885, 1886, and subsequent bye-elections. A great variety of information is brought compactly together in dictionary form. We may class with the foregoing a quite new compilation, 'The *Scientific American* Cyclopædia of Receipts, Notes, and Queries,' edited by Albert A. Hopkins (Munn & Co.). This is the garnering of nearly half a century's accumulations in the journal named in the title, and fills more than 600 octavo pages of fine print. Cough medicines, pills, cosmetics, pomades,

wrinkles, beers, syrups, soaps, preserving, cleansing, dyeing, bread (aerated), ice-cream, proof-reading, photography, microscopy, etching, electro-metallurgy, pyrotechny—almost everything is to be found in this volume, subject to the searcher's discrimination over and above the editor's.

D. Appleton & Co. send us their revised 'Handbook of Summer Resorts,' and the Messrs. Longman the third edition of Charles Ledyard Norton's excellent and comely 'Handbook of Florida,' which has been decidedly improved by an index. Of all the topics there mentioned, that of phosphates probably has the greatest significance for the future of the peninsula. In connection with these guides we may pertinently speak of C. V. Hine's 'On the Indian River' (Chicago: Chas. H. Sergel & Co.) and 'In Biscayne Bay,' by Caroline Washburn Rockwood (Dodd, Mead & Co.)—the one a story of a canoe voyage, the other (in the guise of a novel) of a yachting voyage, in the respective waters of the east coast. Both are somewhat rhapsodical, and both have attractive photographic illustrations.

Rand, McNally & Co. catch at the wave of present interest in southern South America by reproducing from their 'Indexed Atlas of the World' a map of the Argentine Republic, Paraguay, Uruguay, and Chili. The scale is seventy miles to the inch, and the map is folded to pocket size.

A new weekly, literary and artistic in its aims, the *Mahogany Tree*, appeared at Boston with the new year. The first few numbers of such a venture rarely afford grounds for an exact and infallibly just appreciation of it. In the present instance they produce the impression of a certain jaunty, amateurish cleverness not wholly unpleasing. The typography of the paper is to be praised—save for the rather sprawling title-page; its character is French, or of a French-like sort, graceful, and perhaps clear enough, though somehow it has the air of being crowded. The first number printed at length Thackeray's "Ballad of the Mahogany Tree."

The prospectus of another new venture, this time a quarterly review of high aspirations, is now being sent out. It is to be called the *Knight Errant*, and devoted to criticism of all the arts, "working to this end without hope or, indeed, desire of pecuniary return." The expenses of the first year are assumed by forty guarantors. Only five hundred (numbered) copies will be printed at present, but the proprietors reserve the right to increase the issue at the beginning of the second year, should this seem advisable. The first number will appear in February, and will be in royal quarto form, with wide margins, printed from a special type upon a hand-made special linen paper. It will be mailed flat, between boards, to its subscribers. We fail to find in the lines of the handsome prospectus, or between them, any definite intimation of the course which the *Knight Errant* is likely to follow.

Houghton, Mifflin & Co. will publish in March the first number of the *New World*, "a quarterly review of religion, ethics, and theology." It will be under the charge of an editorial committee consisting of Profs. Charles Carroll Everett and Crawford Howell Toy of Harvard; the Rev. Orello Cone, D.D., President of Buchtel College, and the Rev. Nicholas Paine Gilman (managing editor). The new periodical will have 200 pages in each issue, a fourth of which will be given to the careful review of important books in its field.

We must also direct attention to the new *Philosophical Review* (Ginn & Co.), edited by Prof. J. G. Schurman of Cornell, a bi-monthly. The first number contains a paper, by Benjamin Ives Gilman, on such an out-of-the-way topic as the "Psychological Aspects of the Chinese Musical System"; and the department of book reviews is noticeable, as well as the "Summaries of Articles." The *Thinker*, "a review of world-wide Christian thought," comes to us from James Nisbet & Co., London, with its summaries of "Current English Thought," "Current American Thought," etc., and its reviews. Finally, one may wish well to *School and College*, "devoted to secondary and higher education," monthly, except during two summer months, edited by Ray Greene Huling, and published in Boston by Ginn & Co. All these magazines are very presentable in appearance.

The appearance of the first part of Dr. Paul Fredericq's 'Geschiedenis der Inquisitie in de Nederlanden' (Ghent: J. Vuylsteke) accentuates one's regret at the mishap of mankind in the confusion of tongues. The author's position of an acknowledged master of the subject, and the inherent interest and importance of the long struggle for freedom of conscience in the Low Countries, invest the work with no common claims on the attention of all students of history who are fortunate enough to possess familiarity with the Hollandish in which it is written. Even those not thus happily gifted can appreciate from the footnotes and references the conscientious labor which has gathered its materials from all accessible sources, and can find in them a satisfactory guide to the bibliography of the theme.

The most effective pamphlet that has yet been written on the woman question has just appeared as the latest number of the series of *Zeit- und Streitfragen*. It is written by Hedwig Bender, whose valuable contributions to philosophy, and especially to the modern forms of Spinozism, we have already had occasion to chronicle. It is entitled "Frauenwünsche und Frauenbestrebungen." Its simplicity and force, its freedom from exaggeration, and its moving quality are such as are not often found equalled in any argumentative writing, and still less often, perhaps, in writing on this very subject. If Germany had had many writers like this, German women would not now be the stunted, Chinese-like, fancy-work-making machines that they are. The book deserves translation. Although it is especially written to meet German conditions, it is, unfortunately, not without much scope for application in other lands as well.

The Legislature of Barbados has voted £500 for putting in order the ancient records of that colony. In supporting the vote, Mr. Knollys, the Colonial Secretary, said: "In one book especially which struck him, here and there the minutes had been entirely painted over with something like printer's ink. It was found out that those were the minutes of the Council during the period of the Commonwealth, when Oliver Cromwell was in power; and after the accession of Charles II., the early settlers of Barbados blotted out all the minutes which were signed by the Governor who was appointed by Oliver Cromwell." The Governor referred to was Daniel Searle, who held office from 1652 to 1660.

—Dr. Gould and Prof. Pickering of Cambridge, Profs. Upton of Providence, Todd of Amherst, Safford of Williamstown, Newton of New Haven, Boss of Albany, Young of Princeton, Holden of the Lick Observatory, and many other astronomers of America, have united in a memorial to Congress calling attention to the question of the future administration of our Navy's new Observatory, the buildings of which are now being completed on a scale and at an expense which have never before been equalled. The magnitude of the appropriations for this purpose made by four successive Congresses may be regarded as expressing the popular will that the nation should have an astronomical observatory second to none in the value and interest of its work. It is greatly to be regretted that money and buildings have not secured this end in the past, and there seems to be no reason for assurance that the future will show anything different. The so-called Naval Observatory, originally a "depot of charts and instruments," has existed for years without a scientific head, its superintendent being appointed, with frequent and disastrous changes, from the line officers of the Navy. Occasionally this method of routine appointment has secured a good executive head for the Observatory, but as a rule the "line" of the Navy have regarded the Superintendency as a capital shore-billet, and have successfully resisted the repeated attempts at a change of management. Such change is now, however, favored by the Secretary of the Navy, and it is clearly a wise one; for without a scientific head, a well-considered plan for prosecuting scientific research is obviously impossible. Even supposing the Observatory to possess a body of the ablest astronomers, if they are thrown together without adequate guidance, and without any problem to solve, they can hardly achieve success. The movement to place in the position of Superintendent the ablest and most accomplished astronomer who will accept this office, may be expected to institute a concerted plan of work which will restore the Observatory to the respect and confidence of the scientific men, as well as of the legislators, of the country.

—That the lack of competent expert direction of the Observatory has been harmful to the interests of science, is prominently demonstrated by the fact that more than a half-million of dollars has been expended in mere buildings and equipment without consideration of their adaptability to any specific lines of research. Of course if a new observatory was to be built at all, this condition of things had to be, because the establishment and its corps of astronomers have no specific instructions to work out any problem, but are pegging away at space pretty much in general. No private business concern would spend $50,000 annually in this haphazard manner, and there appears to be no sufficient reason why a Government observatory should be managed by unsound business methods. But the new Superintendent, whoever he may be, will find himself hampered by the costly outfit imposed upon him; and the inability to undertake modern lines of work with inappropriate instruments cannot fail to prove an embarrassment. It may be expected, however, that this great responsibility will not burden the willing shoulders of a single astronomer who may accept the directorship, as the proposed new management will include the organization of an advisory council of five members, who are, among other things, to draw up and modify the programme of scientific work, and make the necessary inspections and reports. No harm to science would be done if the council were vested with authority to overhaul the Observatory corps also.

—We learn from the January number of the London *Artist* that an attempt, unhappily

without success so far, has lately been made in London to form a company for the purpose of reopening and working once more the marble quarries in the island of Paros which were so famous in old times. Specimens of the marble, recently obtained, have been submitted to various sculptors, who praise highly the fine rosy color and beautiful grain of the stone, accounting it in many respects superior to the marble of Carrara. But it seems that there are a good many British interests vested in the Carrara quarries, and great difficulty was found in the attempt to raise money to float what would be a rival company. Still, since besides its intrinsic advantages the Parian stone will be the less costly, it appears to be likely that capital will be attracted to the venture. The *Artist* also announces that the full number of Mr. Whistler's Venice series of etchings has at last been printed. There were twelve plates in all, and Mr. Whistler, somewhat rashly it would seem, undertook to print one hundred copies of them—an unnecessary number, if Rembrandt's example is to go for anything. Mr. Whistler appears to have recognized his mistake, for the Venice etchings, which at first appeared in considerable numbers, have of late years come from the press only in driblets of three or four at a time. The full number of impressions from four of the plates was complete some time ago, and the plates were broken up. The last few months have been devoted by Mr. Whistler to the remaining eight plates, and the complete series is now finished. This is not merely a publication of more impressions. Mr. Whistler has gone over the plates and modified and elaborated to the extent of almost transforming them. He has taken out figures and added them, and dealt generally "with a large free hand," entering into the work with "unprejudiced freshness and freedom." No doubt the world will be a gainer by this bold and unconventional performance, even though the collectors murmur at it.

—In no one way, next to army organization, has France shown a stronger determination to right herself since the disasters of 1870 than in the matter of education. Those desirous of realizing how much has been achieved, and how deep and wide is the foundation being laid for insuring that all French citizens shall grow up well instructed, should consult Prof. Teegan's exhaustive little treatise on 'Elementary Education in France' (London: Simpkin, Marshall & Co.). The author's experience in educational matters, in connection with the National System of Education in Ireland, enabled him to avail himself to the full of special facilities for inquiry afforded him by the French educational authorities. The advance since the days of the Revolution is traced. Ten chapters are devoted to a description of the system at present in existence—like most French systems, uniform and bureaucratic if comprehensive, almost reminding us of the box-puzzles of our childhood, in the putting together of which no piece can be omitted, and all must be in order. The system is traced from the period when at two years of age a French child may enter an *École Maternelle* to when, as a successful pupil, he may pass on from an *École Supérieure* to a public employment or State office. Statistics and programmes of studies are laid before us, and the system is fully explained under which the schools are supported and teachers are trained, appointed, and paid. Studying Prof. Teegan's volume and realizing all that has been achieved since 1786, and the intelligence and education now broadening over France, we little wonder that the horrors of the revolutions are being more and more forgotten in the immense benefits from the change now being garnered by the citizens of the republic.

—In a volume of 200 pages entitled 'Die Thierquälerei in der Strafgesetzgebung des In- und Auslandes' (Berlin: Liebmann), a German jurist, Robert von Hippel, gives an "historical, dogmatic, and critical" survey of European and American penal legislation for the protection of the lower animals against the cruelty of man, together with suggestions for the modification of the laws of the German Empire on this subject. England was the first Christian country to enact laws for the prevention of cruelty to animals. The Prussian Capt. Archenholz, in his work on 'England und Italien' (Leipzig, 1785), speaking of the former country, says: "Among the queer laws of this land are two which are not found in any other European code, and by which penalties are imposed for profane swearing and for merciless cruelty to cattle. With apparent inconsistency, however, cock-fighting is not punished, since, in the eyes of Englishmen, the cocks do not play a passive part, but fight willingly in self-defence." By an act of Parliament passed in 1835, cock-fighting, bull-baiting, and other brutal sports of this sort were also made punishable by a fine. As a rule, the Continental countries of Europe have been very slow in making adequate provision for the prevention of cruelty to animals. In this respect French legislation is still extremely defective; the imperial code of Germany punishes offences of this kind only when they excite public scandal —an absurd limitation, which our author wishes to have removed; Italy, it is true, has taken a decided step in advance by Zanardelli's law, which went into effect January 1, 1890; but in Spain, Portugal, Greece, Russia, and the interjacent States, there has been little or no general legislation on the subject. Dr. Hippel discusses the question of the rights of animals from juristic and ethical points of view, with a concise survey of the literature relating to it, including the theories of Kant, Schopenhauer, Abegg, Hommel, Henke, and other philosophical and legal authorities, and regards the extreme anti-vivisection move as unwise and injurious.

KIPLING'S BEAST AND MAN IN INDIA.

Beast and Man in India. By John Lockwood Kipling, C.I.E. Macmillan. 1891.

"My father!" said Rudyard Kipling—"all I have, all I am, I owe entirely to him." That father is the author of the book before us. You cannot read much in it without seeing that both son and father were debtors to each other, and that with mutual advantage.

A law for the prevention of cruelty to animals was recently made by the Council of India. By many in England it was declared superfluous, like sending owls to Athens or coals to Newcastle. Mr. Kipling was thus roused to correct a popular misapprehension. After devoting his best years to Indian service, he had returned, *spoliis Orientis onustus*, to spend the sabbath of his years in England. He could show from personal knowledge that, in Hindu dealings with brutes, cruelty is the rule and kindness a rare exception. His testimony is of this sort: The natives leave a turkey to bleed to death for half a day with intent to bleach the flesh. Tail-twisting is so common that the greater part, probably, of Indian oxen have their tails permanently dislocated by this practice. At some village festivals the whole population turn out to beat a buffalo till he dies. Semi-starvation is the lot of most captive elephants. The post-horses of native contractors are seldom started without tortures which tear their ears and noses beyond healing. Native cruelty is aggravated by many false notions. Thus, goats are flayed alive in the belief that skins stripped from living animals have a better quality than others. The nostrils of a donkey are slit in hopes to soften his voice, and his ears are split from "pure cussedness," without any pretence of a reason. When a cow is sick, doctors shave off the papillæ at the root of her tongue, slit her ears, and brand her with the signature of a god. Brahmanical damnation is denounced for cow-killing, yet a man is guiltless who inserts under her skin a thorn so poisoned that she pines away slowly and so dies many times before her death. A horse who had broken a leg, as seen by a recent traveller, had been left alive for three days among crows, who had already picked out both his eyes and were eating other tender parts. No Hindu would kill the horse, for fear that the soul of his own grandfather, imprisoned in the carcass, gave it the breath of life. Bridle-bits, called "thorns," as drawn by Mr. Kipling, out-Herod most torture tools in the Nuremberg chamber of horrors. Facts like these evince that humanitarian legislation is nowhere more needed than in India, as well as that Lecky's conclusion that Hindus surpass Christians in consideration for animals is ill-grounded.

But it soon became clear to our author that the popular error he strove to correct was only a fraction of English misconceptions of Indian life, especially in relation to animals. Hence his book. At first glance it might be deemed the hasty product of a day. The truth is that it was produced, not extempore, but *ex omni tempore*. It was not made at all; it grew, and was finished, all but writing the words, before the first line was penned. The author lived in India for a generation. As a Yorkshire boy he had been a keen observer of English birds and beasts. From his entering Hindustan he made its new and strange fauna his darling study. For years he kept tame ravens, hillcrows, banana-eating bats, or flying foxes as household pets, feeding them from a plate in his hand. He tamed a huge lizard, and would hold it in his hand, though natives called it deadly. Daily for months were he and his family interested in a troop of wild monkeys which they regularly fed, trying them with very various foods. He accompanied natives in hunts for field rats, which they dug out. He went out in the hawking parties of falconers. The flight of birds—particularly the evolutions of pigeons wheeling on the wind, and their settling down from flight—were in his view among the most fascinating things in life. Then he became curator of a museum where the whole Indian fauna, alive and dead, was always before his eyes. More than all, as the head of the Mayo Art School at Lahore, the most successful institution of its class in the Orient, he could not be neglectful of the animal forms around him. It was much when *Hamlet* "fell to such perusal of *Ophelia's* face as he would draw it." Kipling did draw the creatures which he was required to teach his pupils to draw, as well as to criticise their artistic essays. It is no wonder, then, that seventy-one of the ninety-four illustrations in his volume are creations of his own pencil.

While teaching pupils zoölogical drawing, he was wise enough to learn from them many a lesson regarding animal relations, habits, and treatment. From this source, and in converse with intelligent natives (since he was no stran-

ger to their strange tongue), he became rich in proverbs and other outcrops of indigenous notions regarding both beasts of the field and fowls of the air. On the whole, few men's surroundings and whole manner of life could so well equip them for portraying the beasts of India and their human relations. Kipling's crowning merit lies in seeing that, thanks to the Indian stage of culture being similar to that of the Æsopic era, bestial and human life are closely interlocked, and in making the most of that connection.

The bestiary of India here treated, in addition to Oriental types of English domestic beasts, includes monkeys, buffaloes, elephants, camels, and jackals, besides birds and reptiles. The proverbs, which are as numerous as the pages, are sometimes odd analogues of those in Occidental lands, and always elucidate Oriental peculiarities. Some are pathetic, "sweat-and-blood axioms born of penury and edged with despair." "A monkey with a snake in his hand" answers to our catching a Tartar. "A monkey with a cocoanut in his hand" denotes one who has a good thing but can get no good out of it. "Can there be no daylight if the cock does not crow?" snubs a pompous declaimer. "Six handfuls to the cow-calf, one to the ox," was born of the precept, "Love the cow, hate the ox." A low estimate of females is betrayed by the saw, "Drums and women are better for beating."

No writer has made more felicitous use of folk-lore which so photographs the traits of common folk. The gait of a peacock is admired; hence a man limping with sciatica binds a peacock's feather on his leg, with full assurance that he can thus walk with less pain. One wonders that monkeys, and pests still more mischievous, not only are household pets, but have free course in their pranks. His wonder ceases when he learns that they are a sort of lightning-rods which attract to themselves all the ill-luck that may be hovering about the house. As to the ass, whose Hindu name is "roarer," it is believed that he brays *because he has a vision of Satan*, a satanophany. Moslems have also a legend that when the donkey was recalcitrant about entering the ark, Noah beat him, crying: "Go in, and the devil go with you!" Afterwards Noah, who had supposed Satan to be drowned, espied him safe on board. When he demanded the reason of the intrusion, the answer was: "I came by your own invitation—which was to go with the donkey." Many mythical bits in a similar strain—sparks from a working-engine, not fireworks for display—elucidate Kipling's themes, and might well form a supplement to the 'Arabian Nights.'

The chapter on elephants will shock teetotalers. They will there learn that the beast who shares most in human reason finds most cheer and comfort in a tipsy-cake in which rum, brandy, or arrack is the main ingredient. Again, we read: "It is recorded by an American trainer that elephants left entirely to themselves have been seen to rehearse the lessons they have learned." This story is set down among those rather beyond belief, and it doubtless struck the author as a Yankee hoax, or at least a new thing under the sun. But we have it in Pliny the Elder, viii. 3: "It is certain," he says, "that an elephant dull in learning what he was taught, and therefore punished, was discovered by night practising those same things which he had been taught (*eadem illa meditantem noctu*)." The things taught were movements in the style of dancers and gymnasts. Plutarch (*De Solertia Animalium* sec. xii.) furnishes further details concerning this same elephantine sagacity, and adds: "The dull scholar was seen all alone by moonlight going through his lessons again, and rehearsing them." Mr. Kipling, after telling us that "the handed one" is a Sanskrit name for elephant, gives the saying, "When the handed one puts forth his handiness, man is but a fly before him." He cites Tennyson's "Serpent-handed" as if the compound had originated with the Laureate. It is at least as old as Lucretius, who more than once calls the elephant *anguimanus* (ii., 538, v. 1302).

"The reported existence of wild camels in Arizona" (here called *a State*) seems to Mr. Kipling "a fabulous or jocular illustration of American character." He says, however, that if the story is not true it ought to be. The tale would have been more credible to him had he known that camels were actually imported in scores from both Africa and Asia by the United States Government. These ships of the desert came to land at Indianola, and in 1857 navigated the whole breadth of Texas to El Paso, which is scarcely a hundred miles from Arizona. They and their offspring were distributed in various forts. On marches or at military posts some of them must have become estrays, and may now very naturally range the sands of Arizona. Mr. Kipling's American allusions, by the way, are so flattering that he might be suspected of catering for an American market. His motto is from Walt Whitman. He quotes Bryant, and named his favorite monkey "Uncle Remus." He praises the novel 'East Angels.' He finds tales analogous to those in 'The Wayside Inn.' American boxers and tiger-tamers are in his view no whit behind the English, and Americans need no teaching about horses. He must hold that America is, or will soon be, Greater Britain.

The pages on dogs will be a dainty to all who have either owned or loved them. Mr. Kipling complains that the sacred writings of Hindu, Moslem, and Christian, all alike lack recognition of canine services. At last, however, he brings forward something of the kind from Moslem and Hindu books, but nothing from the Bible. But while sojourning so long *in partibus infidelium* he has forgotten the Scripture of his childhood, and so speaks more than once of the calf of *Moses*. He has forgotten Tobit, a book which a majority of Christians have never separated from the Testaments as apocryphal. Otherwise he would have told us about the dog of the young man Tobias that went forth with him all the way from Persia to Media and back again to his home, as far even as his guardian angel did. This service is clearly viewed as praiseworthy. The same may be said of the dogs who came and licked the sores of Lazarus. One other testimonial to a good canine characteristic, approved by Moslems and many Christians, must have been unknown to our author; else would he have extolled it as a plea alike truthful, charitable, and irrefragable. We refer to a legend in the Persian poet Nisami. It relates that Jesus stood at the gate of a city when the vilest cur there had been stoned and was dragged out at the tail of an ass amid the execrations of the mob. When Jesus was asked what he thought of the carcass, his reply was: "Pearls cannot rival the whiteness of his teeth."

'Beast and Man' is a title suggested by the ancient signboard at inns, "Entertainment for Man and Beast." Kipling will entertain every man who reads him, and would still more entertain every beast who could understand his demonstrations that brutes have rights which men are bound to respect.

THE PHILOLOGICAL SOCIETY'S DICTIONARY.

A New English Dictionary on Historical Principles, etc. Edited by James A. H. Murray, B.A., Lond., etc. Part VI. Clo-Consigner. Oxford: Clarendon Press; New York: Macmillan. 1891.

For consecutive reading, if the phrase be allowable, this part of the great Dictionary is less interesting than its predecessors. In our vast English vocabulary there are streaks as in the ocean, and what obviously distinguishes the present is the Romance compounds with co-, col-, com-, con-, filling 200 pages, with more still to come. But, besides this unappetizing array, one-quarter of the main words are obsolete, we are told. Then, from the editor's point of view, this section of the alphabet is remarkable as having furnished hitherto the greatest number of bogus words yet met with, as will by and bye be demonstrated in an appendix, and is here typically illustrated in the case of *cherisaunce* for the confusion of a critic of Part V. Finally, for no previous section have the common dictionaries been so deficient and erroneous.

The solid advantage, for etymology, of proceeding on historical principles is pungently intimated under *cog*, "tooth of a wheel," where we read: "The Celtic words, Ir., Gael. *cog*, Welsh *cocas*, uncritically cited as the probable source, are (as usual in such cases) from English." Under *conscience* is admirably unfolded the "gradual individualizing and personification" of the word in the sense of an inward moral monitor and deity. Under *commence*, *commencement*, *commencer*, *commencing*, is supplied an explanation of the seeming paradox of denominating the close of a college term a "Commencement." To *commence* in this sense is "to take the full degree of master or doctor *in* any faculty at a university," being a translation from the Latin *incipere*. The very earliest quotation chances to combine the ideas of dismissal (license) and beginning (1387): "By a statute of the universite of Oxenford whan eny man is i-congyed there to commence in eny faculte." Trevisa's *i-congyed*, by the way, invites mention of the substantive *congee*, both from the fact of its curious phonetic decay from the Latin *commeatus*, 'a passage, a furlough,' and because "from the fifteenth to the seventeenth century the word was completely naturalized, and bade fair to descend into modern English as *congy*; but since the Restoration . . . there has been a growing tendency to treat the word as French" and restore its French form. A pseudo-French form has even been simulated in the case of *confidant*, since 1700, perhaps to indicate the French pronunciation of "confident"; and it is surmised that the feminine form *confidante* arose first.

Fourteen pages are given up to *cock* and *cockle* and their compounds and derivates, and a wonderful labyrinth it is. *Cock* (like *clock*, which perhaps never meant 'bell' in English) is an "echoic" word, and was a century late in reaching England from the northern home of the Gallic bird. Our term *rooster* we took from our Kentish forefathers. There is a long discussion of the obscure etymology of *cock-a-hoop*, and it is still uncertain whether to connect it with a spigot and a tavern, or with the fowl which the German analogy justifies our thinking (stop-)*cock* to have got its name from. Dr. Murray's identification, also through the German, of *cockney* with "cocks' eggs," is well known, but a shade of dubiety perhaps still hangs over it. *Cockatrice* receives

the most elaborate treatment as to its origin, and furnishes an extraordinary tale of confusion in natural history. Capt. John Smith (1624) gave us *cockroach* in an alleged Spanish form, "cacarootch." May we identify with the tomato Browne's Jamaica (1756) "Love Apple and Cockroach Apple. . . . The smell of the apples is said to kill cockroaches"? *Cock-sure* was a word "originally perfectly dignified, and habitually used in the most solemn connexions," the sureness being objective. In the course of two centuries and a half, as measured by the quotations, it acquired a subjective and ridiculous sense, as when Lord Melbourne said he wished he was "as cock-sure of anything as Tom Macaulay is cock-sure of everything." The "*cockles* of the heart" remain a mystery; the editor wisely refraining from adopting the explanation that likens the shape of the heart to a cockleshell.

The word *come* occupies nearly eight pages (twenty-three columns), and "breaks the record" in respect of expansiveness. No better example could be afforded of the minuteness of differentiation in shades of meaning which is carried in this dictionary to an extent never before known. It is also noteworthy for its illustrations of the prepositional connections, for which foreigners ought to be grateful. To *come to* (out of a swoon) was used as far back as 1572, in Knox's 'History of the Reformation,' and has probably been a popular expression ever since, but the next quotation happens to be from Marryat (1832), and the next from Dickens (1861). *Come-at-able* is as old as 1687. We should have had the spelling "cum" but for the vice of the Middle English scribes in writing *o* for *u* before *m*, *n* and *u* (*v*). So *comptroller* is an erroneous spelling introduced about 1500; and the *a* in *cocoanut* was faultily inserted by Johnson.

The various spellings of *coffee* all but embrace one ("*kauphy*") which contains not a single letter of the accepted form; we find *cauphe*. Evelyn (1636) is first cited for our modern mode, though Capt. John Smith approached it with *coffa*. *Cod*, the fish, is of purely English origin, and comes to the surface in a statute of Edward III., 1357; but, "parent of sweetest *sounds*, yet mute forever," it refuses to tell how it got its name. *Coal* ("se cole") was so designated as early as 1253; the substance itself ("carbonem maris") was known still earlier. *Compass* is of uncertain origin; it is first met with in 1515, and *commerce* arises still later (1587), with the accent on the second syllable as late as 1702. From Jefferson is taken the first use of *commissariat* in the military sense (1779). The *color-sergeant* owes his being to the Peninsular War, where feats of bravery by non-commissioned officers called for some recognition (General Order July 27, 1813). *Conservative*, the party name superseding Tory, was Croker's invention, on January 1, 1830. All needful historical data are given about our own *Congress*.

Americanisms are of course plentifully noted. Dana, in his 'Three Years before the Mast,' gave currency to the phrase *club together;* and the *clubbing* of newspapers for lower rates is a Yankee notion. We say *coal-hod* for "coal-box"; and *cologne* for *cologne water;* and write *connection* for *connexion*. But we must not pride ourselves on the boodlers' *combine*, for the word was used in England in 1610 to denote 'a plot, a conspiracy'; nor the intransitive *collide*, which Dryden employed in 1700, yet "when first used of railway trains or ships in collision, in 1860-'70, it was much objected to as an Americanism"; nor *compete*, a word not in Johnson, though handy to Bishop Hall in 1620, and in 1824 "styled 'a Scotticism,' and 'an American discovery.'" That awful ban still holds our British cousins aloof from our most tempting inventions, as when a reviewer in the *Athenæum* quotes from our chroniclers of "the wheel" the word *coast*, and sighs, "Why have we not got this convenient term?" The word *half-cocked*, we observe, is attributed to the Australians, by a clear penman's or typographical error, since the first quotation is from Irving (1809), and this slang is perhaps not quite obsolete with us. Then, why should *closetless*, with a single (American) quotation, be deemed rare, and *cockless* with a single (British) quotation not be similarly branded? Under *confederate* we find embalmed the propagandist purpose of the Slave Power, in the outspoken provision of the Constitution of the Confederacy that "in all such [new] territory the institution of slavery as it now exists in the Confederate States shall be recognized."

We had set down a long list of names of American writers cited in this instalment of the Dictionary, from Franklin to 'Mrs. Rohrer's Cook-book,' from *Harper's Magazine* to the *American Miller* and the Wisconsin *Republican;* but our diminishing space admonishes us. We must pass, too, without remark, such entries as *cold cream*, *common good*, *common lawyer*, *con moto*, and close with a word or two about the literary aspect of the quotations. To a fair extent we encounter the familiar quotations of our great writers —under *compound* (vb.) the verse from 'Hudi bras' that will occur to everybody; *compute*, from Burns; *concord* (sb.), from Milton; *condition* (sb.), from Pope; *confabulate*, from Cowper; *confirmation*, from Shakspere. But we miss under *cock-and-bull* the closing sentence of 'Tristram Shandy'; under *colonel*, Milton's opening line of his sonnet, "Captain, or colonel, or knight in arms," if only to illustrate the trisyllabic pronunciation; under *complexion*, Gray's "To this complexion thou must come at last," if, indeed, there is there any mention of the meaning here exemplified; under *conscience*, Clough's "bare conscience of the better thing." Under *color*, some American reader for the Dictionary ought to have sent in, for "give color to," the historic satire of John Quincy Adams on his would-be censors in the House, who charged him with having "given color to the idea that slaves have the right of petition." We do not know that Dr. Murray has any reason to complain of his American colaborers, even if in the sum (on this side of the water) they fall short of the assistance rendered single-handed by their countryman, Dr. Fitzedward Hall, who has regularly read the proofs, and "added hundreds of the most valuable quotations" from his inexhaustible storehouse.

It will not be uninstructive to close with a point of grammar. The intransitive use of the verb *commence*, with infinitive, "to begin *to do* anything [OF. *cumencer à*]," is shown to have been very old—in the 'Orfeo' (1320) and the 'Lai de Freine' (1326). The first modern instance is from Pope's 'Dunciad' (1742); and Landor, Helps, Lytton, and Jevons are cited in the present century. The editor follows these with a note: "This construction has been objected to by stylists, who prefer *begin* before *to*." Americans, strange to say, are the chief care-takers of the language on this occasion—Mr. Geo. P. Marsh (1862) and Dr. F. Hall (1873); Miss Yonge being enlisted on their side (1876). What is to be noted is, that the plan of this Dictionary affords no secure ground for concluding as to the *weight* of authority determinative of the best usage. *Continuity* from century to century is denoted by the quotations; but we have no means of judging how far the writers selected stand for the majority of the class who set the style. Any one, indeed, may say, "What was good grammar to Pope or Landor or Helps is good enough for me." Another may even go back to the Old French for justification, just as he answers objections to the use of the word *individual* for "person" by saying that the French have found it convenient; or of *over* for "more than," by reference to German analogy—being resolved not to let foreign tongues surpass our own in resources. Nevertheless, any one familiar with Dr. Hall's supremacy as a recorder of usage, and desirous to side with the élite, would let his objection *prima facie* outweigh all Dr. Murray's examples. But, to avoid the appearance of dogmatism, he should turn to the discussion in Dr. Hall's 'Modern English.'

TAYLOR'S FACTORY SYSTEM.

The Modern Factory System. By R. W. Cooke Taylor, H. M. Inspector of Factories. London: Kegan Paul, Trench, Trübner & Co. 1891.

THE office held by this author has imposed upon him a reticence that has seriously limited the scope of his work. He has felt it decorous to abstain from using information or experience gained in his capacity as inspector, and has even gone so far as to give a preference to quotations at second hand over those from original sources. As a result of this delicacy—which seems a little exaggerated—we learn nothing whatever of the actual operation of the English factory acts. For information of this character it is necessary to refer to the official reports of the inspectors of factories, which are of course sealed books to the public. The diligent reader, however, can extract from these pages much that is of interest as bearing upon the modern tendency to return to the mediæval policy of statutory regulation of the conditions of industry.

This statutory regulation by what is known as factory legislation was, as Mr. Taylor shows, brought about under the influence of many causes. There was a great religious revival in the eighteenth century, followed by "almost as rich a crop of humanitarian projects as bids fair to mark the closing years of this one, and a more luxuriant crop certainly than has marked any equally definite period of our national history before or since. It was a time of great ferment on all subjects of social concern—the era of criminal reform, of prison reform, of the first effort for negro emancipation, for popular education, of the first attempt to protect 'climbing boys.' The spirit of philanthropy and fraternity, the characteristic spirit of the European Revolution, was abroad, and still alert and confident." In truth, the mass of the English population was debased and brutalized, and the more enlightened class was just awakening to that fact and to its own responsibilities in the matter. There is no reason to suppose that the introduction of factories either caused new abuses or aggravated those that existed; but it made these abuses more conspicuous, and at the same time brought them within reach of legislative control. Mr. Taylor quotes with approbation the statement of a historian of the textile industries that the system of infant labor "was at its worst and greatest height before any one thought of a

factory." In fact, the case of the chimney-sweeps is sufficient to show that the air of the factory has no especially predisposing influence towards cruelty.

The earlier factory acts, the first being passed in 1802, were intended to check some outrageous abuses to which apprentices, especially pauper apprentices, were subjected. The protective, or rather prohibitory, duties of that period, especially upon grain, made the food of the people scarce, while the maleficent Poor-Law made the people numerous. The Government therefore adopted a policy contrary to the proverbial rule of the Almighty to send bread for every mouth: it multiplied the mouths and reduced the bread. The resulting misery was aggravated by a frightful load of taxation, so that the working-people of England were ground between the upper and the nether millstone. Having bred pauper children like rabbits, the authorities hit upon the ingenious plan of farming out their labor to manufacturers, with results which were sufficiently ghastly.

By some mysterious process of reasoning, Mr. Taylor has reached the conclusion that this state of affairs was the ideal of political economy. At a time when legislation was dictated by landlords; when restrictions of every kind were laid upon industry; when a workman could not legally go out of his parish to get employment; when his wages were legally fixed by magistrates, and when the Statute of Apprentices was still in force, Mr. Taylor informs us that status had "succumbed to contract," that "combination had almost wholly succumbed to competition," and that the conditions of labor were "politically free." Very naturally he lays it down that competition has "for its utmost purpose but to secure that the weakest goes to the wall"; and that perfect liberty of action not only allows but assures economical despotism. As to the results to laborers of the introduction of machinery which made labor of the kind to which they were used unnecessary, he observes: "The benefits from the machines went to the owner first, and the consumer afterwards, the unemployed wage-laborer clearly coming within neither category." These somewhat questionable propositions are explained by the authorities in political economy upon which Mr. Taylor relies. He reprobates the doctrines of Smith and Ricardo, and declares that it is "with no small satisfaction" that he finds himself in substantial agreement with "the accomplished author of 'Das Kapital,' whose great work has recently been made generally available to the British public by translation."

The act of 1802, which was introduced by Sir Robert Peel, himself a manufacturer, is said by Mr. Taylor to have had the effect of making employers give up apprentice labor; but it did not apply to children not apprenticed. Accordingly, in 1815, Peel proposed that it should apply to all children employed in cotton and woollen factories, these being the only ones of conspicuous proportions at that day. The law adopted, however, was limited to cotton-factories, and so was that of 1819, which forbade the employment of children under nine, and limited the daily labor of those under sixteen to ten and a half hours, the number of working hours per week being limited to seventy-two. In 1825 these hours were reduced to sixty-nine, and, soon after, night-work by persons under twenty-one was prohibited. In 1833 a Royal Commission was appointed, and their report has become a classic. They found that children employed in manufactures generally worked as many hours as adults, with most injurious results both physically and mentally, and recommended legislation, which was supplied at once by what is known as Lord Althorpe's Act. This applied to all factories except those of silk, forbidding the employment of children under nine, limiting the hours of those under thirteen to forty-eight per week and nine per day, and providing for schooling and holidays. In 1844 another bill was passed, of which Mr. Taylor's account is very confused, but it reduced the hours of labor for children to six and one-half, while permitting their employment at the age of eight, and provided for fencing dangerous machinery.

In 1847 the scope of this legislation was further extended by prohibiting adult women from laboring more than fifty-eight hours a week, or ten a day. Then followed an attack upon the relay system, and in 1850 all work was prohibited except between six A. M. and six P. M. in summer, and seven A. M. and seven P. M. in winter, one and a half hours being taken out for meals, and work to cease at two P. M. on Saturdays. Minor acts extending the scope of those already existing were passed from time to time, industries not classed as "textile" being gradually included; and the term "factory," which had been extended first so as to cover some forty species of places of employment, and later to any establishment where fifty persons were employed in any manufacturing process, was further supplemented by the introduction of the term "workshop," which was defined as any place where any handicraft was carried on by the employment of any child, young person, or woman. By more recent statutes the hours of labor have been still further reduced, the age at which children may be employed raised and their schooling provided for; adult males as well as women and children have been put under the care of Government inspectors, and almost all productive industries except agriculture regulated. Since it is not referred to by Mr. Taylor, it is necessary to add that, by the abolition of protective duties and the progress of invention, such an enormous burden was lifted from production as to make Governmental interference by factory legislation, as to which much apprehension was felt by some manufacturers, inappreciable in reducing the efficiency of labor.

Mr. Taylor seems to incline to the opinion that the factory system, with all its drawbacks, is not unfavorable to either health or morals. He attributes this result, as we understand him, to factory legislation, but he does not concur with Miss Beatrice Potter, who has recently taken the position that, in order to prevent the evils of "sweating," people ought to be prohibited from working at home and be forced to work in factories. Mr. Taylor does not object to this on the ground that it interferes with freedom, but on the ground that it is practicable to inspect home workers, although he is somewhat staggered when it comes to the inspection of domestic service, being conscious here, he says, of a difference which he finds it difficult to define. This, however, is the only exception which he allows to the principle that Government must inspect all the affairs of its subjects. "No one," he says, "has ever proposed a factory act to prevent any one overworking himself," but this is a misleading statement of the case. A recent act makes it a misdemeanor for persons working in white-lead works not to wash themselves according to prescribed rules, which is not different in principle from forbidding them to work more than prescribed hours. The regulations of trade unions are specifically directed to this end, and it has been proposed that the desired eight-hour law should embody this principle.

In the present constitution of society, every producer expects to exchange his product for others, and he is under precisely as much compulsion to labor when he buys his own materials as when he works up materials bought for him. In either case he must work or starve, and in the modern world the material surroundings—which are all that the Government can regulate—of the mass of those who work for hire are better than those of all but a small proportion of such as live by selling the products of their own unaided labor. Mr. Taylor has the courage of his convictions; he sincerely believes that the ideal state is a vast mutual inspection society, and it cannot be denied that there has been a sufficient tendency in this direction in England to yield him encouragement. He furnishes us with some speculations as to a phase of industrial life that may succeed the present factory system, considering it not improbable that we may presently be able to consume water as fuel, thus rendering the congregation of workers unnecessary. But Mr. Taylor is perhaps not the safest of guides in matters that involve historical deduction, as he gravely announces his belief that it is "among the great thinkers of ancient Hellas, ancient Judea, and ancient Egypt (if we knew more of them), that in all human probability the worthiest discussion of many social problems which even now, though in a new guise, confront us might be found, not in the hasty, superficial, and often sordid literature of our own day."

Preludes and Studies: Musical Themes of the Day. By W. J. Henderson. Longmans, Green & Co. 1891.

As the sub-title indicates, this volume deals entirely with topics of present popular interest, and its most conspicuous merit is its readableness, combined with a directness of style and clearness of statement that will make even an occasional technical paragraph easy to follow by the general reader of musical literature. Exactly one-half of the 245 pages are devoted to Wagner, whose later dramas are discussed under such headings as "The Story," "The Philosophy and Humanity," "Some Objections to *Leitmotive*," "Comments and Commentators," "The Book of Parsifal," "A Study in Tristan," "The Endurance of Wagner's Works." The second half of the book is devoted to a study of the evolution of piano music, and to Schumann and the programme symphony.

The story of the Wagner dramas is briefly and graphically told in these pages. In the section which follows, the most interesting part is the discussion of Wagner's treatment of love. In the chapter on leading motives, Mr. Henderson, while correcting some popular errors, reaches the extraordinary conclusion that "the *Leitmotiv* system, while not truly dramatic, is truly musical." To us it seems the very essence of the music-*drama*—that which, by identifying certain musical phrases with the characters of the play and their mental processes, makes it possible for the orchestra to tell the story alone. Liszt lauded Wagner for having thus given music a new *intellectual* interest. If some opera-goers are too tired or too indolent to exercise their intellects in following a Wagner plot in the orchestra, it surely would be absurd to blame the composer for this. Mr. Henderson justly insists on the necessity of repeated hearing for thorough appreciation of any good opera. He might have

added that to those who can follow the German text the leading-motives never appear to be riddles, for every line of the poem, as it is sung, tells the meaning of the music that goes with it. Here again we must say that it would be absurd to blame Wagner for the fact that some hearers do not understand German, or that some singers do not enunciate their words distinctly. If sung and understood as they should be, there are no riddles in Wagner's dramas.

Delightfully spicy and sensible is the chapter entitled "Comments and Commentators," in which the author belabors two English Philistines, Sir Arthur Sullivan and Joseph Bennett, for their insular criticisms on Wagner. But we cannot agree with the opinion, incidentally expressed in speaking of Sucher, Malten, Lehmann, and other German artists, that "all that these people know about singing, Italy taught them, directly or indirectly." It would take too much space to discuss this point fully, but it may be said succinctly that what Germany (Schubert, Schumann, Franz, and Wagner) has superadded to Italian vocal style and method is very similar to what Schumann and Chopin superadded to the pianoforte style of (say) Hummel. Why cannot the greatest of Italian vocalists, Mme. Patti, sing a Schumann or Franz song or a Wagner rôle? The answer to that question would make an interesting essay, and would destroy many popular notions concerning Italian singing.

The chapter on the endurance of Wagner's works will be interesting reading to certain prophets. It could have been made stronger still by quoting statistics regarding the yearly growing frequency of Wagner performances. On page 77 there is a good hit at the anti-Wagnerites. Many years ago Brendel remarked in a newspaper article that very many of Wagner's enemies were people who were bored by all good music, but as "good form" required them to abstain from abusing the great dead, they poured out the vials of their wrath on Wagner. In a similar vein Mr. Henderson remarks:

"It is a curious fact—at any rate it seems a fact—that the bona-fide anti-Wagnerite never goes to a symphony or chamber concert. If he did, he would be obliged to condemn Beethoven, Schumann, Liszt, Chopin, Brahms, Dvorák, Tchaikowsky, and Rubinstein for doing the very same thing that Wagner did—writing dissonant measures when it suited their purpose to do so. But, as there is no blatant opposition to these composers, we are forced to the conclusion that the anti-Wagnerites do not go to hear their music, or else they are inconsistent—which is, of course, inconceivable."

Of the pages on piano music the most original section is that on the evolution of the concerto from the form used by Mozart to that of Liszt and D'Albert. It is odd that Mr. Henderson, while not quite approving of the leading-motive in the music drama, should find the principle of progress, here as well as, later on, in the Schumann symphony, in the practice of carrying forward the thematic germs of one movement into the next. A little more reflection will, we are convinced, make him a full-blooded Wagnerite in this question, too. In the symphony he justly places Schumann as second only to Beethoven, with a doubt whether even the "second" is entirely just. The history of the piano is suggested in this brief sentence: "The instrument which had been a prattling babe in the hands of Scarlatti, a singing boy in the hands of Mozart, a hero and a prophet in the hands of Beethoven, became a poet in those of Schumann." The question of programme music is thus summed up:

"No one can deny that interest is added to a composition for the average hearer by the application of a 'programme.' Men and women are fond of having a peg on which to hang their imaginations. This is sometimes urged as an objection against all programme music. The objectors say one cannot understand such music without a key. That is true enough; but when the key is supplied, it certainly opens the door for us, and lets us see what is going on in the composer's mind. The music stimulates the imagination, and the two act and react on one another."

Spanish Institutions of the Southwest. By Frank W. Blackmar, Professor of History and Sociology in the Kansas State University. [Johns Hopkins University Studies in Historical and Political Science. Extra Volume X.] Baltimore. 1891.

THIS volume certainly marks a progress in the methods of treating the history of Spanish colonization in America. The step in advance consists in the fact that Spain's rule of her American colonies is recognized as a policy and system, and not merely looked upon as organized brigandage, as which it is only too often pictured by so-called historical writers. There is an honest intention on the part of the author to do Spain justice, but in carrying out that intention the means have been lamentably defective. Mr. Blackmar is inadequately versed in Spanish legislation for the Indies, and since that chief source is not open to him, his book lacks permanent value. The blame for this falls not so much upon him, for one may be ignorant of a subject and still honestly believe that he knows all about it; the blame falls upon Johns Hopkins University for publishing the work, and thereby recommending it as something which it is not, namely, a solid and accurate production.

California occupies the greatest space in the book, and this is but natural, as the author lived there for some time, and consequently is better acquainted with California than with any other section of the Southwest. The missions and missionaries absorb a great deal of his attention, and he is very fair and just in his appreciations of their work. In regard to New Mexico he is less successful, having but a very insufficient knowledge of the history of early Spanish colonization of that country, and no knowledge at all of the real nature of the Pueblo Indians. It suffices to notice here that he speaks of "Montezuma" as a Sun God and of a "Montezuma worship" in particular. Of the manner in which the Pueblos submitted to Spanish power, of the legal consequences thereof, of the true legal status of the Pueblos under Spanish rule, he gives hardly any idea; and even that idea is fundamentally distorted.

The great defect and mistake on the part of Mr. Blackmar has been to undertake his work mostly with the help of secondary sources, and without having made in advance a serious study of Spanish laws and institutions in *Spanish* documents and books. The 'Recopilación de las Indias' is, of course, a highly valuable source, but in order to understand it one has to know the principles according to which the Indies were to be governed, and for this purpose second-hand works are utterly inadequate. Antonio de Leon y Pinelo, Juan de Solor, and Pereyra, for church legislation (so intimately connected in Spanish affairs with civil legislation), Abreu, Frasso, etc., etc., should be studied first, in order to obtain an intelligent glance at the picture which Spanish institutions present. Mr. Blackmar is evidently ignorant of these and of a great many other works of that kind. Of the collections of royal decrees (*cédulas*) he knows nothing. Neither Vasco de Puga, nor Aguiar, nor Montemayor, nor Beleña seems to be known to him, or, at least, appreciated by him, and without a close study of the royal ordinances and decrees there is no possibility of understanding and fairly judging of the institutions of Spanish origin in America.

The origin of Spanish institutions in general as far as the formation of the monarchy—in fact, the times previous to the discovery of America—is concerned, is well discussed and represented by Mr. Blackmar. But it strikes us that not enough stress is laid on the influence of Arabic or Moorish culture in Spain. When a people leaves such indelible traces in the social, political, and judicial terminology of another people as the Arabs have left in Spain, it must be supposed that the institutions themselves bear equally distinct traces. Words like *alcalde*, *alguazil*, *alcaide*, *almojarifazco*, *alcavalá*, even possibly *barrio* (from bar, field), are significant of the rôle played by Arabic influence in the institutions of Spain.

The book is handsomely illustrated by photo-lithographs, California furnishing the greatest number of views; and the general make-up is very commendable.

The Cause of an Ice Age. By Sir Robert Ball, Royal Astronomer of Ireland. D. Appleton & Co. 1891.

DR. BALL has at once a high standing among mathematicians and a wide reputation as a popular writer upon astronomy. To most readers, however, the attempt to popularize his subject in the present volume will seem to have been somewhat overdone. The first half of the book is a rambling disquisition occupied mostly with dim intimations of what the author is going to prove. To such an extent is this drawn out that an eminent legal friend of ours laid the book down in despair of finding out what Dr. Ball's theory of the cause really was.

This was unfortunate, since the fifth and sixth chapters contain a clear-cut discussion of a discovery with which all students of the glacial period will hereafter have to reckon. The discovery is one which appears greatly to strengthen the theory of Adhémar, so ably defended by Croll and Geikie, that the glacial period, or periods (for their theory implies that there have been a great many of them), was the effect of the precession of the equinoxes, combined with changes in the eccentricity of the earth's orbit. As the result of these movements, there is considerable variation both in the length of the seasons and in the distances of the earth from the sun during perihelion and aphelion. At the present time the northern winter occurs in perihelion, when the sun is about 3,000,000 miles nearer than in the summer, and the winter (that is, the period from the autumnal to the vernal equinox) is seven days shorter than the summer. On account of the precession of the equinoxes, these conditions are exactly reversed every 10,500 years. About 250,000 years ago, and at irregular intervals still earlier, these differences were greatly increased. At times the difference between perihelion and aphelion distances has amounted to seven or eight millions of miles, and the difference between the length of the summer and that of the winter to as much as thirty-three days.

Croll, adopting an erroneous statement of Herschel, reasoned upon the assumption that the shortness of the perihelion season was exactly counterbalanced by the greater proximity of the sun, so that a hemisphere of the earth would receive the same amount of heat in the short season of perihelion passage as in the longer season consumed in making the aphelion

passage; but he reasoned that when winter occurred in aphelion, the loss of heat from radiation would be excessive, and would tend to the production of glacial conditions. Dr. Ball's discovery is thought greatly to reinforce the theory of Croll; for he finds that "of the total amount of heat received from the sun on a hemisphere of the earth in the course of a year, 63 per cent. is received during the summer and 37 per cent. is received during the winter" (p. 90).

But it is far from certain that Dr. Ball's discovery will restore the failing fortunes of Croll's ingenious theory, for the recent objections to that theory are mainly drawn from tangible facts. Prominent among these is the absence of any signs of a general glacial period during the Tertiary epoch, while, in America, the centre of glacial dispersion proves to be not the north pole, but two points considerably below the arctic circle, namely: in the eastern part of the continent, the region south of Hudson's Bay; and in the western, the highlands of British Columbia. These facts indubitably point to some terrestrial cause as predominant in the case. Whatever tendency to produce glacial conditions there may be, therefore, in the astronomical changes adduced by Dr. Ball, it is pretty certainly subordinate to other causes yet to be discovered by the students of geology and meteorology. So evident has this become to American geologists within the last ten years that there is a great revival among them of various terrestial theories, prominent among which is that of great changes, since the Tertiary period, in the relative level of the land in the northern hemisphere; while the Director of the Glacial Branch of the United States Geological Survey has recently committed himself to the theory that there was a change of the position of the earth's axis which brought the north pole far down towards the southern part of Greenland.

Dr. Ball's volume is certainly timely, since it marks a new epoch of lively interest in the subject of which it treats. But its real help towards the solution of the problem of the cause of an ice age will, upon close examination, prove to be insignificant. We note an error which may mislead the unwary. The letters "X and Y" (line 9 from top of page 82) should be A to B; and "A to B" in line 10, on the same page, should be X and Y. The context shows this; but if further proof is wanted, it may be had on page 92. The error is, apparently, purely typographical.

My Canadian Journal. 1872–1878. By Lady Dufferin. D. Appleton & Co. 1891.

When Lady Dufferin says, in her preface, that wonderful changes have taken place in Canada in the last thirteen years, so that she would to-day be quite unable to recognize many of the places herein described, and when she further says that, in view of her husband's official position, she has carefully avoided any reference to the politics of the Dominion, she gives two excellent reasons why her letters from Canada should have remained unpublished, and why, being published, they are decidedly uninteresting. Her accounts of official visits to sections of the country which were considered remote in the early seventies, but are now as accessible as Buffalo, are about as valuable as a guide-book of the same period would be; while the entire absence of any reference to the political questions of the time takes away any importance that might attach to such a volume as this. It was undoubtedly very entertaining for Lady Dufferin's mother, to whom this journal was sent in weekly instalments, to learn that "D." or "His Ex." had made two speeches and passed through three arches, that the salmon fishing had been good or bad, as the case might be, that the private theatricals had gone off well, and that the children were learning the outer edge; but it is assuming a good deal to suppose that the general public will be equally interested fifteen years after these important events took place.

The Governor-General of Canada, although the direct representative of the Queen, is really a very much less important personage than the Parliamentary leaders. He can at times perform a useful part as a sort of antipyretic, in lowering the political temperature, which is apt to rise to a dangerous height, especially among the French-Canadian politicians. On several occasions the present British Ambassador to Paris exerted such influence with a skill that is still remembered at Ottawa; but to judge from this book one would suppose that his six years of official life had been spent in a weary round of receptions and speeches, varied by salmon fishing and occasional glimpses of "the States." As regards speeches, it is annoying to be repeatedly told that "this was one of D.'s most successful efforts" without being given an opportunity of forming an opinion on the subject; but, on the other hand, the few specimens of D.'s eloquence that have found their way into the book cannot be classed higher than the solid after-dinner variety of the article.

Lady Dufferin has been somewhat careless about the orthography of places in Canada, and, having enjoyed the hospitality of Mr. George Stephen (now Lord Mount-Stephen), she should have known that his name lacked the final *s*. Turning to matters of style, it would perhaps be hypercritical to object to such expressions as "having dressed ourselves smart," but really we feel sorry for the gentleman who wrote a play to which her Ladyship refers as "such a piece which we could possibly not stay to see"!

The book throws no light on the question of the future of Canada, on the characteristics of its inhabitants, on the varied beauty of its scenery; and, in fact, there seems to be no ground on which its existence can be justified.

Memoir of Rufus Ellis. Including Selections from his Journal and Letters. Edited by Arthur B. Ellis. Boston: William B. Clarke & Co. 1891.

It is a very interesting and engaging personality that this handsome volume reveals. Dr. Ellis was at once one of the most conservative and catholic of the Unitarian clergy of his generation. His conservatism was quite as much a matter of taste as of opinion, as, for example, in his preference for the King James translation of the Bible over any other actual or possible. In the earlier part of his ministry he was much impressed by Emerson, and was something of a Transcendentalist, but he grew more conservative in his opinions as time went on, while never losing his interest in liberal ideas. Had he been reared in an orthodox church, he thought he should have been content to remain in it, a liberal among conservatives. He had cordial relations with several orthodox clergymen, but they were such men as Dr. Washburn of New York and Prof. Diman of Brown University. Yet, though Bishop Huntington was his intimate friend, he seems never to have inclined to follow him out of the Unitarian into the Episcopal Church. He was one of the first among Unitarians to prefer the Athanasian to the Arian Christology. In this respect he was a leader and has many followers. In this connection it should be said that Dr. George E. Ellis, who contributes an interesting chapter on the "Development of Liberal Christianity," has entirely misconceived Dr. Hedge's reasons for preferring "Humanitarianism" to "Unitarianism" as a denominational name. His preference had nothing to do with the humanitarian tendencies of the denomination, but only with the humanitarian conception of Christ.

Another mistake is where it is said (p. 162) that, "in common with Dr. Martineau," Mr. Ellis never adopted the name "Unitarian" as defining his religious views. Dr. Martineau frankly accepts the name "as defining his religious views," but objects to it as the name of a church or body of churches, as implying a dogmatic basis of fellowship. Another strange mistake to have escaped proof-readers and friends is the statement that Lowell's Class Poem has never been printed. Dr. Ellis was in the same class with Lowell, who furnishes a brief letter of reminiscence, warm in its praise of one who could not have approved his youthful levity. Leaving the Divinity School, he went to Rochester, N. Y., for a short time before settling in Northampton, where some of his people were of that noble temper which Mrs. Susan I. Lesley has made familiar to us in her 'Recollections of My Mother.' He remained there ten years, going to Boston in 1853 and dying in 1885. He did not make much noise, but in the ways of quiet service his was an enviable success. His catholicity was not merely for those more conservative than himself, but also and increasingly for those more radical; and there is no better testimony to his character than that on p. 290 which brings out this aspect of his life.

Ten Centuries of Toilette. From the French of A. Robida. By Mrs. Cashel Hoey. With illustrations by the author. London: Sampson Low; New York: Charles Scribner's Sons.

This epitome of the history of costume, in gay binding and with gayly colored plates, differs from more monumental works in treating of the outward adorning of one sex only—the sex whose loveliness has been said when unadorned to be adorned the most. Such a distinction is quite in keeping with the fashion of the day in book-making. Woman as she appears in almost every relation in life has already been made the subject of a special volume. Here she is to be seen as she appears in "ruffs and cuffs and farthingales and things." Those to whom such amiable follies are interesting will be sure to find entertainment in these pages of miscellaneous content. The illustrations at once prove to the eye that fashions have been very charming as well as very ridiculous in the course of the centuries passed in review. They were never more picturesque than when the lady of the castle figured in the tall conical cap known as the "hennin," with a flowing diaphanous veil, her jewelled alms-bag at her side, and on her feet the pointed shoes denounced by the preachers as an "outrage on the Creator," but into whose snares even the sterner sex did not keep the feet from falling.

Descriptions of the cumbersome raiment of wrought needlework of the mediæval ladies, of the little better than no raiment of the *merveilleuses* of the Directory, of the "windmills," "gardens," "frigates," and other preposterous headdresses of the unfortunate Bourbon beauties, incline one to look with a cheerful eye upon the modes of the present day, even though they include some supererogatory street-sweep-

ing. Dress reform is, however, by no means this author's affair. He clings, in effect, to the good old adage that to be beautiful one must suffer. After describing the corset "that penetrated the flesh, took the skin off the waist, and made the ribs ride up one over the other," he takes the tone of prophecy, and adds, "The corset will witness the burial of successive ages, will survive all other fashions, notwithstanding every attack upon it, and the doctors who are unanimous in their excommunication of it, and will be ever victorious over all and sundry."

It is a pity that the English dress of the book should be so slipshod. It is sufficiently clear that the original presented the difficulties of a rambling, ready-made style, and of indifferent punctuation, but this does not excuse, for instance, such a hap-hazard rendering as "Josephine's dressmaker tried back into the far past, even to the days of the Greek and Roman ladies, for elegant novelties two thousand years old." One wonders, too, why the titles under the twenty-nine full-page illustrations should all be left untranslated (though the index gives them in English), while those under the woodcuts plentifully scattered through the text have not been so neglected. Also, a prose translation of the various verses quoted here and there would doubtless have proved, to many readers, better than none.

The History of the Middle Ages. By Victor Duruy of the French Academy. Translated from the Twelfth Edition by E. H. and M. D. Whitney, with Notes and Revisions by George Burton Adams, Professor of History in Yale University. Henry Holt & Co. Pp. xxvi, 588.

The History of Modern Civilization: A Handbook based upon M. Gustave Ducoudray's 'Histoire Sommaire de la Civilisation.' With Illustrations. D. Appleton & Co. Pp. xx, 587.

DURUY'S 'Histoire du Moyen Âge' is justly regarded as the best compendious treatise on the subject. Hence the announcement, more than a year ago, that an English version of the work was in preparation was everywhere received with unusual satisfaction. Its appearance has relieved the college instructor of a serious embarrassment. As the editor justly declares—

> "Text-books on general history almost invariably fall into one or the other of two faults: some of them deal in general views and afford no sufficient ground-work of fact, so that, however clear these general views may be, they are left hanging in the air in the student's mind, and though he may have learned a great many plausible explanations of history, he has learned very little history. Others crowd together such a mass of detail that the student cannot find his way, and the work leaves in his mind only a jumble of unorganized facts. The author has followed the middle course between these two extremes with very great success. The reader can hardly fail to gain a clear conception of the general life and growth of the race during this time, and of the relation of the several lines of progress to one another, and yet these general views are continually anchored to the facts and given fixed and definite place."

The author's analysis is very clear, his style crisp and vigorous; and he has wisely confined himself in the main to a concise, straightforward narrative. To these characteristics his success is largely due. In thirty-three chapters, arranged in ten books, he has been able to give us a most effective sketch of the extremely complex though always fascinating history of the eleven centuries between the first Barbarian invasions and the capture of Constantinople by the Turks. On the other hand, even the author's latest edition retains many errors in matters of detail, and fails notoriously to profit by the results of recent research. It has long needed the thorough recension which Prof. Adams has now given it. Besides making "numerous slight revisions" in the text, the editor has supplied in the margin many critical notes based on the latest investigations. It is to be regretted, however, that Prof. Adams did not supplement these valuable notes with references to the principal sources of information.

The translators have done their work well; and the usefulness of the book is greatly increased by the introduction of a number of colored maps in appropriate places throughout the text. There is also a good table of contents and a very full index.

The handbook of the 'History of Modern Civilization' is a "continuation and completion" of the 'History of Ancient Civilization,' prepared in a similar form by the same editor, the Rev. J. Verschoyle, more than two years ago. It is designed to give "young students and general readers a comprehensive view of the progress of the nations, as far as it is known, out of the decadence of ancient civilization, through mediæval barbarism, until they emerge in modern, and advance to contemporary, civilization." It is an "adaptation rather than a translation" of the original; for, declares the editor, "M. Ducoudray's standpoint is so exclusively French that it has been necessary not only to omit much and to correct freely, but also to fill numerous and extensive gaps in his knowledge of England and other countries." It may be doubted, however, whether a method which conceals the individuality of authorship can ever prove entirely satisfactory.

The work is, of course, much more comprehensive in its plan and ostensibly more philosophic in its aim than that of Duruy. It is divided into four books, comprising twenty-one chapters, and attempts an explanation of the leading facts in social progress from the advent of Christianity to the latest events in the United States and the colonial empire of Great Britain. Considering the vast field covered, the author has supported his generalizations by a creditable number of well-chosen details. Moreover, the narrative is very interesting and the translation is well done. But the work as a whole stands scientifically on a lower plane than the treatise of Duruy. In those chapters devoted to similar topics, there is not an equal breadth of view, precision of statement, or clearness of analysis. There is perhaps more conscious effort at fine writing, and consequently more of those faults of overstatement and hasty generalization which usually lurk in epigram. The chief defect of the author is lack of thoroughness, particularly in the discussion of causes and results. Thus, in the chapter devoted to the rise and character of Christianity, he fails to appreciate the real religious and moral power of Stoicism, and the spiritual significance of the advent in the West of the mystic rites of Egypt and the East. So also, in the account of the persecutions of the early Christians, he fails to make a distinction between the period of legal proscription, beginning with the celebrated rescript of Trajan, and that which precedes it—a distinction of primary importance. In his discussion of the origin of the Crusades, the cause which is really fundamental—the localization of the Christian worship, beginning even before the days of St. Jerome—is not referred to, unless by implication. William the Conqueror is described as "formally and methodically" establishing feudalism in England, with no mention of the famous oath of Salisbury, or of those other devices by which he for ever rendered the principal and characteristic evils of feudalism impossible on the English soil. Voltaire is treated with fairness and generosity, but without adequate appreciation of his great mission as champion against the theological and intellectual absolutism of the eighteenth century, which, according to his best critic, renders Voltairism the counterpart of the Reformation and the Renaissance. The attempt to explain the causes of our civil war is little short of trivial, and the editor is sometimes careless in details, as when he suffers the statement to pass that San Francisco is the capital of California.

Still, the author's defects are not fatal. They are for the most part faults of omission, and may readily be corrected by the alert student. Probably the best chapters in the handbook are those which deal with social life and with the development of literature and the arts. The work will undoubtedly prove a valuable aid in the study of general history. The numerous pictorial illustrations are full of instruction, but there are no bibliographical reference lists, and the failure to provide an index is inexcusable.

Atlantis Arisen; or, Talks of a Tourist about Oregon and Washington. By Mrs. Frances Fuller Vinton. Philadelphia: J. B. Lippincott Co. 1891.

THIS is the somewhat inconsequent title of a very chatty and readable book about our two northwesternmost States, which seems very timely now that this region is making such rapid advances in wealth and prosperity, for it is really very little known except by those who have actually visited it. It is divided by the Cascade range of mountains into an interior or eastern half, which possesses the general arid character of the Great Basin region, and a coastal or western half, which has abundant rains and a climate similar to that of the Eastern States. This western coast-belt is warmed by the Kuro Siwo, or Pacific Gulf Stream, and its abundant precipitation induces a luxuriance of forest growth unequalled in any other part of the earth outside of the tropics. Abundant interior waterways, magnificent land-locked harbors, a generally equable climate, and the most imposing natural scenery are among the attractions of this Western region. Its southern portion received permanent settlements from among the thrifty and enterprising farming population of the Northern States several years before the wild tide of promiscuous emigration was started by the discovery of gold in California. The whole was for a long time included under the general name Oregon, the half to the north of the Columbia River being later set off as the Territory (now the State) of Washington.

That part of Mrs. Vinton's book which is apparently the result of actual personal observations is bright and attractive, and gives a very pleasing and trustworthy picture of "Atlantis." Its usefulness is sadly marred by the absence of an index or even of a descriptive table of contents. In the portion which is evidently derived from the testimony of others, especially that which explains the remarkable geological phenomena of the region, there is evidence of a want of that discrimination in selecting material which would come from technical familiarity with the subject. The book is handsomely got up, and illustrated by about thirty excellent

reproductions of photographic views, some of which show that most characteristic feature of the scenery, a snow-capped volcano, looking like the ghost of a mountain, raising its white head on the far distant horizon, high above the dark, pine-clad hills.

The Principles of Chemistry. By D. Mendeléef. Longmans, Green & Co.

THE work before us will be heartily welcomed by English and American chemists. It gives the mature views of a man of remarkable originality and talent, who has enriched chemistry with one of the finest and most fruitful discoveries ever made in that science—the so-called "periodic law." This law constitutes the keynote of the work. It is constantly referred to, and is brought in to explain, illustrate, and suggest. The work differs very materially from other books on the branch of science of which it treats. The main text embraces general descriptions only, while very ample details are given in footnotes at the bottoms of the pages, in much finer print. These contain a vast deal of varied information. The little-known work of the Russian chemists receives full justice, the physics of chemistry being the field in which the Slavic mind seems to labor with especial pleasure. The author's own views differ in many respects from those now generally received, and will certainly not always find favor, though the ideas of an original and independent thinker must command a certain respect. Details are not always given correctly. It is not easy to keep up with a science which advances with such extraordinary rapidity—witness the three gigantic annual volumes of the German Chemical Society. Yet the author's industry has been noteworthy, and the omissions and inaccurate statements will probably be corrected in another edition.

The book is eminently readable. It is written in an agreeable, almost colloquial, style. The translation from the Russian is fairly good, so far at least as our own language is concerned, with an occasional quaintness which is not unpleasing. The work is in no sense a textbook, but, as the most original and suggestive treatise on inorganic chemistry which we possess, it is well worthy of the student's attention, and must be regarded as a very important addition to chemical literature.

A Tonic

HORSFORD'S
ACID PHOSPHATE.

A most excellent and agreeable tonic and appetizer. It nourishes and invigorates the tired brain and body, imparts renewed energy and vitality, and enlivens the functions.

Dr. EPHRAIM BATEMAN, Cedarville, N. J., says:

"I have used it for several years, not only in my practice, but in my own individual case, and consider it under all circumstances one of the best nerve tonics that we possess. For mental exhaustion or overwork it gives renewed strength and vigor to the entire system."

Descriptive pamphlet free.

Rumford Chemical Works, Providence, R. I.

Beware of Substitutes and Imitations.

CAUTION: Be sure the word "Horsford's" is on the label. All others are spurious. Never sold in bulk.

Direct Fast Express Route
TO THE MEDITERRANEAN.

First-class Passenger Steamer Service between

NEW YORK and GENOA, ITALY,

BY THE

NORTH GERMAN LLOYD
STEAMSHIP CO.

TIME, LESS THAN ELEVEN DAYS.

To meet the demand of the American public for some direct and expeditious means of reaching the shores of the MEDITERRANEAN during the FALL and WINTER months by steamers of the same standard of speed, comfort, excellence of service, and cuisine that marks the Express service of the NORDDEUTSCHER LLOYD S. S. CO. between New York, Southampton, and Bremen, this Company have decided to despatch two of their well-known Express steamers from NEW YORK to GENOA, ITALY

The fine, fast steamers FULDA and WERRA of 5,000 tons and 7,000 horse-power have been designated for this service, and will sail from NEW YORK for GIBRALTAR and GENOA at regular intervals;

FULDA, Feb. 6, March 12, April 16.
WERRA, Feb. 27, April 2, May 7.

The time from NEW YORK to GENOA by these Express Steamers is less than ELEVEN days.

The traveller can reach ITALY and the shores of the Mediterranean by this route during the Fall and Winter months, without braving the Northern latitudes of the ATLANTIC, without crossing the Channel, and without tedious railroad travel.

From GENOA the traveller can proceed to CANNES, NICE, SAN REMO, MENTONE, MONTE CARLO, or any other health resort on the RIVIERA and to all points in ITALY, in a comparatively short time by rail.

Travellers bound for EGYPT, INDIA, CHINA, JAPAN, and AUSTRALIA can make connection at GENOA with the fine NORDDEUTSCHER LLOYD IMPERIAL MAIL STEAMERS that touch at that port on their way to the EAST, INDIA, CHINA, and AUSTRALIA.

Opportunity is offered the Winter sojourner in ITALY or in Southern France to return to AMERICA by the same route in the early Spring from GENOA, thus entirely avoiding the rigorous climate of Northern latitudes. Apply to

OELRICHS & CO., 2 Bowling Green.

Letters of Credit. We buy and sell bills of exchange on and make Cable Transfers of money to Europe, Australia, and the West Indies; also make Collections and issue Commercial and Travelers' Credits, available in all parts of the world.

Depositories.
FRANKLIN TRUST COMPANY, NATIONAL CITY BANK.

The firm of Messrs. JOURNEAY & BURNHAM of Brooklyn, Importers and Dealers in Dry Goods, was established in January, 1844, by Mr. Henry P. Journeay and Mr. Lyman S. Burnham. In the following year Mr. Hugh Boyd became a partner, and the firm remained unchanged until the death of Mr. Journeay a year ago necessitated a reorganization, and its conversion into a corporation was accomplished.

The reputation of the firm for honorable dealing and for the high class of goods which it handles has always been recognized, and its credit and that of the company succeeding it is the highest accorded by the Commercial Agencies of the country. It has over 50,000 patrons, not only in Brooklyn, but throughout the New England States, New York, New Jersey, Pennsylvania, and Maryland, and extending as far south as Texas and as far west as Iowa.

Its career has been one of continued prosperity, *the sales for upward of forty years past having amounted to over* $1,250,000 *per annum.* For the three months ending Dec. 31, 1891—the first complete quarter of the corporation—its gross business amounted to $386,965.17, being $71,943.48 greater than the business of the firm during the same period in the preceding year. The net profits for the quarter were $37,777.18, being at the annual rate of 8 *per cent. upon the Preferred Stock,* 12 *per cent. upon the Common Stock,* and a surplus equal to 5 11-100 per cent. upon both, making in all 13 11-100 *per cent. upon the Preferred Stock and* 17 11-100 *per cent. upon the Common Stock.* It is, however, expected that the business will show a much greater increase after March 1, upon which date the company will remove from its present limited and inconveniently located premises on Atlantic Avenue to its new and commodious building now nearly completed at the junction of Fulton Street and Flatbush Avenue. This site was selected after due consideration, and it is believed to be the most advantageous location in the city of Brooklyn for a dry-goods business. It is reached by seven different lines of street-cars, is opposite the stations of both elevated railroads, and within two blocks of the Long Island Railroad station, whereas the present location is reached by but two lines of street-cars. The removal is in response to a popular demand, and universal assurances of approval have been received of the contemplated change.

The company is managed, under the control of its Board of Directors, by the surviving members of the late firm, aided by its well-known, reliable, and experienced staff of employees. Messrs. Lyman S. Burnham and Hugh Boyd, and Mr. John M. Conklin, for many years associated with the late firm, have entered into an agreement with the company to remain in its service until July 1, 1896, and for such longer period as their services may be required.

The stock now offered is the balance of that issued by the company to acquire the interest of the deceased partner. The 8 per cent. stock which was offered in July last was largely oversubscribed, and was allotted pro rata among nearly six hundred applicants. It is now quoted at 106 ex-dividend bid, with no stock offered.

CONDITIONS OF SUBSCRIPTION.

Ten per cent. upon application, balance within ten days after allotment. The right is reserved, should the applications exceed the amount offered, to allot a less amount than that subscribed for. Preference in allotment will be given, so far as is practicable, to the customers of the house.

Prospectus and form of application can be obtained from the undersigned, and applications may be made to them direct or through local banks.

WHAT GOOD JUDGES SAY ABOUT
AN INTRODUCTION TO POLITICAL ECONOMY.

By RICHARD T. ELY, Ph.D.

"It is, I think, the best elementary economic treatise which I have read. How clear and simple it is." —*Emile de Laveleye, Professor of Political Economy, University of Liege, Belgium.*

"I think I can use it better than any other as an introduction to economic studies." — *Edward W. Bemis, Professor of Political Science, Vanderbilt University, Nashville, Tenn.*

358 Pages, with copious index, a series of questions and exercises for self-examination, and valuable suggestions for study and courses of reading.

Crown 8vo. Cloth, $1.00.

HUNT & EATON, Publishers,
150 Fifth Ave., New York.

A MANUAL
OF CONGRESSIONAL PRACTICE.

Or, THE U. S. RED BOOK.

By T. H. MCKEE (Superintendent Document Room, H. of R.). An outline of the Legislative and Parliamentary Proceedings, or review of daily practice in the Senate and House, showing in minute detail the methods of legislative work, with all the various forms used, in *facsimile.* Highly indorsed by Members and Senators.

Royal 8vo, 398 pages, red roan binding, $3.50.
Published by W. H. LOWDERMILK & Co.,
1424 and 1426 F Street, Washington, D. C.

The Nation.

NEW YORK, THURSDAY, FEBRUARY 11, 1892.

The Week.

MR. BLAINE'S letter announcing that he is not a candidate for the Presidency has been so generally discounted that it will not cause any sensation. Every well-informed person has known since his break-down last May that he was physically incapable of filling the Presidency, and that the excitement of a campaign would be more than he could safely encounter. It has therefore been only a question of the time when, and the manner in which, he would announce the fact that his name would not go before the Convention. He has put off writing the letter as long as he could, and when he did write it he made it as curt as possible. There is not even the slightest reference to the Administration of President Harrison, and it is easy to perceive the writer's attitude of contempt towards his nominal chief. All that he has to say, after thanking his friends for their confidence, is that he is sure they will "make earnest effort in the approaching contest, which is rendered specially important by reason of the industrial and financial policies of the Government being at stake"; and that "the popular decision on these issues is of great moment and will be of far-reaching consequence." Indeed, the letter is as short and tart as it could well be made.

After taking two weeks to think it over, the acting Secretary of the Treasury, Mr. Spaulding, has concluded that he must reckon in the Treasury statement the expenses on account of the national-bank fund, and so he now admits a deficit of about $250,000 for the first six months of the fiscal year, instead of the surplus of $7,000,000 which he reported to the Ways and Means Committee on January 23. On that date, he also admitted that the cash in the Treasury used for the purpose of meeting the requirements of the sinking fund had not been included in the expenditures. He said that about $10,000,000 out of the "apparent surplus of $24,000,000" would be needed to provide for those requirements. Last Saturday he stated that during the first six months of the fiscal year $29,986,256 had been turned over to the sinking fund. Secretary Foster, in his annual report, estimated the total sum which would be needed for that purpose at $48,913,025. So here is a discrepancy of about $10,000,000 between him and his subordinate. We recur to these conflicting statements to show how impossible it is to accept any of them as exact, and in what an insecure condition our national finances now stand.

Those solemn editors who profess not to be able to see anything funny in the inglorious close of the late unpleasantness with Chili, ought to read the current debates in Congress. The surest way for any speaker to raise a laugh is to make some reference to that case of acting under the duellist's code without abiding by its rules. Republicans, too, resort to it as well as Democrats. Thus, Congressman Bowers the other day, in defending the Billion-Dollar Congress, gave a humorous turn to his remarks by saying that, but for the large appropriations, we should not have been able "to send an ultimatum to the Indians in Patagonia." The laughter which such sallies evoke in the House and in the country in general is really one of the best proofs the Chilians could have that this nation at heart cherishes no unkind feelings towards them. If there had been any genuine war feeling in the country, it would not have blown off as it did, in a hearty guffaw and a sense of relief, when it was found that the President was able to get in a threat of war only by turning his back on assurances of peace and rushing to the fray with his eyes shut. We hope that Minister Montt and the other intelligent Chilians now in the United States will not fail to observe how conclusive this evidence is, or to point it out to their countrymen. It is safe to say that, outside of politico-naval circles, and apart from boys and those who take the boyish view of a war, there was absolutely no sentiment in this country in favor of fighting Chili for any of the real or imaginary offences alleged against her.

Ex-Senator Ingalls added one more to his cynical exposures of Republican schemes in the remarks he made in Chicago last week about the real purposes of the Warriors. He said that "the supposititious trouble with Chili was manufactured by people who have a direct interest in securing a big appropriation from Congress to build an expensive, useless, unnecessary navy. It was the annual war scare which is gotten up by those same people just about the beginning of every Congress." There has already been a good deal of justification for such an opinion in the quiet laying of fingers alongside noses indulged in by navy contractors, and in the haste with which a naval appropriation bill has been introduced in the Senate. Nor can there be any doubt that Ingalls reflects a great body of public sentiment in the West in his further observation:

> "A navy will only get us into trouble, just as the *Baltimore* did. There is no necessity for this country sending a lot of war-ships swaggering around the earth saying, 'The United States must be respected!' The United States is respected without any bullying of that sort. Nations are like individuals. A blustering fellow who goes around with a revolver in his hip-pocket and a bowie-knife down his boot-leg, is more apt to get into trouble than a quiet citizen who goes unarmed and minds his own business. The United States does not need to play the rôle of a 'bad man.'"

Many of the Western Republicans in the last Congress were very reluctant to vote for the increased naval expenditures. In fact, some of them did at first vote against the increase, and it was not until the *Tribune* had lectured Mr. Peters and the rest of them for their "prairie idea of a navy" that the bill went through. We think that the ridiculous finale of the Chilian imbroglio will considerably strengthen the prairie idea in the present Congress.

We find in the Washington despatches to the *Times* a fresh example of the kind of things the navy is ready to do for us now that it has no chance to bombard Valparaiso. It is described in these words:

> "'Probably the only chance of getting Mole St. Nicolas is to wait for the next Haytian revolution, which can be counted upon to occur before long, and then make the cession of the Mole the price of recognition by the United States of one side or the other. That is practically what was done at the time of the last revolution, but Mr. Douglass let it get away from him. In case such a bargain is made again, it is probable that immediate possession will be taken by the United States, and no opportunity will be given for the Haytian Government to back out of its contract."

This has the true piratical ring. Wait till your neighbor is in trouble and then seize his property. There is just one improvement that we could suggest, and that is to stir up some trouble in Hayti in order to make a pretext for taking the property. There is generally one Government of Hayti on that island and another on some neighboring island—Jamaica for example. Why not go to the latter government and make a bargain to put it in power on condition that it hand over the Mole St. Nicholas to us? This is about the same thing that Mr. Douglass tells us was done before, and might have succeeded had we not been pushing a steamship-subsidy job on the Haytian Government at the same time. Of course we should not make the mistake the second time of having an over-scrupulous Minister at Port au Prince.

Mr. Hill continues to neglect his duties as United States Senator at Washington, and spends week after week of the session at Albany, in order to "set up" the caucuses which will send delegates to his "snap" convention of February 22. The attention of the whole country is called to this shameless performance by the proceedings in the Senate on Monday. It was the day set for action on the nomination of a postmaster for Elmira, the Senator's home. He had objected to the President's choice, and had asked to have consideration of

the important matter postponed until he could be present. In accordance with the demands of "Senatorial courtesy," postponement was twice granted. When a third request for delay was made on Monday, and the Senate was asked to wait until the 24th of February, when the midwinter convention would have been held, even his Democratic colleagues were so much disgusted that they refused to comply with the impudent request, and final action in the matter was taken. As though to emphasize Hill's flagrant neglect of his duties at Washington, word comes from Albany that he has had to leave the quarters which he had taken in a respectable private house there, because the decent people who live in it could not stand the goings-on of the gang of political "strikers" who are his only visitors, and that he has had to go to the Delevan House, where he is appropriately quartered in Tweed's old rooms.

The simple facts about Mr. Hill's career are, that he learned his first lessons in political methods from a man who was first dismissed from the Union Army and was afterwards a convict; that his chief weapons in political warfare have always been bribery, trickery, and party treachery; that he has habitually formed his political alliances with the worst elements of society; that he has from his earliest manhood to the present moment never associated with the respectable elements of society, but with the base and depraved; that he has conferred the public offices within his gift upon the men who were most willing and unscrupulous in doing his political work; and that the theft of the control of the State Senate, with which he has ended his career as Governor, is the logical and fitting culmination of a busy lifetime of political crime. That such a man should presume to offer himself as the candidate of a great party for the Presidency of the United States is the most astonishing event in our political history. Nothing approaching it has ever happened before, or is likely ever to happen again, for it is preposterous to assume that the experiment can meet with anything except overwhelming rebuke and failure.

We understand that the perplexity of the Tammany and Hill people over Gov. Flower increases daily. They say they have to watch him in eight-hour shifts, lest by some bad blunder, committed when alone, he should in some manner damage the great cause they have at heart. They nominated him, doubtless, knowing he would be subservient, but they now see that there is such a thing as too great subserviency even in a tool. He may at any moment, by some display of excessive and foolish zeal in their service, still further aggravate the difficulties of their position. But he can hardly do worse out of his own head than they have made him do already. The appointment of Mr. Maynard to the Court of Appeals was undoubtedly imposed on him by the Mentors. Mr. Flower would hardly have thought of it himself; and yet what a stupendous piece of folly it was as a preparation for a meeting between the Democracy of New York and that of other States. Nothing approaching it in flagrancy has been perpetrated in this part of the world in the worst days. As bad judges as Mr. Maynard have sat on the judicial bench in this State, but not on the bench of the Court of Appeals, and as bad judges as he have got nominations, and have been elected by the people in ignorance or indifference. But no Governor has ventured to *appoint* such a man to a seat in any court of record.

It is good news that an investigation of the Pension Bureau is at last to be undertaken in earnest by the Democrats of the House. It is one of the worst scandals of the Harrison Administration that a discredited politician like Raum should have been retained as the head of this important department of the Government after conclusive evidence of his gross unfitness for the place had become public, despite all the efforts at concealment and whitewash. An official exposure of his misdoings ought to force action even from a President who does not believe in dismissing a man when he is "under fire." An equally searching investigation ought to be made into the no less notorious and discreditable management of the Census Bureau by Porter. That shrewd spoilsman has done his best to avert trouble by giving a good many Democratic Senators and Representatives slices of the "pork," but we shall not believe until we are forced to do so that a House with a Democratic majority of 150 will let him off for that.

Besides the advantage of economy in money which the new bill to regulate the Government printing proposes, an economy of the patience of those who read the *Congressional Record* is also contemplated. The economy in printing is to be brought about in various ways, such as the prevention of duplicate printing and reprinting. Senator Gallinger brought out the fact that the entire Blair Bill was printed seventeen times in the House during the last Congress, having been introduced by seventeen different members. Such an outrageous practice is to be cut off. More than that, a great saving is to be effected, if the bill passes, in the mere form of reporting motions and the action thereon. One of the official reporters of the House has made a calculation which shows that in the last Congress 131½ columns of the *Record* were filled with useless verbiage in regard to the single motion for "reconsideration" in the House alone. The case is as bad with many other stereotyped forms which it is proposed to give authority to the printers of the *Record* to reduce to the simplest terms. Indeed, Senator Sherman went so far as to suggest the employment of an editor of the *Record*, authorized to wield the blue pencil mercilessly. He admitted that the position would require "the most courageous man in America," and feared that even so he would be killed off within a week. The discussion was of value, at any rate, in drawing public attention to the immense heaps of rubbish that leave the Government printing-presses only to rot in the basement of the Capitol or in junk-shops, and in showing the ease with which, as Mr. Sherman observed, the annual printing bill could be cut down by from one to two million dollars.

There has been extraordinary delay on the part of the protectionists in identifying and locating the "hundreds of new industries" brought into existence by the McKinley tariff, and in reporting cases where it has caused a rise in wages. This delay has been naturally attributed to the non-existence of the necessary facts, and we were, therefore, somewhat surprised that the Syracuse *Journal*, in reporting an increase of wages at the works of the Solvay Process Company in that city, did not make the usual protectionist claim. The manufacture carried on by that concern resembles to some extent that of a blast furnace, the works being necessarily operated continuously, and it has been the custom for the men to work in shifts of eleven and thirteen hours. Recently, however, the company issued a notice to its workmen to the effect that, "in appreciation of the long hours of work and of the faithful service of the shift-workers," and desiring "not to be outdone by others in caring for the welfare of its employees," it proposed to make three shifts instead of two, the men to receive 9¾ hours' pay for eight hours' work. The change, which was submitted to the workmen's vote, involves the employment of about 25 per cent. more hands, and an increase in the amount of wages paid of about 20 per cent. The reason why the glory of this change has not been attributed to the tariff appears upon examination. The products of the concern are soda-ash, caustic soda, and bi-carbonate of soda. The McKinley Act left the duties upon the two former products unchanged, and reduced the duty upon the bicarbonate from 1½ cents to 1 cent a pound. It looks as if the managers of this concern thought it more profitable to apply their money to the payment of increased wages than to contributions to the Wanamaker and Quay campaign fund.

Morris, the Louisiana lottery man, is learning the disagreeable lesson that nobody trusts the word of a gambler, no matter if he be a millionaire. The anti-lottery people in his State are inclined to regard his letter, which ostensibly aban-

dons the fight for a new charter, as only a ruse to secure the withdrawal of the opposition to the lottery; and they think that the supporters of the lottery expect to secure a majority of the Legislature to be elected in April, when they will at once call a Constitutional Convention, frame a new Constitution for the State, chartering a lottery company, and declare it adopted without submitting it to the vote of the people. For this reason the anti-lottery party will keep up its fight as determinedly as though Morris had made no announcement. Both parties, moreover, are preparing for the spring election as though it were to be a battle, and consignments of weapons are arriving by steamer at New Orleans for distribution through the State.

Meanwhile the thing to do is to secure the passage by Congress of the proposed law taxing lotteries so heavily that nobody will hereafter be able to make them profitable. If Morris & Co. propose, as they apparently do, to keep at work until the end of 1893, the law is needed immediately for effect in their case. It has been hastily assumed by some people that the recent decision of the Supreme Court, declaring the constitutionality of the anti-lottery law passed by the last Congress, put fresh obstacles in their way. As a matter of fact, however, the law has been in existence and has been enforced for a year and a half. It undoubtedly reduced the profits of the lottery, but they were still large enough to make it worth while for the managers to offer $1,250,000 a year for a new charter—an offer which was, of course, made with the knowledge that the Supreme Court might render such a decision as has just come from it. It needs to be supplemented by a tax-law such as has already been introduced. Even if Morris and his associates were to surrender now, such a law should be on the statute-book as a warning to all that lotteries will not pay hereafter in this country.

A Corrupt Practices Bill has been introduced again in the Massachusetts Legislature. The first appeared in 1889, and, like its successor in 1891, passed one house of the Legislature only to meet its death in the other. The present bill is substantially the measure which was presented last year, only a few unimportant changes having been made in its provisions. It relies solely on public opinion for its success in practice, as all its provisions relate to the securing of enforced publicity of expenditures. All campaign committees or organizations are required to have treasurers, and to keep detailed accounts of all moneys, securities, and equivalents of money received, and of the manner in which the same is expended, and to publish sworn returns of both receipts and disbursements after election. Every candidate is required to make similar returns. No limit is placed to expenditures by candidates, as is proposed in Senator Saxton's new bill, but blank forms are given in which the exact amounts expended for all the most familiar campaign uses must be set down. The Supreme Judicial Court and the Superior Court are given full equity powers to compel delinquents to comply with the law, and to advance such proceedings upon their dockets.

Mr. Chamberlain's accession to the leadership of the Liberal Unionists in the House of Commons will give special prominence, no doubt, to his Socialistic schemes. He very likely had these in mind on Monday when he rubbed the vinegar into the wounds of his Tory associates by saying explicitly that he took the position of leader as a Liberal. His plans for better housing of the poor and for securing small leaseholds to tenant-farmers are apparently to give way, for the present, to his project of State pensions for the aged. On that subject he contributes an article to the February number of the *National Review*, in which he sets forth the details of his plan—a plan which is subjected to a most destructive criticism, from the financial and practical point of view, in the London *Economist* of January 30. In general, he would imitate the German plan of providing an old-age insurance for workingmen upwards of sixty-five years, by payments from an accumulated fund to which the workingman himself, his employer, and the State should contribute in equal proportions. He objects to the present system of post-office annuities that it requires payments which a great many laboring men, with only "a week's reserve between them and starvation," are utterly unable to make; but the *Economist* shows that, on his own plan, fully as large or larger payments would often have to be made.

Mr. Chamberlain is by no means the father of this scheme in England. Its history is detailed in the last number of the *Economic Review* by Mr. L. B. Sladen, who traces its advent in Great Britain to the indirect influence of recent German and French legislation, and directly to the agitations of the National Providence League, originated by Canon Blackley. In 1880 that organization was advocating a system of workingmen's insurance against both old age and sickness, and in 1885 a select committee of the House of Commons was appointed to consider its proposals. The committee decided against the sick-pay plan, and this led the League to drop that part of the project. Canon Blackley's original scheme was to compel every person between the ages of eighteen and twenty-one to pay over to the State £10, while in return the State was to act as a banker and guarantee a pension of five shillings a week in old age. The obvious difficulty of compelling people to pay who did not want to has finally led the Canon to abandon that plan in favor of the German method. On the other hand, Mr. Charles Booth has brought forward a definite plan of pensioning aged workingmen by a system of national taxation exclusively. He estimates the proportion of paupers in the population above sixty-five to be 38 per cent.; but he uses the word "pauper" of every person who has received even the smallest parochial relief during the year—no more, for example, than a bottle of medicine; and he admits his statistics to be thus insecure. But he reckons that an old-age pension of five shillings a week could be paid in the whole United Kingdom, including working expenses of the system, for £26,000,000 per annum, which would demand an addition of 1.7 per cent. to the income tax. There is no likelihood whatever of such a scheme being put into operation, at least not until sufficient time has elapsed to judge fairly of the working of the German system. Prof. Geffcken has pointed out that the cost of the actual administration of that system is likely to be very much in excess of what was estimated.

The tendency of German tribunals to strain the law for the restriction of the liberty of the press finds another forcible illustration in the recent attempt of the prosecuting attorney in Berlin to make not only the type-setter and proof-reader (as was decided last year by the Supreme Court of the Empire at Leipsic), but also the machinist who runs the press, legally responsible for what a paper prints. In the present case the incriminated matter is a politically offensive engraving, for the existence of which the Imperial Government wishes to punish as many persons as possible in order to terrorize the censorious. According to the letter of the law, not only the author or editor of an improper publication, but also "the publisher, the printer, and any one who sells or publicly disseminates it," are regarded as culpable and may be called to account; but no mention is made of type-setters, proof-readers, or other persons performing mechanical functions in the production of the objectionable work, and it is evident that the framers of the law never contemplated such an application of it. This arbitrary construction of a legal enactment is based upon the forced interpretation of the phrase "causal connection," which might as well be pushed further and made to include the paper-maker, the rag-picker, the manufacturer of the press, and the printer's devil. Indeed, every purchaser of a newspaper sustains a certain causal connection with it, and might be implicated in its criminalities as an accessory after the fact. The incident has called forth indignant protests from the German press, and is noteworthy as indicative of the spirit that begins to prevail in high official circles at Berlin, as the result of the Emperor's influence, and threatens to corrupt the fountains of justice.

THE HOUSE RULES.

THE debates on the rules of procedure of the House of Representatives have been marked by little of the acrimony and excitement which characterized the discussions of the same subject at the opening of the Fifty-first Congress. This has resulted partly from the fact that no such sweeping changes in the rules as were brought about by Speaker Reed were contemplated, and partly from the fact that the Democratic majority is so overwhelming as to reduce to a minimum the temptation to gain a partisan advantage by manipulation of the methods of legislating. Just here was where Mr. Reed made a great mistake. Conceding for the moment the force of all his arguments in favor of granting the Speaker power to count a quorum, the change was introduced at a time when, in fact, it did confer an immense advantage upon his party, and when it could not escape the imputation of being founded upon partisan considerations, and not upon an impartial desire to improve parliamentary practice. No such imputation can lie, except in one particular which we shall mention, against the present proposals of the Democrats in the House, since they have at command a two-thirds vote to suspend any rules which might stand between them and any desired legislation.

The rejection of the quorum-counting power of the Speaker was, of course, a foregone conclusion. Mr. Reed and his party colleagues advocated its retention, as was to be expected, and he, for the first time, we believe, took occasion to explain, or to attempt to explain, the flat contradiction between his expressed views on this subject in 1880 and in 1889. The explanation was little more than a grudging confession that he had changed his mind. But the debate on this question, though forced and spiritless, at least brought out and put on record the fact that the power of the Speaker to count a quorum was exposed to absurd mistakes and open to dangerous abuse. Mr. Reed himself admitted that one member of the Fifty-first Congress had been counted as "present but not voting" who was, in fact, not even "present" in the city of Washington at the time. The present Speaker was once similarly counted, when in reality he was in his room in the Metropolitan Hotel; and Mr. Reed made no denial of the assertion of Congressman Alderson: "I am here to say that the records of the Fifty-first Congress show that gentlemen not present were counted as present, and were not even permitted subsequently to have the privilege of stating in the *Record* that they were not present." From such absurdities, at least, the present House will be free.

Neither will Speaker Crisp be given the immense power conferred upon Mr. Reed in the preceding Congress by the rule which enabled him to refuse to entertain a dilatory motion. Left entirely to himself to determine what a "dilatory" motion was, Mr. Reed made a set of rulings on the subject which not only were contradictory, but even so seriously impaired the privileges of members as to refuse to allow them to correct the *Record*, to make a personal explanation, or to appeal from the decision of the Chair. This rule found no place in the recommendations laid before the present House, and was rejected when moved as an amendment by the Republicans. Yet a very strong rule was reported for the prevention of filibustering. It reads as follows:

> "It shall always be in order to call up for consideration a report from the Committee on Rules, and, pending the consideration, the Speaker may entertain one motion that the House adjourn; but, after the result is announced, he shall not entertain any other dilatory motion until the said report shall have been fully disposed of."

In the course of the debate on this rule a great deal was said by the Republicans about Democratic inconsistency. Here, they alleged, was the overriding of the rights of the minority so vehemently denounced when practised by a Republican Congress. Yet as they could not, if they were to be consistent themselves while charging others with inconsistency, object to the principle of the rule, their opposition was necessarily resolved into a taunt. As to that, Mr. Catchings of Mississippi said, doubtless with truth, that the repression of filibustering had long been desired in some form or other by the more experienced members of Congress. He said that "it was a matter of common talk among us on this side in the preceding Congress [the Fiftieth] that we were sitting here like children and babies." He had in mind such scenes of wanton filibustering as the Republicans indulged in to prevent Mr. Carlisle from being seated.

> "I assert," said Mr. Catchings, "that if the Democrats had carried the last Congress, there would have been a provision something like this. . . . I want to make another statement. The impression went abroad that in the last Congress the Democratic members of the House opposed the rules proposed by gentlemen on the other side because they sought to lodge the power in the Speaker, or somewhere, to bring business to an end when it had proceeded sufficiently long. I have gone through every debate on that subject, and I assert now that no gentleman who addressed this House on this side of the chamber uttered a single word which suggested that the House should be denied the power to close debate under suitable circumstances. The whole avalanche of debate on this side of the House was directed against the method suggested by gentlemen on the other side. My friend from Maine [Mr. Reed] smiles at my statement. I reiterate it, and repeat now that not a solitary word was uttered in debate by any gentleman on this side which sought to deny that the House should have this power."

That there is an essential difference between the rule in question and the method employed in the last Congress is perfectly clear. As Mr. Bland put it:

> "The rule of the Fifty-first Congress vested in the Speaker of this House the power to gag this House by his own ruling. That I would never do, or anything like it. . . . This simply says that the Speaker and his Committee on Rules may report to this House a rule by which legislation may be facilitated, and that question is submitted to the House itself, and not to the Speaker."

And Mr. Goodnight brought out excellently the nature of the rule as a club in reserve against the filibuster when he said:

> "For a long period in the proceedings of this body, power was vested in one man on the floor as the filibuster; in the last Congress it was vested largely in one man in the Chair as the Speaker. Here is the compromise—not to vest the power in the Speaker, one man; not to vest it in the filibuster, one man; not to vest it in the Committee on Rules, a set of men; but to vest it in the House, by authorizing the Committee on Rules to ask the House whether it is its desire to proceed with business and its desire that the filibuster be stopped."

The acceptance of Mr. Holman's pet rule admitting of "riders" on appropriation bills, provided they are "germane" and reduce expenditures, we must regard as unfortunate and mischievous. Whatever excuse for such a provision there may have been in the days of military rule in the South no longer exists, and we see no defence for it. It is an indirect way of doing what the House would not dare to do directly—that is, to say to a hostile Senate and President: "Consent to such and such legislation, or we will give you no money to run the Government." It may not be an unconstitutional proceeding, but it is certainly extra-constitutional, and therefore highly dangerous.

One excellent rule was moved as an amendment by Mr. McCreary, and accepted by the Committee on Rules, and says:

> "It shall be the duty of the several committees having jurisdiction of the general appropriation bills to report said appropriation bills (except the General Deficiency Bill) within eighty days after the committees are announced in a long session, and within forty days after the commencement of a short session; and if any committee fail so to report, the reasons of such failure shall be privileged for consideration when called for by any member of the House."

Mr. McCreary showed how this rule had been in force for twenty-one Congresses, but how, since 1880, the appropriation bills had been reported later and later, in July and August even, with the consequent blind rush and insufficient consideration which have marked the legislation of the last hours of so many sessions in recent years. If the rule is enforced, it will lead to a change in this particular greatly for the better.

Also worthy of commendation is the rule urged by Mr. Dingley and finally accepted by the Democratic majority, giving immediate consideration to any bill returned from the Senate with amendments, instead of sending it to the foot of the calendar.

AUTHORITIES IN PRACTICAL POLITICS.

WILL there be, twenty years hence, anybody left in this community who will receive any attention as an authority touching the drift of public opinion or the probable result of any State or Federal election? In view of the astounding blunders made every year on these points by men who cultivate most carefully the art of political forecast, it is difficult to answer this question in the affirmative. There has probably never been a man in this State who cultivated practical politics more carefully than Tweed, in the two great political

kitchen gardens, Albany and New York, and yet he made a prodigious mistake concerning the amount of his kind of politics the public would submit to. Another illustration of this want of perspicacity on the part of an exceedingly keen politician —an illustration which we have already cited—is Mr. Reed's course in the Speaker's chair in the House. After extraordinarily good opportunities of testing the popular temper and taking the public judgment on his own work, he appears to have left the chair in October, 1890, and awaited the Congressional elections of the following month in a state of utter delusion about the (to him) most important political phenomena of the day. Mr. Blaine is another example of the same thing. No such training in the art of finding out where one stands in popular estimation has ever been enjoyed by any man as he has had, and he has had the aid of the shrewdest party augurs in the country. But, for all this, he evidently in 1884 did not know where he stood. He found himself weak where he thought he was strongest, and strong where he expected to be weakest. He cut down heavily the party majorities, for instance, in States in which the enthusiasm for him seemed greatest. We need not recall the error of the venerable Mr. Charles A. Dana of the *Sun* touching the vote in New York city in the Presidential election in that year, as that enjoys a world-wide fame, being an error of 129,658 in a total of 136,656. The annals of mathematics, to say nothing of politics, contain nothing like this. Coming down to the last State election, we find, too, one of the oldest and most skilful politicians we have still among us, Mr. George Bliss, making a mistake of about 70,000 in a total vote of 1,165,000. This error is not as large as a church door, and cannot approach the venerable Dana's, but it is enough to reflect unending discredit on a great reputation.

We might multiply these illustrations almost indefinitely. We use them at all simply to bring us to the case of Hill. Hill has had the longest career as a trickster of any man in the history of the State. There is no mode of doing it or not doing it, in the field of what is called machine politics, which he has not successfully tried. He has in this field apparently achieved all that Tilden achieved, without any of Tilden's aids in the shape of a high position at the bar, the possession of a great fortune, and considerable reputation as a reformer. He has during the past seven years passed with ease from triumph to triumph, each of them more open to public reprobation than the previous one, until finally he convinced a large number of respectable men that, "say what we will," he, and not Cleveland, was the man to retrieve the fortunes of the Democratic party in this State. He persuaded hundreds of these people that his powers of trickery and intrigue, known as "management," although known only in this State, were a far more valuable possession to the party in the nation at large than Cleveland's prestige as the first candidate under whom the party had won in twenty-five years, and the first leader to furnish it with a platform which had attracted tens of thousands of quondam opponents.

Within a few weeks, all this has been changed. It is now difficult to find a respectable man to do Hill reverence or to say a good word for him. Everybody seems to have lost confidence in his methods—nobody ever had any confidence in the man himself—and we are witnessing a movement, which will undoubtedly be successful, against him as a politician who would lead the party to its ruin next fall. Now all that he has done to merit this downfall has been to keep straight on in the course he has been pursuing for the last seven years. Not a single departure from it has he made. Everything he has been doing at Albany during this period was a natural and legitimate preparation for the selection by himself exclusively of the State delegation to the National Convention, and, having this power of selection, it seemed proper, or of little consequence, that he should fix the period of electing them. Consequently, we have no doubt that he feels some honest indignation to-day at the proposal to strip him of his powers and dismiss him from the party service in disgrace.

But, what is the mistake he has made? Why, exactly the mistake that Tweed, Blaine, and nearly all the other Bosses have made, or are sure to make in the long run—the mistake of supposing that because the public stand some things from a politician, they will stand everything. One of the most valuable elements in the success of all the political charlatans on both sides is the absorption of voters in their private affairs, and the unwillingness to turn aside to take part in fights that are not likely to be decisive. This is now an old story. We claim no originality for it as an explanation, but it does explain a very large number of American political puzzles. It is almost impossible to get men in a city like this to deal with a tumor like Hill in the beginning by taking medicine. They let him grow and grow till he comes to a head, and then they are astounded by their own supineness and lance him. But how unjust to our charlatans this is! Into what excesses it lures them! What damage, too, the prolonged success of such careers, with public condonation and connivance, must do to the ideals of the younger men who are thinking of public life. Hundreds and thousands in this State have already begun to admire Hill, and some to imitate him, with the permission, if not applause, of their seniors. How hard it must be for many of them to cleanse their bosoms of such perilous stuff, even after he has been found out and discarded.

FREE SILVER.

A MEETING of the free-silver members of the Coinage Committee was held at Mr. Bland's house on Saturday evening, at which it was resolved to report a bill in accordance with their views without delay. Notwithstanding this menace to the business interests of the country, the public mind is quite indifferent to the meeting, and also to the weekly meetings of the full Committee, at which testimony of one sort and another is taken on the silver question, and the old straw thrashed over for the hundredth time. The explanation of this indifference is that the people do not consider the free-silver movement at Washington serious. They see plainly enough that certain members of Congress are under the necessity of stirring around and making a show of activity for silver—all this for home consumption—but they see, also, that the Democratic party is not going to disembowel itself at the beginning of a Presidential campaign. They see, too, that, if it should do such a thing, free silver would not result from that performance during the present session of Congress. Hence the little interest that is taken in the meetings of Mr. Bland's Committee.

These committee meetings are worth following, however, since they show us what is running in the minds of the members. They had Mr. Leech, the Director of the Mint, before them the other day. While this gentleman was on the witness stand, Mr. Bartine of Nevada made it very clear that he wanted to have all the loose silver in the world, and all that comes into the world hereafter, "taken off the market" in order to improve the price. Among other queries put by Mr. Bartine was this:

"Suppose there were none at all on the market, would that have an effect on the price?"

Mr. Leech was obliged to answer that it would have a decided effect, but when Mr. Bartine went on to ask what would be "the maximum price" in that case, he replied that he should not like to say absolutely. He thought it would depend somewhat upon the intensity of the demand. Pushed a little further by the Nevada member (who put the hypothetical case that the Government should buy *all* that was offered and hold it), Mr. Leech said that "It would probably remain at the price we paid for it." Mr. Bartine's curiosity was not even now satisfied, but he did not succeed in getting any figures that it would be safe to speculate upon. One of his queries, however, showed that he considered free coinage to be the same thing in effect as our buying all the silver in the world and all that may be mined hereafter. At least this is what we infer from the following question put by him to Mr. Leech:

"Suppose there were open mints. I am putting a hypothetical question. The silver simply flows into the mints. There is nothing left in the form of bullion; and I ask you, in that case, upon what the market price of silver would be based?"

Mr. Leech referred his questioner to the country immediately south of us, and said that there was an open mint in Mexico,

but that that did not prevent silver from having a market price. Whereupon Mr. Bartine expressed surprise that anybody could compare Mexico with the United States. Besides, he said, Mexico is a silver-standard, not a bimetallic country. Continuing, Mr. Bartine said:

"The whole theory of bimetallism is this, is it not?—that under free coinage both metals, being coined, are thrown into the common reservoir of the currency, and just as long as they remain interconvertible, parity is maintained."

It is pleasant to have a short definition of the whole theory of bimetallism, and we must say that Mr. Bartine has given it to us in as few words as we could hope for. It prompts us to say that during much the larger part of the world's history—down to within a few years comparatively—free coinage existed in Europe and America, all the nations being engaged in "throwing the two metals into a common reservoir." Yet there was always a price for silver quoted in terms of gold, or of gold quoted in terms of silver, in the metal markets (a varying price), and, although they were interconvertible in theory, they were seldom so in fact. Parity was never maintained ten years consecutively either in France or in any other country.

What was running in the head of Chairman Bland was also made clear by the questions he put to Mr. Leech. He had an idea that the prices of commodities have been forced down by the demonetization of silver, and that the price of silver bullion itself has been forced down *pari passu* by the same cause. But when confronted with the fact that some commodities had not fallen in price at all, while some had fallen more than others, and that some had fallen and then had risen again, he took refuge in a grand average of "fifteen or twenty years," of which he appears to have the sole key. Mr. Bland did not tell Mr. Leech in what way his grand average decline in prices of commodities had been injurious to the laboring classes, or how they would be benefited by a general advance in the cost of the things they have to buy. He kept that secret also to himself.

Mr. Williams of Illinois appears to have had a gleam of sense during the examination of Mr. Leech, but whether it will do him any good or not is doubtful. He put this fetching question to the witness:

"If the value of the Treasury notes depends on the confidence of the people that they will be redeemed by the nation in gold, why not issue more greenbacks, instead of buying silver?"

Mr. Leech must have known that this interrogatory carried the whole philosophy of the silver question. He must have known, too, that Mr. Williams put it to him as an economical, and not as a legal, question. Yet he chose to answer it as though it were put to him in the latter aspect only. So he said, merely, "We buy silver under a law of Congress." But Mr. Williams was not entirely satisfied with this. So he asked: "Why would not paper money be just as good?" And again Mr. Leech avoided the point of the inquiry by replying that "the absorption of this large amount of silver by the Government has had a tendency to steady the price of silver." As this was not responsive to the inquiry of the member from Illinois, we will supplement Mr. Leech's answer by saying: "O wise Mr. Williams, paper money would be just as good, in fact better, since the national resources would not, in that case, be squandered in buying something which the nation does not want and cannot use. Granted the major premise that the paper outstanding based on silver is to be redeemed in gold, then is the silver itself useless, and worse than useless, for if it were not bought by Government, it would enter into our commerce and balance of trade, like wheat and corn and cotton."

UNBALANCED FOREIGN TRADE.

THE old phrases about "the balance of trade," and about the "favorable" or "unfavorable" nature of it, have not remained in persistent use in this country without good reason. Our economic system for the past thirty years has been based upon the fundamental ideas of the so-called mercantile system, and it is no wonder that it should have clung to the phraseology of that past stage of economic theory. Moreover, the statistics of our foreign commerce for many years have given much color to the view that exports and imports normally balance each other, since, in fact, they have generally come very near doing so. The totals of the two for a series of years come to about the same figure.

Of course, it is a truth, and a most important truth, that the exports of a country are paid for by imports, and so that the two, in a sense, must balance. But it is far from being true that such a balance will be revealed in the returns of commodities actually exported and imported. Yet it is this last which has been supposed to be true by publicists and writers in our country, and it is this which leaves them wholly aghast over the present condition of our foreign trade. According to the figures of the last four or five months, the excess of our exports over our imports amounts to something like $150,000,000. By the prevailing logic, this "favorable balance" must be paid over to us in gold, and the confident prophecy that a vast sum in gold was bound to come to us was made week after week by our financial authorities, all through the fall and early winter. Indeed, a suggestion, intended to be humorous, that the new navy ought to go and seize upon the gold Europe was keeping back from us, was seriously taken up by a Pennsylvania contemporary, which thus gave an unconscious illustration of the prevailing confusion of ideas upon the subject.

Prof. Bastable of the University of Dublin has a chapter on "Money and Indebtedness in Foreign Commerce," in his lately published manual entitled 'The Commerce of Nations,' and in it he discusses this whole question in a very illuminating manner. England, of course, furnishes the classical refutation of the "balance of trade" theory. For the last thirty-five years her balances of foreign trade have been steadily and enormously "unfavorable," and foot up for the whole period (1856–1890) the frightful sum of $13,250,000,000. On the theories now in vogue among us, and lately adopted in France, England should have been ruined several times over in the course of those disastrous thirty-five years, and all statistics and returns of wealth and taxation which go to show that, on the contrary, she has been growing richer all the while, should be set down as inventions of the devil or the Cobden Club. In addressing himself to the task of explaining this apparent anomaly in the statistics of trade, Prof. Bastable has attacked the hardest problem of the kind to be encountered anywhere, and the solution of it which he advances is well worth the consideration of those who are puzzling themselves over our own unwonted situation.

He begins by making the point that the usual and visible interchange of commodities between countries is not the only form of economic relation existing between them. For example, there are credit relations which make no figure in the returns of trade, and which yet powerfully affect the real status of the lending as related to the borrowing country. For many years the accumulated wealth of the United Kingdom has been flowing abroad and going into foreign investments. Now loans of that sort are, in Prof. Bastable's happy phrase, "an immaterial export." They go to pay in part for the excess of imports, not in the crude way of settling imaginary "balances," but in stimulating that prosperity abroad which results in increased shipments of goods to England. So far from arguing a disastrous condition of English trade, these increased imports only go to show how excellently English capital is employed in foreign countries.

Prof. Bastable also dwells upon the great influence which the industry of transferring commodities must have upon the wealth of those countries whose citizens engage in it largely. The services which they render in this way are also a kind of export. "A nation that possesses a share of the carrying trade of the world will so far have an excess of imports, which are the payment for the work done in this direction." Thus the excess of England's imports is naturally attendant upon her supremacy in shipping. The Professor asserts that careful observers give the sum of $300,000,000 annually as the amount that Great Britain can now set down to this account. He enumerates also several other circumstances that affect the course and figures of foreign commerce—such as remittances to absentees, Government payments abroad, earnings of for-

eigners sent home, etc. In short, he effectually disposes of the superficial idea that a country's international account can be accurately drawn from the books in the custom-houses, and, above all, stamps afresh the absurdity of the notion that it is a ruinous thing to get as big a price as possible, in imports, for what a nation has to sell in exports.

ANOTHER YEAR OF HARVARD.

A CLEAR note of progress and prosperity is sounded in President Eliot's annual report, just given to the public. More students than ever; greater surpluses here, smaller deficits there; no abatement in fresh endowments; marked increase in the collections of the great University Museum; new branches of instruction; further changes in the organization of the Faculty; a year added to the medical course—such are some of the evidences of good and even plethoric condition. For, on the other hand, how shall the multitude of students be cheaply lodged and fed? and what is to be done with an overflowing and overcrowded Library, with a Law School building already outgrown, and with law-books torn to tatters in the mad competition for the study of cases? In fact, even if immediate response were made to pressing needs, the time required for the slow process of construction is such that a period of embarrassment from excess of attendance and of growth is almost inevitable. But in this particular Harvard does not stand alone.

The accompanying official reports from the several departments afford a lively sense of the range of University equipment, studies and activity, and should be read by every educator, and by parents who wish to form their own opinion of Harvard. They are, of course, summarized in the President's report, but much of their impressiveness is lost in the process. We shall say no more about them, confining our remarks to a new appointment of a so-called Regent, whose functions are (for the college world) those of a chief of police and health officer. "He may also," says President Eliot, "exercise some salutary influence over students' societies." This is the only allusion to a recent attribution to the Regent by the Board of Overseers in consequence of an aroused public sentiment against a certain Greek-letter society at Harvard. That the public ought not to have expected the President to treat this subject directly and at length will appear from the fact that his report covers the year ending October 1, 1891—a date prior to the agitation against the D. K. E. We should ourselves refrain from reviving the discussion, temporarily closed by the action of the Overseers, if we felt sure that it would be noticed in the next annual report even by way of chronicle.

That the abuses exposed have persisted so long and so flauntingly may be explained in two ways: either the Faculty have felt powerless to cope with them, or they have disavowed responsibility for the morals of the undergraduates. That the latter position is tenable cannot be admitted. The compulsory prayers, now happily abolished, were clung to up to the last moment, for their alleged moral value; the voluntary services that replaced them are maintained to the same end, and a body of college Preachers has been created with a view to the closest possible ethical relations with the greatest possible number of students. The wholesome restriction and regulation of the athletic mania had a very large reference to the demoralization attendant upon student sporting contests—as in the opposition shown to the employment of professional coaches, etc. If the Harvard Faculty should imitate that of Yale in forbidding—or even discountenancing—the advertisement of liquors in the college papers, no one would think it an extraordinary interference. Or if, supplying a great desideratum, a hall should be built in Cambridge for student assemblies, and the Faculty should order all class dinners to be held there, and forbid wine as at the Commencement dinner, that, too, would seem only natural and salutary. In like manner it might legitimately throw its corporate weight against any attempt to revive saloons in Cambridge.

There was a time, some thirty-five years ago, when, secret societies having been abolished by the action of a class that deserves to be remembered, the Faculty ought to have resolved never to let them invade the College again, as it ought now, in our opinion, to repress every new one that raises its head. Societies whose end is secrecy have no place in student life, and produce incomparably more evil than good. They prolong both the childish age and the childish code of morals, which is essentially a savage code. The "running" and fagging exacted by the D. K. E., as illustrated in a late issue of *Harper's Weekly*, was submitted to from a perverted sense of honor such as small boys exhibit when they have pledged obedience to a domineering spirit among them. This "honor" led to public behavior such as dishonored breeding, family, and common gentlemanliness; and social prizes were actually awarded for rowdy dress and boorish antics. Even the crack athletes refuted the pretence that their pastimes foster manliness, by submitting to the degrading behests of fellow-members of the D. K. E., their momentary masters. As for the branding of the arm with cigar-stumps, it was, as a test of fortitude, on a par with suspension from the muscles of the back and breast among the Mandan Indians, as described by Catlin; and treatment hitherto reserved for cattle and slaves was courted or endured by the sons of freemen and gentlemen, the offspring of the highest culture, in an institution of the highest culture.

It is not our purpose to supply reasons why the Faculty have not long since made a determined attack on the D. K. E., or why they are content with concessions volunteered by a secret society alarmed by public exposure. We do not allege that the task is easy; but we are sure that it ought to engage the Regent (who may, however, well be a past member of the society in question), the college Preachers and Professors (some of whom are certain to be past members). What is easy, and has never been attempted, is to enlist *parents* on the side of the desired reform. Suppose we are told that if the evil thing is suppressed under one name, it will spring up under another, or that it will take on a still greater degree of secrecy, etc.; yet if its existence is merely suspected, the Faculty can denounce it and put parents on their guard. Such an intangible relic of hazing as "Bloody Monday" could have been reached by due warning. Let the Faculty proclaim a boycott, and every right-minded parent will take sides with it. The mode of doing this is of course by circular, and this the Preachers of the University have been allowed to use in support of their own special charge and interest. Why should the Faculty neglect to inform parents succinctly of the number, aims, and standing of student societies, with approbation or censure? Is it less proper or less important than to "advise" them "that eighteen years is a suitable age for entering Harvard College"; or to exhibit annually, in the Catalogue, tables of cost of living, with a more or less explicit admonition not to allow the student too much money for extravagant and corrupting misuse?

In several places in his report President Eliot intimates the leadership of Harvard among American colleges. It is on this account that we have chosen for comment a subject deeply interesting to the most of Harvard's sister institutions. As in the case of elective studies and voluntary religious devotion, the example set by Harvard affects, sooner or later, all rivals and aspirants; and this consideration should be a standing incentive to reform.

CARDINAL MANNING.

LONDON, January 21, 1892.

IN the Cardinal Archbishop of Westminster, who has just passed away at the age of eighty-four, England has lost one of the most interesting, or at any rate one of the most singular, figures of this generation, and a man who has contributed a new type to her already wide and various ecclesiastical life. Without being a personage of the first order, he will nevertheless deserve a place in the history of his time, having effected what greater men might perhaps have failed to effect, and being, indeed, an instance of the dictum that it is by no means the men of greatest intellect who effect most.

The salient facts of his life are probably known to your readers. He was the son of wealthy parents, educated at Harrow and Oxford, where he obtained high honors and a Fellowship; presently an English Episcopal clergyman, who soon rose to be Archdeacon

of Chichester, and, having by degrees been led further and further from his original Low Church position into the Tractarian Movement, ultimately, at the age of forty-three, went over to the Church of Rome. Having some time before lost his wife, he was at once re-ordained a priest, was appointed Archbishop of Westminster on Cardinal Wiseman's death in 1865, and raised to the Cardinalate by Pope Pius IX in 1875.

He was not a great thinker nor a man of conspicuous learning. In his writings there is neither originality nor any eminent logical weight and power; indeed, so far as purely intellectual gifts are concerned, he was not to be named with Cardinal Newman or several other of the ablest members of the Tractarian party, such as Ward and Dalgairns, who went over to Rome, and Dean Church, who remained an Anglican. Though he had won a high reputation at Oxford, he was not a leading spirit in the famous "Movement"; and he rose to eminence in the Church of England in virtue rather of his winning manners, his graceful rhetoric, and his zealous discharge of clerical duties, than of any commanding talents. Nor had his character the same power either to attract or to awe as that of Newman. Nobody in those days called him great; nobody felt impelled to follow where he led; there was nothing in him —either in his sermons or in his writings—which one felt to be majestic, or lofty, or profound. In short, he was not in the grand style, and wanted that note of ethereal purity or passionate fervor which marks the highest form of religious character.

Intelligent, however, skilful, versatile he was in the highest degree; cultivated, too, with a knowledge of all that a highly educated man ought to know, dexterous rather than powerful in theological controversy, an admirable rhetorician, handling language with that particular kind of art which Roman ecclesiastics most cultivate—an exact precision of phrase and a subtle delicacy of suggestion. He wrote abundantly and on many subjects, always with cleverness and with the air of one who belonged to the *âmes d'élite*, yet his style never attained high literary merit. There was no imaginative richness about it, neither were there the weight and penetration that come from sustained and vigorous thinking. Similarly, with a certain parade of references to history and to out-of-the-way writers, it gave little evidence of solid learning. He was an accomplished disputant in the sense of knowing thoroughly the more obvious weaknesses of the Protestant (and especially of the Anglican) position, and being able to contrast them effectively with the external completeness and symmetry of the Roman system. But he never struck out a new or illuminative thought; and he seldom succeeded in facing—indeed, seemed anxious to evade—a real difficulty.

What, then, was the secret of his great and long-sustained reputation and influence? It lay in his power of dealing with men. For the work of an ecclesiastic, and especially of an ecclesiastical ruler, he had three inestimable gifts—a resolute will, captivating manners, a tact equally acute and watchful, by which he seemed not only to read men's characters, but to discern the most effective means of playing on their motives. To call him a consummate intriguer would be unjust, because the word implies something dishonorable and probably also selfish, and the Cardinal was neither; but he had the talents which an intriguer needs, although he used them in a spirit of absolute devotion to the interests of his Church, and was too much of a gentleman to think that the interests of the Church justified any and every means. He had the art of seeming to lay his mind alongside of yours, anxious to know what you had to say, and prepared to listen respectfully to it, even though you might be much younger and of no particular consequence; yet you felt that he was watching you, and watching, in conformity to a settled habit, the effect upon you of everything he said. It was hard not to be flattered by this air of genial deference, and natural to admire the great man who condescended without condescension, even though one felt secretly disappointed at the want of brilliance or profundity in his conversation. Like his famous contemporary, Bishop Samuel Wilberforce, he was all things to all men—possessed, no doubt, of far less wit and far less natural eloquence than that brilliant creature, but giving a stronger impression of earnestness and unquestioning loyalty to the cause he had made his own.

In the government of his diocese he showed himself a finished ruler and manager of men, flexible in his power of adapting himself to any character or society, yet inflexible when firmness was needed, usually gentle in his methods, but tenacious in his purposes, demanding rightfully from others the simplicity of life and the untiring energy in work of which he set an example himself. Over women his influence was still greater than over men, because women are more susceptible to the charm of a fine presence and fascinating manners; and no one could count so many conversions among ladies of rank, his ascetic face and dignified carriage according admirably both with his sacerdotal rank and fervid piety. So in his public appearances, it was neither the solid substance of his discourses or speeches that struck one, nor the literary quality of their style, but their happy adaptation to the audience, and the grace with which they were delivered. For this reason—originality or weight in the substance being of more relative consequence in the pulpit than on a platform—his addresses at public meetings were much better than his sermons, and won for him the reputation of a speaker whom it was well worth while to secure at any social or philanthropic gathering. At the Vatican Council of 1870 it was less by his speeches than by his work in private among the assembled prelates that he served the Infallibilist cause. Himself devoted, and, no doubt, honestly devoted, to Ultramontane principles, he did not hesitate to do violence to history and join in destroying what freedom the Church at large had retained, in order to exalt the Pope to a position unheard of even at Trent, not to say in the Middle Ages. His activity, his assiduity, and his wonderful powers of persuasion contributed largely to the satisfaction of the wishes of Pius IX., who promptly rewarded him with the Cardinalate. But the opponents of the new dogma, as superior in learning to the Infallibilists as they proved inferior in numbers, carried back with them to Germany and America an undying distrust of the astute Englishman who had shown more than a convert's proverbial eagerness for rushing to extremes and forcing others to follow.

But Dr. Manning's powers shone forth most fully in the course he gave to his policy as Archbishop of Westminster and head of the Roman hierarchy in Britain. He had two great difficulties to confront. One was the suspicion of the old English Roman Catholic families, who distrusted him as a recent recruit from Protestantism, a man filled with ideas unfamiliar to their conservative minds. The other was the aversion of English society, and indeed of Englishmen generally, to the pretensions of Rome—an aversion which, among the Tories, sprang from deep-seated historical associations, and among the Whigs drew strength from dislike to the reactionary tendencies of the Papal power on the European Continent, and especially its resistance to Italian freedom. Both these hostilities he overcame. The old families soon became proud of a prelate who supported with dignity and vigor the pretensions of their Church; while the suspicions of Englishmen generally were by degrees disarmed by the heartiness with which the Cardinal threw himself into moral and philanthropic causes. He was an ardent advocate of temperance, and did much to promote it among the poorer Roman Catholic population. He joined those who worked for the better protection of children and the repression of vice. He interested himself in what are called labor questions, did not recoil from proposals to limit by legislation the hours of toil, and willingly exerted himself to settle differences between employers and workmen, showing his own sympathy with the latter. Thus he won a popularity with the masses greater than any prelate of the Established Church has enjoyed, while the middle and upper classes noted with pleasure that, however Ultramontane in his theology, he always spoke and wrote as an Englishman upon non-theological subjects.

In all this there was no playing of a part, for he sincerely cared about temperance, the welfare of children, the advancement of the workingmen, and the greatness of his country. But there was also a sage perception of the incidental service which his attitude in these matters could render to his Church; and he relished the notion of proving that a Roman Cardinal could also be a patriotic and philanthropic Englishman. He saw the value of these things and used them, and, though he was not artful, he was full of art. Truth, for its own sake, he did not love nor seek, but, having once formed his conclusions, subordinated everything else to them. Power he loved, yet not selfishly, but rather to promote the objects he cared for. But to his church he was devoted heart and soul; nor could any one have better served it so far as England was concerned. No one in our time, hardly even Newman, has done so much to sap and remove the old Protestant fears and jealousies of Rome—fears and jealousies which some of us hold to have been more reasonable than the easy indifference and self-styled liberality of the present day will allow. Truly the Church of Rome is a wonderful institution, fertile beyond any other, since in its old age it can give birth to new types of force and brilliance. In Manning it produced a figure full of a kind of charm and strength which no Protestant body could have reared, a man who never obtruded a claim, yet never yielded one, who was the loyal servant of a spiritual despotism, yet apparently in sympathy with democratic ideas and movements, equally welcome among the poorest Irish of his diocese and at the gatherings of the great, ready to join in every good work with those most opposed to his own doctrines, yet standing detached as the austere and confident representative of an unbending, world-embracing power.

O. D.

THE ACADEMY OF FINE ARTS.—II.

PARIS, January 23, 1892.

DURING the reign of Louis Philippe the composition and the attributions of the Academy of Fine Arts remained as they had been organized by Louis XVIII. The other academies

also continued subject to the same rule. The only reform which took place, and this was a return to the past, was the reëstablishment, in 1832, under the name of Academy of Moral and Political Sciences, of the second class, which had been founded in 1795, and had been suppressed seven years afterwards.

Louis Philippe, as I have said, had no great love for art. The restoration of Versailles was for him the occasion for encouraging Horace Vernet, who became his favorite painter. Horace Vernet had an admirable facility; he painted great historical battles with an extraordinary rapidity. The rooms which he filled with his canvases at Versailles are still visited by hundreds of people every year, and his pictures have preserved a freshness which is wonderful. Horace Vernet had no "system": he was not a pupil of Gros or of Gérard; he was a naturalist. He had made a special study of the horse, of military uniforms; he became the painter of the conquest of Africa. Louis Philippe formed the historical museum of Versailles with great celerity, and Horace Vernet's rapidity suited his purposes. The accounts published after the Revolution of 1848 of the civil list of Louis Philippe show that he had spent in 1848 nearly twenty million francs, wholly from this civil list, for the restoration of Versailles and for the works of art which fill its galleries. A splendid fête was given on the 10th of June, 1837, at the palace of Versailles, on the occasion of its inauguration as a museum. The five classes of the Institute figured in it, as well as all the artists, even the most humble, who had had a hand in the realization of the King's project. The "Misanthrope" and "Esther" were played in the beautiful theatre of the palace; Horace Vernet was the hero of this fête; everybody admired his beautiful pictures, which were a sort of illustration of the recent exploits of the French Army.

When the revolution of February broke out, the Academy was on the point of exercising one of its prerogatives, which was the selection of the works of art admitted to the annual exposition. This exposition used to take place in the rooms of the Louvre. The new Government applied in artistic matters the principles which had been proclaimed from the steps of the Hôtel de Ville: as the right of suffrage had been given to every Frenchman, all the works of art sent for examination in 1848 were admitted without exception. The result was deplorable: some of the pictures were not fit to become sign-boards. The principle of universal admission was abandoned, and ever since a special jury has had to be elected by the artists themselves.

The patronage of the Academy extended over the French School of Rome. All who have lived in the capital of Italy know the Villa Medici. In 1848 the Director and the young *pensionnaires* had to leave Rome; they were denounced as revolutionists and threatened by the *codini;* they took refuge in Florence, and returned to Rome only after the city had been taken by a French army. Horace Vernet was for some time director of the school of the Villa Medici; the post has always been much envied by French artists. Horace Vernet had Ingres for his successor.

The constitution and the privileges of the Academy were, on the whole, respected by the Republic of 1848. It was reserved for the Second Empire to strike a great blow at them. For sixty years the Institute had had the right to regulate its public meetings, to distribute the places, to appoint its functionaries, librarians, secretaries. What was equally important, its members were the sole judges in the competitions for the various prizes given either by the different or by the united academies. The Government diminished this precious prerogative. As for what concerned the Academy of Fine Arts, it assumed the right to choose the judges among the various members of the Academy. A long struggle ensued. After five years of discussion and of protestation, the effects of the imperial decree were practically annulled. The Emperor, in order to soothe the wounded feelings of the Institute, created a prize of 20,000 francs, which was to be given every two years by the five classes judging in common, "to the work, or to the discovery, which was judged the most likely to honor or to serve the country." This is called the biennial prize.

Ingres, Paul Delaroche, Horace Vernet, Paul Delacroix were the most famous members of the Academy. The three last died in rapid succession, Delaroche on the 4th of November, 1856. For twenty-four years he had exercised a great influence in the Academy; his salon as well as his atelier had become a centre of attraction. Horace Vernet was not so influential in the Academy; he was more personal, more susceptible; he died in 1863. Eugène Delacroix died six months afterwards. No painter has been more discussed; he has even now ardent friends and ardent enemies. He was a great colorist, but his drawing was imperfect, or rather seems imperfect, because he liked contorted and extraordinary attitudes. Ingres, who has been as much discussed as Delacroix, died in 1867, at the age of eighty-six.

It is certainly to the credit of the Duke of Orleans, the eldest son of Louis Philippe, who met such an untimely end by jumping out of his carriage, that he used to visit the painters in their studios and give them orders himself. He ordered the "Stratonice" of Ingres, and the "Assassination of the Duc de Guise" of Delaroche. These two famous pictures are of the same size; they are not large, and were ordered by the Duke for his own rooms. They are now in the galleries of the Duc d'Aumale at Chantilly. I have heard that one day Decamps, who was at the time quite unknown, saw the Duke of Orleans enter his studio with a long loaf of bread, such as is made by Paris bakers, under his arm. "How is this, your Royal Highness?" "Well, your porter asked me if I would not take this bread to you, as he could not just now mount your stairs." Decamps was chosen by the Duke of Orleans, with Raffet and some others, for the illustration of a magnificent work on his campaigns against the Kabyles.

The siege of Paris and the Commune were great trials for the Academy of Fine Arts; many of its members saw their work destroyed by fire: MM. Lesueur and Baltard, who had constructed or completed the Hôtel de Ville; Lehmann, Léon Cogniet, Cabanel, who had adorned its rooms and galleries with their pictures, beside the famous ceilings of Ingres and Delacroix; M. Duc, the architect of the new Palais de Justice, which was almost entirely ruined in its interior parts; M. Lefuel, who saw the library of the Louvre consumed by the flames, with the fine walls which he had decorated, as well as the magnificent apartments which he had arranged in the Tuileries. One house was entirely burned by the Communists in the Rue de Lille, opposite the Cour des Comptes, which now stands as the only ruin and witness of the Commune. It had been the house of the two Mariettes, and had become the home of a member of the Academy, M. Gatteaux, who had made it one of the objects of his life to collect all the studies and drawings of Ingres; he had collected also pictures by Sebastiano del Piombo, by Poussin, etc.; fine bronzes, enamels, drawings of the old masters, engravings. M. Gatteaux intended to leave all his collections to the National Library. Nearly all was burned. A picture by Memling, now in the Louvre, the "Mystic Marriage of Saint Catherine," was saved because it happened to be at the time in the house of an engraver. M. Gatteaux bore with great fortitude the loss of his magnificent collection, the finest in Paris at the time, and died in 1881, at the age of ninety-three years.

Auber, likewise, the musician, also an Academician, died at a very advanced age. He was of a very gay disposition. He once told a friend who complained of getting old, and pitied him, too: "Well, I accommodate myself to old age because it is the only way thus far discovered of living long." Still, when he reached his eighty-ninth year, he said: "There must be no exaggeration in anything; I have lived too long." He died on the 12th of May, 1871, during the Commune. The Communists wished to make a great ceremony of his funeral, as he was an extremely popular composer. To save him from this civic funeral, Ambroise Thomas, his friend, had to conceal his body secretly in the vaults of the Madeleine.

Under the reign of Napoleon I., as well as under the following reigns, the day of the public annual session of the five academies was the fête-day of the sovereign. In 1871, it was decided, as the Government had become republican, that this session should be held on the anniversary of the foundation of the Institute. The ceremony took place for the first time on the 25th of October, 1871. There were present M. Thiers, who was then President, and four of the Ministers of the Republic, MM. Dufaure, de Rémusat, Jules Favre, and Jules Simon, all Academicians. Since 1870, the Academy is again in full possession of its old prerogatives; it simply chooses freely artists who are still outside of the company, as supplementary judges for the distribution of its prizes; but it is sovereign in the choice of its laureates and of the young artists who are sent to the School of Rome. The patronage of the Academy extends every year. Baron Taylor has given to it a fund for pensions which are to be bestowed on old artists; this fund has been increased by the Brothers Galignani, who started long ago the only English paper which has for a long time been published in Paris. The Comtesse de Caen left a sum of money the interest of which has to be distributed yearly to the young pensioners of the School of Rome who come back to Paris and are still unknown. Mme. de Caen remembered that some of the best pupils of the School of Rome had at first had very hard times in Paris, especially the sculptors. A very touching legacy made to the Academy is the legacy of Dubosc, an ancient model. "Having," said he in his will, "begun to be a model in 1804, at the age of seven years, and having continued to be one till I was sixty-two years old, I have spent my life among artists, and I wish that after my death my small fortune should be employed in some foundation which will be useful to them."

It would be too long to give the whole list of the benefactors of the Academy and of the Institute. Last, but not least, comes the Duc d'Aumale, who has given to the five classes of the Institute the vast domain of Chantilly, with its forest, château, and the magnificent collections which it contains.

Correspondence.

MR. KENNAN AND SIBERIA.

To the Editor of The Nation:

Sir: In a review of my book, 'Siberia and the Exile System,' published in the *Nation* of January 14, your reviewer says:

"The first thing which strikes the ordinary reader is the delightful and graphic style in which the book is written. Nothing could be better. It takes somewhat deeper knowledge and observation to appreciate another quality, viz., the art with which the omission of what is not desired is concealed. It is the commonest of practices to state only one side of a question, but the knack of doing so in a manner which shall leave the reader utterly unconscious that another side exists is a rare gift."

Will you kindly permit me to call the attention of the reviewer to a few pages of my work that he seems to have overlooked? The side of the Siberian question that I am accused of having artfully concealed is, of course, the good or favorable side. I am charged with an "intention to see everything in the blackest possible light," and to present everything in such a way as to "leave the reader utterly unconscious" that a lighter side exists. The word "everything" is somewhat vague and sweeping, but it is meant to include, I presume, Siberian prisons, Siberian officials, the Siberian exile system, and the treatment of criminals in the Siberian penal settlements. Your reviewer half asserts and half insinuates that I have said everything of an unfavorable nature that I could possibly find to say about these subjects, and that I have artfully concealed everything that would have a tendency to lighten or relieve the dark picture of Siberian penal life. Do the pages of my work furnish any justification for this sweeping and unqualified charge of premeditated dishonesty? I think not. The limited amount of space that can be given to such a communication as this will not permit me, of course, to quote here all that I have said, in two bulky volumes, in praise of Siberian prisons and Siberian officials; but three or four citations will be enough, I trust, to show that I have presented the favorable side of Russian penal institutions whenever there was a favorable side to present, and that if any one is to be charged with "clever lightness" and artful concealment, it is the reviewer.

In vol. i., pp. 299–301, of 'Siberia and the Exile System,' in speaking of the life of exiles on the convict barges between Tiumen and Tomsk, I state the fact that, for fifteen years, there has been a steady improvement in the hygienic condition of these barges and a corresponding decrease in the sick and death-rates, and then add that—

"In my judgment the inspector of exile transportation and the local Siberian authorities are now doing all that lies in their power to do for the comfort and health of exiles on the voyage between Tiumen and Tomsk. The barges are thoroughly cleaned and fumigated after every trip, and the prisoners are as well fed and cared for as they can be with the limited sum of money that the Government appropriates for the purpose. The suffering and disease which still exist are attributable, mainly, to overcrowding; and overcrowding the Siberian officials cannot prevent."

In vol. ii., pp. 125–127, I give a very favorable and commendatory description of the new convict prison at Verkhni Udinsk, in the province of the Trans-Baikal, in the course of which I say that—

"The *kámeras* [cells] were all large, well lighted and well ventilated, and every one of them, above the basement, had an extensive outlook over the surrounding country through at least three large windows. The corridors were twelve or fifteen feet wide; the stairways were of stone with iron balustrades; the solitary-confinement cells were as spacious as an ordinary American hall bed-room; the arrangements for heating, ventilation, and cleanliness seemed to me to be as nearly perfect as they could be made; and, as a whole, the prison impressed me as being the very best I had seen in Russia, and one of the best I had ever seen in any country."

In vol. ii., pp. 346–350, I give a long and favorable description of the Alexandrófski convict prison, near Irkútsk, in the course of which I say:

"We were taken first to the mills where 75 or 100 convicts were grinding rye. The air here was fresh and good; the labor, although hard, was not excessive, and the men who turned the cranks of the clumsy machines were relieved by others as fast as they became tired. This was the only hard labor that the inmates of the prison were required to perform, and it occupied only three or four hours a day. From the mills we went to the *kámeras*, which filled the greater part of the large building and which were occupied by from 15 to 75 men each. They varied greatly in size and form, but all were large enough for the number of convicts that they contained, the ceilings in them were high, the air everywhere was good, the floors and sleeping-benches were scrupulously clean, and nothing seemed to call for unfavorable criticism except, perhaps, the lack of bedding. The corridors into which the *kámeras* opened were high, spacious, and fairly well lighted, and the air in them seemed to be almost as pure as that out of doors. From the *kámeras* we went to the kitchens, where food was prepared every day for more than a thousand men, and where I could discover nothing that was out of harmony with the neatness and good order that prevailed in other parts of the building. . . . After paying a visit to the hospital, which contained only forty-two patients, and which was clean, well ventilated and in perfect order, we expressed ourselves as satisfied with our inspection of the prison and returned to Mr. Sipiagin's house. . . . Taken altogether, the Alexandrófski prison seemed to me to be in the highest degree creditable to its warden, and not discreditable to the Russian prison administration. It gives me great pleasure to say this, because I did not find much to approve in Siberian prisons generally, and I am glad to have an opportunity to praise where praise is deserved."

In vol. ii., pp. 366–368, I give a favorable description of the prisons in Krasnoyarsk, in the course of which I say:

"We made a careful examination, on Wednesday, of the Krasnoyarsk city prison, the exile forwarding prison, and the prison hospital, and I am glad to be able to say a good word for all of them. . . . At the time when we inspected them they were in better condition than any prisons that we had seen in Siberia, except the military prison at Ust Kamenogórsk and the Alexandrófski central prison near Irkútsk. The hospital connected with the Krasnoyarsk prisons seemed to me to be worthy of almost unqualified praise. It was scrupulously clean, perfectly ventilated, well supplied, apparently, with bed-linen, medicines, and surgical appliances, and in irreproachable sanitary condition generally. . . . At the time when we saw it I should have been willing, if necessary, to go into it for treatment myself."

In view of the above citations, I beg leave to ask your accomplished critic where he finds his warrant for the insinuation that I have tried to "see everything in the blackest possible light," and that I have artfully concealed from my readers even the fact that there is a brighter side to Siberian prison life? At whose door should the charge of artful concealment justly lie—at the door of the author who praises Russian penal institutions whenever he can do so truthfully, or at the door of the reviewer who, with "clever lightness," skips over all the praise, intimates coolly and confidently that there is none, and then proceeds, upon a false assumption, to charge the author with conscious and premeditated dishonesty? If the quotations that I have made from my book do not indicate a disposition on my part to see and present the light as well as the dark side of Siberian prison life, what do they indicate?

It is true that I have given more space in my book to bad prisons than to good ones; but, inasmuch as the bad outnumbered the good in the proportion of about ten to one, I could not well do otherwise. It is not true, however, that I have intentionally or consciously suppressed or concealed a single fact, within my knowledge, that would lighten the picture of Siberian penal life. I have always spoken well of Russian prisons, officials, and penal methods, when I could do so honestly. In vol. i., p. 270, I referred with approbation to a reform which had then recently been made in the method of forwarding criminals eastward from Tomsk—a reform which consisted in the separation of the sexes in convict marching parties; in vol. ii., p. 127, I spoke favorably of the new *étapes* erected by the Government at a cost of $200,000, in the province of the Trans-Baikal; in vol. ii., appendix F, I gave a tabular statement of the improvements and ameliorations in the condition of Siberian prisons and prisoners that had been made since my return from Siberia so far as they appeared in the reports of the Russian prison administration; in vol. ii., pp. 469–470, I gave an outline of the series of reforms in the exile system that had been projected by the Government and were under consideration when I left the empire; and, finally, I spoke favorably—sometimes very favorably—of Siberian officials in vol. i., pp. 168, 288, 300, 307, 308, 319, 345–346, and in vol. ii., pp. 42, 216–222, 290–291, 350, 368, 370, 371, and 467.

From the fact that your reviewer quotes a comment made upon my book by some unnamed person in Siberia, I infer that he has a Siberian correspondent. I respectfully and courteously challenge the reviewer or the correspondent to produce from ten years' files of any Siberian newspaper as many favorable descriptions of Siberian prisons and as many favorable references to Siberian officials as may be found in the two volumes of my book. Your reviewer admits, in his second article (published in the *Nation* of January 21), that I have spoken well, on the whole, of Siberian officials, and even says: "If there is one thing that Mr. Kennan has succeeded in demonstrating more plainly than the general high average of Russian character in the officers, . . . it is not only that the Russian Government is fully aware of the evil state of the Siberian prisons and *étapes*, but that it has appropriated funds and given orders for the construction of new and suitable buildings."

Will the reviewer be kind enough to explain how I have managed to demonstrate so clearly and conclusively that Russian offcials are men of high character and that the Russian Government has done so much to remedy prison evils, while, at the same time, I have seen everything "in the blackest possible light," and have artfully concealed the fact that anything in favor of such officials and Government can possibly be said? I seem to have shown the high character and mild rule of the officials by seeing them in the "blackest possible light," and to have artfully concealed the Government's side of the prison question by giving it frank statement and conclusive demonstration! The only explanation of this paradox that suggests itself to me is the wild and improbable conjecture that the reviewer had forgotten what he said in his first article before he began to write the second.

George Kennan.

Washington, D. C., January 31, 1892.

[If Mr. Kennan will refer to our criti-

cism, he will see that the expression "clever lightness," to which he objects, was applied directly to the nature of his reading previous to 1884; to the information obtained in his preliminary journey of that year; and, indissolubly connected with this, to the question of intention, and his omission to explain the normal conditions of life among all but an exceedingly minute proportion of the exiles. This materially affects the question of the degree of cruelty to which the exiles are subjected and the criminal responsibility of the Government.

Far from skipping over his praises of officials and institutions, we reminded our readers that Mr. Kennan had proved the high character of the majority of the officials, and not only the good intentions, but the good performance of the Government in the matter of prisons and *étapes*. We are under obligations to Mr. Kennan for his detailed index of such cases (omitted in our criticism for lack of space). They will go far toward revising the false opinion of the general public, which has certainly regarded his revelations, and the Russian Government, in the blackest possible light, owing to the omission of precisely those details concerning the exile's normal life which we have supplied. It is an undeniable fact that not one in a thousand of Mr. Kennan's readers even notices his mention of those extenuating circumstances to which he now aids us in calling attention, owing to the unrelieved blackness of the descriptions to which we objected. Russians, on reading accounts worded in much the same way, would be able to make the proper allowances, through their lifelong acquaintance with the lives of the people, and of all classes. The omission of information on such a point, when writing for foreigners, lays an author open to the suspicion of intention or ignorance; the one being as grave an offence as the other in a work which assumes to be authoritative, on so serious a subject.

It would be a work of supererogation for us to furnish records, either favorable or unfavorable, from Siberian newspapers, after Mr. Kennan's ample contributions from those sources. His reference to the ten-year limit merely corroborates our suggestion that the darker side of the question was attainable in print for a long time previous to his journey in 1885, and brings us back to the assumption from which we started: that that journey was based on the sound calculations of a man who knew pretty well what he was going to "discover," and how his public would receive it.—Ed. Nation.]

BRITISH vs. RUSSIAN IMPRISONMENT.

To the Editor of The Nation:

Sir: Perhaps in no circle of educated and thoughtful men is the meaning of the words "penal servitude" more clearly and really understood than among Irish Nationalists of advanced age. Many have themselves endured it; few there are who, at one period or another, often for long years, have not had friends or those they sympathized with or respected living through its horrors. I perused Mr. Kennan's *Century* articles, as they appeared, month after month, and constantly asked myself whether, after all, it might not be easier to bear in association with others the horrors he described than have to endure the cold, clean, merciless British system, where the body is conserved and cared for, but where the mind and affections of men who have theretofore thought and loved, are subjected to a discipline worse than death. And I asked the opinion of several who had passed through it. The republication of Mr. Kennan's articles in book form renewedly forces one's attention to the question. The readers of the *Nation* may perhaps be interested to consider the views of men so well known as the late Boyle O'Reilly and of Michael Davitt.

Very sincerely yours, Alfred Webb.

Dublin, January 31, 1892.

The "Pilot" Editorial Rooms,
Boston, October 23, 1889.

Mr. Alfred Webb:

My Dear Sir: The question you ask me has often arisen in my own mind, when reading Mr. Kennan's articles on Siberian prisoners: "Is not their miserable condition, with their one advantage of kindly human association, to be preferred to that of the English prisoner, in his narrow iron cell, and his silent labor in the gang, under the watch of never-ceasing rigor and discipline?" From my own experience in English prisons, the Russian system, described by Kennan, is at once to be preferred. So far as it allows political prisoners to associate only with their own kind, it is incomparably better than the English system, the makers or masters of which seem to delight in compelling the shameful association of political convicts with the criminal class. But, the political question aside, so far as the Russian system allows prisoners to associate and converse, at labor, and during the confined hours, its humane forbearance, in my opinion, counterbalances all its evils, as compared with the British home convict prisons. Mental suffering is the worst suffering; and, where there is association, there are comfort and courage. The body suffers pain by labor and privation, but the suffering of the mind in privation, labor, disgrace, with silence and loneliness, is agony.

The British penal colony of western Australia was an illustration. I was a prisoner there for a year (after nearly two years' imprisonment in Ireland and England). The feeling of relief at the open-air, associated labor of western Australia, after the rigors of Pentonville, Chatham, Portland, and Dartmoor, was actual enjoyment. Australia, however, had one immense advantage over Siberia—the climate was always healthful and delightful. In my opinion, the worst feature of Siberian imprisonment is the cold weather. The dirty prisons are kept foul by the necessity to keep them warm. In western Australia the convicts on the road parties had certainly no more care from their Government than those of Siberia; but they slept in open log huts, which they could and did empty and clean every day.

My memory of the dreadful routine of hard labor and enforced silence, in the imperial prisons, in England and Ireland, makes me shudder, even after twenty years. It is a punishment unfit for men, and it must be still worse for women, whose emotions are warmer and quicker. It is regulated inhumanity. It destroys many; it improves none. The moral reformation of a criminal under such conditions is abnormal and insecure. The flimsy barriers will be blown away with the first wind of free temptation. On the contrary, the effect of associated labor and life in the Australian colony was decidedly beneficial. It brought out the characteristics of manliness, truth, and personal honesty, in some such way as they are developed among soldiers. In one year I saw extraordinary improvement in a whole party of twenty criminal prisoners, to which I, though a political prisoner, was attached. They had all gone to Australia in the same ship with me and the other Fenian prisoners of 1866-'67. They were mostly old professional criminals, though nearly all young men. There were burglars, bank-robbers, thieves, in the majority. They were all Englishmen, most of them from London. As soon as ever they were sent away to the bush, to build their own hut and their officer's, and make out their own life, in the almost independence of the road-laborer, they began to develop as men—*for the first time in their lives*. Some became expert hunters and trappers, some took to tanning skins, some to vegetable gardening, etc. Very soon, they took personal pride in their free work, on the road or round the camp. They punished dishonesty and lying in their own way. If a man called another a liar, he had to fight him—he was *forced*, by flogging, to fight, or "take it back." Thieving from their fellows was punished in the same way. In three months there was no fighting and no flogging; in a year there were several men among them whom I shall always remember for their manly character. Every one of those men, probably, is free now, if living; and living an honest, industrious life.

A man released, after years of penal servitude, in Great Britain, is unfitted for life and its associations. He has been scared and drilled into habits of inhuman submission. Self reliance is gone, for self-reliance is a sure relation to one's fellows, and this unfortunate man has had all his ties and tendrils clipped close as his hair. Penal servitude ought not to be the vengeance of a Government, as this is. Transportation to a colony where mutual freedom and citizenship can be insured will reform almost the entire criminal class that is not abnormally degraded. Between the objects of the Russian and English systems (now that Australian transportation has ceased) there is little to choose; but the associated exile of Siberia, with its horrors of cold and its foul prisons, is a far lighter and less injurious punishment than the relentless order, separation, half-starvation, and degraded servility of the convict prisons of Great Britain.

I am, dear Mr. Webb, most truly yours,
John Boyle O'Reilly.

Ballybrack, October 8, 1889.

My Dear Mr. Webb: I have read a good many of the American *Century Magazine*, with George Kennan's narratives of Siberian prisoners and exiles. I have also had the advantage of talks with my friend Stepniak, on the subject of Russia's treatment of political prisoners. But, I fear, my opinion would be more than sufficiently biassed already to preclude my giving what should be a strictly impartial judgment upon such a subject. No one who has undergone penal servitude can rid himself sufficiently of resentment against the power that imprisoned him to speak calmly and justly upon the topic of his treatment. Neither can absolute reliance be placed upon narratives such as Kennan's, in which all the powers of eloquent writing are employed for the purpose of rendering a manifest prejudice against the imprisonment of Nihilists in Siberia appear as if clothed in the language of unquestionable facts. Deducting these considerations from any opinion of mine, I would say:

(1.) That the solitary-cell system of English penal servitude, together with the forced association of the criminal element, as applied to political prisoners, would represent far keener mental suffering than I conceive to be involved in the confinement by congenial association, which appears to be the rule in many Siberian prisons, where attempts at escape, like that which Muishkin and his comrades made from Kara, do not involve separate-cell confinement and additional punishment.

(2.) The picture so powerfully drawn of the Tiumen Forwarding Prison exceeds anything in my experience of English convict life. The filth, the insanitary condition of the *kámeras*, their horrible crowding, etc., have no parallel in the worst of the nine prisons over which my experience extends. Cleanliness and arrangements for ventilation are very characteristic of Clerkenwell, Newgate, Portland, and Portsmouth Convict Prisons, though in Millbank and Dartmoor the sanitary conditions were not as good. The food appears to be much more liberal in Siberian prisons (according to what Kennan gives as the day's rations in Tiumen) than in England, but it is not as cleanly cooked.

(3.) To be followed into imprisonment by those one loves—by wife and children—would be, from the point of view of my own individual feeling, a horror for which I could not find a suitable name—that is, of course, if it were added to the existing penal servitude of

England. The bare idea of one's wife and children being associated with criminals, because a man is himself a prisoner, is too horrible a thing to contemplate. But, if such association (I mean that of wife and children) is considered along with political punishment which takes the form of exile into parts of Siberia where there is no actual confinement within prison walls, I would say that this would be infinitely preferable to the treatment included in the English penal system.

(4.) I do not think we can accurately, or even approximately, estimate the amount of suffering involved in the worst prison described by Kennan, from *our* point of view. What would be exquisite torture for a man of one kind of civilization, brought up under totally different habits and influences to those of Russian life, might not represent as much suffering to a Siberian prisoner. Then again, temperament, education, habits of life, all enter into the question of relative suffering in prison. For instance: if *I* had been allowed books, and the privilege of writing, during my seven years in Dartmoor, as I was while in Portland in 1881–'82, I would have felt comparatively happy, notwithstanding the convict dress and the solitary confinement. On the other hand, a temperament that could not find Wordsworth's world in "books and dreams," would suffer the greatest mental torture by being shut up, for days and months and years, between bare whitewashed walls. In order, therefore, to speak correctly of the punishment involved in a sentence of ten years, or of life, in a Siberian prison, I would have to know a great deal more about the previous life and individualities of the Nihilist prisoners than I have present knowledge of. I do not think the treatment of Siberian prisoners, outside of labor in the mines, to be as humiliating to a political prisoner, or as degrading to one's idea of manhood, as what is comprised in English penal servitude. You are compelled to act as if you were a thing devoid of soul, or sentiment, or individuality of any kind. You are simply reduced to the level of an animal, while all the higher attributes of your nature are deprived of all opportunity of ministering to your own or your neighbor's solace or mind's ease.—Yours very truly,

MICHAEL DAVITT.

SCIENCE IN AMERICA.

TO THE EDITOR OF THE NATION:

SIR: In the able review of 'The Comtist Calendar' in the *Nation* of January 21 occurs the following:

"There is no civilized country where a great work of reasoning is less feasible than in ours. We have the most superb observatories and laboratories, it is true, but what would a Kepler, with his bad sight and awkward hand, be doing in such an establishment? Perhaps among our sixty millions there may just now live one such mind; certainly nobody is on the lookout for him. If he does exist, what is he doing? Reading examination papers?"

No, indeed, it seems quite unlikely that this should be his occupation. If it were, we should soon hear of him. He would find time enough to work out some great thing that we should be able to admire, and soon he would rise to positions of high honor and comparatively high pay. He is much more likely, as a true son of his time and his country, to be wasting his time in making money. In this pursuit, no doubt, he is successful, his great talent having taken that direction. In Germany it is the army that absorbs the best talent of the country, and with us it is the chase after riches that causes many a brilliant talent to be lost to the world.

The trouble is that our colleges do not, in general, attract great talents. But it is not the universal craving for wealth alone that produces this result. Much of the blame no doubt falls to other causes, and these I prefer to state in the words of the Rev. James T. Bixby (*Unitarian Review*, August, 1888):

"On the other hand, the man among us who, outside the college circle, does original and able work, may hope in vain for a college appointment. He is not in the line of promotion, and the solid phalanxes are unwilling to admit a new-comer to interfere with the rules of seniority. And even if he has gained admission to the charmed circles, he must square his instruction with the demands of his superiors, or he is likely to be unceremoniously shown the door, as Prof. Felix Adler (by current rumor) was at Cornell University after his lectures on Buddhism, or as Prof. Alex. Winchell was at Vanderbilt University because of his belief in Pre-Adamites and Evolution."

To return to our Comtist Calendar review. Fermat and Jacob Steiner are mentioned among those who are barely assigned a place by Comte in his Calendar of great men, though Comte was himself a mathematician. Now, I would ask, how many are there, even among the readers of the *Nation*, who know anything about Jacob Steiner, or what he did? And this leads me to the subject I wish to urge, namely, that it seems high time we should begin the study of modern geometry. So far as I am aware, not a single book upon the subject has been published in America, nor is the study of modern geometry pursued in any of our institutions by purely geometric methods. Yet modern geometry is by far more interesting, more systematic, more fruitful of results than the Euclidian geometry. Steiner, in the preface to his 'Systematische Entwickelung,' says: "There exists a small number of simple fundamental relations, from which the remaining great number of theorems can be derived, and without difficulty. Thus, by the acquisition of the few fundamental relations, one becomes master of the whole subject." And in the book itself, with wonderful ease, he derives almost everything from *one* fundamental relation, namely, the anharmonic ratio. The principle of duality there shows itself in its wonderful fecundity. Any one who will take the trouble of studying Chauvenet's "Introduction to Modern Geometry," appended to his 'Elements,' will understand the possibilities of the method, and, furthermore, will be prepared for the study of the larger works, say, Chasles's. It would be easy to compile a good text-book from easily accessible sources. Thus, the 'Traité de Géométrie,' by Rouché and De Comberousse, alone, in its various appendices, contains all or nearly all the material necessary, and collections of problems exist in goodly number.

Permit me to plead for one more neglected mathematical study, namely, the functions of complex variables (functions of $x + \sqrt{-1}\, y$). When we find that the realm of number is not of one dimension, so as to be representable upon a single infinite straight line, but that it has *two* dimensions, and requires a whole infinite plane to represent it, our horizon is at once infinitely widened. When next we find that by taking $z=f\ (x + i\ y)$ as the general form of the equation of a plane curve, and that we encounter no longer the puzzling difficulty of having the dependent variable become "imaginary" and meaningless, while undoubtedly it continues to vary, we see the usefulness of the method. And, finally, when we follow Rieman to his *mehrfach zusammenhängende Flächen*, we cannot help admiring the beauty of this modern analysis.

Shall we continue to plead that this is a new country, and that as yet we have no time for the sciences, except so far as they serve some technical purpose in the useful arts? The Australians seem to disdain such a plea, and we hear of vigorous scientific work done at Melbourne.—Respectfully,

WERNER A. STILLE.

ST. LOUIS, January 25, 1892.

[These things are worth saying; albeit the first question, upon which our correspondent so lightly expresses himself, involves points of high debate among those who of late years have studied the problem of genius. We shall return to some of these in a notice of Lombroso's 'Man of Genius.' Meantime, we remark that Kepler, with all his advantages, did but one great work, and that that was by no means the sort of thing a college tutor "would find time enough" to toss off.

As to the teaching of the two important branches of mathematics to which Mr. Stille refers, we derive the following information, relating chiefly to the year 1888–9, from Prof. Cajori's document on the 'Teaching of Mathematics in the United States.' The Theory of Functions was the subject, at the Johns Hopkins University, of several courses; at Cornell of a two-years' elective course, with sessions thrice a week one year, twice a week another; at Harvard of an advanced course; at Princeton of a University course; at Madison of a "special advanced elective" (possibly not taken). Projective (modern synthetic) Geometry was the subject of a course at the Johns Hopkins; at Cornell was *required* for some students, elective for others; at Ann Arbor was studied (and *really* studied, as we happen to know) from Reye's admirable treatise; and at the Universities of Texas (where Cremona's charming book was used), Virginia, and South Carolina formed the subject of post-graduate lectures or examinations. This, though a poor showing, yet makes a beginning.—ED. NATION.]

Notes.

TRANSLATIONS of Paul Bourget's 'Impressions of Italy,' of Pierre Loti's 'Book of Pity and of Death,' of Gabriel Bonvalot's 'Across Thibet,' and of E. Renan's 'Recollections, Letters, and Addresses,' are in the press of Cassell & Co. The last is from the practised hand of Miss Hapgood.

Charles Scribner's Sons will continue their reproduction of the historical series of Imbert de Saint-Amand by publishing his 'Youth of the Duchess of Angoulême.'

Macmillan & Co., reversing the usual order, and having begun with a condensed popular edition, in one volume, of Mrs. Humphry Ward's new novel, 'The History of David Grieve,' are now about to issue a two-volume edition in larger type.

Houghton, Mifflin & Co. have in press a "Universal Edition" of 'Uncle Tom's Cabin,' to be sold at 25 cents in paper and 50 cents in cloth; 'Songs of Fair Weather,' by Maurice Thompson; 'Equatorial America,' by M. M. Ballou; and lives of William Gilmore Simms, by Prof. W. P. Trent, and of Mark Hopkins, by his successor, President Carter of Williams.

Henry Holt & Co. will add immediately to Sneath's "Series of Modern Philosophers" volumes extracted from Reid by Dr. Sneath of Yale University; from Spinoza by Prof. Fullerton of the University of Pennsylvania; from Kant by Prof. Watson of Queen's College, Canada; and from Descartes, by Prof. Torrey of the University of Vermont. They contemplate adding in the near future volumes from Berkeley, Hume, and Hegel.

A. C. Armstrong & Son will publish shortly 'From the Usher's Desk to the Tabernacle

Pulpit,' an authorized Life of the late Mr. Spurgeon. It will contain numerous portraits, with other illustrations.

Thomas Whittaker announces a volume of lectures (in the Charlotte Wood Slocum foundation at Ann Arbor), 'The Chalcedonian Decree: or, Historical Christianity, Misrepresented by Modern Theology, Confirmed by Modern Science, and Untouched by Modern Criticism,' by John Fulton, D.D.; and two volumes of sermons by the late Archbishop of York, Dr. Magee, 'Growth in Grace,' and 'Christ the Light of all Scripture.' Also, 'The Story of the Discovery of the New World by Columbus,' compiled by Frederick Saunders.

The Rev. S. J. Andrews's 'Life of Our Lord upon Earth' won high regard on its first publication, thirty years ago, by virtue of its minute treatment of the chronological and topographical questions involved in the subject, and it is these specialties, in the new and thoroughly revised edition just published by the Scribners, which will commend the work to scholars. Putting aside, as the author does, all questions of the authorship and formation of the gospels, it will be seen that he renounces entrance into the most instructive and fascinating field of New Testament criticism.

'The Races of the Old Testament,' by A. H. Sayce (F. H. Revell Co.), is a little study in ethnology based for the most part upon Mr. Petrie's valuable series of photographs of types found on the Egyptian monuments.

The full text of the Manderson Bill for the printing, binding, and distribution of public documents is given in the January issue of the *Library Journal*. The December number is wholly occupied with a report of the San Francisco Conference of the American Library Association. A reprint of the admirable paper on "Public Support of Public Libraries," read at this Conference by Mr. William E. Foster of the Providence Public Library, is before us. It is an effective reply to a shallow chapter in the recent work called 'A Plea for Liberty: An Argument against Socialism and Socialistic Legislation.'

The second report of the Massachusetts Free Public Library Commission is very encouraging. Thirty-six towns during the past year have established libraries and received from the State $100 worth of books, leaving only sixty-six towns (with an aggregate population of 92,439) unprovided with free libraries. The books given have been selected with great care and with especial reference to the character and needs of the community in which they are to be placed, the main object having been to provide "reading that should be healthy in tone, pure and attractive in style, of educational value, and fitted to stimulate a love for the reading of good literature. American history, local and general, and nature-study in its varied forms, have had particular prominence given them." Not the least interesting part of the report is the "notes of library progress," containing statements of the numerous gifts in money, books, and buildings made to the various towns in the State during 1891, as well as of the buildings begun or completed last year. A detailed account of each newly established library, with various laws relating to libraries, is given in an appendix.

The Biblioteca Nazionale Centrale of Florence published on the last day of November, 1891, a valuable list of non-political Italian periodicals received at that library during the past year. The arrangement is in classes, with an alphabetical index of titles, another of places of publication, and a third of editors (*scrittori*). The task has been admirably executed by Paolo Baccani and Miss Anita Castellano. One desires only a table of classification. There are four entries under the head of "Magnetismo e Spiritismo," beginning with the monthly *Annali dello Spiritismo in Italia*. The number of journals devoted to "Wants" is noticeably large. A typical example is the *Gazzetta degli impieghi vacanti governativi, municipali, commerciali e privati*. The total of all kinds is 1,362.

A discovery of considerable importance has been recently made by Mr. Kordt, an assistant in the library of the University of Dorpat in Livonia. While rummaging in a large wall-closet, full of what were supposed to be worthless records and duplicates, he found several rolls of manuscript, which proved to be the remains of the archives of the University, the minutes of the proceedings of the Senate of Dorpat, and the account-books of the University, which furnish valuable material for the history of the founding of that institution by Gustavus Adolphus in 1632 and its early development under Swedish jurisdiction. The documents thus brought to light number some six hundred, and are written in Latin, Swedish, German, French, and Russian. They comprise the correspondence of the Swedish Chancellor Axel Oxenstierna, his son John Oxenstierna, Envoy Plenipotentiary to Germany, the Generals de la Gardie, Horn, Banèr, Wrangel, and about sixty letters, instructions, and other communications from the hand of Gustavus Adolphus, dating chiefly from the years 1613, 1627, and 1629. The importance of these original sources for the history of the Thirty Years' War, the various negotiations with Russia and other Powers, and the final conclusion of the Peace of Westphalia, can hardly be overestimated. Mr. Kordt is preparing them for publication, and hopes to render them available to scholars at an early date.

The second number of the *Law Bulletin* of the State University of Iowa contains an historical bibliography of the Statute Law of Iowa by T. L. Cole of Washington. Incidentally the steps towards acquiring Statehood are set forth, from which it appears that six years were spent in the effort, the popular reluctance being as great as the popular celerity nowadays; but "Iowa, like so many other of the admitted States, set the machinery of her State Government into full operation before the date of formal admission."

The London *Bookman* (Hodder & Stoughton) maintains well the level on which it was launched. Its January issue "presents" an inserted plate engraving from a portrait of Browning in the Count D'Orsay style and period, and reproduces in facsimile on its foolscap pages a creditable letter of Robert Burns touching provision for an illegitimate child. The *Publishers' Circular*, on its part, began on January 16 an illustrated series of articles on wood-engraving—forerunners, we may assume, of still another book on that fruitful topic.

In the February number of the new *California Illustrated Magazine*, Lieut. George L. Dyer, U. S. N., has a very good account of the military operations marking the final success of the Chilian revolutionists. He is naturally reticent in regard to the suspicions thrown upon his superior officer, Admiral Brown, though he makes it perfectly clear that that commander was in a position to render the greatest possible services to Balmaceda, by way of informing him of the resources and plans of the Congressionalists, had he been disposed to do so.

Mrs. Bishop's anniversary address before the Royal Scottish Geographical Society, published in its magazine for January, summarizes the results of her adventurous journey among the Bakhtiari, a Persian mountain tribe of nomads. One of the most striking passages is that in which she describes their summer country, in whose villages the traveller in May finds an absolute solitude, though the hill-slopes are covered with grain-crops and intersected with irrigation ditches. But by the first of June "every plateau and ravine has its village of tents, and at night the camp-fires gleam like the lights of cities." Here the tribe dwell till October, then migrate to the plains, sowing the grain before they depart, and reaping it in the following summer. Mrs. Bishop has little to say that is encouraging for the future of this interesting people, whose characteristic virtues are bravery, chastity, and charity; their blood-feuds leading to constant intertribal wars and checking all progress. To this may be added the merciless exactions of the Persian officials, who are slowly crushing the life out of the people. Incidentally she refers to the great commercial activity of the Russians in Persia, their wares being found in almost every hamlet or camp visited in a journey of about 2,000 miles, however remote they were from the great caravan routes. Mr. E. Delmar Morgan sketches the Pamir in its geographical and political relations to the surrounding countries, his paper being accompanied by an admirable map, in which the Russian boundary under the agreement of 1873 is given, together with that now claimed. This is placed more than a hundred miles to the southward, absorbing the territory left neutral by the agreement, and coming within about seventy miles of the English at Gilghit.

Recent events in the Pamir give a peculiar interest to Mr. St. George Littledale's account of his journey across this desolate region, published in the January Proceedings of the Royal Geographical Society. The traveller, whose main object was to shoot the great horned sheep, the *Ovis Poli*, was accompanied by his wife, their point of departure being Osh, then the farthermost Russian post in Ferghana. From this place, where they were treated with the greatest courtesy by the Russian commandant, they went in a generally southerly direction, skirting the eastern shore of the Karakul and traversing both the Alichur and the Great and Little Pamirs, reaching Gilghit in a little more than two months after leaving Osh. The general elevation was rarely less than 12,000 feet, the highest point reached being apparently 15,950 feet on the pass of Darkot over the Hindu Kush. Mr. Littledale describes the region as in great part a barren wilderness, with few inhabitants, scant vegetation, and little animal life, though birds are very numerous on the lakes. Had he passed a month later, his account of its capacity for supporting life would probably have been more favorable. The latest Russian authority, Col. Grombchevsky, says that "the Pamir is far from being a wilderness. It contains a permanent population, residing in it both summer and winter," and "increasing to a marked extent."

Prof. James Darmesteter has some fine pages in the *Revue Bleue* of January 9. "Les Religions de l'Avenir" is the title of his article, which is, in fact, the preface of his new book, 'Les Prophètes d'Israël,' which was announced to be published by Calman Lévy on the 20th ultimo. The fundamental idea of the book is that "prophétisme"—that is, the *ensemble* of the doctrines proclaimed by the

prophets of Israel from the year 800 to the year 518 before our era, and expressed in the so-called prophetic books of the Old Testament—is one of the essential elements of the religion of the future. It will not set up new altars or new rites, since its aim is to lead men beyond altars and rites, but it will inspire and revive the "two actual religions which to-day dispute possession of France, and which to-morrow will share it in peace, that of Science and that of Christ." M. Darmesteter's article is quite in line with those of M. de Vogüé and others who have been writing on the new religious movement in France, and will be of great interest to all who have been following the development of that movement.

Cardinal Newman is to have a statue at Oxford. The list of subscribers to it shows a singularly wide range. It includes Anglicans and Roman Catholics and Nonconformists, peers and commoners, university heads and ecclesiastical dignitaries of every shade of thought, politicians like Lord Rosebery and Mr. Justin M'Carthy, literary men like Mr. Lecky and Mr. F.T. Palgrave, and the late Dean Church.

Our readers will recall the mention in these columns last May of the generous offer by Miss Garrett of $100,000 to the trustees of Johns Hopkins University, on condition that by February 1, 1892, the trustees should have raised $221,000, and would in that month formally announce the opening in October, 1892, of the Medical School of the University. The admission of its women students to all the dignities and honors of the Medical School was a further condition of the offer. The sum needed to secure Miss Garrett's $100,000 was the amount still lacking towards the $500,000 named by the trustees as necessary to the opening of the Medical School when they accepted the contribution of $111,300 from the committees of the Women's Fund, on condition of receiving women students on the same terms as men. It has just been announced that the trustees have raised no part of this amount. Miss Garrett has therefore released the time limit to her donation, and gives the University an indefinite period to secure the endowment of its Medical Department, reserving the right, however, to cancel the offer of $100,000, by giving one year's notice of withdrawal. When the thousands of dollars which, during 1891, were contributed by numerous donors for the cause of higher education in the United States are considered, it is subject of surprise even more than of regret, that a university whose professors and alumni during the past decade have carried the reputation of American research and scholarship into every great seat of learning in both the Old and the New World, should still go begging for what is, after all, a paltry portion of a superb educational foundation.

—The February *Atlantic* lacks any article of special distinction, all the papers being of limited interest. The recent archæological discoveries at Rome, in respect to the celebration of the Secular Games in 17 B. C., are described by Prof. Lanciani with enthusiasm, and the fortunes of Gabriele Giolito, a Venetian publisher of the sixteenth century, are told by Mr. Horatio F. Brown in a similar vein of student ardor. The intelligence of animals is examined by Prof. Evans, with a view to the confusion of the late Prof. von Prantl, who denied them the "time-sense," besides other things, and the critic has made an entertaining collection of those peculiar institutions of beast, fowl, and insect which seem to parody the organs of human society. The course of study followed by French girls is treated of by Henrietta Channing Dana with thoroughness and good sense, in a way instructive to the managers of our female colleges, and also illustrative of the better and less-known phases of French family life. Some Russian travel, a bit of Shaksperian criticism, and a paper by Prof. Shaler describing the condition of political opinion in Kentucky in 1861, complete the list of serious articles, with a single exception, an unsigned paper upon "The League as a Political Instrument," which, in connection with the remarkable tariff-reform paper of last month, and other political papers that have appeared under Mr. Scudder's editorship, mark a return of the *Atlantic* to the useful discussion of public questions. The idea of this contribution—namely, that the development of the League puts into the hands of independent-thinking citizens an instrument of proved power in the form of temporary party organization for single definite ends, dissolving when those ends are gained—is not new, but the clearness with which the fact is stated and the practical force of it realized gives significance to the paper, and foreshadows an attempt, at least, to systematize independent voting and convert it from a defiant "rebuke" into an aggressive weapon. The success of the Copyright League, the Civil-Service League, and the Indian Service Association is the solid foundation of the writer's argument.

—*Harper's* is also without any article of special distinction, but it makes up for the lack by lending itself to a piece of as crude sensationalism as has appeared in magazine literature for many a day. This extraordinary contribution is nothing less than an entire five-act play by Amélie Rives Chanler on the subject of "Athelwold." The scene is laid in that distant age when "Angleland" existed, and we presume it is mere carping on our part to suggest that the historical setting is pretty closely confined to the orthography. The story is of love, and the action is for the most part osculatory. It is Catullus's little lyric drawn out in linked sweetness, kiss by kiss. The author seems to have remembered *Rosalind's* way when she was "gravelled for matter." There are eighty-two of these amatory exercises in a single act, without making distinction of plural and singular. There has been of late much discussion of wedding literature to the stage once more, but this is the way to throw contempt on "the literary drama." It is, however, little that this play cannot be thought of as acted. Not to put too fine a point on it, here is the very slush of vulgarity: in character, in incident, in diction, the underbred cannot farther go; it is the burlesque and travesty of the thing it aims at being, and what service is done, either to the public or to the name of American letters or the young woman herself, by its publication? In the remainder of the magazine Mr. Julian Ralph writes of Chicago in "the large style," though not perhaps as Matthew Arnold meant the phrase; the Royal Danish Theatre is the subject of a paper from Mr. Archer; Mr. Horatio Bridge's recollections of Hawthorne continue; and an article of local interest, on the "Old Shipping Merchants of New York," winds up the number.

—The *Century* justifies its reputation for public spirit this month by the merciless exposure it makes of the history and methods of the Louisiana lottery and the character of the men who have been engaged in the enterprise. The paper itself is a remarkable one in lively management of matter naturally dry, in variety of attack, in restless and unexpected sarcasm. The black story is told so that it makes its own darkness visible without aid of light from any moral world; the origin of the scheme, its breeding out of the racing and gambling industries of New York, its course in the State that it chose for degradation, its gradual fettering of the whole community there, the forlorn struggle against it, are recounted in a way to make the names of its owners (for the paper deals directly with persons) a synonym of infamy in public affairs; and the present gravity of the question is urged home without effort, but with telling effect. The Supreme Court reminds Mr. John A. Morris that he is a citizen, but such a paper as this also reminds him that he does really live in a community where public opinion is still capable of blasting the success of enormous wealth gathered in defiance of the common morals of the land. The fight may not be over, but the example of such a deadly stroke as this paper is a fine object-lesson to both sides; it shows resource and courage of the sort that makes a bad cause beware. Incidentally, also, the stripping off of the mask of charity is a blow to all schemes for condoning evil practices for a price devoted to good objects—and few errors in morals are so insidious as this one, or so widespread among honest people. To quicken conscience in such matters is a good work. Another paper of public importance in the number is Mr. Atkinson's on "The Registration of Australian Land Titles." The remaining papers are of the usual kind, and fairly distributed among the different departments of science, society, history, art, and fiction.

—*Scribner's* contains a philanthropic paper by Mr. Albert Shaw describing briefly the Young Women's Institute of London, which has been developed under the fostering care of Mrs. Quentin Hogg, and is meant to do for working girls at the West End the same service that her husband's "Polytechnic" does for young men. The club has had only a few years' trial, but its success is assured, and it already provides for a membership of twelve hundred. The plan is essentially the same as that of the older institution for young men, and includes the dining, athletic, and school features; there is some interchange between the two clubs in order that some of the special advantages of the men's side may be shared by the women; the final result, too, will probably be to settle the Institute on a permanent foundation endowed from the Public Charities Funds. The example is an interesting one, but it obviously owes much to favoring circumstances, to the experience and benevolence of Mr. Hogg and his wife, to their prestige, and to the fact that the Public Charities Fund is available for the perpetuation of the organization. A scientific article of considerable interest deals with the "Illusions of Memory," and, apart from the description and analysis of the tricks of this faculty, points out some analogies between its operations in unusual states and the workings of the mind under hypnotic influence. At the end the strength of the faculty is made to depend on sane and healthy conditions in general rather than on any special cultivation. The Revenue Service affords a readable article, and some remarks of Washington Allston on his methods of painting have as much interest as the subject permits.

—A measure of the quality of instruction and grade of students at the Harvard "Annex" is afforded by the "Fay House Monographs" published by the Society for the Collegiate Instruction of Women. Two of these have been anatomical studies; the third and latest is entitled 'Fugitive Slaves (1619–1865),' and has

been prepared by Miss Marion Gleason (Mrs. McDougall), under the direction of Prof. Albert Bushnell Hart of Harvard. The monograph occupies 150 octavo pages, and is in every way a highly creditable as it is a very useful performance. The several chapters deal with "Legislation and Cases before the Constitution," "Legislation from 1789 to 1850," "Principal Cases from 1789 to 1860," "Fugitives and their Friends," "Personal Liberty Laws," "The End of the Fugitive Slave Question (1860–1865)." This systematic presentation is accompanied in five invaluable appendixes by the documents, viz., the colonial laws relating to fugitives, national acts and propositions relating to fugitive slaves (1778–1854), and again (1860–64), list of important fugitive slave cases, and bibliography of fugitive-slave cases and fugitive-slave legislation. Add a very full index. In the colonial portion Mrs. McDougall has had no predecessor; nor has any one relieved her of the drudgery of wading through the Congressional records, without which it would have been impossible to realize how constant were the efforts made to amend more stringently the law of 1793, since history preferably deals with *faits accomplis* and is silent about abortive measures, however significant of states and tendencies of opinion. This restless striving to stop the exodus from slavery to freedom is perhaps the most striking revelation in Mrs. McDougall's monograph; but it is also instructive to compare the text of the fugitive-slave act signed by Washington with that which brought infamy on Millard Fillmore, and to notice how little difference there was in respect to the treatment of slaves as mere chattels, and to the absence of provisions against the kidnapping of free men of color—or free Caucasians, for that matter. And if we consider how many doctors of divinity enforced, after Webster, the duty of returning Onesimus, we shall not conclude that a perceptible moral advance had been made in 1850 over the North Carolina stage of 1741, evidenced by a law requiring a description of apprehended unknown runaways to be "sent to the clerk or reader of each church or chapel within the county. They were required to post all such notices every Lord's day for two months in some convenient place near the church." Finally, it is wholesome for the Grand Old Party to be reminded that in 1864, amidst the civil war caused by slavery alone, Senator John Sherman proposed to abolish the Fugitive Slave Law of 1850 only by an act reviving the law of 1793. Mrs. McDougall's survey is very comprehensive, and we have observed but one omission, viz.: an estimate of the number of past-fugitives compelled by the law of 1850 to abandon their homes and occupations and seek refuge in Canada. Statistics on this point are of course vague, but they are not wholly wanting. On page 26, the dates of British West India Emancipation should be 1833, 1838. The fugitive William Browne, on p. 5, is not indexed; his namesake, on p. 56, presumably stands for the late William Wells Brown.

—The volume of Proceedings of the Massachusetts Historical Society for 1891 winds up the record of the Society's first century, and so is largely occupied with an account of the centennial celebration. It is illustrated with portraits of three eminent men, President Walker of Harvard, Richard H. Dana, and Robert Bennet Forbes, memoirs being furnished by O. B. Frothingham, Charles Francis Adams, and Leverett Saltonstall, respectively. There is also a very precious photograph, taken in 1858, of a remarkable group of members, of whom Mr. Robert C. Winthrop is the most distinguished survivor. Mr. Winthrop's son contributes the opening paper of the present collection, and it is easily first also in lightness of touch, and in the charm with which the writer invests genealogical and family particulars concerning persons of no great consequence, yet types of early Puritan society. Mr. Winthrop also prints a strong and characteristic letter of Thomas Hooker's, replete with worldly wisdom. The most serious and permanently valuable study is that of Mr. Charles Francis Adams on "Some Phases of Sexual Morality and Church Discipline in Colonial New England." The first part of his subject is not new to those who have been led, for other reasons, to examine church records, which abound in evidence of marriages to legitimize children; or to those who have ventured into the literature of bundling. Mr. Adams, however, gives precision and strength to his deductions by comparing the records of several localities in Massachusetts, and discovers "the compelling cause to the confessions [of the sin of fornication]" openly made in church to have been "the parents' desire to secure baptism for their offspring during a period when baptism was believed to be essential to salvation, with the Calvinistic hell as an alternative." In the Groton Church, under this compulsion, 66 out of 200 persons owning the baptismal covenant between 1761 and 1775 "confessed to fornication before marriage." "C. F." became the abbreviated record of this circumstance. Mr. Adams remarks upon the increase in the number of the confessions after 1725, which he connects with "The Great Awakening," or revival period, of 1726-1744, and its dangerous association of the sexes in a state of religious exaltation. Mr. Adams closes with some encouraging reflections as to the comparative morality of the last century and the present, without, however, attributing our gain in sexual morality to the rise in the status of woman, as would appear to be necessary.

CLARK'S COLLEGES OF OXFORD.—I.

The Colleges of Oxford: Their History and Traditions. Twenty-one chapters contributed by members of the colleges, edited by Andrew Clark, M.A., Fellow of Lincoln College, Oxford. London: Methuen & Co.; New York: Macmillan.

The Rev. Andrew Clark has hit upon the plan of having the history of each of the Oxford Colleges written by one of its own members, and in each case he has succeeded in getting a distinguished man to do the work. The papers, coming from different hands, are, as might have been expected, not uniform in mode of treatment. Some have more of anecdote and social antiquities, others more of architecture, others (the writer of which has, perhaps, been bursar) more of the history of college finance and landowning; but they supplement each other, and on the whole they give a satisfactory account of those foundations, and sufficiently enable us to follow the thread of their corporate life through the six centuries of English history. There will be room for revision in a second edition, but in the main the work has probably been done once for all.

The eldest of the foundations is University College, the name of which, by its identity with that of the body of which the colleges in the aggregate are a federation, perplexes the American visitor who has not been accustomed to distinguish exactly between a university and a college. The Master and Fellows some years ago had the courage—or, as Mr. Freeman, who has no mercy on myths, thought, the effrontery—to celebrate the thousandth anniversary of their college as a foundation of King Alfred. That the eldest of English literary institutions should dedicate itself to Alfred's memory would be proper enough; and it is likely enough that Oxford was the seat of one of Alfred's schools. But University College was founded in the thirteenth century by Master William of Durham, who had been an English student in the University of Paris and had been driven out by an academical revolution. The story of the foundation by Alfred is a fable or worse. It appears to have been fabricated by the college to induce Richard II. to exert his prerogative in its favor in a law suit. It sufficed, however, with the help, perhaps, of a touch of Hanoverian policy, to lead the Court of King's Bench in 1728 to decree that the College was a royal foundation, and that the Visitor was not the University, or the Faculty of Theology, but the Crown. It was argued on that occasion that it would be too shocking for the Court to hold that a society of clergymen had for so many years been returning thanks to God for the bounty of a mythical founder, and that religion would thereby receive a greater scandal than it had from all the atheists, deists, and apostates from Julian down to Collins. It is not easy for the University now to return, as the author of this essay wisely exhorts it, to the firm ground of historical truth. The myth is incorporated into its legal existence as well as blazoned in its escutcheon, and embodied in the fine bust of Alfred which looks down on the Fellows as they sip (or did before recent reforms) their wine around the ample fireplace in the cosey old Common Room.

The statue of James II., which was left intact over the college gate, attests the mildness of the Revolution of 1688. Obadiah Walker, who was Master at that time, was a learned man and about the most respectable of the apostates to Roman Catholicism, though his name, rhyming with *Ave Maria*, lent itself to popular mockery. In an ecclesiastical law suit the other day, where there was a question as to the mode of treating the remnants of the bread and wine after the administration of the Sacrament, Sir Horace Davey, an ex-Fellow of University, referred to the practice of his own college, where the Master and Fellows, when the service is over, instead of consuming the remainder of the elements at the communion table, march out to consume them in the ante-chapel. It did not occur to him that this practice, evidently a protest against the High-Church view, was a relic of the reaction which followed the expulsion of Walker and the Romanizing party. That reaction has left other traces in the College customs. The vicissitudes of history are marked by the combination of the statue of Eldon with that of James II., while the Common Room of the College was the scene of the expulsion of Shelley. For the expulsion of Shelley, we may remark in passing, the College was not much to be blamed. His circulation, among clerical dignitaries, of an atheistic treatise, was an outrage, even on the atheistic hypothesis, and his contumacy shut upon him the gate of mercy.

University and Balliol, though, as the oldest foundations, they head the list, were not the first colleges. The first real college, the type of the series and the model to which University and Balliol were afterwards assimilated, was Merton, founded by Walter de Merton in what has been called the Renaissance of the thirteenth century. Merton's idea was the combination of the cenobitic, cloistral, and disciplined

life of a monastery with secular studies, which were practically anti-monastic. His antagonism to the domination of the friars, who were then carrying everything before them, is marked by the statute excluding them from his fellowships. His cloistral discipline was the antidote to the turbulence which reigned among a vast concourse of students, many of them half barbarous, living at large in the city, and which broke out in riots, and even in regular battles between the Northern and Southern "nations." The idea, meeting the needs of the time, took root and bore fruit in a series of imitations.

The grandest of the imitations was New College, or, to give it its proper name, the College of St. Mary Winton, founded by William of Wykeham, prelate, statesman, and architect, in the time of Edward III. St. Mary Winton College was to Merton as an abbey to a priory. The equipments for religious services were on an abbatial scale of magnificence, and the warden lived with the sumptuous state of a great abbot. But as a literary foundation New College was distinguished by its connection with the school at Winchester, which was to supply it with carefully trained scholars, and by the stress laid in the statutes on the study of the classical languages, or at least of Latin (*grammatica*), as contrasted with those of scholastic logic and philosophy. Mr. Rashdall, the writer of the paper in this volume on New College, rejects the notion that Wykeham himself had any idea connected with the Renaissance; but he afterwards admits that the first breath of the Renaissance air is felt in the characteristic studies of the foundation. It is hard to believe that a great patron of learning contemporary with Chaucer should have been untouched, or not consciously touched, by the spirit and movement of his age. Wykeham, it is true, was a conservative and an adversary of the Wicliffites; his object, no doubt, was to recruit the ranks of the clergy and put on them the armor of learning, though in a critical and revolutionary age the armor of learning can hardly be put on men without engendering other than conservative tendencies in their minds. The University was apparently at this time in a state of depression, and a collateral object of Wykeham's was the revival of literary discipline. Before him all the instruction had been received in the public schools of the University, the college being only the boarding-house, or at least having no regular staff of teachers. Wykeham introduced teaching within the college, and thus became, for good or evil, the founder of the tutorial system which ultimately superseded the teaching of the University, and reduced the University professorships to an insignificance from which they have been only just redeemed by recent reforms, while even now the tutorial system disputes their domain with them, as energetic professors, like Prof. Freeman, think they have reason to complain. A loose system of obtaining from the University exemptions from the statutable conditions of graduation had prevailed. To guard against this, Wykeham, as an academical reformer, strictly forbade his students to "sue for graces." By a strange and almost incredible perversion of his intention, this exceptional restriction was itself turned into an exceptional exemption, and when regular examinations for degrees were introduced by the University, it was understood that a New College man had the privilege of taking his degree without a University examination. The consequence was the almost total wreck, for a long period, of Wykeham's Oxford foundation. His school at Winchester, which retained its high character, sent up to Oxford generations of "golden scholars," only to have them turned by privileged idleness into "silver bachelors" and "leaden masters." A similar calamity befell the kindred foundation of King's College at Cambridge, with which Eton was connected as Winchester was connected with New College. Both cases are sad warnings against allowing the letter of a founder's will to operate long after his death. The principle upon which Parliament acted in the reform of the Oxford and Cambridge Colleges, and which it may be said practically to have adopted with regard to all foundations, is that only a founder's main object shall be respected for more than fifty years after the date of the foundation—a limit certainly beyond the foresight of any ordinary man.

Wykeham's statutes give us an insight into the life and character of students in those days:

"One piece of rough mediæval horse-play which incurs the founder's especial wrath is that 'most vile and horrid sport of shaving beards, which is wont to take place on the night preceding the inception of Masters of Arts.' Among the more ordinary pastimes forbidden by the founder are the haunting of taverns and 'spectacles,' the keeping of dogs, hawks, or ferrets; the games of chess, hazard, or ball; and other 'noxious, inordinate, or illicit' games, 'especially those played for money'; shooting with 'arrows, stones, earth, or other missiles' to the danger of windows and buildings; the 'effusion of wine, beer, or other liquor' (some unpleasant details are added under this head) upon the floor of upper chambers; 'dancing or wrestling or other incautious or inordinate games' in the hall or 'perchance in the chapel itself'; the reason alleged for this last prohibition being that danger might be done to the sculptured 'image of the Holy and Undivided Trinity,' and other ornaments on the wall between the chapel and the hall. After this comprehensive list of unlawful amusements, the reader may be inclined to ask, 'What recreations did the good bishop allow his scholars?' Only one seems contemplated by the statutes; the founder's experience of human nature told him that, 'after bodily refection by the taking of meat and drink, men are made more inclined to scurrilities, base talk, and (what is worse) detraction and strife'; he accordingly provides that on ordinary days, after the loving cup has gone round, there is to be no lingering in hall after dinner or supper (except for the usual 'potation' at curfew); but on festivals and other winter nights, 'on which, in honour of God and his Mother, or some other saint,' there is a fire in the hall, the Fellows are allowed to indulge in singing or reading 'poems, chronicles of the realm, and wonders of the world.'"

Ciphers. By Ellen Olney Kirk. Houghton, Mifflin & Co. 1891.

It is a singular frame of mind that one finds one's self in on reading 'The House of Martha.' A tale of genuine passion from the pen of Mr. Stockton seems almost a joke in itself; and it is perhaps to draw us up into the regions of emotion not too urgently, that these new-born loves and fears are attached to characters of the old Stocktonian type—dryly comical, solemnly grotesque. That a man who hires a listener to his own monologues should turn out to be the wildly impetuous hero of a romantic love story, gives one the same curious feeling that would arise on encountering Mrs. Aleshine (in perfectly dry clothing) at a meeting of the New York Historical Society, or on finding Pomona at the head of the State Charities Aid Association. There are moments of interest in the romance; there are moments of joy over the humor that flows from but one pen; there are yet other bewildering moments when the fun seems to be in one syllable and the characters no better fitted to mystery or to the tender passion than are Rollo and Lucy. One cannot say that the interest flags, but certainly it zigzags.

'The Squirrel Inn,' by the same author, is added proof that this writer's humor is too delicate, too prim, one might almost say, to lend itself effectively to plot. The present story in suggestion is dramatic, but its substance is too light and slight even for farce. One says at once, "How easily this would go on the stage; and how very dull it would be." Now what is thinner reading as a story than a dull farce? And yet the old charm peeps out in a tantalizing way—tantalizing because it sends the wishes back to the Stockton stories which are no more, but which we hope will be again.

Mr. Oscar Wilde's little volume might be called a collection of skits; and this attitude of the gentleman towards matters in general is a familiar one. Yet a subjectivity of method on his part, which all who were happy enough to see him in this country a few years ago will somewhat painfully remember, nearly disappears in his stories, leaving his method freer and himself a more agreeable satirist than might have been supposed. We detect little of the rebuking knee-breeches or the exemplifying forelock here, while there is abundance of wit and invention. "The Canterville Ghost" and "The Sphinx without a Secret" are easily better than the two remaining sketches; in the former, the irreverent treatment by an American family of an English ancestral ghost is the happy subject of happy treatment. The story which gives the book its name is a stiffish dose of trying to be funny, but its opening chapter is worth reading for as clever a picture of a social function as we have lately seen. The volume is charmingly bound and printed, only the title-page of each story betraying any eccentricity, and so we may feel that we have got off as easily as could be expected.

We defy any one to open a book of stories nowadays and find it beginning with a sage-brush plain, a glaring sky, and a lonely stage station, without a momentary sympathy with the Man without a Country. Our Southern California maidens, with ragged shoes, black eyes, and many acres, our miners' camps, our sombreros, lariats, revolvers, and, most of all, our dialects, begin to recall *Richard II.'s*

"Patience is stale, and I am weary of it.
[*Beats the Keeper.*]"

Mr. Fletcher's stories are no worse than the others, perhaps better than many, but so hopelessly hackneyed are his landscape and figures that it is difficult to do justice to that half of

his tales which deals with the prairie or the Pacific Coast. While the remaining ones afford a few original positions, the characters are absolutely stereotyped. The general effect of the book, then, is mediocre, although the writer has a ready pen and a sense of form.

A cheerless foreboding of a holiday book assails one who picks up 'Mr. Zinzan of Bath,' in its inordinately large covers, its festal, harlequin binding, its wide margins, and profuse illustrations. Beauty is not always its own excuse for being, nor is there always a moral in being fair. 'Mr. Zinzan' proves to be no Christmas gift-book, but a fresh, pleasing little story set in attractive mounting; the story being one of loves and brave apparel—the scene, Bath in the days of George the Second, under the rule of Beau Nash. Pretty Mistress Dolly Chesney, with her adventures, gowns, and heartburns, during her first season—her minuets, masks, and snuff-boxes (which we learn with relief she carried but did not use)—running her daily round of gayety—floating about of a morning in the bath in wig and powder, and sipping chocolate—making conquests at the afternoon rout, and trembling through her first dance at the evening assembly before the dowagers, is a winning portrait. Another and a telling one is that of the great Beau himself, who glitters in pomp and power, denies royalty a dance after eleven o'clock, says "No" to aprons at the assembly and makes her Grace the Duchess drop hers at the door, lace though it be; the great Beau, who foreshadows our own McAllister, but in the added glory of buckles and ruffles, and diffusing a nimbus of powder with every stately bow. These and many other lifelike figures make up a lifelike view of the city where, as Thackeray says, "all history went and bathed and drank"—a view suggestive of history if not historic, albeit from these pages are absent the bigger bigwigs, a Walpole, a Chesterfield, a Pitt, who might figure in a Chronicle of Bath under the card-playing monarch.

Let not him who begins 'Dame Care' be discouraged by its commonplace tone at the outset from continuing the reading. Let him not be hindered by clumsiness in the translation or by the scent of the obsolete which clings round it still. Such phrases as "The coachmen with their shining buttons sat on their boxes with proud smiles and threw contemptuous glances all around"; "Oh, golly! the hussy has courage," might easily act as deterrents but for a friendly word of warning, and thus might be lost the acquaintance with a little story at once striking and poetic; sad with almost the sadness of Turgeneff, but blooming with more of the humanities than usually flourish on Russian soil. Paul Meyerhofer hears the fairy story of Dame Care from his mother, who, however, will never tell him the ending. He spends his life in learning it, and it is not until it is told in full on the last page that the completeness and artistic quality of the little book are wholly revealed. There are plenty of Teutonisms to be forgiven, but it well stands a searching test for any work of art, that of retrospect.

A story of Bohemia, translated from the Bohemian, is not published every day, and interest is bespoken besides for 'The Grandmother' by the biographical notice of the author which prefaces the story. Bozena Nemec's not numerous writings are dear to the hearts of Bohemians. She was one of the earlier authors among them, having been born in 1820, and having while still quite young gained popularity by her patriotic poems and stories. She and her husband were active in behalf of their country during the Revolution of 1848, and suffered for their zeal by being ever after suspiciously watched by the Government and forced into a struggle against cruel poverty. Mme. Nemec's love of her country and love for the peasantry were the leading motives in her work. She wrote in Bohemian (although the best of her education had been in German), that she might the more surely reach the hearts of her people. It is said that as a faithful delineator of Bohemian country life she has no equal, and certainly the present volume is a remarkably realistic account of the daily being, doing, suffering, and enjoying of an old peasant woman and her family and neighbors. Long and detailed as the chronicle is, it moves with an energetic spring not less characteristic of the narrative than of the sturdy, vivacious grandmother herself. A most agreeable idea is given of the Bohemian domestic hearth and of the loving optimism of family life. The Princess is more or less a figure-head, but Grandmother, with her superstitions, her horse-sense, and her loving heart, is beautifully alive, and so are the children who hang at her skirts—maidenly Borunka and sprite-like Adelka. Dogs, chickens, doves, deer, ants, and ladybugs are among the prominent characters, and in the main we find them as interesting as the children do, even if here and there, while Knowledge is flying about, saying "Take me," a rebellious reminiscence will arise of 'Evenings at Home' and 'Sandford and Merton.' On the whole, though the book can hardly be called a novel, it is interesting as a specimen of Bohemian literature, and as a mirror of manners and superstitions; while as a narrative it will please grandmothers, grandchildren, and those who love either class.

The grandchildren must decidedly not be given Ossip Schubin's latest work to read. This clever author begins to flaunt the defects of her virtues. Her stories, it is true, grow more firm and more inventive, but her development in that direction does not keep pace with the monstrous growth of her note-taking, which, having been her strong point heretofore, now threatens to swamp her other powers. The delineation of the manners of Vanity Fair is as lawful a field for a novel as the working out of a plot, but if it consists mainly of episodes which neither advance nor illumine the story, it cannot be called a well-constructed novel, though it may furnish amusing reading. Ossip Schubin has elected to describe, in 'Countess Erika's Apprenticeship,' the manners of aristocratic society in Berlin. No one under a countess figures in her pages, and princesses grow on every bush. There are, of course, a few artists wherewithal to stock the princesses' bear-gardens, but even they are all "vons." With few exceptions, the characters are a wicked and adulterous generation, and it is the list of their misdemeanors, either detailed or hinted, which, thinly clad in a story, supplies the real *raison d'être* of the book. The supreme struggles of the small fry to associate with the great, of the great to keep themselves supplied with scandals, subjective and objective, are only equalled by those of the writer to show an arm-in-arm intimacy with human nature, and more particularly with the aristocracy. The whirling of the scene from Berlin to Bayreuth and to Venice changes only the sky and not the mind. The Grand Canal, "Parsifal," the Thiergarten, are simply pegs on which to hang the same clever but shallow feats of pen, the same display of knowingness. There is an air of cheerful alacrity about the vices of Ossip Schubin's world which is wanting to its reluctant and perfunctory virtues. Wit and the wish to be caustic are not absent, and in a superficial sense the story is entertaining. If the world loves anything better than a lover, it is a lord, even in his sins. So has it been ever since the immortal Evelina's cousin cried, "Law! Polly, Miss danced with a lord!" Here may be found, then, the charm of fine names and titles, and of all, in short, that is included in the Indian boy's definition of "unwieldy wealth," namely, "dazzling gauds and plenty too much elephants." Apropos of 'Countess Erika,' a passing query suggests itself: What is the connection between the persistent use of the present tense in novels and a certain style of story which it invariably accompanies? Intensely modern it always is, and modernly intense, reeking with the world, the flesh, and the devil. The heroine, here and usually, renounces all three at last in favor of the only suitor who is not a roué, but the real fun of the thing is over then; the gist of the book has been the author's acquaintance with methods of getting into intrigues and out of them.

No one can wonder that the writer, in a preface, congratulates herself upon having Mrs. Wister for a translator, nor that she authorizes the present translation to the exclusion of every other one.

Stanley Weyman, already favorably known as the author of 'The House of the Wolf,' now gives us 'The Story of Francis Cludde.' Both are historical novels or novelettes, and if the earlier book, considered as history, might have borne the sub-title, 'The Massacre of Saint Bartholomew Made Easy,' the present volume could be called 'Bloody Mary in the n^{th} Dilution.' No doubt, for story-telling purposes, dilution is to be desired, and this is certainly a commendable story, being full of interest and told with great spirit. Master Francis Cludde, a hot-headed young Englishman, runs away from his home in Warwickshire to carve his own fortunes. In London he falls in with the Duchess of Suffolk and her kinswoman, who are fleeing to Holland to escape Catholic persecution. Holland, in 1555, it will be surmised, soon becomes a very hot place for even English Protestants. Many and wild are the adventures of the little group, now enlarged by the Duchess's husband and a Dutch Protestant family, in getting out of Holland with their heads on their shoulders. How they did it—how they came back in later times to England, and how Master Cludde made an honorable name for himself—all is told in an animated style, while the interest of suspense is admirably maintained. It is a capital book for the young, and even the less hardened nerves of the middle-aged will find here no superfluity of gore or brutality to mar their pleasure in a bright and clean tale of prowess and adventure.

The application of the aphorism—"Ciphers forget their integer"—with which Mrs. Kirk begins her new novel, 'Ciphers,' is not altogether clear; but it is evident enough that most of the characters represented in this story of modern New York society life are ciphers; though they might readily make the mistake of imagining themselves integers. The beautiful and wealthy widow who creates a sensation on her reappearance in society, and the manly young architect with whom she falls in love, have enough inherent character to give them some value and to save the reader from drearily echoing the words of the Preacher, "All is vanity." Yet in spite of the breath of fresh air which these two chief actors bring into drawing-rooms crowded with the trivial appurtenances which suggest, accord-

ing to the author, the "acme of civilization," the story leaves one unrefreshed and unstimulated. The principal figures are not drawn vigorously enough to produce a very marked impression or to compensate for the inanities of the others. And a novel that fails to brighten life or to enrich it has surely failed of its purpose.

THE NON-EUCLIDEAN GEOMETRY.

Geometrical Researches on the Theory of Parallels. By Nicholaus Lobatchewsky. Translated from the original by George Bruce Halsted, A.M., Ph.D., ex-Fellow of Princeton College and Johns Hopkins University, Professor of Mathematics in the University of Texas. Austin. 1891.

LOBACHEVSKI'S little book, 'Geometrische Untersuchungen,' marks an epoch in the history of thought, that of the overthrow of the axioms of geometry. The philosophical consequences of this are undoubtedly momentous, and there are thinkers who hold that it must lead to a new conception of nature, less mechanical than that which has guided the steps of science since Newton's discovery. The book has been published many years—in fact, the essence of it was set forth before 1830; so long does it take a pure idea to make its way, unbacked by any interest more aggressive than the love of truth. In this case, the idea is lucid, easy, and convincing. Nobody with enough mathematical capacity to be able to understand the first book of geometry need fear the least difficulty in mastering Lobachevski's tract; and really it is high time that every thinking man and woman should know what is in it.

In the pre-Lobachevskian days, elementary geometry was universally regarded as the very exemplar of conclusive reasoning carried to great lengths. It had been the ideal of speculative thinkers in all ages. Metaphysics, indeed, as an historical fact, has been nothing but an attempt to copy, in thinking about substances, the geometer's reasoning about shapes. This is shown by the declarations of Plato and others, by the spatial origin of many metaphysical conceptions and of the terms appropriated to them, such as *abstract*, *form*, *analogy*, etc., and by the love of donning the outer clothing of geometry, even when no fit for philosophy. For instance, one of the remarkable features of geometry is the small number of premises from which galaxies of theorems result; and accordingly it has been the effort of almost all metaphysicians to reduce their first principles to the fewest possible, even if they had to crowd disparate thoughts into one formu'a. It did not seem to occur to them that since a list of first principles is a work of analysis, it would not be a small number of elementary propositions so much as a large number that would bespeak its thoroughness. Admiration for the elements of geometry was not, however, confined to metaphysicians. Euclid's treatise was acknowledged by all kinds of minds to be all but absolutely perfect in its reasoning, and the very type of what science should aim at as to form and matter.

In the empyrean of geometry there was but one little speck—the theory of parallels. Euclid had had a difficulty in proving the sum of the angles of a triangle to be not less than two right angles. His treatment of the subject betrays a very profound study of it; for instead of slipping over the difficulty unaware, as forty-nine out of fifty mathematicians would have done, instead of even bringing the necessary assumption to a persuasive shape, he takes as his fifth postulate (or 11th axiom, in incorrect editions) a proposition that begs the question in the frankest manner—namely, if two straight lines in a plane are met by a third making the sum of the inner angles on one side of this third less than two right angles, then these two lines will meet on that side if sufficiently produced. Innumerable attempts were made to demonstrate this; but, at length, the efforts of Legendre and others made it pretty clear that this proposition could be deduced only from some other nearly equivalent. The least unsatisfactory assumption ever proposed was that of Playfair, that if of three unlimited straight lines lying in one plane two intersect, the third must cross one or both. It was at this point that Lobachevski cut the knot by supposing Euclid's postulate untrue, and showing that the result was a perfectly consistent system of geometry which may, for all we can yet observe, be the system of nature. All this time, Euclid's proof (Elements, Bk. I., props. 16 and 17) of what substantially amounts to the proposition, that the sum of the three angles of a triangle are *not greater* than two right angles, was regarded as perfect. It was not till 1854 that Riemann first discovered that, though accepted for two thousand years as conclusive (and it stands to-day unchanged in almost all the text-books), this pretended proof is really quite fallacious. It is plain that it is so, because it uses no premises not as true in the case of spherical as in that of plane triangles; and yet the conclusion drawn from those premises is known to be false of spherical triangles.

The truth is, that elementary geometry, instead of being the perfection of human reasoning, is riddled with fallacies, and is thoroughly unmathematical in its method of development. It has in some measure confused all mathematics, by leaving unnoticed most of the really fundamental propositions, while raising to an undue rank certain others almost arbitrarily selected. It leads young men into bad logical ways; and it causes pupil and teacher to think that whoever has difficulty with this sophisticated logic is wanting in aptitude for the apprehension of mathematics. The study of geometry ought to begin with the theory of perspective. Let a man be supposed to stand on an unbroken sandy plain. Let him fix a needle upon a post, and set up a plate of glass in a steady position, and draw a perspective picture upon the glass by placing his eye so as to bring the needle point over each point in the sand to be represented and marking it on the glass in the same line of sight. The horizon is where the lines of sight just skim the surface of the rounded earth. These lines of sight form a cone, and their perspective representation will be the section of this cone by the plane of the glass. But for simplicity let it be supposed that the earth is flat and indefinitely extended, so that the *plain* is also a *plane*, and an unbounded one. Then every straight line in the sand will have a straight line for its picture, for all the lines of sight from the needle-point to points in that straight line will lie in one plane; and this plane will cut the plane of the glass in a straight line.

Lobachevski and Riemann cast no manner of doubt upon the geometry of perspective, so far as this is confined to questions of incidence and coincidence. But when it comes to the measurement of distances and angles, their objections begin. According to the Euclidean notions, the infinitely distant parts of an unbounded plane would be represented in perspective by a straight horizon or vanishing line. But Lobachevski says we cannot be sure that this line would be straight, that may be it would be a hyperbola like the perspective of the terrestrial horizon; and, in fact, the straight line being only a special case of the hyperbola, it is proper to say that such is its form. Riemann, however, points out that we cannot even be sure there would be any such line at all, for we cannot be sure that space has any infinitely distant parts, since it may be that if we were to move off in any direction in a straight line, we might find that, after traversing a sufficient distance, we had got around to our starting-point again.

Prof. Halsted's translation (which, while our notice has been waiting, has reached, we are glad to see, a fourth edition) is excellent; his useful bibliography of non-Euclidean geometry was already well known. We could only wish there were a more copious appendix. The work of Lobachevski, though simple and convincing, is not what would now be considered a scientific presentation of the subject, and is open to a good deal of criticism. A new synthetic exposition is much needed, and might well accompany a collection of the contributions of Lobachevski, Bolzai, Riemann, Cayley, Klein, and Clifford.

JAMES SMETHAM.

Letters of James Smetham. With an introductory memoir. Edited by Sarah Smetham and William Davies. Macmillan & Co.

THE name of James Smetham will call up to only a very limited circle of art students in England any associations. He was an instance of a type of man, not uncommon in English stock, rarely to be found in any other, in whom extreme sensibility in moral, intellectual, and æsthetic nature alike, without great strength, intellectually or physically, gives some of the best early fruits of culture, and wears out the machine it drives just when people look for something great from so much earnestness and so correct an estimate of the task in view. Writing verses at nine years and taking to art early, with the burthen of a religious tendency which we can hardly exaggerate in calling morbid, Smetham forced the note of a conscience which dominated whatever he did, and ended, as was to be apprehended, if not foreseen, in insanity, before he reached sixty. The last eleven years of his life were passed in intellectual night. Some of his early work had attracted the attention of Ruskin, ever sympathetic with all that had the tinge of devotional in art; and in a letter to the critic, Smetham tells the story of his efforts and his development.

At eight he decided to become a painter, was apprenticed to an architect, got rid of his indentures by showing his incapacity and reluctance to do what was set for him, quite as much as by his pertinacity in following pictorial art, and finally got consent to go his way. If he had had an education of the kind that the painters of the fifteenth century got, he might have become a remarkable painter, never a great one, except as Fra Angelico was great. In fact, his temperament was more akin to that of the Beato than to that of the Frate's great pupil Benozzo Gozzoli; and, but for his having been born and bred a Methodist, he might have been an ecstatic like the Angelico. But, instead of this, he went to the school of the Royal Academy, the last place in the world to learn anything but to sharpen crayons and draw from the antique with them; and presently he began to paint, his own master, like so many more in England; and, like most of them, only learning late what he ought

to have been taught in the very beginning. The Royal Academy did not work him the harm it generally does to men of his temperament, for he remained only a few months there. But he gained a living by painting portraits (though, later, photography broke off this resource), and the usual struggle of young painters working without help or patronage began. He went into the country to live, after his few months in the Royal Academy school, and a passage in his letter of autobiography to Ruskin is the prediction of his final eclipse:

"I went into the neighborhood of Bolton Abbey, where my father then resided; and here you will understand me when I speak of the great change which came over my life. The death of my brother [a Wesleyan minister in London] cast a great shade over my wild dreams and extravagant ambitions. I did a great deal for his approbation, and when he had gone my spirit followed him. I perceived that to attain to him was not a matter of fancy or speculation, and 'the commandment' came to me. A complete uproar and chaos of my inward life followed, and I fell into the 'slough of despond.' The beauty of nature mocked me, my fancies became ghosts. I felt my discordances with the spiritual universe; and it was not till my father also died that my soul was stilled and set in order. I had worked on (except for one dreadful period of four months, when I could not work at all though in perfect health) wearily and painfully; but now I resumed my pursuits with new zest, and devised the plans of study, some of the results of which you have seen. . . . A salutary fear shut me up in a happy seclusion, and I could not precipitate myself into the battle of life; so I went on painting portraits and interspersing them with fancy pictures, gaining money enough to keep me, and then snatching a month or two for study; now in a large town, now in a little one, now in a remote farm painting the farmer and his family, and roaming in his fields, and by the edge of his plantations; then in London."

It is not difficult to see here the symptoms of the mental disease which later came over him. Whether it might have been possible for him to cure the morbid and fatal tendency by a vigorous wrestle with humanity and getting calloused by the process, it is impossible to say; but if there were any hope for a healthy development of his talent and mental activity, it would have been only there. His seclusion, his giving the lead to the moodiness which many men who can recall their early years of poetical impression will recognize, were the surest tendencies to destroy his intellectual equilibrium; and if his Life has any value for those who read it, it will be that it is an illustration of the way in which minds over-inclined to introspection and spinning their mental fabrics from their spiritual natures tend towards a collapse. Ruskin, who had the same tendency, seems to have had a perception of it in Smetham, for he writes to him on the occasion of receiving from him a drawing on which the artist had bestowed great labor and feeling:

"I have hardly ever seen any work of the kind carried so far as the drawing in the principal face. I shall indeed value it very highly; but if, indeed, you think any words or thoughts of mine have ever been true to you, pray consider these to be the truest, that it is unsafe for you, with your peculiar temperament, to set yourself subjects of this pathetic and exciting kind for some time to come. Your health is not sturdy; you are not satisfied with what you do, and have to do some work which is irksome and tedious to you. If your work is divided between that which is tedious and that which tries your feeling and intellect to the utmost, no nervous system can stand it; and you should, I am very strongly persuaded, devote yourself to drawing and painting pretty faces, and things involving little thought or pathos, until, your skill being perfectly developed, you find yourself able to touch the higher chords without effort."

Smetham's was an essentially devotional nature—not merely religious in the sense of being governed by the immanent eternal law and divine presence, but dependent on the emotional activity which, where not united to a sound constitution and a robust frame, provides so many of the inmates of our lunatic asylums. To him the sense of the dominance over himself of the divine law and the willing obedience to it were not enough for conscience—he must be perpetually awakening the emotional illusions of the spiritual presence in that conscious state which is in itself a step towards insanity—perpetually feeling of his spiritual nature to be assured that it was there, like a man in a dream touching his body to be assured that it is himself. This is a condition in itself symptomatic of mental disease, and in another epoch, or another country, would have sent Smetham into a monastery; but in the condition in which he lived, it simply determined the wearing out of his mental machinery by the manifold charges on it. In one of his letters he gives utterance to the following rhapsody, which, with all its exaltation, is clearly only the expression of his habitual temper, what he was moved to in all his waking hours:

"It is the Truth that lives. This evening, going round the fields and lanes, on my old steps of thirteen years ago—the same gray twilight, sharp air, and pensive gold purple sunset over Highgate—my heart glowed within me as I thought how my life has changed by the belief of a few simple things since those old days. I thanked God aloud. I sent some plain expressions of praise upward to the heavens, where I saw one white star in the gray, tender blue eastward; such expressions as I could scarcely repeat, so unlike me to say aloud were they; but I could not help it. My heart was glowing silently like that star in the heavens. A star is ever the same. All that we know of it was known by the Shepherds of the East—by us as children—but it is for ever there. The leaves are tossing on the grass, or perishing in the pool, but the star is simple and the same. The leaf is not so simple to us as the star, it is not so grand, it is not so ineffable. I find the Truth to be like that: I know no more intellectually of it than when I first believed; but what a result comes from its abiding! A deeper, deeper happiness absorbs the heart and pervades the soul. A deepening calm rules and assimilates the faculties, and compels them into action; not excitement, but definite and proper action. The peace of God, which passes all understanding, which baffles all analysis, which has an infinitude of depth about it—as you cannot understand remote stars, nor the overhanging vault which you cannot at all explore, but can only feel as you feel your life, so you cannot touch this Peace of God with your understanding. It lies round you like an atmosphere. It dwells in you like a fragrance. It goes from you like a subtle elixir vitæ. 'My peace I leave with you, My peace I give unto you: not as the world giveth give I unto you.'"

With the exception of part of the latter sentences of this quotation, there is in it nothing that does not show the naïve and unaffected expression of the man himself with no atmosphere of the pulpit. If a little verbiage envelops the definition of the Truth (with a capital T), it is not strange; the letters are in the vein of a diary, and all diarists know that to write simply and unconsciously is the next thing to the impossible. Smetham's perceptions of the truths of art show that his feeling was the true one, and that, had he been wisely taught, he might have made his mark in the century. Speaking of the Turner sketches at Marlborough House, he says: "They confirm what I have long believed to be true, that in preparing for painting the best way is not to paint finished things from Nature, but to make slight, often symbolic, records, in abundance, of facts. There is scarcely an instance of a finished sketch of effect directly from Nature in all Turner." He did not take kdinly to pre-Raphaelitism. Speaking of some landscapes by Rembrandt, he says: "The pre-Raffaelite dicta of ten years ago would have laid these landscapes dead. The 'awe of observation,' peeping, and botanizing, and protesting, and putting the screw on square inches, would slay all such art, and it is the grandest of all." There is a most interesting letter of description of a visit to Denmark Hill, when Ruskin was there, and his father and mother still alive, and the portraits of the three are of the best:

"His father is a fine old gentleman who has a lot of bushy gray hair, and eyebrows sticking up all rough and knowing, with a comfortable way of coming up to you with his hands in his pockets and making you comfortable, and saying, in answer to your remark, that 'John's' prose works are pretty good. His mother is a ruddy, dignified, richly dressed old gentlewoman of seventy-five, who knows Chamounix better than Camberwell; evidently a good old lady, with the *Christian Treasury* tossing about on the table. She puts 'John' down and holds her own opinions, and flatly contradicts him; and he receives all her opinions with a soft reverence and gentleness that is pleasant to witness."

The brief sketch of Ruskin is perhaps recognizable in its complete truth only by those who knew him in that phase of his life, and is "worth framing."

"I wish I could reproduce a good impression of John for you, to give you the notion of his 'perfect gentleness and lowlihood.' He certainly bursts out with a remark, and in a contradictious way, but only because he believes it, with no air of dogmatism or conceit. He is different at home from that which he is in a lecture before a mixed audience, and there is a spiritual sweetness in the half-timid expression of his eyes; and in bowing to you, as in taking wine, with (if I heard aright) 'I drink to thee,' he had a look that has followed me, a look bordering on the tearful."

The book has a value in no ways proportional to the position which the artist took in the world of art. It betrays the complete image of a man who was a true artist by temperament and mental outfit, but who failed of the success which is the real object of labor, from the want of the correct education in living and in art which is necessary to technical mastery, and from causes which are always potent in the life of men who approach art in the modern condition and in the modern temperament. He was far from a great man, though he might have been a very distinguished one but for the dispersion of his energy and the sapping of his intellectual powers by the morbid devotionalism which found no counteracting influence in his practical life. His was a true and characteristic life because true to its morbid type, and therefore an instructive one—a life for a warning, not for an example.

The Financier and the Finances of the American Revolution. By William Graham Sumner. 2 vols. Dodd, Mead & Co. 1891.

THE problem to which the colonies and the confederation devoted most of their attention was how to carry on a war without taxing themselves for the maintenance of an army. As Prof. Sumner puts it, "It seemed to be accepted by everybody as a rational and correct view of the situation, that, of course, taxes could not be laid, because the fight was against taxation. We have not met with a single case in which anybody undertook to point out the distinction between resisting all taxation and resisting taxation which was not levied upon due authority; nor have we found one case in which anybody argued that the people had intelligently undertaken to resist the authority of Great Britain, and that they could or would subject themselves to the neces-

sary cost of it, in money and military effort, like men." In point of fact, the idea that taxation was necessary to the existence of society, an idea which seems to us elementary enough, was scarcely comprehended in the colonial period, for the excellent reason that society as then constituted existed practically without taxation. There was not much government nor very much need of it. The colony was "a congeries of coöperative land companies," and the taxes in these communities "were really nothing but the subscriptions of a club." Since they rebelled against Great Britain simply because she taxed them, it is perhaps not very surprising that their leaders hesitated to tell them that by their revolt they had only made taxes more inevitable.

Under these circumstances the governments of the Revolution were driven to resort to the most desperate expedients. The revolt against British taxation led to the suspension of most of the slight taxes that had been levied by the colonial governments, and we find the Provincial Congress of Massachusetts, two weeks before the battle of Bunker Hill, grasping eagerly at the report that there was a man in Salem who had £500 which he was willing to lend them. "It would be of the greatest importance to pay the soldiers, and might prevent the greatest mischief." At the outset some money appears to have been raised in this way, but the inducements to resort to the issue of paper currency were too strong to be resisted. It depreciated at once, of course, and then followed a series of measures intended to force people to part with their goods in exchange for this paper, the particulars of which are given by Prof. Sumner, and which could end in only one way. These enactments, however, did for a time terrify some persons into giving up their goods, and were especially convenient in plundering the Tories. But revenue so gained was not all profit, as the Tories retaliated by plundering the Whigs when they got a chance. In the course of three or four years all the devices that human folly and passion could suggest were exhausted. Specie had been driven out of use, the Continental currency had expired amid universal execration, and the business of the country was reduced to a system of barter.

It might seem that at last a resort to taxation had become inevitable, but, happily or unhappily, one other expedient remained. According to the theories of the age, colonial trade was a vast source of wealth to any nation that engaged in it, and there was from the beginning a good deal of hope that, by offering their trade to the rivals of Great Britain, the colonies might procure some substantial assistance. At this critical juncture these hopes were beginning to be realized, although the attempt to stop the trade with Great Britain had only resulted in making it illicit—both Congress and the States prohibiting it to their subjects, while they engaged in it themselves. The appetites of the French had been early whetted by stories of the enormous profits made in this traffic—the gain from a successful voyage to the West Indies sometimes being enough to balance the loss of two vessels with their cargoes—and the French Government seems at first to have intended to confine the expression of its sympathy with the colonists to allowing them to market their products in France. The address of the American Commissioners, however, was such as to induce the foreigners to part with their goods before they were paid for them, and eventually to induce the French Government to make loans in money. This was exactly what the colonists most desired, and the question of repayment by shipment of supplies, or in any other way, lost much of its interest. The success of the French and American arms in the latter years of the war produced the conviction abroad that independence would be won, and borrowing became easier; for it was thought, justly, as the event proved, that, after the States had secured their independence, they would easily carry their burden of indebtedness.

It was early in 1781 that Robert Morris was unanimously elected by Congress Superintendent of Finance, an office created for him and in which he had no successor. He was commonly spoken of as the Financier, and that title is inscribed upon his tombstone. He was a man of affairs, a merchant, banker, and speculator, and he made it a condition of taking office that he should be permitted to continue his private business. He could, of course, not expect much remuneration from Congress, but as it was necessary under the circumstances to speculate on their behalf as well as his own, the resulting confusion of accounts gave his enemies a chance to bring ugly charges against him. There seems to have been no reason to doubt his honesty, and as he freely used his own credit in raising supplies for the public, bringing some kind of order out of financial chaos and greatly reducing expenditure, the balance may be said to have been heavily on his side, although the accounts made him out a debtor.

The importance of Morris's appointment lay in the fact that it put the management of the finances into the hands of an executive officer, it having previously been controlled by a committee of Congress, under whose incompetent direction the most deplorable waste and corruption had occurred. Prof. Sumner does not give us a very clear idea of what reforms Morris effected, but he quotes a statement that it had cost Congress $18,000,000 a year in hard money to carry on the war, while under Morris's administration the cost was reduced to $4,000,000. For one thing, Morris insisted on controlling his own subordinates, although Congress was extremely reluctant to give up this patronage. His understanding of what ought to be done was clear enough, but his attempts to make the States pay their quotas to the general Government seem to have produced little result. He was driven to undertake a general mercantile business on behalf of the Government, buying, selling, exporting, and importing commodities by the ship's cargo. He established the Banks of Pennsylvania and of North America, which proved of some convenience, and he engaged extensively in operations in the exchange market, some of which at least were sheer "bill-kiting." At all events, it may be said the country managed under his administration of the finances to struggle through three most critical years, and when he resigned, the success of the loans made in Holland relieved us of our most pressing difficulties.

There are numberless matters of interest touched upon by Prof. Sumner to which we are tempted to refer, but we can only advise our readers to consult his work for themselves. It is furnished with a copious list of authorities and a full index, and the thanks of his countrymen are due to the author for the immense labor which he has performed—a labor which is not less valuable because it simply subserves historical truth, and has not been affected by any disposition to extenuate the failings of the period. The glories of the time have been elsewhere sufficiently dwelt upon. As a matter of fact, the country came through the Revolution without exhaustion, and throughout the war the army may be said to have been starving in the midst of plenty. The utter lack of administrative organization, the absence of financial experience, and the timidity of the leaders which prevented them from calling upon the people for taxes, nearly wrecked a cause which there were abundant resources to sustain. The colonies are said to have raised an army of 25,000 men during the Seven Years' War, and during the Revolution they never maintained more than 30,000 at any one time.

So far as Morris as an individual is concerned, Prof. Sumner's portrait is but a faint and colorless outline. He learned evil ways in administering the distressed finances of the nation, but his subsequent ruin was due entirely to his wild speculations in land. His services were evidently believed at the time to be most important, and though he took office at a period when the conditions were beginning to turn in our favor, his labors were sufficiently arduous to entitle him to the honor of posterity. He declared, in words which Prof. Sumner places on his title-page, "It is of the nature of expedients to increase the evils which they postpone"; but a policy of expedients was forced upon him, and he made the best of the situation.

A Brave Black Regiment. History of the Fifty-fourth Regiment of Massachusetts Volunteer Infantry, 1863–1865. By Luis F. Emilio. 8vo, pp. xvi., 410. The Boston Book Co.

Captain Emilio has written a modest, candid, and full history of the colored regiment made famous by its charge upon the parapet of Fort Wagner, where Colonel Robert G. Shaw died at its head. It was the pioneer organization of black troops and had a just preëminence on that account. Fully weighing the importance of the experiment, Governor Andrew determined to give to it a corps of officers selected with exceptional care, and to be rigid in excluding from the rank and file all unhealthy and weak recruits. The result was an organization which bore the fatigue and exposure of camp life with uncommon success. Its ranks were always full and always ready for duty.

Its military career was an honorable one, though both the more important engagements in which it had part turned out unfortunately. The attack upon Wagner was repulsed because there was no unity in the assault by the several regiments engaged in it, and so the heroism of Shaw's regiment, as well as of others, was wasted. The fault was not with the regimental officers, who did their duty nobly. Their other battle was that of Olustee in Florida, when the little army to which they belonged was defeated, but the Fifty-fourth performed well the honorable and perilous duty of covering the retreat. Their skirmishes and minor engagements were numerous, but they were not accompanied by the stimulus and the éclat of success on a large field, and the whole service of the regiment was rather a steady and faithful one than one of marked brilliancy. The roster shows that the recruiting for the regiment was not confined to Massachusetts, but was active in New York, Pennsylvania, Ohio, Indiana, Illinois, and Michigan. Nearly every free State had some representation in the ranks, and the regiment was therefore rightly considered a typical one, exhibiting the military aptitude of the free colored men of the country. Later in the war, very great numbers of freedmen were enlisted, but neither in education, in habits of self-respect, nor in the train-

ing under carefully chosen officers, could they be expected to rival the Fifty-fourth Massachusetts. The whole subject of the actual value of the colored troops has as yet been very imperfectly studied, and would well repay a searching investigation from a strictly military point of view, to determine whether their enlistment and use was in fact an economy of the military resources of the country.

The narrative makes it very clear that Col. Shaw's regiment was orderly, well-disciplined, and brave. It had some peculiar discouragements to contend with. First of these was the threat of outlawry on the part of the Confederacy against officers and men of black and mulatto regiments. The warning given by the United States Government that severe retaliation would follow any treatment of them contrary to the laws of war, protected the captured, apparently, though the massacre at Fort Pillow was horrid proof that quarter could be refused on little or no pretext. A small number of the Fifty-fourth were taken prisoners and were surrendered at Wilmington just before the close of the war. The Confederacy, however, had, up to that time, refused to exchange colored prisoners, and the doubt as to his fate if captured must have hung over every colored man who enlisted. Besides this, the Fifty-fourth had a special grievance in regard to its pay. Mr. Stanton's authorization to Gov. Andrew to raise colored regiments preceded the act of Congress on the subject, which fixed the pay at a lower rate than for white men. The recruiting officers of the Massachusetts regiment offered to enlisted men the same pay as others received, in good faith, but without authority of law. When the time for payment came, the regiment refused to take the lower pay, even under protest. The Massachusetts Legislature appropriated State funds to make up the difference, but the non-commissioned officers and men made it a question of principle, and maintained their position till Congress awarded them the full pay, eighteen months after their service had begun. No better proof of loyalty and good discipline could be given than is found in their steady obedience to orders during the long delay, very few cases of insubordination being reported. Capt. Emilio's history does not enter as fully into either of these questions as is desirable for historical purposes, for there were two sides to the discussion, as is usual. He gives the side of the regiment, as they felt it, warmly but temperately, assuming that there could be no debate as to the injustice of their treatment by the national Government.

The book should be welcomed as an important chapter of our war history, well presented, and well illustrated by good maps and good portraits of the men of both races who carried the muskets as well as the sabres.

Japanese Letters. New York: Longmans, Green & Co.

THIS book purports to be a collection of private letters from two Japanese, which have been "edited" by Commander Hastings Berkeley, R. N., author of 'Wealth and Welfare.' They profess to give, as the sub-title advertises, "Eastern impressions of Western men and manners, as contained in the correspondeuce of Tokiwara and Yashiri." Tokiwara is the "representative of young Japan," who has left the land of earthquakes and attempts at Parliament, and is travelling in Egypt, England, and the Continent. The youthful enthusiast is set over against the aged and sober Yashiri, who remains at home, conservative in politics and sceptical of the benefits promised to his country by the infusion of Occidental ideas. England is the country from which Tokiwara believes Japan is to learn the secret of industrial and political supremacy. Like so many Japanese, he hopes that Nippon is to become "the England of the East." Yashiri, on the other hand, distrusts the power of his æsthetically-minded fellow-islanders to become a business nation. The national temperament is impulsive, while the striking quality of the English is "their power of self-restraint, their reluctance to undertake more than they feel they can carry out." Mightily impressed with London is the young traveller, and the intensity and permanency of endeavor in the Briton are constant surprises to him. With a philosophical power and coloring of language that is wholly English, this young Japanese, doubtless faultlessly clothed by the tailors of Ludgate Hill, discusses, in a suspiciously Occidental and un-Japanese style of thought, religion, science, fashion, politics, art, and education.

The "editor" of these letters, who modestly ascribes to Yashiri and Tokiwara his own cogitations and criticisms, has succeeded in soaking out the last watermarks of real Japanese thought, and in translating away all native idiom and peculiarities. True, he introduces here and there a Japanese word, and then obligingly turns it into English in a foot-note. The skill which he has shown, however, in destroying the moulds of Japanese thought and in obliterating the native canvas-texture beneath the English paint and varnish, is worthy of nobler work. The Englishman whose religion is "British interests," and the club-man and naval officer who enjoys ventriloquizing his opinions, is manifest in every chapter. We should mark paragraphs on pp. 23 and 29 as strong evidences of this. The "editor" has evidently seen Japan from the deck of a man-of-war, and probably picked up many notions about the Japanese, so that he is well able to compare, for example, the uses of the pocket-handkerchief and the nose-paper on different sides of the Pacific. Every Japanese familiar with the facts knows that "our three hundred feudal nobles in 1869" did not spontaneously (p. 252) relinquish their "fiefs, feudal power, and military splendor," but that the stronger compelled the weaker to do so. The few men of personal importance gave the many figure-heads to understand that blood and destruction awaited them unless they at once complied with the orders given in the Emperor's name. Very properly the "editor" brings his chapters to an end after likening the Japanese to the French mind in love of ideas, and making a complimentary reference to Thomas Carlyle. The true author of these essays has given us, under the thin disguise of letters labelled Japanese—which are Japanese in the same sense as are Sullivan's music and opera singers—an interesting contribution to the discussion of the subject of Japan's attempt to appropriate Western civilization. Even in their earnest search for religion, for the basis of morality, for the best government, the people of Japan are worthy of all sympathy. And this quality the editor shows commendably, despite the catch-penny title of his book.

Selected Fragments of Roman Poetry from the Earliest Times of the Republic to the Augustan Age. Edited by W. W. Merry, D.D. Oxford: Clarendon Press; New York: Macmillan & Co. 1891.

IT was a good idea of Dr. Merry's to give in a convenient form a representative selection from the fragments of Roman epic, dramatic, and satiric poetry. To most men, Latin epic poetry means Vergil, satire means Horace and Juvenal, with sometimes Persius, while Roman drama is utterly unknown. For of course in Plautus and Terence there is hardly anything Roman except their mere language. The fact is, we know nothing of real Roman drama except what we can learn from the remains of the tragedies, praetextæ, and togatæ, written by such men as Livius, Ennius, Nævius, Pacuvius, and Afranius. Nor can one understand the growth and thoroughly appreciate the perfection of the later epic and satire without having studied the fragments of the earlier writers in the same kinds of poetry. Of course, material for such study has not been wanting, but it has been scattered about in different books, and these have generally been too large or too difficult for the beginner. Dr. Merry's collection is therefore welcome, and will doubtless be more useful than his modesty allows him to hope. We are more than glad to forgive him for attempting nothing himself in the lines of textual criticism and metrical arrangement, since he offers English readers the results of the work of such scholars as Ribbeck, Vahlen, Baehrens, Riese, and L. Müller.

The book contains selections from about forty poets, as well as some early formulæ, the Scipio epitaphs, and popular songs. Some of these poets we have already mentioned. Among others are Turpilius, Accius, Lucilius, the two Varros, Cicero, and Cinna. A brief word of introduction might have been said about each of them—at least their dates should have been given—but the notes are confined to a summary of the contents of the fragments and to the explanation of a few of the more difficult terms. On the whole, the beginner wants more notes everywhere than Dr. Merry gives him—notes like those in Allen's admirable edition of the 'Remnants of Early Latin.' Most valuable, however, are the suggestions about the plots of the lost plays of which we have fragments. In the ordinary editions only the bare Latin is provided, and the task of making sense and connection is worse than a Chinese puzzle. It is good to find that at last some praise is accorded in an English book to the work which Cicero did in poetry. Ridiculed as his muse has been, its productions yet show a real advance in the matter of form, if not in thought. Lucretius and Catullus are not the only stations in the long journey from Ennius to Vergil, and hexameters like those which Cicero and a few others have left behind them mark the stages of development which resulted finally in the 'Æneid.' The perfection of the Vergilian form can no more be appreciated by one who has not studied the earlier hexameters than can the lyric metres of Horace by one who knows nothing of their Greek models.

We have noticed a few misprints here and there, such as the references to Terentius Scaurus and to Festus on the first page, and on page 16 *Menippae* for *Menippeae*. Of errors may be noted *immulgens* for *inmulgens* (p. 13), as well as *nefrens* for *nefrendes*. In a revision it would be well for the editor to consult both here and elsewhere De Ponor's Festus. The statement (p. 2) '*rue=ruinam*,' with '*lue=luem*' preceding it, is misleading. The metre in the quotation from Nævius on page 23 requires *utrubi*, not *uterubi*, and the former is what Charisius gives in the place cited. It is perhaps trusting one's authorities too far when a line quoted as a senarius by Gellius is printed as a saturnian by Dr. Merry (p. 4), following without a word of warning the wholesale rearrangement of Baehrens. Still, all these are tri-

fling blots, easily removed, on what promises to be a useful handbook.

BOOKS OF THE WEEK.

À Kempis, Thomas. Meditations on the Life of Christ. E. P. Dutton & Co. $1.25.
Andrews, Rev. S. J. Life of Our Lord upon Earth. Scribners. $2.50.
Burnham, Mrs. C. L. Miss Bagg's Secretary. Boston: Houghton, Mifflin & Co. $1.25.
Cambridge, Ada. Not All in Vain. Appletons.
Cobb, Sylvanus, Jr. Bion the Wanderer. Cassell. 50 cents.
Collins, Clinton. All Poetry: A Selection of English Verse. Cincinnati: The Traddles Co. 70 cents.
Coltman, Robert, Jr. The Chinese: Their Present and Future: Medical, Political and Social. Philadelphia: F. A. Davis.
Conway, M. D. Prisons of Air. United States Book Co. 50 cents.
Crushed Yet Conquering. F. H. Revell Co. $2.40.
Davis, N. S., Jr. Consumption: How to Prevent It and How to Live with It. Philadelphia: F. A. Davis. 75 cents.

Dainty Foods Demand it.

IN EVERY Receipt that calls for baking powder, use the "Royal." Better results will be obtained because it is the purest. It will make the food lighter, sweeter, of finer flavor, more digestible and wholesome. It is always reliable and uniform in its work.

I have found the Royal Baking Powder superior to all others.
C. GORJU,
Late *Chef*, Delmonico's.

A Tonic

HORSFORD'S ACID PHOSPHATE.

A most excellent and agreeable tonic and appetizer. It nourishes and invigorates the tired brain and body, imparts renewed energy and vitality, and enlivens the functions.

Dr. EPHRAIM BATEMAN, Cedarville, N. J., says:

"I have used it for several years, not only in my practice, but in my own individual case, and consider it under all circumstances one of the best nerve tonics that we possess. For mental exhaustion or overwork it gives renewed strength and vigor to the entire system."

Descriptive pamphlet free.

Rumford Chemical Works, Providence, R. I.

Beware of Substitutes and Imitations.

CAUTION: Be sure the word "Horsford's" is on the label. All others are spurious. Never sold in bulk.

"The weary brain requires some nerve sustaining element as food."—HERBERT SPENCER.

Crosby's Vitalized Phosphites.

The vital principle of animal and vegetable life isolated from the ox brain and wheat germ.

The loss of memory, the tired and exhausted feeling, the dull unrefreshed sleep, or nervous sleeplessness, brain weariness, depressed vitality, are simply the brain and nervous system calling for their necessary food. In this condition the Vitalized Phosphites give great relief. It restores the true protagon, the brain phosphoid, increases brain and nerve power by specially feeding the nerve centres. It reinvigorates brain and body.

For thirty years endorsed by leading physicians, and the world's best brain workers. Formula on the label. Pamphlet free to those who write for it. Druggists or by mail, $1.00.

The Nation.

NEW YORK, THURSDAY, FEBRUARY 18, 1892.

The Week.

THE voice of the people of New York in the town elections of twenty counties is clearly audible in the following table, compiled by the Albany *Evening Journal*, showing the political divisions in the new Boards of Supervisors as compared with those chosen last year:

	1891.		1892.	
	Rep.	Dem.	Rep.	Dem.
Broome	14	15	22	7
Chemung	7	4	3	8
Chenango	9	12	13	8
Cortland	7	8	10	5
Cattaraugus	19	13	20	12
Delaware	11	8	12	7
Franklin	12	7	16	3
Herkimer	10	9	12	7
Madison	9	5	13	1
Montgomery	4	6	6	4
Onondaga	7	12	15	4
Otsego	13	11	13	11
Putnam	3	3	3	3
Schoharie	3	13	6	10
Schuyler	5	3	4	4
Seneca	5	5	5	5
St. Lawrence	27	4	28	3
Steuben	15	17	23	9
Tioga	6	4	9	1
Washington	13	4	15	2
Totals	199	163	248	114

Here is a net Democratic loss of 49 in a total of 163, or more than 30 per cent. That is a condemnation of Hillism, as exhibited in seat-stealing and snap-convention-calling, which is not to be misunderstood. The Democratic party would have small chance of carrying the State of New York with a candidate in any way representing the odious performances which have called forth such a rebuke as that. The voters of the counties in which Hill perpetrated his canvassing-board outrages are clearly determined that there shall be no chance for the repetition of those outrages after the next election. The Republicans have made gains in fifteen of the twenty counties, have held their own unchanged in three others, and the Democrats have made gains in only two, one of these being Hill's corrupted county of Chemung.

However reluctant the bar may be to attack a judge on the bench, and however incompetent the public may be for the task of initiating a movement against him, it can hardly be that we are reduced to such helplessness that nothing will be done to call Judge Maynard to account for his share in the late election frauds. He has been positively charged by one of the witnesses in a judicial inquiry with having assisted in these frauds, by abstracting one of the returns from the official custodian on its way to the Board of Canvassers. This is a criminal offence, defined in the Penal Code as "grand larceny in the second degree," and punishable by imprisonment for not less than two or more than five years. He has, further, in the public estimation as the matter stands at present, apparently been appointed to a seat in the Court of Appeals, to fill an unexpired term, as a reward for the commission of this offence. No such incident has heretofore occurred in our judicial annals. We do not say that the charge has been proved. Judge Maynard may have a defence to it. But nothing has as yet been done to make him produce this defence. No proceeding is pending in which he is a party defendant.

The testimony of the Comptroller and his messenger shows that Mr. Maynard, without any authority whatever, went into the Comptroller's office and abstracted from his mail an official document which had been sent to the Comptroller for him to file in the official records of the State. This document was the legal return of the election in the Fifteenth Senatorial District, showing that the Republican candidate had been elected. If that return had been received by the Comptroller and filed by him, in accordance with his oath of office, with the State Canvassing Board, that Board would have been obliged to canvass it as the Supreme Court and the Court of Appeals directed, and the Democrats could not have stolen control of the Senate. One other bit of evidence has been given which implicates Judge Maynard as the leader in the conspiracy by which this legal return was prevented from reaching the State Canvassing Board. In the statement which Senator Hill made to Col. George Bliss, and which the latter repeated to Judge Cullen in Brooklyn on February 10, Mr. Hill declared that when the Clerk of Dutchess County, who is himself charged with inducing one of the Governor's messengers to give him a duplicate of the legal return from the Governor's mail, came to him on the morning that Mr. Maynard committed his offence, and asked his advice as Governor about what he should do to regain possession of the returns, he as Governor advised the clerk to "see Deputy Attorney-General Maynard, who was counsel for the State Board of Canvassers, and take his advice." Whether a movement to bring Judge Maynard to justice be made or not, the members of the bar owe it to themselves and to the community not to allow it to go on the record that such a man had been placed upon the bench of the Court of Appeals without their notice.

The Maryland House on Thursday, by a vote of 78 to 3, the full Democratic vote in the affirmative, adopted a resolution declaring it their sense that the National House of Representatives "should deal with the subject of tariff reform, whether by general bill or otherwise, upon the broad lines marked out by President Cleveland's message of December, 1887, and the Mills Bill, in order that the party may enter upon the great contest of 1892 with a definite policy, which will convince the country that it does not mean to take any backward step, and that its faith in the common sense and conscience of the people is unshaken." This is as clear and explicit as a declaration could well be made. Such a deliverance would be of importance if made by any body of Democrats, but its significance is vastly increased when it comes from the Legislature of Maryland, a State whose Democratic leaders have been charged with inclining towards the reactionary policy advocated and represented by Hill. As this Legislature recently reëlected Mr. Gorman to his seat in the Senate, and ratified his choice for the other seat, its present action should convince even Hill of the folly of expecting Mr. Gorman's support.

The first popular verdict to be rendered by the Democrats of any part of the country upon the reactionary tendencies in the party which have been manifested at Washington the last two months, has been pronounced in the Sixteenth Congressional District of Illinois. That district is represented by Mr. George W. Fithian, who made the fight in 1890 upon the tariff-reform issue, and went to Washington at the opening of the session prepared to continue it. He therefore refused, as did two other Illinois Democrats, to support Springer as a candidate for Speaker, and voted for Mills as the champion of tariff reform. During and after the contest for Speaker, these three recalcitrants were threatened with defeat for renomination in their districts because they had refused to be fooled by the "favorite son" doctrine. The canvass for members of the next Congress begins in Illinois soon after the first session of the existing Congress has opened, and most of the primaries in Mr. Fithian's district have now been held. He has already enough delegates instructed for him to insure his renomination, and the same result appears certain in the districts of his two associates, Mr. Lane and Mr. Forman. Such object-les-

sons as this will not be lost upon the managers of the Democratic party.

We are now near the beginning of March. Some persons of influence were confident that Congress might adjourn by the middle of May. But what with the dilatoriness of the Committee of Ways and Means and the doggedness of the Watch-Dog of the Treasury, no tariff bill, large or small, had been reported until the 16th day of February, and only one appropriation bill, and that the shortest of all, has passed the House. The result is that the country is gaining the conviction that the tariff issue is to be "burked" in order that Mr. Cleveland may not become too popular before the Convention meets. Any tariff fight whatever is certain to enure to his benefit. When the pugnacity of the Democrats is excited, as it will be by a real struggle on that issue, the fact that Mr. Cleveland made the issue will be impressed upon the public mind. If there were a settled purpose in the Speakership contest to defeat Mr. Cleveland, it would manifest itself in a sluggish tariff policy rather than in a single-bill policy. We do not think that Mr. Springer has any sinister design whatever, but we take leave to remind him that his own fortunes and those of his party are at stake equally with those of Presidential candidates, few or many, and that he cannot afford to waste more time.

Congressman Harter of Ohio has sent a very telling document to the Grand Army posts throughout the country, showing what effect the free coinage of silver would have on pensions and pensioners. Such a measure would substitute the value of a silver dollar in place of the value of a gold dollar on every pension. The silver dollar is now worth 70 cents. Consequently all pensions would be worth, under the silver régime, 70 per cent. of what they are now worth. Thirty cents would be shaved off each dollar of pensions. A soldier now getting $4 per month would then get only $2.80, and all others in proportion. But, says Mr. Harter, and here he is perfectly sound, the prospect is that silver will decline still more. It is more likely to fall to 60 cents per dollar than to go back to 80 cents. Every new railway built in the mountains, and every new discovery in metallurgy, tend to increase the product of silver and to lower its value. It is a fact that ores which cost *twenty-one* dollars per ton for treatment in Colorado a few years ago, are now treated for *six* dollars per ton. These discoveries and new facilities are as applicable to the ores of Canada, Mexico, and other countries as to those of the United States. The most productive silver mine in the world at the present time is the Broken Hill Proprietary of Australia. Mexico is only beginning to show what she can do in the way of silver output with modern machinery, modern transportation, and modern chemistry. But supposing that the price of silver does not fall any more, the depreciation of pensions under free coinage would be equal to $45,000,000 per year. What is true of pensioners is equally true of savings-bank depositors, life-insurance beneficiaries, and all persons who have fixed payments in *dollars* coming to them. Such persons cannot recoup themselves by strikes any more than they can ward off a thunderbolt by shaking their fists at the sky.

In view of these palpable facts, how foolish and belated is the report of Mr. Bland's Committee presented to the House of Representatives on Monday. Much space is taken in it to show that there can be no "Dump of Silver" in this country from any other part of the world, because there are no great stocks of silver accumulated anywhere. If this were true, it would prove nothing to the point, since the great store of mother Earth would continue to swamp the market in the future as it has in the past. Who would have thought, when the Government's purchases of silver were raised from two millions to four and a half millions per month, that the price would fall 26 cents per ounce in eighteen months? Yet that is what has happened. The price in August, 1890, was 116.9 cents; it is now about 90, and there is no reason to suppose that it has reached its minimum. And yet Mr. Bland puts some emphasis on the statement that there is no great supply of silver in sight that might be dumped upon us at short notice. But, says this report, the foreigner cannot bring silver here and exchange it for gold without the consent of the owner of the gold. No, but everybody who has to pay a debt, including the savings banks, the life-insurance companies, and the Government, can pay depositors, widows, orphans, and pensioners with money worth 30 per cent. less than it is now worth, and *must* do so, because, when the standard of the country is changed, they cannot help themselves.

Mr. Bland's Free-Coinage Bill differs so widely from any measure heretofore proposed by anybody that we can hardly give it serious consideration. The proposal to make our standard of value depend upon the standard of another country, and to have all of our silver dollars recoined on a new ratio in the event that that other country does something, is altogether absurd. This proviso deserves careful attention. It reads as follows:

"Section 6. That so soon as France shall reopen her mints to the free and unrestricted coinage of silver at her present ratio, namely, fifteen and one-half pounds of silver to be worth one pound of gold, Troy, it shall be the duty of the President of the United States to immediately make public proclamation of that fact, whereupon the said ratio shall be the legal ratio of the United States, and thereafter the standard silver dollar shall consist of 400 grains of standard silver, and the laws relating to the standard silver dollars of 412½ grains standard silver shall be applicable to the new dollar of 400 grains standard silver. That the silver dollars of 412½ grains then in the Treasury or thereafter coming into the Treasury shall immediately and as fast as practicable be coined into dollars of 400 grains standard silver. Any gain or seigniorage arising therefrom shall be accounted for and paid into the Treasury."

There are 349,000,000 of standard silver dollars in the Treasury. Of this sum $320,000,000 belongs to the holders of silver certificates which are in circulation. Is the Government to seize upon these standard silver dollars and clip off 12½ grains from each one and pocket it as seigniorage? Or will it deal in this fashion only with the $29,000,000 belonging to itself? In the latter case, what will be the legal-tender value of the present silver dollar of 412½ grains? Will it be one dollar, or something over and above that? And is it possible that anybody can seriously think of putting our standard of value, the measure of all our debits and credits, contracts, undertakings, bargains, and sales, at the discretion of a foreign country? We observe that no provision is made in the bill for the contingency of France closing her mint again, or changing her ratio. As she changed her ratio twenty-seven times in the space of two centuries, it would surely be wise to take that chance into our reckoning.

Senator Hale made a rather serious mistake the other day when singing the praises of reciprocity in the Senate. He was pointing to the increase in our exports of flour to Cuba, as one of the great blessings brought about by the Spanish treaty, whereupon he was asked when that treaty took effect. He admitted that he did not know, but he did not let a little thing like that disconcert him, and went on with his discourse. As a matter of fact, the reduced duties on flour did not take effect until January 1, yet it is somewhat curious to observe that a considerable increase in our exports of flour to Cuba did, in fact, take place in the last six months of 1891, even under the old duty which the *Tribune* asserted to be practically prohibitory. Thus, the exports in all of the fiscal year ending June 30, 1891, were of a value of but $591,886, while in the next six months alone they amounted to $406,205, before a cent was taken off the duty. In December 34,316 barrels were exported to Cuba—more than in any two of the preceding eighteen months. These facts seem to indicate that the duties and the treaty have not had so much to do with the matter as supposed, but that we have in the recent gains in exports a part of the general extraordinary shipments of breadstuffs abroad. The returns for January show still greater exports of flour to Cuba, and we have no doubt that both our exporters and the Cuban consumer will be substantially aided by the lowered duties; but there is little sense in making reciprocity account for everything that happens, including our enormous crops and exportable surplus. An examination of the sta-

tistics of our exports of flour to Brazil, where the reciprocity treaty has run longer, will show that there, too, natural causes have not ceased to operate in presence of the miracles of reciprocity.

The good effects of the system of promotion for merit, as demonstrated by examination, are already visible in the Post-office Department, where it was instituted last July. There is a marked diminution of petty irregularities, and a corresponding increase in the quantity and quality of the work performed. Each clerk now feels that his advancement depends entirely upon himself, and the man of ability no longer fears that one of inferior merit will be more quickly advanced because the latter has an "influence." A large number of promotion examinations has been held, the greatest stress being laid upon the office work, and the questions being especially framed for each examination and with particular reference to each body of clerks examined. The system has also been extended to other branches of the Department, and the system of promotion for merit now applies to the Railway Mail Service as well as to every post-office where there are fifty or more employees. Each railway postal clerk with a desire for transfer to the more congenial duties in the Department at Washington, and every clerk with similar ambitions in each of the large city post-offices, is now making a record upon which will depend his chances for this transfer. This record is kept up from day to day, and the transfers are made quarterly. The Postmaster-General is much impressed by the effect thus produced upon the large body of people who see a way for their advancement.

Senator Quay is as frank and open in his methods as Senator Hill. He says of the Pennsylvania delegation, which he is now "packing" for personal use in the National Republican Convention, that it will not be committed to any candidate, but will go to Minneapolis as a "Quay delegation," and that when he gets on the ground with it he will look the field over, and see what to do with his men. The idea that the delegation should in any sense represent the wishes of the Republican voters of Pennsylvania, he would probably regard as a joke. The Republican party in Pennsylvania exists primarily for the benefit of Quay, as in former times it existed for the benefit of Simon Cameron. It would be a decided novelty for the State to have in a national Republican convention a delegation which was not in the market, controlled by one man, and for sale to the highest bidder—that is, to the candidate who will give the best terms to the owner of the delegation.

Masked behind what is outwardly the ignoble collapse of the Connecticut Legislature is in reality a most vital step towards a constitutional change in that State. For many years and up to recently the Democratic leaders have skulked and cringed in fear that the "little towns" would resent any practical measures aimed at a revision of the ancient organic law. But a few months ago the party made its first advance by enlarging the delegations of the large towns and cities in its own State conventions; and the Democratic Senate, just before it adjourned last Friday, went further and took up a bill for a constitutional convention. But for filibustering and the weariness of the Senate from the long deadlock, the bill would have been passed, as a test vote showed. As it is, the bill has been referred to a committee which is almost certain to report the measure favorably on the 2d of next May, and its passage will put the Republican House in the extremely awkward dilemma of answering to the people for a failure of the reform, or accepting it to the injury of the party's selfish interest, now bulwarked by the "rotten-borough" Constitution.

It does not seem possible that the Democratic Legislature of New Jersey will take the risk of passing any bill this winter to make disreputable horse-racing and betting on such racing less offensive in the eye of the law than it now is. It is true that there is a great deal of "politics" behind the racing scandals in New Jersey; that leading officers of Hudson County are interested in the Guttenburg track; that the judicial machinery of that county has been used to protect the gamblers, and that Gov. Abbett has deemed it expedient, as an ambitious politician, to hob-nob socially with the same disreputable crowd. But all this is less difficult to bring about than a yea-and-nay vote in a Legislature in favor of a bill giving legal sanction to gambling and gamblers. Many a rural legislator who will quietly tuck a ten-dollar bill into his pocket and vote as the giver asks him to on a corporation measure that his constituents do not understand, will refuse to incur the home censure that he knows will be visited upon him if he votes for a measure that is against good morals. As the Democrats have a majority of 11 in the Senate and 24 in the Assembly, they will, as a party, have to assume the responsibility for any racing and pool-selling laws that may be enacted this winter, even if a Republican is put forward as the introducer of the bills.

Oxford has given the world a great many exhibitions of religious panic, and the excitement caused by the proposal of some of Cardinal Newman's friends to erect a statue to his memory within the grounds of that Church of England stronghold is only the latest. It serves to recall, however, the similar artificial stir caused by one of the earliest efforts made to unmask Newman and his friends in the beginning of the "Oxford Movement." This was the plan to erect a memorial to the heroes of the English Reformation—Cranmer, Ridley, and Latimer—whose work and opinions were the pet aversion of the Tractarians. They naturally held aloof from the plan to build the Martyrs' Memorial, and thereby gave ground for fresh suspicion that they were Romanists at heart—which at the time they were as far as possible from being. If the proposition were now to set up a statue to Newman as a man of genius whose name is indissolubly linked with Oxford, there could not be much objection to it; but the attempt to give a specially religious significance to the memorial in his honor was enough to defeat the whole project, besides inviting comparisons which his friends ought to be the last to suggest. The influence of his austere character and fidelity to conviction will long be great, but the opinions for which he battled and upon which he staked his life were so hopelessly out of touch with the modern world, even with modern Oxford, that one sees how Carlyle could assert of him that he had not the intellect of a moderate-sized rabbit. The Oxford of 'Essays and Reviews,' and abolished tests, and enthusiasm for German thought, would be as shocking to Newman as would the sight of Darwin's tomb in Westminster Abbey.

The Anarchistic outbreaks in Spain are probably only sporadic, though many Spaniards are recalling the work of the Black Hand under Alphonso XII., and fearing that the present disturbances imply a reorganization of that society. But the better opinion seems to be that a certain amount of floating Socialistic doctrine, combined with the extraordinary series of calamities which Spain has suffered during the past year, has been enough to lead to the semi-organized attempts at plundering which have passed themselves off as uprisings of Anarchists. There can be no question that the condition of the average Spanish laborer is a hard one. A Spanish correspondent of the *Journal des Débats*, writing of the very province where the recent disorders and executions occurred, not long ago detailed the low wages and hard treatment of the agricultural laborers, and showed how open they were to the Anarchistic propaganda. In the north of Spain, on the other hand, the striking miners avow their aim to bring about a "social revolution"; and in their zeal and strong organization and enlistment of women in the cause, they recall the beginnings and spirit of the revolution of 1868, which brought about the downfall of Isabella and her methods of government. But there appears to be no general sympathy with the movement, and the Government can count upon the coöperation of all political parties in putting down the agitators with a rough hand.

"HARMONY."

We observe that there is a disposition, which even such an opponent of Hill as the *World* seems disposed to encourage, to "harmonize the party" by coming to some sort of terms with the Hill faction. Now, the only portion of Hill's following which is united, coherent, and corporate, so to speak, and capable of being negotiated with and of giving and receiving rings of harmony, is Tammany Hall. It will be noticed that wherever Hill goes at this trying crisis in his career, his companions, counsellors, and comforters are the Tammany chiefs. At his conference on Saturday night in this city, the Tammany "Honorables" occupied the chief places. There were the Hon. Richard Croker, the Hon. Bourke Cockran, the Hon. T. F. Gilroy, the Hon. James Martin, the Hon. Frank Fitzgerald, the Right Hon. Thomas F. Grady, and so on. This has been the only class of persons he has ever been in the habit of seeing on his visits to this city. The leaders of his delegation at Chicago will undoubtedly be Tammany men, and the Hon. Bourke Cockran will in all probability be the spokesman who will present his name. His policy at the Convention will doubtless be one of intimidation, and the Tammany vote will be the weapon he will use in trying to have his way. There is no doubt, too, that this weapon can be easily made to look formidable, for it consists of a solid mass of about 120,000, which acts as an army, under command, and on which no speeches, or documents, or other similar instruments of persuasion can make the smallest impression.

As a general rule a political organization in a free country, although it may, and indeed must, have leaders, nevertheless has to be led in the way it would go. The members do not surrender their wills and consciences to their chiefs. They reserve to themselves the power of deciding what their objective point shall be, and give their leaders no power but the power of deciding how they shall reach it. The Tammany Association is something very different. Although a political association, there is really no politics in it. The Hon. Cockran's famous question, "What is there in this for Tammany?" did not mean, "Does this proposal furnish Tammany with the means of embodying in legislation or administration some favorite idea about public policy?" It meant, "How much can Tammany get out of this in cash or other valuable consideration?" The interest Tammany takes in Federal politics is always really very languid. None of the Honbles. knows or cares much about Federal questions, such as taxation, or currency, or foreign relations, or army, or navy. Twice in the history of the Association—the first time under Tweed and now under Hill—the leaders have had faint hopes of being able to enter into the Federal arena by getting one of their "pals" into the Presidency, but this ambition was roused solely by the chance it offered of controlling Federal offices in this State and city. They have come nearer to it now under Hill than ever before, for Croker has actually been able to dictate the appointment of the doorkeeper of the House of Representatives. He has doubtless smacked his lips a good deal over this morsel as a foretaste of good things to come.

This fact—that the following of the Tammany Quartet is a dumb, blind, conscienceless crowd, which can be led in any direction, without open discussion or explanation—is one which all harmonizers have to bear in mind, for it makes all compacts with the Honbles. worthless. No matter what promises they may make openly on the platform, they can break them secretly, and have done so in two memorable instances. Moreover, the weight of their disciplined force in a Presidential election is always overrated. When the people of the State are really roused, Tammany, formidable as it appears in peaceful times, counts for very little. In 1876, John Kelly, the then Boss of the organization, went to the Convention at St. Louis as the open and rabid opponent of Mr. Tilden's nomination, and distributed a hostile circular among the delegates, signed by a considerable number of respectable and representative Democrats of the city and State, and fought the Democratic candidate vigorously at the election. Tilden nevertheless carried the State by a majority of 33,000. In 1880 the same Kelly went to the Convention as the enthusiastic supporter of Gen. Hancock. Kelly made a speech, in which he informed the Convention that "there could be no doubt as to what the result would be in this State in November," just as the Honble. Cockran will doubtless do if Hill should be nominated next June. Garfield carried the State by 21,000 majority. In 1884 this same Kelly, supported by two Honbles. still extant, Cockran and Grady, went to the Convention at Chicago to oppose Mr. Cleveland, and did oppose him to the end. Cleveland carried the State by a small majority. In 1888 there was no formal opposition to Cleveland's renomination from Tammany or any other quarter. "Harmony" prevailed right and left, and yet Harrison carried the State by 14,000 majority, and Hill was elected Governor by 19,000.

The moral of all this is plain. Harmony with Tammany is not sure to do any good; discord with Tammany is not sure to do any harm. To make concessions to Tammany for the sake of its support is something even worse than buying a pig in a poke. It is alienating that shifting, uncertain, independent vote which, partly Democratic, partly Republican, so sways from side to side as to make political prophecy in this State worthless. But it is quite certain that whatever Tammany wants will be something to disgust, in a greater or less degree, the 33,000, or the 21,000, or the 14,000 voters who, in this State, as experience shows, cast the vote of the State at Presidential elections. It must not be left out of account, too, that Tammany has not, since Tweed's day, been so much discredited in the eyes of the country as it is to-day. The present Tammany Honbles. have hardly a respectable Democrat on their side. Hill's supporters and backers are largely of the semi-criminal class. Any one who looks at the signatures to the anti-Tilden circular which Kelly carried to St. Louis in 1876 will see at a glance that it would be impossible for Croker to obtain any names of corresponding weight or significance to-day.

OUR NATIONAL OBSERVATORY.

For the past five or six years our navy has been building a great observatory, and has finally got it about done. It will have cost something in excess of $800,000—nearly double the amount expended in constructing any of the great European institutions of like character. It is situated on a hill in the northwestern part of Washington, where "the atmospheric conditions are, perhaps, slightly better" than they were at the old site—at least, such is the testimony of the most distinguished astronomer of the Naval Observatory; but this advantage is offset by the very massiveness of the pile itself. If there is any one thing which modern manipulation of astronomical instruments has proved more conclusively than another, it is that working observatories should be built with an absolute minimum of material. Iron or steel, canvas and wood, are demonstrably unsurpassed. Progressive astronomers the world over have repeatedly testified to this, as witness the new observatories at Cambridge, Nice, Greenwich, Paris, the Cape of Good Hope, and elsewhere. Nor does one need to be a professional stargazer to see why large masses of any compact material in or near an observing-room are strongly objectionable, particularly in summer; the simple fact being that heat, radiating from them in the early part of the night, when the instruments are most used, produces those annoying atmospheric effects known as irregular refraction and bad definition. Nature wages incessant war upon the investigator; he can hope to win only by unremitting endeavor to circumvent her. Hence the constant aim of the working astronomer must be the minutest avoidance of all such perturbing conditions. But our navy's astronomers, paying little attention to all this, drew up specifications for their grand new observatory requiring masonry enough for a State capitol. Every extra load of brick and stone has helped to impair the desirability of the site. The great telescope, among the largest in the world, requires the steadiest atmosphere if one would fully utilize its extraordinary power; but even that splendid instrument is housed in quarters of solid masonry, where it is entirely safe to say that nearly all the summer observations made with it must hereafter be relatively inferior to the winter, because the immediate surrounding

atmosphere will be getting favorable for the best vision only about the time the observer will ordinarily have finished his work and gone home to bed.

One might discuss the instruments *seriatim* only to find little that is more hopeful; but this would involve too great technicality, and it is more to our present purpose to pass on to the management itself. Although an acknowledged scientific institution, the Naval Observatory has had no scientific head, no great astronomical problem to work upon, no expert supervision, no concerted plan of astronomical investigation. In the early history of the institution, no star-place could be completely determined without the use of two separate instruments and two observers instead of one. But for years, instead of coöperating, each observer seems to have worked away on his own list of stars, quite independently of what the other might be doing. At another time the "Superintendent" ambitiously blocked out a programme of observations to include nothing less than the determination of the magnitude, color, and accurate position of every star in the heavens within optical reach of the instruments! He was going to

> ". . . make a stir,
> Like a sage astronomer."

But as he had made no estimate of the time it would take to complete so enormous a piece of work, his venture necessarily ended in ignominious failure. The lack of organized effort at the Observatory is well illustrated by what took place some years afterwards, on the eve of a very important event, which four astronomers of the Observatory undertook to record. One, being preoccupied, did not find out until it was too late that the heat of the sun had broken his shade-glass; another trusted a treacherous clock-motion to carry his telescope, and so failed; the third, omitting to note whether his telescope was armed with a direct or an inverting eye-piece, was much chagrined to find out afterwards that he had missed the phenomenon completely, because it had been inconsiderate enough to take place on the side of the sun just opposite to that on which he had been expectantly gazing; while the fourth got no observation, for some reason or other, and prudently withheld all explanation of the circumstances. Divided responsibility was of course no responsibility. It is fair to presume that a competent head of the institution, invested with sole responsibility, would have made sure in sufficient season that the instruments were in working condition, and his corps of astronomers in some sort of training for the simpler types of observation.

Illustrations of this sort might easily be multiplied indefinitely. They show better than argument the folly of putting a man in charge of work that he knows nothing about. No official enterprise, the world over, is conducted in this inconsequent manner, and a half-century seems long enough for even a government to find out the fallacy of it. For a long period of years, says a prominent authority in these matters, the operations at the Naval Observatory were "creditable to no one but the one or two astronomers by whom all the observations of value were made." Another well-known astronomer, who has had excellent opportunities to judge, likens the Naval Observatory to "an astronomical mob, sometimes successful in obtaining the most brilliant results by individual prowess, but always lacking in coördination of work, and wasteful of effort." The principles governing naval seniority and advancement have repeatedly been shown to be utterly inapplicable to the needs of the Observatory service; and the authority just quoted remarks further, and with no small grain of truth, that "placidity and longevity are the stepping-stones to material success, which no zeal, no eminence of acquirement, can hasten, and no laziness and incompetence delay." To form some idea of things as they are now, it is only necessary to quote from a recent report of the Superintendent, in which he says that "the issuing of the annual volumes of the Observatory has been for years falling further and further behind, until now publication is five years behind the observations, and the amount of work done has been growing less and less."

What relation this Government institution, if left to itself, would sustain to the future progress of astronomy may be gathered from its supineness in the past with regard to stellar photography. Astronomers in Paris and elsewhere, taking the initiative, have achieved results of the highest importance, and have paved the way for solid progress in that identical branch of astronomy which Government observatories are maintained for. All the while this has been going on abroad, a pair of photographic instruments of the very best type for beginning such work, and which had cost the Government large sums of money, have been lying idle at our Observatory. Indeed, if any one has ever taken such a thing as a star-photograph at the Observatory, no Superintendent has ever mentioned the fact in his report. In this most significant development of recent astronomy, our national institution can now only commit itself to the rôle of a follower, when it had every facility for constituting itself the leader. Again, the chief European governments have systematically encouraged for years that delicate research known as "the spectroscopic determination of the motion of stars in the line of sight." No one at the Naval Observatory has ever made a single observation of this type; Congress has never been asked for an appropriation to enable the purchase of the necessary apparatus; indeed, it is not known that the Observatory possesses a spectroscope.

But the present issue is, what shall be done with the Government buildings, telescopes, and astronomers — a celestial "plant" which the mass of the people doubtless think is a credit to the nation? Evidently the Observatory and its management are incapable of reform from within, and so the astronomers of the country at large have undertaken the task. At their instance a bill was introduced into the House on January 18, and into the Senate the day after, with the hearty support of the Navy Department, and it will without doubt become a law. It provides a more perfect organization for the Observatory, cast in the general mould of the Royal Observatory at Greenwich. In the first place, the institution is hereafter to be known as "The United States National Observatory," but without detachment from the Navy Department. A Director is to be appointed by the President, who shall be a "practical astronomer of eminent abilities and professional experience," to receive a salary of $5,000; and he is to have a chief assistant, also a skilled astronomer, with a salary of $3,600, who may act as Director during a temporary vacancy in the office of his chief. Further, the bill provides for a Board of Visitors, to consist of the two aforesaid astronomers and "three additional persons of scientific attainments, and not otherwise in the employ of the Government, who shall be appointed by the Secretary of the Navy," and serve without salary. But it does not appear that this Board has anything more than merely advisory functions. Apparently, also, certain wholesome changes are to be wrought in the present astronomical body which can scarcely fail to better the institution and its standing. The corps of so-called "professors of mathematics in the navy"—of whom some are eminent for their knowledge of this science, while others have attained a certain distinction for their ignorance of it—are to be no longer eligible for observatory duty so soon as the present members of the corps have either died, resigned, or been retired. The new Director will, accordingly, have the opportunity of assembling a corps of active and harmonious workers (and he ought to have the power to remove them when for any reason they prove unsatisfactory); observations will probably be computed, and perhaps published, before the time has gone by when they would have been of some use; and the Observatory, having gradually sloughed off a pottering and contentious staff, may begin to address itself to the serious business of concerted action in astronomical research.

THE READING'S LEASES.

ALTHOUGH the general outline of the combination of coal roads has been made public, there yet remains a word to be said about its lawfulness and effect. It has been calculated that the advance in the prices of stocks of the roads interested, including the Lackawanna, has amounted to forty millions, a very handsome profit to all holders. Whether the actual results when realized will be found to sustain so

large an increase in stock values may be doubted. A large increase in the retail price of coal to consumers is out of the question from every point of view, and indeed those in the confidence of the new owners assert that this truth is so well known to them that nothing of the kind is contemplated. At the same time one at all familiar with present conditions in the mining, carrying, and selling of anthracite can easily see wherein economies can be introduced which will result in important savings.

The Reading, Lehigh Valley, New Jersey Central, and Lackawanna Roads in 1891 carried over 70 per cent. of the large output of that year. Controlling so large a proportion of the tonnage, the combination can fill the orders of the different States and cities from the mines nearest to the markets and send the coal by the most direct route. Steadiness in mining and cheapness in the transportation can both be helped thereby. Another point not hitherto noticed is that a great advance has been made, because of this new combination, towards clearing up the trunk-line situation. The Lehigh Valley and the Lackawanna have been thorns in the side of the large through carriers for a long time. These coal roads, earning their profits from the carriage of anthracite, have felt that any additional grain from Buffalo or immigrant travel from New York was so much clear gain to them, even if taken at lower rates than quoted by the older routes. Thus the competition of the Lehigh Valley and the Lackawanna often disturbed the rates and consequently the net earnings of the other roads which depended upon the through traffic. Until now there has seemed no way to check the unequal rivalry short of a war of exhaustion, in which the coal-carrying lines would have had the great advantage of an established business unaffected by any lowering of the tariffs on wheat, corn, live stock, or immigrants.

The change in the general attitude of the Lackawanna Road is particularly welcome to railroad and coal-men. That company was led by aggressive and able men, who, naturally enough, were satisfied with the independent policy of their own road, and so cared but little for the general situation. It has always been supposed that control of the Lackawanna's stock could not be purchased, and it is said that until but little more than a week ago the officers of the company were firm in that belief. The fact that hereafter the Lackawanna will turn its policy towards the general good of the coal trade and of the trunk lines of railroads is one of the important effects growing out of the situation. As regards the lease of the Lehigh Valley to the Reading, the question is often asked by what means a strong corporation was induced to surrender control to a weaker. This is not strictly the situation; it should be regarded rather as an attempt to unite the several interests in the most feasible way, of which the lease in question was but a part. Of course the probability of getting larger dividends through increased traffic, even without the Reading guarantee, had great weight with the owners of the majority of Lehigh Valley stock. It should also be borne in mind that the Lehigh Valley has within a year or two spent many millions of dollars for terminals on New York harbor and connecting lines, and that, in view of the condition of the investment market, it is possible that the road has yet a large floating debt awaiting funding. If so, the bankers might have used the fact in argument.

The legality of the leases has been questioned. Mr. A. J. Cassatt of the Pennsylvania is outspoken in his view that if the lease of the Beach Creek Railroad to the Pennsylvania or the Northern Central was illegal, the lease of the Lehigh Valley to the Reading must be equally so. Mr. Johnson, the counsel for the combination, rests his case, apparently, upon the ground that, unlike the first instance, the two companies draw their tonnage from different coal regions, the Schuylkill and the Lehigh, and are therefore not competing or parallel roads within the meaning of the Pennsylvania statute. This is an interpretation of the law which can be said to be really correct or not only after a judicial decision; but at least it is an ingenious defence of the legality of the leases. All combinations tend towards an enrichment of themselves at the expense of the public, but in the present case we may give the coal roads the benefit of a present doubt upon that point, for, as the *Financial Chronicle* justly observes, "In these days of National and State Commissions, there can be no monopoly to fear, and with that danger removed the people are every way advantaged by the prosperity of our carriers."

"THE EXCLUSIVES."

A REPORTER for the *Herald* has interviewed Mr. Ward McAllister to some purpose, for he has extracted from him the somewhat startling announcement that the "Four Hundred" are to be reduced to one hundred and fifty. We believe he has also made known in other quarters that these one hundred and fifty are to be called "The Exclusives." This important change, which in other ages and countries would certainly have put the Government in peril, is, he confesses, the direct outcome of an innovation of his own known as "The Dinner Dance." "The Dinner Dance" was conceived by him, and means a dinner of thirty at one of five houses, followed by a dance at another of the five, in regular order; and thirty multiplied by five gives one hundred and fifty, as any child may see. But he predicts that the arrangement cannot last. Why not? it may be asked. Because similar "noted and brilliant functions," got up by the Princess Metternich in Paris and at Almack's in London, lasted only a few years. This reasoning is, however, unworthy of a mind like Mr. McAllister's. Like causes, it is true, produce like effects, but he himself admits, further on, that the causes here are not alike, and therefore, although the effects may be similar in both cases, evidently there are in this branch of sociology effects which may have one or more causes each. The Princess of Metternich's "functions" in Paris, we know from history, ceased only because the Princess herself left Paris, and the goings on at "The Royal Almacks" in London, as General Choke called it in 'Martin Chuzzlewit,' ceased because the lady patronesses died or got tired of the work.

But, as Mr. McAllister shows, the breakdown of the system in New York will come from the fact that "there are people of wealth coming here every year who have the right to join our society." "These dinners are delightful," he says, "but they can't last—the competition for places will be too great." There is the whole explanation in a nutshell. Mr. McAllister, like a clever social analyst, recognizes the forces which really settle these things in New York. The Ins may cut down their numbers as much as they please, and close the gates on themselves, but the Outs are always on the march in overwhelming numbers to attack the place, and it has to surrender when summoned. The One Hundred and Fifty will accordingly, as sure as there is a sun in the sky, have to become Four Hundred again in the near future, and in a future not very remote it may be One Thousand. "The people of wealth" are not to be trifled with when they come to New York "to get into society." Mr. McAllister himself could not withstand them if he would. One of the strongest proofs of his capacity as a leader is to be found in his constant recognition of the facts of the situation. He is a thoroughly modern man, who sees all things exactly as they are. He does not allow his Society to become a fools' paradise. He makes and keeps it elastic and receptive, and yet he is not embittered, as a smaller man might be, against a really exclusive Society, like that of royalty, by the treatment he received in Queen Victoria's kitchen when dinner was announced.

There is only one way, as Mr. McAllister knows as well as we do, to restrain these demands for admission from the outside which threaten to break down the One Hundred and Fifty, and eventually the Four Hundred, and that is to set up other barriers than wealth and a knowledge of table service and of etiquette. Happily, nothing is plainer than that this knowledge is spreading just now with a rapidity which nobody could even ten years ago have foreseen. The agencies by which it is spread multiply every year. The number of dinners given by people outside the Four Hundred is increasingly great, owing simply to the growth of wealth. There are probably five hundred in New York at this season, every evening, of which Mr. McAllister never hears, and those who attend them pay an attention to

the cookery, and the order of courses, and the proper use of different knives, forks, and glasses, which, when coupled with American keenness of perception, is sure in the course of a single winter to qualify probably two or three hundred to dine even with Mr. McAllister himself without making a single mistake. Then there are many newspapers, both here and elsewhere, which furnish weekly answers to questions on difficult points of etiquette and table manners, which are doing an immense work of education. Mr. McAllister is himself one of the most potent of these agencies. His recent work on Society, and his remarkable series of articles in the *World*, have been of inestimable benefit to tens of thousands who are preparing themselves for a brilliant social existence in New York. How many, too, are getting day by day, under the tuition of Pinard and Sherry, a knowledge of the art of giving dinners, which, though not comparable with that of Mr. McAllister, of course, at least enables them to set up strong claims to his eventual recognition.

This rapid work of multiplication, not only in New York but in other cities, constitutes a danger to the Exclusives for which Mr. McAllister suggests no remedy, so far as we know, in any of his writings. It ought to show him how injudicious it is to rely on wealth alone as a qualification even for admission to the Society of the One Hundred and Fifty, which he says now includes "all that is brightest and best in America." Does he not see that if all that is necessary to be one of "the brightest and best" in America is to buy and furnish a house and give "Dinner Dances" in it, the circle must be indefinitely enlarged, and its claim to exclusiveness ruined from garret to cellar, through the mere material development of the country? He occasionally, we admit, alludes faintly to "manners," as things which will do an Exclusive no harm, but makes in none of his works any mention of education. This, and the correct use of the local language, are, no doubt, required in most countries as a qualification for a life among "the brightest and best," and they perhaps ought to be required here. But if this test should be adopted as a barrier against mere wealth, the question would at once arise, Whose manners should be the standard? Who should furnish the model in a Society which furnishes no traditional standard, and which is engaged in a process of parthenogenesis, so to speak? We suppose the answer which most people would make to this would be: "Why, Mr. McAllister's manners, of course."

Far be it from us to say that this ought not to furnish an easy solution for a knotty problem. Who, indeed, is the American gentleman if it be not Mr. McAllister? But, nevertheless, with all due respect be it said, nothing is less likely than that he would be universally or even generally accepted as a model, for a reason (not peculiar to America) which makes a man who sets up for a model of manners in all democratic societies a little ridiculous. No good work as such a model can be done in any society which has no court or aristocracy to define the term "gentleman." In addition to this, in our country the question of State pride would come into play, and we should have Society torn by the conflicting claims of model gentlemen from various States. Controversies, fatal to the maintenance of any one general standard, would arise over such questions as the way to eat fish, the proper side of the spoon to use in taking up the soup, the proper amount of water in the finger-bowls, or the number of wines which should be served at "a really first-class entertainment." On these subjects Mr. McAllister, like all really strong men, has doubtless strong opinions of his own; but other States would not accept them, and there would be revolts against his authority even here in New York. In fact, if we are rightly informed, his dictum on the proper place of roast leg of mutton in a *dîner à la Russe* has already caused serious discontent among his followers. It is easy to see how these discontents would become aggravated were an attempt made to treat his rules as supremely authoritative all over the country.

In fact, the question of the proper mode of admitting people to Society in this city, in spite of Mr. McAllister's learned labors, seems at present, to all intents and purposes incapable of settlement. At all events, we have no suggestion to offer. All we can do is to point out the dangers and difficulties of the present system. Abler hands must save Society, if it can be saved. But we do not hesitate to say that were Mr. McAllister (*absit omen!*) taken from us, the One Hundred and Fifty, and the Four Hundred, too, would bitterly regret not having availed themselves of his vast knowledge and ripe experience and sound judgment to define for all coming time the personal qualities and amount of real and personal estate entitling a man or woman to be one of "America's brightest and best."

WAS COTTON MATHER A FELLOW OF THE ROYAL SOCIETY?

In most biographical notices of Cotton Mather, that eminent man is said to have been a Fellow of the Royal Society. In some of such notices, the statement is emphasized by describing him as the first native-born American who attained to that honor. According to his son, there were many in New England who were "so foolish as to doubt, nay, to deny, his right to that title." Cotton Mather's name did not and does not appear in any list of the Fellows of the Society. Becoming himself uneasy upon the point, he inquired of the Secretary to the Royal Society whether he really was a Fellow. In reply, he was informed that he had been elected a Fellow both by the Council and by the general body of Fellows. That his name did not appear in the published list was due, he was told, to the fact that, being in America, he was unable to subscribe personally to the orders of the Society, from which foreigners were dispensed, but not British subjects. Years went by, and still Cotton Mather felt uncertain of his position. On May 21, 1723, he wrote the subjoined letter to Dr. Jurin, then Secretary of the Royal Society:

"Syr: You are better known to me than I am to you; and I congratulate unto myself, as well as unto the world, the felicity of your succession in the office of *Secretary* to the *Royal Society*. But in order to a mutual better knowledge, I owe you, & must now give you, some very short account of myself; more particularly, with relation to that Illustrious Body, whereof I hoped, I had the Honour of being esteemed a Member. Having the pleasure of some correspondence with your excellent predecessor Mr. Waller, I did communicate unto him (and unto my valuable Dr. Woodward) a great number of American, and philosophical, curiosities; with an intimation of my purpose to continue the communications. Those Gentlemen put the, as unexpected as undeserved, respect upon me, of proposing me for a Member of the *Royal Society;* and they both wrote unto me, that I was chosen accordingly both by the Council and Body of the Society, on the Anniversary Day for such election in the year 1713.—Adding that the only Reason of my not having my name in the *printed* list of the *Society*, was because of my being beyond-Sea and yet a Natural Born Subject, & so not capable of being inserted among the gentlemen of other Nations.

"Your Secretary also, Dr. Halley in the *philosophical Transactions* of 1714 printed my name, with an F.R.S. annexed unto it. Mr. Petiver did the like, in his Naturæ Collectanea; and in his letters to me, he had these words, 'Your election succeeded without opposition, and you were elected after the usual method of Balloting. The reason of your being out of the *printed list*, is your not being personally here, to subscribe to the orders that should be tendered you'; to which he added co· gratulations & complements not proper to be by my pen transcribed.

"A Distinguished, & a diminutive crue of odd people here, when they could find no other darts to throw at me, imagined their not finding my name on the printed list of the *Royal Society*, would enable them to detect me of an imposture for affixing an F.R.S. unto my name, on some just occasions for it. And an infamous fellow, whose name is John Checkley, a sorry *Toryman* (that yet had the impudence to write as a Divine) wrote a letter full of scandalous invectives against me, which was publickly read in the *Royal Society*. This wretched man, ambitious to do the part of a *Divine*, printed here some Rapsodies, to prove, *that the God whom* K. William, *and the christians* of New England *have worshipped*, is the D— l —. A young and a bright kinsman of mine, bestowed such castigations on the Blasphemer that I became thereupon the object of his implacable revenge. But of this matter, I gave Dr. Woodward a more full account, a year and a half ago: Which because I know not whether ever he received it, I now repeat a little of; Relying to your justice, if any further indignity of this Nature should be offered me. But, that I may not lay aside any of the meek, patient, humble disposition with which I should address you on this occasion, I shall keep such Terms, as I used unto my Doctor when he had what he required of me upon it.

"I should never have presumed upon affixing an F. R. S. unto my poor unworthy name, had I not thought, that my Honourable masters, would have taxed me as guilty of some ingratitude unto them for their unmerited favours, if I had always declined it.

"The many treatises (many more than three hundred) which Heaven has allowed & assisted me to publish, (in the midst of many other constant & heavy labours) on various arguments, and in various Dead as well as Living Languages, added unto some other circumstances needless to be mentioned, had procured me from some Europæan Universities, without my seeking in the least measure for them, the Testimonies of the highest respect that they could show to the meanest of men, and among the rest a *Diploma* for the *Doctorate in Theology*. Upon this I was under some temptation unto the vanity of Thinking that it was possible the *Royal Society*, also might esteem it no dis-

grace, to permit my name among their members. Especially, when my remittances to their Treasury, might for number (however not for value) be æqual to what they might receive of some other members whose correspondence they cast a kind Aspect upon. For the embellishments wherewith I studied usually, (after the manner of the German Ephemerides) to make my dry & dull stories a little more palatable to men of erudition, some of your own members, as well as Monsr Tournefort helped me to some apology.

"But if after all, it be the pleasure of those Honourable persons, who compose or govern the *Royal Society*, that I should lay asside my pretensions to be at all related unto that illustrious Body, upon the least signification of it by your pen, it shall be dutifully complied withal. I will only continue to take the leave of still communicating Annually to you (as long as I live) what *Curiosa Americana* I can become the possessor of. For (my Jewish Rabbis having taught me, to *love the work*, and have *little regard unto the Rabbinate*) it is not the Title, but the service that is the Heighth, & indeed the whole, of my ambition.

"As a Token of my purposes this way, and as an earnest of a much greater variety, which I propose to send you by another hand, about a Fortnight hence, I now present you with a tedious account of sentiments & occurrents relating to a subject, about which I perceive you are sollicitous to have the exactest informations. At this time, I add no more, but with hearty prayers, to Heaven, that you may be continued long as a great Blessing to the world I subscribe

"Syr
"Your most affectionate
"Friend and Servant
"COTTON MATHER

"BOSTON N. ENGLAND
"May 21 1723.
"Dr. Jurin."

The answer to the above letter should be interesting. There is, however, no record of it in the archives of the Royal Society. Under the circumstances, it will be well to inquire how far the proceedings of the Society establish the fact of Cotton Mather's connection with it.

For the election of Fellows, the ordinary procedure observed by the Royal Society is this: The names are first submitted to the Council of the Society. After candidates have by the Council been chosen for submission at a general meeting of Fellows, their names are brought before such meeting. Here the election is made, and two-thirds of the votes are necessary to secure it.

In the Journal of the Society there is the following entry, under date of July 23, 1713:

"A letter drawn up by Mr. Waller for Mr. Cotton Mather at Boston in New England was read; giving an account of the receipt of his letter and his manuscript, containing his several observations on Natural subjects, with an invitation to a future correspondence; which was ordered to be sent.

"Mr. Waller proposed the same gentleman as a candidate, according to his desire mentioned in his said letter; which was referred to the next Council."

The Minutes of the Council of July 27, 1713, record that "Mr. Cotton Mather was proposed, balloted for, and approved to be a Member of the Society." A diligent search among the records of the Society has, however, failed to find that Cotton Mather's name was ever submitted to the general body of Fellows. Would it be an undue surmise to suspect that Cotton Mather's mistaken zeal in the witchcraft heresy stood in the way of his obtaining a two-thirds vote, and that, the Council finding this the case, did not risk a rejection?

If Cotton Mather may not be reckoned a duly elected Fellow of the Royal Society, who, then, of Americans born, is to be reckoned the earliest Fellow of that distinguished body? On the 11th of March, 1714, the Rev. Mr. William Brattle, minister of the Church at Cambridge, New England, was elected a Fellow by the general body of members. On November the 21st, "Sir Hans Sloane proposed Mr. Elihu Yale, Executor to Dr. Thomas Paget, as a candidate, which was referred to the next Council." Yale was elected on the 30th of November, 1717, and Paul Dudley on the 2d of November, 1721. In a List of Fellows of the Royal Society, to be found among the Rawlinson MSS. in the Bodleian (*C.* 437), the names of Brattle, (1713–14), Yale (1717), and Dudley (1721) are given, but not the name of Cotton Mather.

A NEW SHAKSPERE?

LONDON, January 28, 1892.

THE one event of interest in the theatrical world of London is the special matinée. At the regular performance the rule at present, as almost always, is music-hall fooling, called pantomime, gorgeous spectacle advertised as Shakspere, and sentimental melodrama which passes for farce, comedy, or tragedy, according to the traditions of the theatre in which it is played. But fortunately a few managers and actors of ambition long to test their talents in other than conventional lines, and then they give a matinée. To introduce an experiment into the evening bill is to court failure. Not much more than a year ago a loud blast of trumpets heralded the innovation at the Haymarket, where Mr. Beerbohm Tree proposed to devote his Monday evenings to the production of new or original plays. He brought out "Beau Austin"; he revived his old successful melodramas; and it is now already months since his famous Monday evenings were brought to an end for ever more. The matinée remains the ambitious actor's only chance.

For long this ambition carried him—or her, for as frequently as not the would-be innovator is an actress—to Ibsen. It was as inevitable as the courting of the unbecoming by the dress-reformer. In rapid succession we had "The Doll's House," "Rosmersholm," "Hedda Gabler," until a performance of "The Lady from the Sea," ridiculous in its inadequacy, resulted in a healthy reaction, and we have heard no more of Ibsen since. Next Zola had his turn—Zola, who, like Ibsen, calls for actors of the first order, and usually falls to the mercy of the third-rate. Only within the last few days have I seen the effort made to convert his "Thérèse Raquin" into an Adelphi melodrama; unsuccessfully, however, for the worst acting cannot destroy the power of the play. But Zola on the stage, even in London, is not an innovation. M. Antoine and his company from the Théâtre Libre have shown Londoners the strength of the French naturalist as a dramatist. Something entirely novel was wanted—there was a demand for a new dramatic sensation; and to Mr. Tree belongs the credit of having been first in the field in the endeavor to supply it. His novelty was Maeterlinck's "L'Intruse," which in its English version, as "The Intruder," was the great feature of a special matinée, held at the Haymarket yesterday for the benefit of Mrs. Bernard Beere.

Maurice Maeterlinck, as every one now knows, is the young Belgian poet who has lately sprung into notoriety. He has published a volume of poems, 'Serres Chaudes,' which are but amusing French parodies of Walt Whitman, the tragedy of "La Princesse Maleine," and two short plays, "L'Intruse" and "Les Aveugles." Until last spring his notoriety had scarcely spread beyond a small circle of admirers among the *décadents* and *symbolistes* of Paris, but in May "L'Intruse" was given at the Vaudeville matinée for Verlaine, and the next day, I think it was, Octave Mirbeau came out with an eloquent article, in which the play was extolled as the greatest and most daring of modern times, and Maeterlinck himself called the Belgian Shakspere. Mallarmé was the next to lead the chorus of his praise, and the Belgian poet's reputation was made for better or worse. In England, where his work has been translated and published, he has been less fortunate in his admirers. Mr. Hall Caine is the most eloquent; and while the author of the "Bondman" and the "Scapegoat" may be an authority on melodrama, his criticism of tragedy and poetry can hardly be accepted seriously.

Maeterlinck has been sadly handicapped by the injudicious name bestowed upon him by his French friends. To live up to his reputation as Belgian Shakspere is no light matter, nor does his work as yet give reasonable foundation for it. His verse, if verse it can be called, is often foolish simply because in it he is so unwilling to be himself, so eager to be Walt Whitman. His "Princesse Maleine," as a whole, must be counted a failure, though there are scenes in it of unquestioned greatness. But its very failure as a whole and its partial success explain at once his limitations and his strength. His force lies in his power to imagine the horror of certain situations, and to express it by the most realistic methods. To sustain this horror, to prevent the realistic interpretation from falling into the commonplace, through five long acts, is an impossibility. In the blackest tragedy, in moments of intense fear and dread, his people speak in every-day language, but language which, because of his wonderful skill in the use of words, becomes in their mouths musical and rhythmical. The murderess does not harangue her victim. The grief-stricken husband does not pour forth his sorrow in a long monologue. Each talks simply, as, the chances are, in real life each would under the same circumstances. In the conversation of several people, the natural repetitions which occur are made to tell, like the refrain in a ballad. But, once the interest falters, once the horror no longer holds you, then the dialogue dwindles into mere Ollendorff. Take a page from the "Princesse Maleine"—it is but one of many:

"Je vois le phare."
"Vous voyez le phare?"
"Oui, je crois que c'est le phare."
"Mais alors vous devez voir la ville."
"Je ne vois pas la ville."
"Vous ne voyez pas la ville?"
"Je ne vois pas la ville."
"Vous ne voyez pas le beffroi?"
"Non."

And yet this same original method of ordering the dialogues, in the scene where the King and Queen strangle *Maleine*, adds tremendously to its tragedy. Now, neither "L'Intruse" nor "Les Aveugles" is much longer than this one scene, and therefore in each, but more especially in the former, you feel only the master. It is in his short plays that Maeterlinck is great.

It is a pity that Mr. Beerbohm Tree has not the ability or even the courage of his intentions, else he would be what he is called, the finest English actor of the day. It was a daring experiment to produce "L'Intruse" upon the English stage. The story is briefly this: A woman after a dangerous confinement lies ill in a rear room. Her father, husband, brother, and three daughters sit together, as they have sat for so many long evenings, that strange restraint upon them which serious illness in a house always brings with it. The old man, himself on the verge of the grave, and blind, is more sensitive than the others to the approach of death. In every sound that breaks the stillness, in every silence, he hears

the Intruder, so that at last he communicates his vague terrors to those waiting with him, though they seek to reassure him, and the horror grows upon them, as it does upon the reader, until the door into the sick-room opens and a Sister of Mercy comes in and, as is the Belgian custom, announces the death of the woman by signing herself with the sign of the cross. Silently they pass to the chamber of death, all except the old man, who gropes about helplessly in his darkness. It is the modern *Danse Macabre.*

The entire effect throughout is produced by the short, abrupt dialogue, with its constant repetitions, which, in the trivial scenes of "La Princesse Maleine," seems like parody. There is no movement, except when one of the young girls goes to the window to see who is in the garden, to the door to look for the visitor whose steps they hear on the stairs, to another room to watch the baby sleeping there, or when the father tries the lamp which is gradually going out.

And now what does Mr. Tree do with this strange play, powerful in its subtlety? Exactly what might be expected of him. He is manager as well as actor. He knows the sort of thing the gods, whether they sit in gallery or stalls, like; he knows how he has made his biggest successes before. He gets himself up admirably, so that as soon as the curtain is raised you hear the customary murmur of approval throughout the house. He turns the old man into the hero of melodrama—advanced in years, it is true—just as he has already turned *Hamlet* and *Falstaff* and *Beau Austin.* He makes all he can of what little chance for action there is, and he cuts down the dialogue recklessly: even when he wants to try an artistic experiment, his audience must not be bored. The result is, that in the Haymarket version "The Intruder" was not only without effect, but was absolutely meaningless, except to those who had already read it. There were some who had, for interest in Maeterlinck filled at least a few seats, even if admiration for Mrs. Bernard Beere crowded the house. But the great majority, when the Sister of Mercy made the sign of the cross, wondered what it was all about, and fondly hoped that the ghost they expected would still appear. To-day the papers have been calling "The Intruder" silly, and imbecile, and idiotic, and the usual adjectives which form the stock-in-trade of the English critic. Of Maeterlinck's "L'Intruse," however, they are qualified to say nothing; it has not yet been seen in England. Nevertheless, Maeterlinck will arrive, and we should prepare to relinquish Ibsen in his favor. N. N.

Correspondence.

AID FOR STARVING RUSSIANS.

To the Editor of The Nation:

Sir: When you suggested that it would be better to cable money in aid of the Russian sufferers than to send ships with supplies, I was much impressed, as were doubtless many of your readers. I should like to tell you some of the reasons why the Iowa Auxiliary to the Red Cross has decided to send to Russia a cargo of corn rather than money. In the first place, we get free transportation from here to the famine district, and go all the way under the auspices of the American Red Cross, whose field agent, Dr. Hubbell, accompanies the expedition. We not only buy our corn here, where it is cheapest, but get large gifts from farmers who would not feel able to give money.

According to Russian estimates, it will cost $5 to keep one person alive from now until next August. With our free transportation we can do it for $2.10. We hope to send a shipload of shelled corn in three weeks or less, and shall send inexpensive mills, with men to put them up, or else the Red Cross will send millers who will show the Russians how to grind the corn properly with their own machinery; and the services of Col. Murphy, who is now introducing corn meal into Europe, have been tendered the Red Cross by Secretary Rusk, so that proper instruction in cooking is insured.

This movement in Iowa is really remarkable and very well organized, although of course there are always persons who are so provincial as to imagine that the world is no larger than the area covered by the United States, and that a vessel leaving our ports immediately falls off into nowhere, or who think that corrupt Russian officials are going to eat an inordinate amount of hasty pudding, kindly prepared for them by our Red Cross cooks. * * *

Des Moines, Feb. 2, 1892.

[As to the suggestion of sending mills and millers, and the use of corn meal, both mills and millers are an unnecessary expense. There are plenty of windmills in the Russian villages for grinding rye and wheat; and as a Russian peasant will "learn as much in three months as a lower-class Englishman will in three years," according to the testimony of an Englishman who had had workmen of both nationalities under him, it is not likely that they will require anything beyond their native wits to discover how to put the corn into shape for eating, especially when prompted by hunger, as at present. Cooking the corn properly is another matter. During the Irish famine, when America sent over corn, the people did not cook it sufficiently, and the natural result was dysentery, and so on. Our opinion that it is unnecessary to send an invoice of people to distribute the contributions in money and breadstuffs, is confirmed by the *European Messenger,* one of the most prominent and trustworthy of Russian monthlies. It says on the subject of the numerous persons who have volunteered to assist in the relief work, that they would be of much less use than in an epidemic. Any one can nurse a sick person, whether he has ever seen the patient before or not; but knowledge of local conditions, and even of persons, is required in this case. The deduction is, that a volunteer would be of use only after an apprenticeship of at least two weeks, and that when assisted by the experience and advice of residents on the spot who are qualified as to the points mentioned. It will be noticed that, in this case, no allowance is made for ignorance of the Russian language and the general problems of peasant existence, which would handicap foreigners more than the uninitiated imagine.

In view of the fact that Philadelphia has decided to send a ship with the breadstuffs of the Northwest's contributing, it is not worth while to enter further into the general question as to the comparative merits of money contributions and contributions in kind. If it were still desirable to discuss the matter, we should maintain our stand on the firm ground that, if sufficient rye flour, such as the peasants are accustomed to use for their sour black bread, could be bought on the spot, or anywhere on the other side of the ocean, it would be not only cheaper, but more nutritious, pound for pound, than the wheat flour sent from America. As soon as navigation opens on the rivers Kama and Volga, direct access can be had to the worst-stricken districts, with grain from the abundant crops of Siberia, through Perm, where the railway terminates on the European side of the Ural Mountains. The recent cablegram which attributed to Gen. Annenkoff the wild scheme of setting up these communications by blowing up the ice in the Volga, displays a faint comprehension of the point here raised, on the part of the correspondent. But Gen. Annenkoff knows that the Neva, at St. Petersburg, which is far swifter in current than the Volga, cannot be kept open in winter, and he can never have dreamed of such a device. He would have used the river as a great natural avenue, as the Neva is used, assuming that he could have cleared it and have kept it clear of the tremendous snows, the heaviest seen for a generation at least, which have been complicating the situation along the Volga this winter. The problem now is, to provision the districts which are dependent upon carts and sledges, before the spring thaws set in in April, and then to hasten grain down the Kama and Volga and their branches when navigation opens, at the middle or last of April. One of the most pressing needs of the peasants is grain to sow in April, so that they may have a crop next summer. An eminently practical gift would be wheat and rye—especially rye—for seed. Corn will not grow. It should be sent promptly, to allow of time for its distribution.

We may take this opportunity to refute the statements, which have been too frequently repeated by our press, to the effect that the Government took no notice of the situation until it was too late to help. By a private letter from a large landed proprietor in one of the suffering Volga provinces, dated August 28 last, we are informed that the general Government had already appropriated 5,000,000 rubles for that province, and that 50 steamers and 200 barks, all laden with grain for the sufferers, were stuck fast in the shallows of the river, above Kazan, the water being unusually low, so that all steamers arrived at their landings not hours, but days, behind time.

Another misconception, founded on imperfect knowledge of geography and lack of logical reasoning, which we take this opportunity to correct, is that which attributes this great famine to "the expulsion of the Jews from Russia." The geographical error is much on a level with

mixing up the Atlantic and the Pacific coasts. The Jewish "Pale of Settlement," in the southwest provinces of the Empire, is not suffering from the famine to any extent. The Russian cultivators of the soil in the far east and southeast are the sufferers, and the Jews are altogether absent, or far less numerous there than elsewhere. The logical error consists in imagining that the penniless Jews, who have left the non-stricken western provinces voluntarily, and who arrive here in such a condition that even the well-known liberality of the Hebrew Benevolent Societies is unable to feed them, so that these societies are compelled to apply (a rare case) to American charity, could have had any money to lend to the peasants had they remained at home, a thousand versts from the scene of action. It is absurd.

We quote further from the correspondent referred to above, as to the causes of the famine:

"What the newspapers write about the bad crops is quite true [this refutes the falsehood that the press has ever been silenced on the subject]. In all the governments along the shores of the Volga, the hot, dry summer has destroyed nearly all the grain. In most places there was nothing to be gathered, so that the peasants had to sit at home and mourn over their state. Happily, our district has suffered less; they could gather rye enough in sufficient quantity to have seed for next year and some left for food, though they say that most of the peasants will have food but till December. The spring grain, like wheat and oats, has all perished, so that our poor horses and cows will have but meagre food during the winter. The Zemstvo [the local assembly] is taking measures to help the peasants; it buys rye in the other governments and has it brought over here, and gives it to the peasants. The prices for grain and vegetables have risen excessively. Rye costs now one ruble twenty-five kopeks for forty pounds; potatoes cost one ruble fifty kopeks for forty pounds. [A ruble cannot be worth more than forty to forty-five cents, with so poor a harvest; nominally it is seventy-five cents; generally it is fifty cents. This is about three times the normal price of rye.] It is thought that in winter they will rise still higher. What will the poor people do? There are already a quantity of beggars, and some hire themselves as workmen without wages, merely for the sake of food. The great heats have occasioned low water in the Volga [with the results which we have mentioned above]. One day it is so hot that one can scarcely breathe; in the night the thermometer shows 20° Réaumur [about 78° Fahrenheit]. The next day it is cold, and in the night there is a strong frost which has spoiled the vegetables; and then it is hot again."

When we add to these atmospheric conditions the fact that the peasants are too poor—not too improvident—to lay by grain or money for a rainy day, or to buy the costly agricultural implements which would enable them to cultivate all their land (instead of being forced to let one-third of it lie fallow), and to cultivate it in the proper manner, surely we have abundant and rational explanation of the terrible famine, without ranting over its being "a judgment on Russia" because Jews do or do not dwell within her limits, or because she owns Siberia. The landed proprietor from whose letter we have quoted is not only providing for his own villages, but is feeding about 200 strange beggars a day. This answers still another accusation—that the Russians are not helping as they should in this crisis. —Ed. Nation.]

SILVER SOUP KITCHENS.

To the Editor of The Nation:

Sir: The free-coinage-of-silver advocates say that their scheme will "make money plenty" among the people and relieve poverty; upon this statement, in fact, they base their whole argument. Now, I am one of the impecunious, in spite of persistent industry to the utmost of my ability. I am anxious to escape this condition, and want to fill my purse in any honest way. Will you be so good as to explain this benevolent promise of the free-coinage men? Is, possibly, any plan for free distribution included in the scheme? When the Government coins all the silver presented, and the dollars are piled up in mountains of wealth in the offices of the silver-mining companies preparatory to the relief of the poverty of the waiting millions, how is the transfer to be effected? Fearing lest I may be overlooked in this grand scheme of national philanthropy, I anxiously ask for information in the name of the vast majority of voters, who are, like myself,

Impecunious.

St. Louis, February 10, 1892.

HILL AND HARRISON.

To the Editor of The Nation:

Sir: How far Gov. Hill is responsible for the defeat of Cleveland in 1888 is a question which now very much agitates the Democratic mind. While I assert that he is wholly to blame for it, I acquit him altogether of any charge or suspicion that he traded votes for himself with the friends of Harrison. Hill got more votes for Governor than the Cleveland electors because there were more saloon Republicans opposed to Warner Miller and high license than "swallow-tail" Democrats scratching Hill. But there was another "deal," by which the Harrison electors got in the city of New York about 9,000 more votes than their party strength, and Cleveland just as many less. The equivalent was given by the Republicans in votes taken from Erhardt and turned over to Grant, by which the latter became Mayor. But for such a deal, Erhardt would have been elected, and New York city would have been saved the misrule of Tammany, and the world would never have heard anything about the McKinley Bill, or Porter's Census, or Patrick Egan.

This "deal" between Tammany and the local agents of Matt Quay could not have been carried out if David B. Hill had, in the winter of 1888, signed Saxton's Australian Ballot Bill. Such a law would have made deals impossible; and because it would render them impossible, Hill vetoed it. Kentucky is a good enough Democratic State, and it was the first to enact the Australian ballot, pure and simple, without pasters or any other conveniences for carrying out deals. Indiana enacted this law, in order to stop the judicious distribution of "soap" to "blocks of five," by a partisan Democratic majority. Hill vetoed a similar law to prevent the smashing of the machine; hence the Grant-Quay deal; hence four years of Ben Harrison. Q. E. D.—Yours truly,

L. N. D.

Louisville, Ky., February 11, 1892.

THE PIONEER BLACK REGIMENT.

To the Editor of The Nation:

Sir: Excuse me if I call attention to an inadvertence in the notice of Capt. Emilio's history of the Fifty-fourth Massachusetts, contained in your last issue. It is there stated: "It was the pioneer organization of black troops, and had a just preëminence on that account." A glance at the very first page of the book reviewed will show that the author makes no such claim, but himself calls attention to the fact that black regiments had been organized in Louisiana, South Carolina, and Kansas in the year 1862, and adds (p. 2): "After these regiments next came, in order of organization, the Fifty-fourth Massachusetts, which was the first raised in the Northern States east of the Mississippi River." This is a guarded and careful statement, and is followed on the same page by the original order from the War Department, giving Gov. Andrew authority to enlist negroes, and dated January 26, 1863—about five months later than the orders under which the earlier regiments had been recruited.

T. W. Higginson.

Cambridge, Mass., February 12, 1892.

[We had, of course, in mind the restricted section defined by Captain Emilio.—Ed. Nation.]

To the Editor of The Nation:

Sir: In the *Nation* of February 11 I find a notice of 'A Brave Black Regiment,' in which it is stated that "Mr. Stanton's authorization to Gov. Andrew to raise colored regiments preceded the act of Congress on the subject which fixed the pay at a lower rate than for white men." It is also asserted that the recruiting officers offered the same pay to the colored soldiers as was offered to white soldiers in good faith, but without authority of law. Presumably the writer of the review made proper investigation before thus committing himself, and there would be nothing surprising if my memory of occurrences which took place thirty years ago was faulty; but I have a strong enough impression in regard to the matter to make it worth while for me to submit it to you and to suggest further investigation.

Maj. George L. Stearns and I were the recruiting officers alluded to, and, as I remember it, our promises, which, of course, were authorized by Gov. Andrew, were based upon the fact that there was no law in existence by which any regularly enlisted soldier, white or black, was entitled to more or to less pay than any other regularly enlisted soldier of the same grade. In other words, the laws governing the payment of United States troops were uniform in their application. The act of Congress to which it is probable the *Nation* reviewer refers, regulated the pay, not of soldiers, but of *laborers* engaged and employed in the army. The refusal by the Government for eighteen months to pay the colored troops their just due was not owing to a nice regard for law, but must be attributed to the contempt for the rights of the colored man which then prevailed, and which always was and is to-day a national characteristic.

The employment of colored soldiers marks an era in the history of our civil war which, so far as I know, has not yet received proper consideration, and it is to be hoped that some competent historian will yet do justice to its significance.—Yours very truly,

Richard P. Hallowell.

Boston, February 13, 1892.

[The subject is a complicated one, and we can only refer those interested to the debates in the Senate begun on February 3, 1864, when Mr. Wilson introduced his bill to equalize the pay of soldiers in the United States Army. Mr. Sumner contended, and seemed to prove, that some

men, at least, of the Fifty-fourth Massachusetts subscribed to an enlistment specifically under the original statute of July 22, 1861, which made no distinction of color, though doubtless contemplating only whites. The statute of July 17, 1862, authorizing the employment of "persons of African descent," and fixing their pay at $10, was ambiguously worded, and left plenty of ground for hair-splitting as to the nature of "any military or naval service for which they may be found competent" in addition to "constructing entrenchments, . . . or any other labor." Senator Wilson said that "some of the best lawyers in the country . . . think the distinction in the act of 1862 applies to men working for the Government, not soldiers"; but a good lawyer and good Republican like Senator Fessenden thought otherwise, and he could point to his ineffectual effort at the time to put the colored soldiers on a level with the white. We were in error in saying that Secretary Stanton's authorization to Gov. Andrew *preceded* the statute of 1862. It bore date, as Col. Higginson points out above, January 26, 1863, and curiously testifies to the Government's timidity with regard to colored enlistments by being general in terms, and only incidentally conceding that the volunteers in question "may include persons of African descent, organized into separate corps."—Ed. Nation.]

GEOMETRY NOT MATHEMATICS.

To the Editor of The Nation:

Sir: A dissatisfaction with the method in which geometry is at present taught finds frequent expression, a case in point being the review of Mr. Halsted's translation of Lobachevsky in the last number of the *Nation*, and, by a peculiar coincidence, in the communication by Mr. Stille on "Science in America," in the same number. In the one case, the author desires to have geometry attacked by the beginner from the point of view of perspective; in the other, criticism is not aimed at the elementary presentation of the subject, but a spirit of discontent is visible which expresses itself in the demand that more students should go beyond the dull elements and breathe the purer air of the "modern geometry" of Jacob Steiner.

Does not the difficulty lie deeper than is suggested by either of these two writers? There seems to be a fundamental misconception of the nature of geometry in the minds not merely of the general public, but also of almost every teacher of the subject. "Mathematics is the science which draws necessary conclusions," so wrote the late Prof. Benjamin Peirce in 1870, and no clearer and more accurate definition could be imagined; and yet it has produced but little effect as yet on students of geometry. Geometry is the simplest of the natural sciences to which, owing to its simplicity, mathematics (*i. e.*, the methods of formal logic, either with or without the assistance of symbols) has been applied with such wonderful success, and which of late years has so richly repaid its debts to mathematics in the hands of Riemann, Clebsch, and others still living. We should laugh at the idea of teaching the mathematical theory of electricity before the student knows in a qualitative way what electricity is, either by a description of the phenomena or, better still, by actual laboratory contact with them. Why should not the same rule apply to geometry? Even then logic need not be entirely discarded, but let it assist the learner, not clog his progress. It is not a perfectly safe guide, as history tells us, even in the hands of a master, and the learner is almost as safe in trusting to his "common sense" as to his own unaided deductions.

The training of the logical faculty is, moreover, of far less vital importance than the development of the mind which results from this first real draught from the cup of science, which strengthens a healthy imagination, and should even yield an æsthetic enjoyment. If we could lead the student first to see the truth of a proposition, and then, perhaps much later, to prove it, we might hope in time to have mathematicians in America. For every mathematical discovery is made in this way, let the mathematician conceal his footprints as he will; it must come as an intuition, and the man to whom it has thus come is its discoverer, even though he never succeed in finding a proof.

Of course there will still remain innumerable points of detail to consider. The wonderful geometric developments of the last hundred years should not be completely ignored; "projective" rather than metrical properties of figures might be brought to the front; but this will all regulate itself when once it is really understood that geometry is not mathematics, but is a physical science to which mathematics may be applied. Maxime Bôcher.

Cambridge, February 13, 1892.

AN HISTORIAN'S SLIPS.

To the Editor of The Nation:

Sir: Lovers of chess will be surprised to learn on page 435, vol. v., of Schouler's 'History of the United States of America under the Constitution' that (1859) "Paul Morphy, the *English* chess-player, was one of the latest foreign celebrities who catered to our entertainment."

May I also point out that "one Barney" (a favorite way with Mr. Schouler of expressing contempt), by whose hand Mr. Monroe sent to the French Convention an American flag (vol. i., p. 319), and "who, in the name of the American people, tendered it with some inflammatory remarks of his own, prompted by the recollection of a personal outrage he had borne from the British fleet off the West Indies," was the same individual as "Commodore Barney, our renowned privateer officer" (vol. iv., p. 408)? I add the "inflammatory remarks" of Captain Barney, styled by Monroe "an officer of distinguished merit, who has rendered us great services by sea, in the course of *our* Revolution." They are taken from a transcript of the proceedings of the French Convention, September 25, 1794, to be found in an appendix to 'A Biographical Memoir of the late Commodore Joshua Barney,' by Mary Barney (Boston: Gray & Bowen, 1832) :

Speech of Capt. Barney, bearer of the colors.

Citizen President: Having been directed by the Minister Plenipotentiary of the United States of America to present to the National Convention the flag demanded [asked] of him, the flag under the auspices of which I have had the honor to fight against our common enemy during the war which has assured liberty and independence, I discharge the duty with most lively satisfaction, and deliver it to you. Henceforth, suspended on the side of that of the French republic, it will become the symbols of the union which subsists between the two nations, and last, I hope, as long as the freedom which they have so bravely acquired and so wisely consolidated.

Respectfully, Basil Sollers.

Baltimore, February 8, 1892.

THE TYPOGRAPHICAL ERROR IN 'CRANFORD.'

To the Editor of The Nation:

Sir: The note from "A. B. N." on "A Typographical Error in 'Cranford'" is interesting, and there is fortunately evidence to show that his happy emendation is really a restoration of the author's text. 'Cranford' appeared piecemeal in *Household Words*, and a reference to the number for May 7, 1853, will show that it was not *loin*, but, as "A. B. N." supposes, *lion*—the pudding originally "made in most wonderful representation of a lion *couchant* that ever was moulded," and served up a second day—"a little of the cold lion sliced and fried." Through how many editions this printer's error—turning *lion* into *loin*—has run, I do not know; but it is found in the only two at the moment accessible, recent ones published by Macmillans and Smith & Elder, respectively.—Yours truly,

William E. A. Axon.

Manchester, England, January 27, 1892.

THE WASHINGTON PEDIGREE.

To the Editor of The Nation:

Sir: I have found a letter from George Washington to a nephew, Col. William Augustine Washington (a son of the General's brother Augustine), dated October 3, 1798, from which one or two facts of interest may be drawn. An extract is as follows:

"I thank you for the old documents you sent me respecting the family of our ancestors, but I am possessed of papers which prove beyond a doubt, that of the two brothers who emigrated to this country in the year 1657, during the troubles of that day, that John Washington, from whom we are descended, was the eldest. The pedigree from him I have, and, I believe, very correct; but the descendants of Lawrence, in a regular course, I have not been able to trace. All those of our name in and about Chotank are from the latter. John was the grandfather of my father, and uncle and great-grandfather to Warren [Warner] and me. He left two sons, Lawrence and John, the former, who was the eldest, was the father of my father, Uncle and Aunt Willis. Mrs. Hayward must have been a daughter of the *first Lawrence*, and thence becomes the cousin of the second Lawrence and John."

In the *Nation* of October 15, 1891, was printed a letter from John Washington (a son of the immigrant and of the Chotank branch) in which he mentions an Aunt Howard who died in 1697 or 1698. Mr. Waters suggested that this aunt was Martha Washington, a sister of the immigrants, who had been assisted by her brother to remove to Virginia. Is it possible that Aunt Howard and Mrs. Hayward are one and the same person? The objection to putting her where Washington suggests is that the immigrant John had only one daughter, who died when very young. The wife of John (a widow) had three daughters when he married her, names unknown, and it may be that Mrs. Hayward was one of them. John, the son of John (the immigrant), had but one daughter, whom he lost early. So it is reasonable to decide that if Mrs. Hayward was of the Chotank branch, she belongs to the generation previous to that assigned her by Washington.

One bit of evidence may assist a determination of the matter. The will of John, the immigrant, was proved in 1677, and in it provision was made for Martha's removal to Vir-

ginia. A patent for 30,000 acres of land in Stafford County was issued in 1689 to a Nicholas Hayward. It was in Stafford County that the "cuz. John Washington, Sen:" mentioned in the will of Lawrence, the grandfather of the President, lived. It does not appear to be a very wild guess that Martha may have become Mrs. Hayward after reaching this country, even though she may have been well on in years. In a new country it is proverbial that age does not handicap a woman in matrimonial ventures.

The Chotank branch of the Washingtons is dealt with in a very remarkable work that has just come from the press—'Virginia Genealogies,' by Rev. Horace Edwin Hayden. All the painstaking and anxious research of this writer leaves many points in doubt, though the results add much to our information. He prints the will of a Henry Washington, who was undoubtedly of the Chotank Washingtons, and conjectures that he was a son of John and grandson of Lawrence, the immigrant. This conjecture is fairly supported by Mr. Hayden's arguments, and, if it could be fully established, would be a decided step towards solving the line of that branch of the family.

WORTHINGTON C. FORD.

BROOKLYN, February 9, 1892.

Notes.

G. P. PUTNAM'S SONS have in press 'Money, Silver, and Finance,' by J. Howard Cowperthwait, a work in criticism of our existing national policy. The same firm announce 'The Genesis of the Art Forms; An Essay in Comparative Æsthetics,' by Prof. George L. Raymond of Princeton; 'Methods of Industrial Remuneration,' by David F. Schloss; 'The Test Pronouncer,' by W. H. P. Phyfe; 'Summer Fallow,' poems by Charles Buxton Going; 'Moods and Memories,' poems by Madison Cawein; and 'Pratt Portraits: Studies of a New England Family,' by Anna Fuller.

'Cigarette Papers,' by Joseph Hatton; 'The Idealist,' by Henry T. King; and 'His Great Self,' a new novel by Marion Harland, are announced by J. B. Lippincott Co.

The Rev. Dr. Lyman Abbott's Lowell Institute lectures on 'The Evolution of Christianity' will be published, after revision, in book form by Houghton, Mifflin & Co., who announce also 'The Rationale of Mesmerism,' by A. P. Sinnett; 'A Golden Gossip,' by Mrs. A. D. T. Whitney; and 'Roger Hunt,' a new novel by Mrs. Celia P. Woolley.

Mr. Morris Phillips, editor of the *Home Journal*, will publish early next month 'Abroad and at Home,' a guide-book to summer and winter resorts, hotels, restaurants, etc., on both sides of the water.

John Wiley & Sons announce a text-book of 'Theory and Practice in the Designing of Modern Framed Structures,' by Prof. J. B. Johnson, C. W. Bryan, and F. E. Turneaure.

The *Academy* announces that Sir Charles Dilke and Mr. H. S. Wilkinson (author of 'The Brain of an Army') are jointly preparing a book on the 'Defences of England,' which will be published at an early date by Macmillan & Co.

From the same source we learn that Prof. George J. Romanes has sent to press an elaborate work on evolution, upon which he has been long engaged, and part of which he read last spring, as lectures, at the Royal Institution. The book is to be called 'Darwin, and after Darwin,' and it will be published in two volumes by the Messrs. Longman. The same publishers have in press the Autobiography of Isaac Williams. Isaac Williams (he was always called by his full name) was one of the early Tractarians at Oxford, and, besides his contributions to the series of "Tracts for the Times," was the author of several volumes of verse—'The Baptistery,' 'The Cathedral,' 'The Christian Scholar,' and portions of the 'Lyra Apostolica.' He also wrote two of the volumes of the 'Plain Sermons.' He was, quite as much as Keble, the poet and the saint of the Movement. Newman paid him a touching tribute of love and esteem in his two dedications to him of 'The Church of the Fathers'—one being written before and the other after Newman left the English Church. The Autobiography now to appear will take its place at once beside Dean Church's memorials in the considerable and increasing library of *mémoires pour servir* which the future historian of the Oxford Movement will find ready to his hand. One may hope that it will contain a portrait of Isaac Williams's refined and beautiful face.

A batch of new editions comes to us from Macmillan, viz., F. Marion Crawford's 'Doctor Claudius,' Davidson and Benham's Life of the late Archbishop of Canterbury, now in its third edition, as is also the 'Oxford Movement,' by the late Dean Church, reduced in size and price. We may also mention here the 'Village Sermons' of the same ecclesiastic, and the new, revised, and greatly enlarged edition of Bishop Alexander's 'Leading Ideas of the Gospels.'

The chief illustrated serials that have figured in *Harper's Magazine* for the past year, the two bound volumes of which lie upon our table, are Mr. Besant's papers on historic London and Mr. Theodore Child's on present-day South America, with the Abbey-Lang series on Shakspere's comedies, and Mr. Schuyler's "Glimpses of Western Architecture." Two cases of literary resuscitation occur in Dickens's letters to Collins, and the Thackeray "Boudin" sketches. For the rest, there is the alternation of story and discussion, travel and biography, to the salient features of which we have called due attention in our monthly comments.

No epitome can do justice to the vast variety of topics touched upon by *Harper's Weekly* for 1891, and resort must be had to its own copious index to learn how wide a range is covered by its illustrations, and how complete a gallery of the year's notabilities is furnished by its portraits. Stories appear to be gaining in number over the record for previous volumes, while the page devoted to sport and athletics is a distinct innovation. Yet there is no lack of serious articles, and the editorial pages point as true as ever to the north of honest politics.

The gauds and marvels of woman's dress take up the customary amount of space, both in illustration and letterpress, in Vol. 24 of *Harper's Bazar*. What women shall do with themselves when once dressed is not forgotten by editors and contributors, and subscribers have a considerable amount of art, ancient and modern, served up to them in reproduction and description, while the volume embraces also two serial stories by Mr. Besant and Mr. Hardy—the latter's 'Tess of the D'Urbervilles' being just now in the public's hands in book form.

The third of the little volumes in which Harper & Bros. have gathered specimen essays of the editorial departments of their Magazine is the most welcome, viz., Mr. Curtis's 'From the Easy Chair,' and is disappointing only because it is so very inadequate to the riches of light literature out of which it is drawn. It has been a frequently expressed wish that the less transitory of these bits of town talk should be collected, since they are quite unique in tone and method, and at the same time continue an old tradition of American letters; but this collection by no means answers our desires. Little enough is given, but even this serves to show how distinctly the Easy Chair, month after month, has been for a generation the elegant chronicle of affairs of taste in this city, relieved by the interest of a citizen in the things of the State and of humanity—strains of "a higher mood"; and the aging New Yorker will find the pleasures of memory spread before him on the page—the songs he used to hear, the prima donnas that have gone, the dinners now historical, the sights of the street long swallowed up by the northward flowing tide of business, the players and the lecturers that were "Planco consule," as the editor likes to say—Everett and Emerson, Thoreau and Phillips, and all the rest of the men and things that filled an hour in their time. It is this reminiscential quality that is most felt in this selection of essays that now exhale the unexpected odor of time past. In particular it is a book of this city, indigenous, with the unmistakable trade-mark of Manhattan. But let us hope this publication is no more than a trial of the public taste, for the Easy Chair cannot shrink to any such proportions as this. It might do in Lilliput, but not on our island.

Mr. Edmund Gosse has collected in a handsome volume, 'Gossip in a Library' (John W. Lovell), a series of brief essays, contributed to the *Independent*, upon the more rare or interesting books in his own library. The pieces are the merest gossamer of bibliography, allusion, and comment, and their subjects usually lack novelty. Camden and the 'Mirror for Magistrates,' Lady Winchelsea (whom Mr. Gosse seems to have found much as Swinburne found Jonson's 'Discoveries'), Beau Nash, "Peter Bell," Eliza Heywood, Farquhar, Pharamond, Moncrif, Donne's Funeral Sermon, and all the rest, except a few that "really were" nobodies, afford the author opportunity to say a baker's dozen of very obvious remarks on each topic before he skims away to his next bastard title. How often need we remind our London cousins that these, like the Abbey, are ours too? *Nec tam aversus*—do our cousins fancy that we haven't primers of our own? We have quite enough just as flimsy as this; for the dilettante is a native product, though not fully protected, it seems, from foreign competition.

A primer of information (such as we just referred to) of American manufacture comes to us under the title 'Wells of English' (Boston: Roberts Bros.). The author, Mr. Isaac Bassett Choate, quotes Principal Shairp to the effect that we should know not only great poets but minor writers, and then gives brief accounts of forty, from Thomas of Erceldoune to John Evelyn. The list includes Skelton, More, Wyatt, Surrey, Raleigh, Chapman, Greene, Daniel, Drayton, Marlowe, and other as well-known Elizabethans, Herrick, Walton, Fuller, Crashawe, Lovelace, and Marvell. Of these the author writes the oft-told story, and he fails to add to our knowledge of the obscurer names. What he sets down is unexceptionable save for its being the fruit, apparently, of a common delusion of the student that what is new in the learning will be new in the telling to others in a book. At the same time there can hardly be too many unpretentious volumes, such as this, of average information of the subject and fair taste in appreciation, to aid in

the steady increase of the use of old literature by the library public.

'Four Lectures on Henrik Ibsen, dealing chiefly with his Metrical Works,' by Philip H. Wicksteed (Macmillan), treat of the vexed genius of the latest comer in "world-literature" with sincere admiration, and also, fortunately, with a certain restraint which makes the eulogistic criticism more acceptable. The subjects dealt with are the "Poems," "Brand," "Peter Gynt," and the "Social Plays." The strong personality of Ibsen is given full value in the analysis of the moral intention of these works; and the contradictions of life mirrored in them, the confusion of extreme ideals or formulas illustrated through them, the violent antipathies developed in Ibsen's nature by modern conditions, are all brought out plainly. The study is, therefore, one worth attending to, and the reservations made in conclusion are the more telling because of the enthusiasm shown. That Ibsen has felt deeply some acute phases of evil in society cannot be gainsaid, and what power he has proceeds from his realization of these; but that his reflection in respect to them is real wisdom, or that the form of imagination in which he embodies them is any part of the fine-art of literature—these are other matters. Some light on them, however, the reader may gain better from this little book than from any other that has fallen under our notice. The author is a devotee of the cult, but the points where doubt begins to insinuate itself are perceptible in his work, and hence he is usefully suggestive.

We have received from Frederick Keppel & Co. a large etching after the portrait of John Lothrop Motley, painted by Bisschop for the late Queen of Holland in 1872. At that time, as we are informed, the historian was the Queen's guest at her "House in the Wood" at The Hague, where the picture now is. The etching has been executed by a Dutch artist, Mr. Philip Zilcken, himself at one time private secretary to the Queen. These circumstances invest the present plate with much interest, and the likeness is in a broad way true to life, yet the face is the most disappointing part of the print, both in respect of solid execution and in interpretation of character. We cannot speak of the original canvas, and it may well be that it is chargeable with the defects we feel in the etching. If so, it would appear that Mr. Zilcken had no such personal acquaintance with Mr. Motley as would enable him to improve on the painting. The print is upon Holland paper and also upon vellum.

—The report of Brig.-Gen. Thomas Lincoln Casey, Chief of Engineers, showing the progress made during the year ending December 1, 1891, in the construction of the building for the Library of Congress, has been printed as Senate Miscellaneous Document No. 15 of Fifty-second Congress, First Session. The advancement indicated is very satisfactory. The front walls of the whole building have been carried up to the height of the second-story floor, and a great part of the inner or court walls has been built to a much greater height, while the iron-work and nearly all the brick and terracotta work of the second-story floor are in place. The various iron-work required for the interior has also been carried forward, including the novel book-stack invented by Superintendent B. R. Green, which is being put up in the north stack-room, and all the materials for the heating apparatus and steam power have been received and the greater part put in place. Two large folding-plates, taken from photographs, accompany the report and show the whole exterior walls of the vast building (471x340 feet) as they stood on December 1 last, thus enabling one to get some idea of how the largest and most imposing library structure in the world is going to look. The amount expended during the year was $823,711.52, leaving an unexpended balance of $810,515.57 to be used during the remainder of the fiscal year; while the contracts in force and minor indebtedness call for $1,059,045.54, and the estimated appropriation required to carry on the work to the end of the next fiscal year, June 30, 1893, is $1,035,000. The total appropriations since October 2, 1888, have been $2,450,000, and the total expenditures $1,639,484.43. The completion of the building is promised by January 1, 1897, provided funds are appropriated to the full amounts of the annual estimates submitted within the limit of total cost fixed by the Act of March 2, 1889, namely, $5,500,000, in addition to the appropriations made prior to that date. It is to be hoped that no false ideas of economy will prevent Congress from promptly making such appropriations as are necessary to carry on, without break, this work, which is of truly national importance.

—It must be seldom that a judicial opinion attains the dignity of an historical monograph, but this may fairly be predicated of Judge Nott's opinion, for the Court of Claims, in the case of the Western Cherokees vs. the United States, decided November 30, 1891. "In 1838," says Judge Nott, "the condition of the Cherokee people was this"—and he proceeds to give succinctly the shameful story of the removal of the eastern section of the tribe to the Indian Territory, and the curious antagonism which arose, under the leadership of John Ross, between the earlier emigrants and the later. For this chief Judge Nott expresses the greatest admiration, saying that his "intellectual successes deserve to be ranked among the extraordinary achievements of diplomacy if not of statesmanship. For eight years he had maintained a contest with both the Government and the State of Georgia in the field of intellectual resource—objecting, procrastinating, evading; sometimes invoking moral forces, sometimes foreshadowing forceful resistance; and again and again he had achieved the negative triumph of frustrating the emigration of his people. And it is not a trivial element of the case that for six years his resistance was effectual against the iron determination of Andrew Jackson." Kooweskowee's contention with the Western Cherokees in their new home was marked by the same qualities. Overthrown in Georgia, he asserted the integrity and unity of the Cherokee Nation, and by means of his larger contingent imposed his policy on the dismayed Western Cherokees in the Indian Territory, appropriating 14,000,000 acres of land purchased with their own money, and substituting one government for two, at the cost of a civil war, in which vengeance was visited on the unauthorized tribesmen who had concluded the treaty of New Echota (1835) that led to the removal from Georgia. The claim of the Western Cherokees for restitution has only now been adjudicated, but, though in their favor, not to the benefit of the claimants in the suit as trustees "to receive the money of those who have not appeared." They simply secure priority of payment as being the first to put in an appearance. The opinion is most interesting reading, both from the political and the legal point of view, and is set forth with great clearness and with the aid of documents.

—In the *Educational Review* for February, Mr. Arthur M. Comey presents some figures as to the number of students attending college in the United States now and in former years. The term college is used in a comprehensive sense, the line being drawn apparently at institutions which require no preparation in Latin for admission to their classical course. The title assumed by an institution, of course, goes for nothing, Mr. Comey having found one "university," empowered to confer degrees, whose freshman class is taught only arithmetic, geography, grammar, orthography, and penmanship, while Latin is begun in the junior year, Greek first taken up by seniors, and modern languages not studied at all. On this principle, students in preparatory departments in colleges have not been counted, nor are women included. These omissions are to enable a proper estimate to be formed of the increase of students following the higher learning, for, in the West and South, colleges have found it necessary to prepare their own students, and the proportion of those in the preparatory departments is nearly two-thirds of the whole. As to the omission of female students, Mr. Comey states that in 1850 there was but one co-educational college in the country, with only six women in attendance. But, for various reasons, "scientific" students are reckoned, although purely scientific schools are altogether disregarded. The only reason assigned for the latter omission is the singular one that it would have involved "large additions to tables already very extended." Promise is made, however, of later mention of the "results which would been brought about had they been included."

—The tables produced show the number of students now in attendance at the different colleges in the several States, the number by States, the number in proportion to the population of the States, the number per 100,000 of population by sections of the country, and the comparative increase of students and population since 1850. Where comparisons with population are involved, of course the untrustworthiness of the censuses of 1870 and 1890 must be reckoned with; but taking the returns as we have them, it seems that while there were 38 students per 100,000 of population in 1850, and the number was scarcely increased until 1880, it rose in the last decade to 50. The absolute increase was from 8,837 in 1850 to 31,516 in 1890. The figures showing the distribution by States and sections are to be read in the light of the fact that only 65 per cent. of the students at New England colleges reside in that region, more than 20 per cent. coming from the Middle States. The most striking result of the investigation is that, between 1880 and 1890, population increased 25 per cent., while the increase in the number of students exceeded 50 per cent.

—Count L. N. Tolstoi's latest book has been translated into French by M. E. Halperine-Kaminsky, under the title of 'L'Argent et le Travail,' and is just published by Marpon & Flammarion. It is a new chapter of its author's now familiar gospel: To give away money is to ruin the poor; money should be done away with; safety lies only in a country life supported by daily toil. The book is introduced by a letter to the translator from M. Émile Zola, which appeared in the *Figaro* of January 9. M. Zola disclaims any special fitness to speak as an expert of the main thesis of the book, which, in fact, he could hardly treat worthily in the narrow limits of a letter, but gives his impressions after reading it. He finds that Tolstoi has lost none of his great powers of observation

and expression. He is still the powerful analyst, the profound psychologist, of 'War and Peace' and of 'Anna Karénina.' His descriptions of his hospital visits and of life among the poor, his tracing out of the roots of vanity and selfishness that underlie almsgiving, are as vivid and as subtle as anything that he has ever done. His sincerity, his enthusiasm, his unwavering faith are more than attractive, they are seductive. They throw a spell over generous minds. Even Zola, whose chief traits do not seem to be those of such minds, feels it and bends to it. No doubt Tolstoi is right at bottom, he says; it is a beautiful dream, based on great truths, yet hopelessly impracticable. Tolstoi shows us the Promised Land, flowing with honey and milk, but there are no roads by which to reach it, and no bridges over the stream that divides us from it. He himself is ready to lead the exodus, and has, indeed, stripped himself for the journey. He urges it upon the world with a fervor and eloquence that are almost unparalleled. But no one moves, for no one knows where to plant the first footstep. It is a vast tribute to Tolstoi's greatness, and to the almost boundless influence that such faith and honesty and tenderness as his have upon men, that so unsympathetic and perhaps also so unspiritual a critic as M. Zola is should be moved to say of him: "Je suis un peu honteux de jouer ici le rôle de l'homme raisonnable."

NORTON'S TRANSLATION OF DANTE'S PURGATORY.

The Divine Comedy of Dante. Translated by Charles Eliot Norton. II. Purgatory. Boston: Houghton, Mifflin & Co. 1891.

In reviewing Mr. Norton's translation of Dante's 'Inferno,' we gave reasons for maintaining that the best version of a great epic like 'The Divine Comedy' must be a prose version, because no English metre can reproduce the *terza rima* of the original, and because, under any circumstances, the best metrical version must be a paraphrase. The only excuse for making a metrical translation is that it may reproduce the charm of the *form* of the original; but if it fail in this, and if it also give only a blurred presentation of the *substance*, it is necessarily inferior to a prose translation in which the substance at least is faithfully presented. We pointed out also that Dante, of all foreign classics, has a style so intense and vigorous that it suffers most from any paraphrasing. Dilute his unique qualities, as the metrical translator is forced to do, and they are no longer recognizable; but in a first-rate prose translation, like this of Mr. Norton's, you find them on every page. That the tendency among scholars has set strongly towards prose translations of the world's poetic masterpieces, cannot be denied; that it is a good tendency, we firmly believe. The development of the critical faculty in modern times has made us value exactness above all things. We want to know just what the great poet or the deep thinker said; and if we cannot read his own words, we are satisfied with nothing short of a precise rendering of his message. For, however much we may regret the loss of the beauty of his manner, we are compensated by the truthfulness of the translation. But, we must repeat, a literal prose translation must have literary quality in order to be permanent; it must be no mere college "pony," but endowed with those attributes which raise any original English work to the level of genuine literature. Such requirements we found Mr. Norton had fulfilled in his version of the 'Inferno.'

The 'Purgatorio' has already been twice translated into English prose—by the late W. S. Dugdale and by A. J. Butler—and as, in the case of the 'Inferno,' we showed wherein Mr. Norton excelled his chief competitor, Dr. John Carlyle, it will be necessary to compare his work with that of these translators of the second canticle. The most obvious quality of Dugdale's work is its readableness; it moves easily, smoothly, and seldom brings you to a halt before an obscure passage. If, however, you begin to suspect this fluency, and turn to the original, you find that the ease has been gained at the expense of exactness. Not only does Dugdale paraphrase freely, but he often uses commonplace words to translate the Dantesque prototypes. Take, for example, the following lines:

"A seder ci ponemmo ambedui,
Volti a levante, ond' eravam saliti;
Chè suole a riguardar giovare altrui" (iv. 52–4).

These Dugdale renders: "Here we sat down, our faces towards the east, from whence we had come up, since to look back on troubles surmounted is pleasant." The real meaning is, as Mr. Norton gives it: "There we both sat down, turning to the east, whence we had ascended, for to look back is wont to encourage one." Evidently Dugdale gains nothing here by unliteralness; but he leads us to suspect that, since he treats thus loosely a passage so simple as this, he will run too far astray when he is confronted by a really difficult passage. And this suspicion is frequently confirmed. To cite a single instance, typical of many, we turn to Canto vii., in which Dante, after describing the blossom-carpeted Valley of the Princes, says:

"Non avea pur natura ivi dipinto,
Ma di soavità di mille odori
Vi facea un incognito e indistinto" (vii., 79-81),

which Dugdale translates thus: "Nature had not been content with lavishing her multifarious hues, but with the sweetness of a thousand perfumes had produced there an indescribably delicious fragrance." Such expressions as "lavishing her multifarious hues," and "an indescribably delicious fragrance," might be found in one of Ouida's effusions; they are not, of course, Dantesque, nor do they give the descriptive quality of these particular lines, as will be seen by comparing them with Mr. Norton's version: "Nature had not only painted there, but with the sweetness of a thousand odors she made there one unknown and blended." This, at the first reading, may seem abrupt, but so is the original, and when reread the meaning becomes clear, and the very terseness adds to the suggestiveness of the description. It has always seemed to us that Homer's picture of Helen at the Scæan Gates ('Iliad,' iii. 155 *seq.*) surpasses all other descriptions of womanly beauty; yet he does not specify, as a modern would, he simply tells the *effect* of her beauty upon the old men chirping there like grasshoppers as she passed them. Dante, too, is master of the art of kindling the imagination by describing the effect rather than the cause; he knows when not to define because definition would impose limits and crudeness upon that the essence of whose charm is vagueness. Such a passage as that just quoted illustrates his method in this respect; Dugdale's paraphrase of it shows how completely he can fail in transmitting the spirit of Dante's work. It would be unfair to dismiss his translation if the two specimens we have drawn from it were exceptional, but they are not; from every page we might cull others to corroborate our statement that he sacrifices exactness for the sake of readableness. His work as a whole reminds us of a snow image of some masterly statue, after the sun has just begun to melt the snow, leaving but an indistinct and eroded effigy of the original.

In Mr. A. J. Butler Mr. Norton has a more serious competitor. Mr. Butler is more scholarly and more precise than Mr. Dugdale, and his version differs from Mr. Norton's chiefly in style. He states in his preface that he aims "at the production of a 'crib,' pure and simple," and that he has not attempted "an addition to English literature, but to aid beginners in understanding that of Italy." It is from the literary rather than from the interpretative side, therefore, that we shall naturally look for shortcomings; and yet it may be difficult, within the space at our command, to make these as evident as were Mr. Dugdale's shortcomings in interpretation. The relative merits of two styles cannot always be shown in a single sentence or even in a single paragraph; but if we take a canto and read first Mr. Butler's version of it, and then Mr. Norton's, we shall be conscious of their different quality; and if we analyze, to discover wherein that difference lies, we shall find it in the sum of innumerable slight touches, hardly noticed separately. For an example, let the reader study the apostrophe to Florence (vi., 127-151), and we shall be surprised if he does not feel the superiority of Mr. Norton's style, in which there is a union of strength and elasticity—now one to be used and now the other, as the case requires—not observable in Mr. Butler's style. Perhaps this difference will appear even in a shorter passage, like the following:

"O power of fancy, that at whiles so snatchest us from external things that a man heeds not whereas around are sounding a thousand trumpets, who moves thee, if the sense set thee not forth? Light moves thee, which is given form in heaven, of itself, or through a will which sends it down" (xvii, 13–18).

Thus Mr. Butler, to be compared with this: "O power imaginative, that dost sometimes so steal us from outward things that a man heeds it not, although around him a thousand trumpets sound, who moveth thee if the sense afford thee naught? A light, that in the heavens is formed, moveth thee by itself, or by a will that downward guides it." Leaving aside the question as to whose interpretation is the more nearly correct, can there be a doubt as to which style is the better?

But while superiority of style constitutes the most obvious excellence in Mr. Norton's version, we should create a false impression if we did not lay stress on the fact that this superiority is due to his more intimate sympathy with the spirit, and to his keener critical judgment of the minute details, of Dante's work; these, combined with taste—that faculty which Fitzgerald calls "the feminine of genius"—have enabled him to produce a translation which is "an addition to English literature."

After having thus briefly pointed out the general considerations which cause us to rank his translation above that of either Dugdale or Butler, we would set down a few suggestions which, as it seems to us, are improvements—for it is the privilege of every reader of Dante to believe his own rendering of certain words is the best. Pia de' Tolomei's brief

"Salsi colui che innanellata pria
Disposando m' avea con la sua gemma" (v. 135–6).

is not quite intelligible when translated, "he knows it, who, wedding me, had first ringed me with his own gem." Dante devotes only four lines to Pia; it would be strange, therefore, if, in a passage so condensed, he threw in the words "innanellata pria" merely to let us

know that putting on a ring was one of the symbols of marriage. The other interpretation of these two words, which makes them refer to Pia's previous marriage (the Nello who let malaria waste her to death in Maremma being her second husband)—this interpretation seems to us preferable. Likewise, in the description of the Celestial Pilot (ii., 44) we prefer the reading *parea* to *faria*, although Mr. Norton has Witte with him in adopting the latter. To say of the Pilot "that if but described he would *make* blessed," suggests a train of thought that the imagination cannot easily follow; whereas the other interpretation, blessedness *seemed* to be written upon his face, or, as Butler puts it, "he appeared blessed by a sure title," is both poetic and clear. For the still more disputed line (vi. 111) "E vedrai Santafior, com' è *sicura*," Mr. Norton finds the reading "com' è *oscura*," and translates, "And thou wilt see Santafiora how dark it is." There is still a third variation, "come *si cura*." In this last case the meaning is, "And thou wilt see Santafiora, how it is cared for," that is, ruled or governed. But the first reading, "thou wilt see Santafiora how safe it is," appears to us much the best. The line occurs in the well-known passage in which Dante, pouring out sarcasm on the Guelph abuses in Italy, invokes the Emperor to come and behold them: the poet is ironical when he speaks of the "loving people" (l. 115), ironical also in his reference to the Guelph county of Santafiora. For him to say merely that the condition there is "dark," seems commonplace, and lacks both vividness and irony; but the epithet "safe" is truly ironical, and harmonizes with the general tone of Dante's invective. A little lower in this same passage Dante, addressing Florence, says, sarcastically of course, "this digression does not touch thee, thanks to thy people *che sì argomenta.*" None of the translators succeed, in our opinion, in quite interpreting the words we have italicized. Dugdale perhaps comes nearest with his "that reason so well"; Butler has it, "that is so full of reason"; Longfellow, "thy people who such forethought take"; Plumtre, "wise in argument"; Cary, "thy people, who so wisely speed." Mr. Norton, leaning rather to the interpretation of Longfellow and Cary, makes it "thanks to thy people that for itself takes heed." But it is evident to us that in *sì argomenta* Dante alludes to the well-known passion of the Florentines for arguing: they were disputatious, they split hairs; and so the *sì argomenta* is doubly ironical, implying not only that the Florentines "reasoned well," but that they disputed incessantly over everything. That they took good heed concerning their affairs is a sarcastic deduction from their contentiousness.

It will be seen that our criticism touches debatable passages about which opinions will probably always differ. Coming to more minute details, we should prefer the English "Montagues and Capulets" (vi., 106), which Shakspere has made familiar, to the Italian form "Montecchi" and "Cappelletti"; so, too, "Conrad," for "Corrado" (viii., 65 and 118), although we recognize how hard it is to follow rigidly any rule for Anglicizing foreign proper names. In the paraphrase of the Lord's Prayer, "Our Father *which* art in Heaven" is to be preferred to "who." Dante frequently uses the adjective *vermiglio*, which the English "vermilion" best represents. The precise shade of the color has changed, we believe, in recent times, it being now more yellow and less crimson than formerly; but the word "vermilion" is rich and poetic. The Elizabethans and their successors often used it. Spenser (in the "Epithalamion") speaks of the "goodly vermill stayne," Shakspere (Sonnet 98) of "the deep vermilion in the rose," Milton (in "Comus") of the "vermeil-tinctur'd lip"; Lovelace calls the rose

> "Vermilion ball that's given
> From lip to lip in heaven."

So there is sufficient reason, however dyers may change their fashion, for using it, instead of "red," wherever Dante does (ii., 7; xxviii., 55; xxix., 114 and 148). In translating the famous quotation beginning "Non è il mondan romore altro che un fiato" (xi., 100), we should keep Dante's word "rumor," which suggests (better than "renown") the element of fickleness and uncertainty which go to make up earthly fame. *Matto* (iii., 34) and *folle* (xii., 43) Mr. Norton translates respectively "foolish" and "mad"; it would be better to reverse them, as *matto* is much the stronger epithet. *Dolente* (xv., 81) carries the meaning of being sorry, that is, penitent, rather that that of "painful"; the P's on the sinner's brow are erased not because they give him pain, but because he repents him of the sins for which they stand. Would it not be well to keep the idea of bending which *piega* (xv., 123) conveys, instead of "overcomes," which calls up no picture? The same question arises in regard to *trastulla* (xvi., 90), which is a picturesque word in the Italian. *Marca* (xix., 45; xxvi., 73) is of course the mediæval "march"—still current in the phrase "the Marches of Ancona"—and it would be well to translate it by a word less abstract than "region." Would "countrified" be too colloquial an equivalent for *rozzo* (xxvi., 69)? And is not "ditties" preferable to "verses" as a rendering of *detti* (xxvi., 112)? We note a few misprints: Court for Count of Provence (p. 128, note 6); Anagna for Alagna, and 1253 for 1283 (both on p. 130).

We regret that we have not space for pointing out a few of the many felicities of expression which make Mr. Norton's translation better than Mr. Butler's, which was hitherto the best; but we have aimed simply to suggest places which might be improved before another edition is issued. His notes to the 'Purgatory' are naturally fuller than were those to the 'Hell,' because this canticle deals more largely with abstractions, with mediæval dogma and allegory; but the notes are never too long, and never argumentative. The 'Purgatory' has never, we conceive, had its due share of attention and admiration, although it is a work replete with fine illustrations of Dante's genius. It contains many pictures as vivid as the better-known pictures in the 'Hell,' and as that is animated by sternness, so is this suffused with tenderness. The atmosphere has changed; the gloom and luridness of the infernal regions are succeeded by sunshine and starlight; you can trace the progress of the poet merely by the increasing purity and brightness of the colors of the region through which his pilgrimage lies. Perfect is the correspondence between the outer scene and the spiritual state of the pilgrim; for none ever knew better than Dante that

> "He that has light within his own clear breast
> May sit i' the centre, and enjoy bright day;
> But he that hides a dark soul and foul thoughts,
> Benighted walks under the midday sun;
> Himself is his own dungeon."

These lines might serve as the motto not alone of the 'Purgatory,' but of Dante's entire epic, of whose significance they furnish a sure key.

CLARK'S COLLEGES OF OXFORD.—II.

The Colleges of Oxford: Their History and Traditions. Twenty-one chapters contributed by members of the colleges, edited by Andrew Clark, M.A., Fellow of Lincoln College, Oxford. London: Methuen & Co.; New York: Macmillan.

THE foundations of Exeter, Oriel, and Queens had intervened between that of Merton and that of New College. In the history of Exeter we find proof that the difference between the Puritan régime and that of the Restoration was really great, though it may have been overstated, and though sceptical criticism may be disposed to refine this with other historical lines of demarcation almost out of existence. Conant, the Puritan rector put in by the Commonwealth, was an exemplary head, and made his college a model both of literary industry and of morality. Upon his ejection for refusing submission to the Act of Conformity, the crew of Comus came in, as Antony Wood, a strong Royalist, has testified. "Exeter College is now (1665) much debauched by a drunken Governor: whereas before in Dr. Conant's time it was accounted a civil house, it is now rude, and uncivil. The rector (Maynard) is good-natured, generous, and a good scholar; but he has forgot the way of College life and the decorum of a good scholar. He is much given to bibbing, and when there is a music meeting in one of the Fellows' chambers he will sit there, smoke, and drink till he is drunk and has to be led to his lodgings by the junior Fellows." So we are told by another and later witness: "There is nothing but drinking and dancery. Exeter is totally spoiled and so is Christchurch. There is over against Balliol a dingy, horrid, scandalous ale-house, fit for none but dragooners and tinkers. Here the Balliol men, by perpetual bibbing, add art and their natural stupidity to make themselves perfect sots."

A Balliol man may read this without a pang, since his College is now in the very front of academical progress. Balliol and Oriel owe their preëminence in recent times to their lucky exemption from the restrictions with regard to birthplace in the election of Fellows which were imposed on most of the colleges by the localism of the Middle Ages. Exeter was a Western College, Queen's was a Northern College, and both suffered from the restriction. Queen's especially had been reduced to a deplorable condition before new life was given it by the emancipatory hand of a Parliamentary Commission. People in the Middle Ages had very faint notions of the natural difference between one man and another. They thought that by the rod of discipline ruthlessly applied a silk purse might be made out of a sow's ear, and therefore in regulating the election of their Fellows they freely indulged in local, family, and other preferences, which proved ruinous to their main designs.

Another instance of the way in which "the best laid plans of mice and men" sometimes "gang agley" is Lincoln College, which, like New College, was founded at the time of Wiclif's movement. The founders were two reactionary Bishops, and the statutes state expressly that the College is intended to combat "that novel and pestilent sect which was assailing the sacraments and possessions of the Church." The phrase is notable, because by connecting the sacraments with the possessions it gives us the true key to the persecutions. It was not only for the doctrine of Transubstantiation that a wealthy Bishop or Abbot was fighting, nor is it likely that mere hatred of doctrinal error, though it might have made them bitter controversialists, would have driven them to wholesale murder. But could Bishops Fleming and Rothersham have looked into the magic glass of futurity, they would

have seen among the Fellows of their college John Wesley, and among its rectors Mark Pattison.

Magdalen was founded by Waynflete, Chancellor of the hapless Henry VI. Its completion is one of the proofs that the general life of the nation was comparatively little disturbed by the murderous quarrels of the nobility. The sumptuous Founder's rooms, which are the pride of the College, once harbored a strange guest. Richard III. lodged in them on his memorable progress. Waynflete came to receive his king, and this tribute from a man who represented the highest morality of his age seems to show that no moral shock was given to the public mind by what is called Richard's usurpation, and that had his fears not hurried him into the murder of his nephews, he might have been generally accepted and have died with the crown upon his head. Magdalen was richly endowed with wealth as well as with beauty; but the founder unluckily indulged his local partialities in the election of Fellows, and the consequence was that his college sank into sinecurism and sensuality, which have been branded for ever by the caustic touch of Gibbon. Delivered by the Parliamentary Commission, it is now what its founder meant that it should be.

Corpus Christi, the college of Keble and Arnold in recent times, is notable as a genuine offspring of the Renaissance. It was founded in preference to a monastery in distinct view of the doom impending over the monastic foundations. Its statutes lay out a regular course of classical study, and in their own language affect a flowery elegance. But the grandest offspring of the Renaissance was Christchurch. Wolsey was not childless; but he of course had no legitimate child, and he fulfilled Bacon's aphorism as to the public philoprogenitiveness of childless men. He fell when his design was but half accomplished, and his place as founder was usurped by the King, though the usurper neglected to remove the Cardinal's hat from the stonework, and totally failed to expel the Cardinal's memory from the hearts of the alumni. Wolsey's munificence was rewarded after all, for his College, or, as all Christchurch men proudly call it, "The House," was for many years the one famous seat of learning and education among the Oxford colleges. The shade cast upon its honor by the supposed expulsion of Locke is undeserved. Locke was not expelled by the College, but deprived by order of the King. The luckless attempt of the Christchurch group of scholars to maintain against Bentley the genuineness of the Letters of Phalaris is a stain on the literary escutcheon not so easily removed.

Wolsey had lived long enough to see, and (as a Cardinal was necessarily a Conservative) no doubt he saw with sorrow, the connection of the Renaissance with the Reformation proved by the appearance of heresy in his College. There soon followed the great religious revolution, with its expulsions, restorations, and re-expulsions of Heads and Fellows, as the tide of change flowed, ebbed, and flowed again, breaking up academical life for the time. Colleges, however, continued to be founded. Trinity and St. Johns were both founded by Catholics under Mary. Wadham, the last great foundation, received its charter from James I. Its architecture, as the writer of the paper on it notes, is the enigma of architectural history, belonging to a style a century and a half earlier than the date of the foundation. This is typical of the whole history of Oxford, where the spirit of the Middle Ages lingered long. It lingered long, partly through the influence of the architecture, though still more owing to that of clerical and celibate fellowships; it regained a brief ascendancy, under the leadership of Newman and Pusey, during three decades of the present century. Keble College, the youngest on the list, is the product of this Neo-Catholic reaction, and not unlikely to be its gravestone. For 'Lux Mundi,' which is partly the work of Keble men, shows that criticism and science have found their way into that which was destined to be the academical fortress of High Church opinion. No college gates can shut out the air, or that with which the air of the times is laden.

The absorption of the University, which had practically taken place before, was formally consummated by Laud's statute requiring every member of the University to be a member of a college. The University was thus saddled with the mediæval statutes of the colleges, and with the restrictions imposed by the partialities of founders on the election of Fellows. We have had occasion to speak of the local restrictions and of their disastrous effects. Still more disastrous, perhaps, were the clerical restrictions. Of these the practical significance and strictness were greatly enhanced by the Reformation. In the Middle Ages, all learning, and even to a great extent art and such mechanical science as there was, were ecclesiastical, and college statutes which required a Fellow to take holy orders within a certain time after his election, by no means devoted him to merely clerical studies or work. But after the Reformation the calling of a clergyman became strictly professional, and dedicated him as a rule either to theology or to pastoral duties. The clerical restrictions now became clerical indeed, and practically excluded from the University all studies but theology and the ancient languages, a knowledge of which was fortunately held necessary for a theologian. All but the members of the State Church were at the same time shut out of the University by tests, mere boys being compelled, with a contempt for the rights of conscience characteristic of a political religion, to subscribe a set of articles comprising scores of disputable positions in divinity. Thus the University became a mere donkey-engine of the State Church, and of the Tory party, of which the State Church was the subservient ally.

In the Cambridge colleges, it is difficult to say from what cause, though the same clerical restrictions prevailed, the clerical character was less intense; the religious test at entrance was somewhat less stringent; the political connection of the University was somewhat more liberal; and Newton's philosophy, taking hold of the mind of the place, turned it partly to non-theological studies. Newton himself was saved to Cambridge and to science by the lucky occurrence of a vacancy in one of the very few lay fellowships of Trinity College, when he was on the point of having to resign as the penalty of not taking holy orders. But Oxford, during the last century, sank into a lethargy poorly relieved by the names of a few illustrious men who were rather boarders than alumni. No life but that of theological controversy was left. Balliol and Oriel, being free from local restrictions in the election of Fellows, led the way in a revival. Then came Parliamentary commissions, invoked by reformers in the University itself, and, by sweeping away the mediæval statutes of the colleges, together with the tests, they restored Oxford to intellectual life and to the nation. Laud's statute, requiring all members of the University to be members of a college, was repealed at the same time, and there is now a considerable body of independent students. Yet the number of these foundations is such, so richly are they endowed with both wealth and beauty, and such are the attractions of their social life as well as their educational advantages, that Oxford still is, and probably will always remain, practically a federation of colleges.

A Song of Life. By Margaret Warner Morley. Chicago: A. C. McClurg & Co. 1891. 8vo, pp. 155. Illustrated.

As a popular book on nature this is a really successful effort. The publishers have treated it well, and, as is not always the case with ornamental books, the text is worthy of its handsome setting. The illustrations are delicate and suggestive touches in lines, artistically woven into the pages or around their margins, where they are effective and useful. In half-a-dozen short chapters the author puts the story of the origin and growth of the embryo, and the subsequent development, in plants, fishes, frogs, birds, and mammals. The plan of the work is novel, and the narrative is accurate and interesting to an unusual degree. Few writers on life's history give so much of it in a space so limited. If inclined to criticise, we might suggest that the quotations on pages 45 to 48 are not entirely apt, and are likely to give the impression that crustacea, radiates, etc., are all included as fishes; or we might call attention to the fact that authorities do not all agree that the song of the bird is inherited.

Jasmin: Barber, Poet, Philanthropist. By Samuel Smiles, LL.D. Harper & Bros. 1892.

Since Longfellow translated 'The Blind Girl of Castel-Cuillé,' Jasmin's name has been attractive to the poetically minded, and Miss Preston has done something to satisfy their curiosity by her later renderings. Mr. Samuel Smiles gives in small compass in this volume a sufficiently detailed biography, the few facts of which are interleaved with abstracts of the poet's longer works, and at the end is a version of "Franconette" and three other shorter pieces. The life is very easily told. Jasmin was born in poverty, and, when ten years old, saw his grandfather one day carried along the street in an armchair, and, running up to him, the boy threw himself into the old man's arms and asked, "Where are you going? Why do you weep? Why are you leaving our home?" "My child," said the old man, "I am going to the almshouse, where all the Jasmins die." He tells this anecdote in his autobiographical poem, "Mes Souvenirs," and adds others that disclose only a poor boy's childhood. He had some little charitable schooling, and became a barber. Then his natural gift broke into blossom; he wrote in his dialect, and one after another famous critic of Paris heard of him or saw him, Charles Nodier being the discoverer, and Sainte-Beuve praised him. He became the pride of his province, and in Paris he recited before the Academicians and royalty with the same vigor and enthusiasm as before the country audiences in Agen, or Toulouse, or elsewhere, for he went about doing what he could with his talent for charity's sake, to relieve the sufferers by famine or other misfortune, to repair churches, and for like objects. But, whether at the capital or with his own Gascons, he maintained his originality, his freshness and good sense, remained a barber, and composed new verses, and so, dying at the

age of sixty-five, he had used his gift of song to the full, and done much good in the world about him, besides having his self-esteem, innocent and unconcealed as it was, very well satisfied by the praise of his comrades, and of the great men at Paris who fancied they patronized him, as, no doubt, he thought too.

Altogether it was a true poet's life, happily unperplexed by taking thought of many things, and unspoiled by being crowned at Agen. The tale is told well enough by Dr. Smiles, without being tagged with morals, but the best part of it is where the text at intervals is illuminated by the descriptions and narrative drawn from the poet's self-revealing work. And his simple country nature shines through the heavy style of the biographer, just as in the poem of "Franconette" in the appendix the grace, the charm, the inimitable freshness of true feeling make way through the harsh, unmusical, and awkward English verses.

Writers and Readers. By George Birkbeck Hill, D.C.L. G. P. Putnam's Sons. 1892.

Dr. Hill gathers in this volume six very desultory lectures upon books and their uses, and pleases the reader by the wealth of anecdote and quotation and out-of-the-way instances which abound in his pages, and also by the frankness of his own opinions. He has at the start a subject rich in malicious delight to the ordinary devourer of books—the disagreement of critics about the masterpieces of their own times, or, as he calls it, the fluctuation of opinion. He handles it well, with wide knowledge and temperate spirit. The story, so far as it relates to our own century, is well known, but the freshness of his work lies in his survey of eighteenth-century opinion, in the criticism of Fielding and Richardson and others, about whom his special knowledge of the period gives him an advantage over other students. Of instances illustrative of lack of prophetic vision among the learned in literature, none is more complete in opaqueness than the contemptuous sentence passed on the Scotch dialect. Dr. Dugald Stewart writes:

"The influence of Scottish associations, so far as it is favorable to antiquity, is confined to Scotchmen alone, and furnishes no resources to the writer who aspires to a place among English classics. Nay, such is the effect of that provincial situation to which Scotland is now reduced, that the transactions of former ages are apt to convey to ourselves exaggerated conceptions of barbarism from the uncouth and degraded dialect in which they are recorded."

This was only eighteen years before 'Waverley.' "To write in that tongue," says Beattie, "is now impossible; such is the effect of mean expressions applied to an important subject"; and again he says that it is "ludicrous" to the Scotch themselves. Ten years after this was written came the Kilmarnock edition of Burns. Hume joined in the chorus of disdain for the old songs in the speech of the people; and Dr. Hill reminds us how Garrick changed the title of Home's play for fear that a Highland name would damn it, and provided besides a supposititious author for it in the shape of an Oxford student, who attended at rehearsals to claim it. Yet it was out of this "uncouth and degraded dialect" and the life of the people who used it that the only literature by which Scotland takes rank with literary nations proceeded, and that, too, within a score of years after these gentlemen of elegant taste had decided the matter so rashly. The blindness of critics, however, is commonly shared by the people of their time, and it is unfair to single out the individual Jeffrey or Lockhart, as if he were a perverse and capital sinner; and it is one merit of Dr. Hill that he deals with the errors of the critic, not as sporadic cases of dulness or incompetence, but as expressions of the changeful taste of the public, generation after generation. The men of the eighteenth century were not more stupid in letters than in politics, and the burst of Burns and Byron was not more a portent than the earthquake under the thrones.

Dr. Hill takes up in succeeding essays several topics upon which he has strong opinions, and among his traits may be noted a violent antipathy to college sports, a Johnsonian abhorrence of æsthetic diction and cruder word-painting, and finally a hearty belief in the educational value of literature. With an apt quotation he dismisses the philologist using Virgil as a comment on some Latin grammar, as

> "——one whose hand,
> Like the base Indian, threw a pearl away
> Richer than all his tribe,"

and summons Dr. Johnson to remind us, in his criticism of Milton on education, of the relative utility in ordinary life of what science and what literature gives the mind. In these later pages one may go along with the author or not (for the most part we find no difficulty in keeping company with him); but in any event the reader will feel a tonic contact with a vigorous judgment, and may well benefit, though he be well-read, by the special information and extract that may be found in all parts of the volume. Nor is the obvious leaning of Dr. Hill to the side of the men of old one which need be quarrelled with.

Age of the Domestic Animals: Being a complete Treatise on the Dentition of the Horse, Ox, Sheep, Hog, and Dog, and on the various other means of determining the Age of these Animals. By Rush Shippen Huidekoper, M.D. Philadelphia: F. A. Davis. 1891. 8vo, pp. 217. Fully illustrated.

It is to breeders, dealers, traders, veterinary surgeons, and students in the agricultural colleges—in fact, to all those having to do with horses, cattle, and other domestic animals—that this work appeals. The teeth being the principal means of determining the ages, the volume is almost entirely taken up with them; less than half-a-dozen pages are given to the discussion of horns. Man, not mentioned in the title, is included among the domestic animals. The impossibility of giving a complete treatise on the dentition in a volume of this size is at once apparent; yet, for the author's purposes, the title is not so far out of the way. A sufficient amount of information on the structure and growth in the earliest stages is given. The illustrations are very numerous, and, being so nearly of natural size, they will serve well for comparing in practical examinations. In the later periods, when the changes are less rapid, they are figured at intervals of a year or more; in the earlier, they are represented from month to month or from week to week. The normal effects of wear are well presented. Wolf teeth, abnormalities, malformations, accidentals, supernumeraries, and the effects of cribbing, are satisfactorily set forth. The tricks of the trader, in making the young appear older and the old younger, or in hiding the effects of cribbing, or in "Bishoping" as practised by the "Gyps"—filing the table even and then gouging out an artificial cup—all receive due attention. While he has no new evidence to offer on the disputed conclusion, the author himself is inclined to believe that drawing the milk teeth hastens the appearance of the permanent series, thus giving an animal the appearance of greater age.

Eminently practical as the book is, it forms a manual in which the subject has been scientifically treated.

BOOKS OF THE WEEK.

"The weary brain requires some nerve sustaining element as food."—HERBERT SPENCER.

Crosby's Vitalized Phosphites.
The vital principle of animal and vegetable life isolated from the ox brain and wheat germ.
The loss of memory, the tired and exhausted feeling, the dull unrefreshed sleep, or nervous sleeplessness, brain weariness, depressed vitality, are simply the brain and nervous system calling for their necessary food. In this condition the Vitalized Phosphites give great relief. It restores the true protagon, the brain phosphoid, increases brain and nerve power by specially feeding the nerve centres. It reinvigorates brain and body.
For thirty years endorsed by leading physicians, and the world's best brain workers. Formula on the label. Pamphlet free to those who write for it. Druggists or by mail, $1.00. 56 W. 25th St., New York.

The Nation.

NEW YORK, THURSDAY, FEBRUARY 25, 1892.

The Week.

THERE is only one view to be taken of the action of the Hill Convention at Albany. Summed up in a sentence, the Convention has served notice upon the Democratic party of the country not to nominate Mr. Cleveland for the Presidency. When we say Convention, we mean, of course, David B. Hill. He was, from the beginning to the end, the Convention. Its delegates did nothing that he had not arranged in advance for them to do. For a month he has been, in complete neglect of his duties as Senator, sitting in headquarters at Albany, packing this Convention, running with his own hand the perfect political machine which he has, for the past seven years, with the aid of the public service of this State, been constructing for this very purpose. He selected the delegation which the Convention appointed to present his name to the Chicago Convention, he drafted the complimentary resolutions upon his candidacy which the Convention adopted, and, when this part of his programme had been executed, he had himself summoned before the Convention which he had packed, and delivered a speech which he had prepared for the occasion days in advance. In fact, had he appointed his solid Hill delegation in his headquarters, without a primary or a convention, and thanked himself for the honor in a speech to himself in his private room, there would have been just as much popular and spontaneous Democratic sentiment behind his candidacy as there is after the Convention farce has been completed.

No party in the history of the country has had a candidate more plainly destined for it, if it has any excuse for existence, than Mr. Cleveland is destined for the Democratic party this year. He has given it the first great issue it has had for a quarter of a century, and has kept it true to that issue till it has won one of the greatest victories ever achieved in American politics—a victory, in fact, which amounted to a political revolution. On that issue next November Mr. Cleveland would be an invincible candidate, if the elections of the past three years can be taken as a basis for prediction. As Congressman Harter says, in speaking of the confidence which the Ohio Democrats secured among the people of that State when they got the courage to declare in favor of free wool: "We might have said, 'We are Democrats' until eternity and we would not have converted a single political soul in that great political State." That is the situation in the whole country. If the Democratic party, under the guidance of a rascally political trickster who has consolidated the worst elements of American politics on his side, makes the blunder of abandoning the issues on which it has won the reluctant confidence of the American people—tariff reform, honest money, and honest administration of public affairs—by abandoning the candidate who personifies those issues as no other candidate can, the party will return to its old position of "We are Democrats," and will relapse into the condition of perpetual defeat and contempt from which Mr. Cleveland's leadership lifted it.

The Republican primaries in Indiana show that Harrison is to have a solid delegation from his own State to the Republican National Convention. The Federal office-holders in the South, who constitute practically the whole of the party in many States, will turn in for him nearly all of the delegates from that section. The Burlington *Hawk-Eye* has been studying the tone of the daily and weekly Republican newspapers of Iowa since Blaine's withdrawal was announced, and reports that "the nearly unanimous expression is in favor of the renomination of President Harrison." There is still some talk of complimentary votes for Alger from Michigan and for Cullom from Illinois, but neither of them stands the slightest chance of getting more than a small fraction of the delegates. There is nothing for the party to do except to renominate Harrison, and every one is coming to see it.

A municipal election was held in Philadelphia last week, the most striking result of which was that the worst candidates before the people received the largest majorities. Among the officers to be chosen were four magistrates. Two of the men on the Republican ticket were incumbents who had been exposed as having shared their fees with the notorious embezzler Bardsley. Two independent candidates were put in the field against them by decent Republicans, and an outsider might have supposed that at least their majority would have been cut down, if they had not been beaten outright. But the delinquent officials were not at all alarmed. They simply made an arrangement with the bosses of the Democratic party by which the latter refused to exercise their right to nominate four candidates for magistrates, and nominated but two. As all the active workers of the election, and both the Republican and Democratic machines, were controlled by the "combines" and "leaders," the result was that, although the two independent candidates received about 6,000 votes, the two against whom the movement was directed polled several thousand more votes than their two respectable associates on the Republican ticket.

A startling indication of the tone of the New York Legislature on questions of temperance and public morals was furnished in the action of the Senate last week in passing Senator Plunkitt's bill for the protection of dive-keepers. Nobody except a Tammany heeler of the worst type, as Plunkitt is, would have had the audacity to introduce a measure of this kind at the very time when public attention in this city is concentrated upon "dives," and the authorities are being forced by public sentiment into prosecuting the keepers of the worst of them and sending them to prison. The object of the bill is to make such prosecutions more difficult hereafter by requiring that no complaint against such places shall be entertained unless made in writing and verified, as pleadings are verified under the Code of Civil Procedure, by an affidavit that the matter alleged is true of the complainant's own knowledge or belief. The bill applies to the whole State, and opens the way to the practically unrestricted keeping of "dives" and "dance-houses" in every city and town of the State. People who are inclined to think that the Rev. Dr. Parkhurst has been using too strong language in his denunciation of Tammany men and methods, would do well to consider this measure and its companion and ally, the Liquor-Dealers' Excise Bill. If the two become laws, as they now seem destined to, it will not be long before every respectable person in the city will be convinced not only that Dr. Parkhurst's language was the simple truth, but that it was spoken not a moment too soon.

Brooklyn has just had a novel experience in the matter of liquor licenses. The Excise Board has held a meeting and adopted a resolution declaring that there ought not to be any increase during 1892 in the number of licenses; that saloons ought not to be allowed on more than two of the four corners formed by the intersections of streets; and that "the best interests of the city of Brooklyn, and the proper regulation of the excise matters therein intrusted to this Board, are served if this Board hereafter does not grant any license for the sale of intoxicating liquors in close proximity to any school or church in said city." There is no large city where licenses have been granted more freely than in Brooklyn of late years. There are over 4,000 saloons in the city, which means one to every 225 people, or one to every 62 adult males; and on some of the main avenues there are from two to four saloons at nearly all the intersections of cross streets. Licenses have been freely granted in the vicinity of schools and churches, and in quarters which were supposed to

be given up entirely to fine residences. There is consequently full justification for the position taken by the Excise Board, but it is, nevertheless, a great surprise. While there have been of late many earnest protests from influential sources against the policy of the Excise Board, there has not been any such outburst of popular indignation as sometimes forces such officials to call a halt.

The explanation of the change of policy appears to be that the liquor interest itself has concluded that the saloon business is overdone. The custom has been for the brewers to start bar-tenders in saloons and take a chattel mortgage, with the understanding that only the beer manufactured by these brewers should be sold there. Such saloons have been started by the hundreds, until nobody could walk the streets of Brooklyn without often saying to himself, "I don't see how they make a living." It seems that they have not, and the brewers have decided that they will not start any more saloons until the city grows up to what it already has. The President of the State Retail Liquor Dealers' Association is perfectly frank about the matter. Being asked whether that association favored the resolution passed by the Excise Commissioners, he replied, "Of course it does. It is a step in the right direction. It will regulate the sale of liquor to a great extent, and will be better for all hands engaged in the business. There are a great many who have stores now who are not making a living." The spectacle of the organized liquor traffic favoring a restriction in the number of saloons is certainly a novel one, and the temperance people who have been working to the same end will be surprised to receive assistance from so unexpected a source.

Congressman Bland has evidently got returns from Congressman Harter's circular to the Grand Army posts on the shrinkage of pensions involved in the free coinage of silver. It is easy for any pensioner to see that if he is now getting $12 per month in money worth 100 cents per dollar, he will get only $8.40 per month when the dollar is worth only 70 cents. The simplicity of this demonstration exasperated Bland to such an extent that on Thursday he interrupted the proceedings of the House, which was engaged on the Indian Appropriation Bill, to call attention to the circular, which he styled a "bulldozing document." Mr. Harter avowed himself the author of the circular, and defended it, saying among other things that he desired to prevent the Democratic party from taking a step which would result in reëlecting Benjamin Harrison as President of the United States. Mr. Harter has also drawn up a call for a Democratic caucus to consider the free-coinage question. This is a wise and necessary proceeding. The country wants to know whether the Democratic party is so bereft of its senses as to pass this ruinous, swindling bill. While a doubt exists on this subject, thousands of voters are saying to themselves: "This poor old Democratic party is just as bad as it was before the war. There is no use trying to do anything for it or with it."

Attention has been drawn to the new silver-mining-camp at Creede, Col., which bids fair to prove a second Leadville in point of richness. The cost of production at this place is said to be not more than 40 cents per ounce, and its capacity is as yet undetermined. The mines are on the line of the Denver and Rio Grande Railroad. Consequently, all the necessary machinery and building material can be brought in and the ore carried out at the lowest possible rate. Twenty-five car-loads of ore are going out every day. Now Mr. Harter very reasonably inquires whether pensioners ought to be asked to accept forty cents' worth of silver as the equivalent of a dollar in case the new mines at Creede and elsewhere should depress the price of silver to that extent. Also, whether wage-workers and savings-bank depositors should be paid off in the same way. These are very proper questions for a caucus.

One thing, at least, is reassuring in the statement which Secretary Foster put forth in Washington on February 17. He said it was "silly to suppose that he contemplated the use of the $100,000,000 gold reserve to meet the current obligations of the Government." This is something of a reflection upon Assistant-Secretary Spaulding, who on January 23 told the Committee on Ways and Means that he "understood" Secretary Foster considered the gold reserve available to meet current expenses. In fact, this is not the first time that Mr. Foster has had to rap the knuckles of an indiscreet subordinate. Ever since he took charge of the Treasury the management has suffered not only from his lack of financial experience, but from his habit of putting out "feelers" as to the policy of the Treasury, just as he was in the habit of doing in regard to merely partisan policy. The Treasury officials under him have not unnaturally taken his suggestions as meaning something, and have had to be repeatedly called to order by him when he found that public and expert opinion was against him. Where Secretary Foster gets his $5,500,000 in the national-bank redemption fund, which he said was at his disposal, is a good deal of a puzzle. In his annual report he showed how the $54,207,975 lying in the Treasury on that account and turned over as available cash by the law of July 14, 1890, together with the $9,363,715 deposited on the same account up to the end of the fiscal year, had all been spent. So far this year the deposits by banks have been but $1,760,648, while the outlay on the same score has been $10,428,663, leaving a net deficit on this item of over $8,000,000. We are unable to see how the Secretary converts this into an unexpended balance.

The shipment of half a million of gold by Saturday's steamers is said to have been for a special reason, the rate of exchange not warranting it as an ordinary trade movement. If there be such a special reason, it is probably to be found in the efforts of Austria-Hungary to put herself upon the gold standard. The suffering that that country has undergone by reason of the fluctuations of silver (the present monetary standard of the empire), has been extreme, and the fear of still further ups and downs, but principally downs, has determined her statesmen to make almost any sacrifice to secure the gold standard. The present is a very bad time for such a step in Europe, the wrenching and twisting which accompanied the Baring crisis of 1890 being still severely felt and being aggravated by bad harvests in 1891. Nevertheless there are indications that the Austro-Hungarian Government is persisting in its endeavor, and is seizing gold wherever it can find any that is not too tenaciously held. The United States can spare this article more readily than any other country now. Although our merchandise exports continue to be enormous and show a balance of trade in our favor for seven months of $182,500,000 (according to the *Financial Chronicle*), yet we have bought back from Europe a vast but unknown quantity of our own securities, and the stream is still flowing this way. This movement has been accelerated by fears on the other side that we are approaching a silver basis, through sheer inability of the Treasury to meet its current expenses and redeem its new silver notes in gold. Foreigners overlook the fact that the Secretary has the power and is charged with the duty of selling bonds if necessary to maintain gold payments. There is no reason to suppose that he would fail to apply this remedy in a crisis, or that the remedy would prove inadequate.

The Anti-Option Bill at Washington has had the effect already to depress the price of wheat. The reason is that it tends to restrict trading to a hand-and-mouth operation. It withdraws capital from the grain market, and gives to the buyer for immediate use (for example, the Minneapolis miller) a command over the market. It drives his competitor (the buyer for future delivery) out of the field. No doubt the Minneapolis millers who are so hot for the bill are working for the interests of the farmer as they understand these interests. No doubt the prosperity of the farmer depends on the prosperity of the miller, just as the general prosperity depends on the protected manufacturers. Still, we wish that the farmer might be enabled to see that two and two make four in the grain market as well as

in the schoolroom. He has been fooled by Alliance lecturers and others into believing that short sellers have the market all to themselves, and that when they want to put down the price of grain they begin by driving the buyers out of the Produce Exchange and then holding high carnival all by themselves. Senator Washburn is under no such delusion. He knows that there are buyers for every pound of wheat sold, whether for present or for future delivery, but he knows also that if the buyers for future delivery can, by any means, be driven out, the honest miller will be the only cash customer, and will, therefore, have the whip-hand of the market. It now looks as though the Constitution might intervene to save the farmer from his friends. Article I., section 7, of that instrument says that "all bills for raising revenue shall originate in the House of Representatives." This bill lays a tax on a certain class of contracts, and is, therefore, a revenue measure. It would seem to be necessary for Mr. Washburn to wait till the House favors him with some bill which an honest miller can support.

Gen. Francis A. Walker has made a practical suggestion for the restriction of immigration. He would have the Government impose a tax of $100 a head upon every newcomer to this country. Undoubtedly such a system would put an effectual check upon immigration if it could be adopted. But the difficulty will be to get it adopted. Such a law would have to be passed by a Congress many of whose members could never have entered the United States if $100 a head had been exacted of everybody who wanted to come here. Of Wisconsin's nine Representatives, for example, one was born in Hesse-Darmstadt, Germany, and brought to this country as a boy of eight; another in Bavaria, and brought here at six; and a third in Norway, and brought to America in his youth. One of Minnesota's five Representatives was born in Norway and brought here as a baby, while another was born in Sweden and came here in his boyhood. It will be hard to persuade such men that other poor Germans or Scandinavians should be forbidden a chance to bring their families here and "give the children a chance"; and if Germans and Scandinavians are to be admitted without paying the tax, where shall the line be drawn? It is not strange that Western newspapers should be expressing the opinion that there is no prospect of Gen. Walker's suggestion coming to anything.

The mortality reports published monthly by the Connecticut Board of Health are compiled with great care, and for December, 1891, and January, 1892, cover 167 out of the 168 towns in the State. For that period of two months they are of exceptional interest, because they show authoritatively the increase of deaths caused by the "grip" and the diseases which are apt to follow it. In each of those months the mortality list surpassed any month's record since the Board was established in 1878. There were 1,729 deaths in December and 1,953 in January, the nearest approach to these figures being those for the "grip" month of January, 1890, and for the hot July of 1887, when they reached respectively 1,648 and 1,649. The average monthly rate for the last six years in the State has been only 1,052, so that the average (1,841) for the two months exceeded by 75 per cent. the average rate for the six years. The unprecedented mortality of 1,953 for last January is 860 more than the average for the preceding five Januaries, notwithstanding the "grip" January of 1890 is numbered among them; and the total deaths for the two months from grip, pneumonia, and bronchitis are no less than 1,392 out of 3,682, or nearly 38 per cent. A curious feature of the report for last month is the fact that in 137 towns of less than 5,000 inhabitants the figures represent an annual death-rate of 34.9 per 1,000, while in 30 towns of more than 5,000 inhabitants the figures are 29.7 per 1,000. This seems to argue that during epidemic disease the healthful air of the country towns is more than offset by the superior home comforts and better medical attendance of the cities. Probably, also, the fatality of the disease among the old folks left behind on the Yankee farms is another factor, though one which cannot be computed in exact figures.

"An Interesting Question" was the appropriate subject of a suggestive editorial article which appeared in the St. Louis *Republic* a few days ago. The writer begins with a reference to what he calls the "town movement" in the agricultural States of the West and South which followed the war, and which, he thinks, resulted from war legislation. As a consequence of this movement, the county and railroad towns in these States "became more and more the centres of activity, with all their phenomena of 'doggeries' and such like, that are inevitable in every period of change." The bad effects are most clearly perceptible in those who are now boys from ten to seventeen years of age, and especially in the matter of education. They are subjected to the full influence of the habits of small towns, while their fathers in the agricultural communities are too poor to give them a thorough education. As a consequence, they have only the barest smattering picked up in the common schools, and it is hard to get them to take even this much. When they have learned to read and write, they think they have enough, and they want to "stop learning and 'go to merchandising'—which means clerking in the grocery-store or the general-supply store." But while this is true of the boys, the girls in the very same communities are getting a fair education. They are anxious to learn, and their parents make great sacrifices to educate them. Female seminaries of high grade are kept up in places where the teacher of a high-grade school for boys would be starved to death. Moreover, "the girls are taught enough to enable them to go on learning after their school days are over, until they get some idea of what the world means." The *Republic* writer is moved by all this to propound sundry questions:

> "What is to come of this? What will girls who have got the very best education their circumstances afford do with such husbands when they get them? What will be the effect twenty years from now? Is it true that 'as the husband is the wife is,' and that the clowns with whom these educated young women will be mated will have strength to drag them down? Or will they be able to make the clown ashamed of himself and his clownishness?"

This article has attracted the attention of the Buffalo *Courier* and elicited a not less interesting response. The Buffalo writer thinks that the *Republic* has got hold of only one phase of the matter; that the agricultural States are not the only ones in which a generation of women is growing up which is superior to the corresponding generation of men; and that all over the country the girls continue to go to school after the boys (in most cases by choice rather than by necessity) drop their studies. But this is not the most marked feature of the movement, in the *Courier's* opinion. It points out that the literary societies, not only in the country but in the cities, are chiefly societies of women. It says that there may be half-a-dozen literary organizations composed exclusively of men in Buffalo, though the names of only two are familiar to the writer of the article, but there must be nearly fifty whose members are confined to the other sex. Rochester is a university town, and the literary clubs composed of men there might naturally be expected to play an important part in the life of the city; but the *Courier* says that "none of them can compare in success with a club of women whose meetings regularly fill the church in which they are held." Every well-informed journalist knows that the same thing is true, or coming to be true, everywhere, and must agree with the *Courier* that under existing conditions "the time is fast coming when the generality of women will be more intelligent than the generality of men, at least as far as intelligence is acquired by the study of books." The Buffalo observer is not at all alarmed by the situation. He thinks it will be an advantage to the race to have the female sex more highly educated, both in the way of its own protection and in the training of children. "The girls of the present generation," it says, "will not allow their sons to grow up, as did their brothers, unappreciative of the value of schooling." This is undoubtedly the vital feature of the case, and it shows how the *Republic's* problem is to be solved.

THE ALBANY CONSPIRATORS.

JUDGE CULLEN'S decision in the Emans contempt case amounts to a charge of conspiracy, made from the bench of the Supreme Court of the State, against David B. Hill, Governor, Frank Rice, Secretary of State, and Isaac H. Maynard, Deputy Attorney-General. Summed up briefly, the Judge holds that the Clerk of Dutchess County, who was charged with contempt of court for not properly transmitting a legal return to the State Canvassing Board, was not guilty as charged, since he did transmit the return properly, and that the reason why the return was not before the Canvassing Board when it held its final session was because it had been abstracted from the official files by Messrs. Hill, Rice, and Maynard. That is to say, while the Clerk is not guilty of contempt, these three State officers are guilty of conspiracy.

Judge Cullen goes over the points in the case very carefully, and makes each point in the conspiracy so plain that no concealment or denial of it will be possible hereafter. He holds that the duty imposed upon the County Clerk, by both the statute and the order of the court, was to transmit the returns, and that when he had put the returns in the Post-office and they had been delivered at the offices of the State officials to which they had been mailed, his duty ceased. After that, whatever action the clerk might take to recover the returns would not constitute official misconduct or contempt of court, but personal crime. The Judge goes on to show that all the steps which the clerk took to recover two of the three copies of the returns which he had sent, from the offices of the Governor and Secretary of State, were taken under authority from Gov. Hill and Mr. Maynard, and with the consent and approval of the Governor and Secretary of State, and that these three officials, and not Emans, are responsible for the offence committed. As for the taking of the third copy of the returns, which Mr. Maynard took from the Comptroller's office, Judge Cullen holds Mr. Maynard solely responsible for that offence. After this careful summing up of the case, the Judge makes decision as follows:

> "Though the enclosures containing the returns had not been open, no imposition was practised upon any of the officers as to their contents, but the officers were entirely aware of the character of the papers delivered up. There was, therefore, in law and in fact, a complete transmission of the returns to the officers prescribed by statute. The returns were not before the Board of State Canvassers, not because of any defect in the transmission, nor of a disobedience of the order of the Court, but because, by the action of the Secretary of State, the Governor, and the counsel of the Comptroller, the returns were taken from the several public offices where they had been properly received and were given to Mr. Emans."

Every word of that decision goes straight to the point, and puts the brand of conspiracy upon Messrs. Hill, Rice, and Maynard so thoroughly that they will never be able to remove it. The returns which they as public officials removed from the files of the State, which they were sworn to guard, were those of the Fifteenth Senatorial District declaring the election of Deane, the Republican candidate. It is worth while to recapitulate briefly the history of those returns. Under the inspiration of Messrs. Hill and Maynard, the Democratic Board of Supervisors had so juggled with the election figures as to make out a majority for the Democratic candidate. Judge Barnard of the Supreme Court, who, like Judge Cullen, is a Democrat, was applied to for a mandamus compelling the Board to recanvass the vote and correct their frauds and errors. He granted it, and issued a stay upon the State Canvassing Board restraining it from acting upon the certificate of election issued on the erroneous canvass, saying: "The State Board has a return which does not indicate the true result. It is proper that the Board should hold its hand until the true record reaches it." What the true record was, Judge Barnard made plain a few days later, when, at the conclusion of another hearing, he ordered the County Canvassers to issue a certificate of election to Mr. Deane, and ordered the clerk to forward the same to Albany.

There were many subsequent efforts made by Messrs. Hill and Maynard to prevent this order of transmission of the returns from being executed, but they were all thwarted after many legal battles in the courts, and the clerk mailed the returns. Then it was that the conspiracy was organized for abstracting them from the mails after they had reached the State officers who were sworn to receive and guard them in the name of the State. There had been, up to this point, decisions by two Democratic Judges of the Supreme Court, Barnard and Edwards, that these returns were legal and proper, and that the other returns, based on the fraudulent count, did not indicate the true result of the election. The false returns were in the hands of the Secretary of State, Mr. Rice, and were carefully guarded by him. If the legal returns were to reach him, they would have to go before the State Canvassing Board, and there would be no excuse for not declaring Deane elected, unless the Court of Appeals were to reverse the decisions of Judges Barnard and Edwards. The legal returns reached Albany on December 22. The decisions of the Court of Appeals on all the disputed cases, were expected daily. The conspirators clearly had no faith that the Court would help them, for they rifled the mails of these legal returns on the morning of their arrival, before they could be put upon record. A few days later the decisions of the Court of Appeals were published, and the following passage in reference to the Dutchess County case, and the decisions of Judges Barnard and Edwards, showed that the conspirators had hit upon the only method by which the legal returns could be prevented from coming before the State Canvassing Board:

> "Upon these facts, standing uncontradicted, we think the court below, in its proper branch, would have the power to command the State Canvassers to canvass without regard to such a return [the first and illegal one]. As it contained the result of an illegal and erroneous canvass by the Board of Canvassers in excess of its jurisdiction, and which thereby would alter the result of an election, the court should not permit it to be canvassed. As to the allegations of the manner of the making of the return by the County Board, the State Board could not itself inquire into them. *If another return should be sent to the Board, properly authenticated and containing the result of the legal action of the Board of County Canvassers, the State Board could canvass it.*"

It was this return, taken from the mails and from the official records, by Messrs. Hill, Maynard, and Rice, which decided the control of the Senate. When the State Canvassing Board met, the illegal and erroneous return, so declared by the Supreme Court and the Court of Appeals, was the only one before it. Mr. Rice, acting as Chairman, refused to make any answer when he was asked if he knew of another return, and the illegal return was canvassed and a seat stolen. It was this theft which gave the Democrats a majority of one in the Senate, and Judge Cullen's decision now declares that theft to have been the result of a conspiracy by Hill, Maynard, and Rice. All three of them should be prosecuted for their official misconduct. One of them is running for the Presidency, another is on the bench of the Court of Appeals, and the third is hailed as a recruit to the Presidential cause of the first. They appear to believe that the moral sense of the American people is as dull as their own. Surely, so far as Judge Maynard is concerned, the Bar Association must now perceive that it has a duty to perform which cannot be shirked. As for Hill and his miserable tool Rice, we have no doubt whatever that the American people will attend to them in due season.

THE IOWA SITUATION.

IOWA has always cast her electoral votes in a Presidential contest for the Republican candidate, and Republican newspapers outside the State always put her down among the "sure Republican States" in 1892. But Republican newspapers published in the State by no means share this confidence. The Council Bluffs *Nonpareil*, for example, contained an editorial article in its issue of February 14 entitled "Iowa's Supreme Danger," which opens with this emphatic paragraph:

> "Do the Republican members of the Legislature realize the danger of Iowa becoming irretrievably and permanently Democratic? They have only to maintain their present do-nothing policy on the prohibition question to accomplish this."

Two agencies have been at work to make a State which in 1880 gave Garfield 78,082 over Hancock, and 45,381 over the combined vote of the Democrats and Greenbackers, in danger twelve years later of becoming "permanently Democratic." One element has been the growth of the high-protection craze in the national Republican party. Garfield's great majority in Iowa came after ten years' advocacy and promise of lower tariff rates by the Republican party of Iowa—the very next

year after John H. Gear had been reëlected Governor by a great majority, as he had been first elected in 1877, upon a platform declaring that "we favor a wisely adjusted tariff for revenue." As the high protection wing gained control of the party, the Republicans of Iowa, who had been educated by their trusted leaders to favor and expect a revenue tariff, became at first dissatisfied, and finally indignant, until at last thousands of them in 1890 voted for Democratic candidates for Congress who stood on practically the same tariff platform the Iowa Republicans occupied between 1870 and 1880; and again in 1891 these same Republicans voted for a Democratic candidate for Governor who was an outspoken advocate of a revenue tariff. This was shown by the large vote polled for Gov. Boies last fall in rural counties chiefly inhabited by farmers.

The other agency which has been at work of late years against the Republicans is the prohibitory law. Prohibition was originally carried at what was called a "non-partisan election," where the question of such an amendment to the Constitution was the only issue submitted, and it was largely carried by the action of men who did not really believe in it, but who either voted yea or refrained from voting nay because the tide set strongly in its favor just then. The amendment was annulled upon technical grounds by the Supreme Court, but a prohibitory law was enacted by the Legislature soon after. The experiment has proved a failure, and the majority of the people are disgusted with it. Gov. Boies made his campaign in 1889, and again in 1891, upon a platform which demanded the repeal of the prohibitory law and the substitution of a local-option and high-license system. Thousands of men who had always been Republicans, and who declared themselves still Republicans in national politics, voted for him upon this issue. These men are now more than ever convinced of the wisdom of their course, and they demand that the Legislature chosen last fall shall heed the voice of the people.

The embarrassment of the Republicans arises from the fact that they control the lower branch of the Legislature. An apportionment made years ago operates in their favor, so that, although Boies received almost 8,000 more votes than the Republican candidate for Governor, and the Democrats also secured control of the Senate, the Republicans carried fifty-three of the one hundred Representative districts. These fifty-three Republicans were elected after a campaign in which the party had declared for the principle of prohibition, and promised to sustain the law if they should carry the election. "We submit to the people of Iowa the determination of the issue," the platform read, "recognizing that the control of the next Legislature by the Democratic party means State-wide license, and that the control of the next Legislature by the Republicans means continued opposition to the behests of the saloon power through the maintenance and enforcement of the law."

The submission of the issue showed that a majority of the people of Iowa are opposed to the prohibitory law, but the legislative apportionment resulted in a House of Representatives controlled by men who are pledged to "the maintenance and enforcement of the law." Ever since the election last November, Republican editors and politicians have been discussing what the party had better do in this emergency. One element takes the ground that the will of the people ought to control; that the people have willed the repeal of prohibition; and that Republican legislators ought to bow to this will, whether they think it right or not. Others declare that these fifty-three Republican Representatives are bound by their pledges to maintain the law, and would dishonor both themselves and the party if they should break these pledges. One set says that the party is sure to be beaten if it sticks to prohibition, as two successive State elections have shown that a majority of the voters are opposed to it. The other set says that the party can carry the State only by the help of those Republicans who believe conscientiously in prohibition, and that such Republicans will desert the party by tens of thousands if it abandons the cause.

The question is now pending before the Legislature, and must be decided at an early day. The indications are that the Republicans will all stand by prohibition. If they do, there are plenty of warnings from thorough-going Republicans, like the editor of the *Nonpareil*, that the State will go Democratic. Iowa has thirteen electoral votes, and it is a new sensation for the country to have a Presidential canvass in which they are to be accounted doubtful.

ZONAL RECIPROCITY.

THE intimate connection of cartography with the question of foreign commerce has long been known to those who have studied the most profound writers on international exchanges. Thus, it was at one time a well-established principle with them that "longitudinal trade" was a perfectly safe and highly desirable thing, but that "latitudinal commerce" was fully as bad in political economy as latitudinarian opinions are in theology. This axiom was brought out for the particular exposure and condemnation of those un-American reasoners who, in 1888, were arguing that if it was well to exchange commodities with San Domingo and the Sandwich Islands, it would be also in the case of Germany and France. A most touching picture was drawn at the time of the argosies of commerce moving in prosperity and triumph along the lines of longitude, but working havoc and disaster as soon as, by any fatal chance, they took a cross-country route. "Give us reciprocity with South America and Canada," was the *Tribune's* cry at that time, "but do not yield a single degree of latitude."

Times have changed since then, however, and it is no wonder that a recasting of definitions has become necessary. The old longitudinal idea is still good for South America, but can scarcely be considered so axiomatic as formerly in view of the repeated rebuffs which the Canadian Commissioners have met in their efforts to arrive at a reciprocity agreement with the present Administration. Moreover, the latter is understood to have deserved the vote of every farmer and manufacturer for its achievements in promoting reciprocity with Germany and France, to which countries approach is distinctly along lines of latitude. In fact, the situation might have been thought a particularly difficult one for our great protectionist thinkers to cover with a neat definition; but the *Tribune* rose to the occasion last week with the following contribution to economic thought:

> "Reciprocity with Canada is, however, a very different thing from commercial union with tropical America and Germany. It is reciprocity between portions of the same zone, and all the main advantages of the bargain lie with the less populous district which covets the commercial privileges of the greatest market in the world."

A mind not fitted by previous training to rise to the height of this great argument might be foolish enough to inquire why, in view of this great truth, the *Tribune* is as anxious as it is for reciprocity with Mexico. That republic is as truly in the same "zone" with New England as Canada is with Texas or California, and, moreover, it is "the less populous district," which would get "the main advantages of the bargain." But all this would be not only impertinent but an unjust reflection upon the *Tribune's* logical and geographical resources. Nothing would be easier for it, we are sure, than to show how the great isothermal lines, or the trend of the Gulf Stream, or the direction of the trade winds, make trade with Mexico a wholly different thing from trade with Canada. In fact, it would no doubt be capable, with Lord Jeffrey, of speaking disrespectfully of the Equator in order to find a reason for a course it had already determined upon.

In all seriousness, the cold reception which the Canadian Commissioners have again had to encounter is a striking commentary upon the sincerity of the pretension of the Republicans that they really desire to promote foreign commerce. Here is a country right at our doors with which, even under the present restrictive conditions, we do a business little short of $100,000,000 a year. In each country a strong public sentiment exists in favor of breaking down or greatly modifying those restrictive conditions. Influential Republicans like Senator Sherman and ex-Congressman Butterworth have strongly advocated reciprocity with Canada. The strong feeling of New England Republicanism in favor of it is well known. Only a fortnight ago the Boston *Evening Transcript* spoke of the direct

and special interest of that city "in the errand of the Canadian Commissioners at Washington," but added:

"It can be stated that neither the President nor the Secretary is very anxious to oblige the Canadian officials, as they have repeatedly interfered to prevent our Government from concluding a treaty with Newfoundland, and acted in an unfriendly manner with respect to the seal fisheries in Alaskan waters. Still, it is believed in Washington that there is a chance that something important will grow out of the present negotiations. The bungling diplomacy in South America, and especially the crowning blunder of intentionally bringing the country to the verge of war after Chili's apology had arrived in Washington, has been so unprofitable and unpopular that an attempt to retrieve the foreign-affairs record of the Administration by important negotiations making for peace and trade is altogether desirable and quite legitimate as politics."

It has been asserted that the coming of the Canadian envoys was a mere blind, designed for effect on home politics, just as our reciprocity schemes were taken up for political effect, and that they had no real authority to treat in a broad way. But in the same issue of the *Tribune* in which this assertion was made, appeared a telegram from Ottawa giving the following summary of Lord Stanley's letter of instructions to the delegates:

"The letter says that the joint commission to be appointed is authorized to deal without limitation, and to propose a treaty respecting the following subjects: (1) renewal of the reciprocity treaty of 1854, subject to such modification as the altered circumstances of both countries require, and to such extensions as the Commission may deem to be in the interests of the United States and Canada; (2) reconsideration of the treaty of 1888, respecting the Atlantic fisheries, with the view of effecting free admission of Canadian fishery products into the markets of the United States, in exchange for facilities for United States fishermen to purchase bait and supplies, and to transship cargoes in Canada, all such privileges to be mutual; (3) protection of mackerel and other fisheries in the Atlantic Ocean, and in inland waters; (4) relaxation of the coasting laws of both countries on the seaboard; (5) relaxation of the coasting laws of both countries in inland waters between the United States and Canada; (6) mutual salvage and saving of wrecked vessels; (7) arrangements for delimitation of boundary between Alaska and Canada, such treaty, of course, to be ad referendum."

Here was certainly a basis of sufficient breadth for serious negotiation, and the fact that the Commissioners coming with such proposals were brusquely dismissed for the second time well shows the narrow views and motives now ruling at Washington. If a tenth part of the effort given to treating with San Domingo or Venezuela had been bestowed upon this vastly more important question of trade with Canada, some arrangement could surely have been arrived at which would have contributed to the prosperity and good feeling of the two countries.

THE SECURITY OF RAILWAY BONDS.

JUDGING from recent events, it seems correct to say that views once held about the sacredness of corporate mortgages have been much weakened. Not many years ago a railway company was considered bound, not only by mortgage, but upon honor, to pay the interest and the principal of its funded debt in full. But latterly exchanges of underlying bonds into a "blanket mortgage," or the scaling down of principal and interest charges, are proposed without exciting general remark; the sole question being whether the suggested plan has backing enough to be carried through. In such a case the holders of a minority of the bonds are usually helpless, and find themselves obliged to accept whatever terms may be offered.

We often hear it said that minority stockholders have very few rights in a corporation. After all possible safeguards have been thrown by law around minority ownership, it still remains true that a majority must rule, and that those opposed must submit to the management of the greater number. But this reasoning does not apply to bondholders. Stockholders are partners in the enterprise, participating in its profits and properly controlling its policy. On the contrary, bondholders are creditors, from whom the money used by the share-owners has been borrowed on certain specific conditions. Every holder of a single bond, though in a hopeless minority, is yet an investor who, by all the rules of law and justice, should be treated with scrupulous fairness, and in strict and honorable compliance with the terms of his contract, by the corporation which has his money. That corporation can excuse non-payment only through absolute inability.

It is indeed possible that a railway may be unable to pay its debts or fixed charges, and that its capitalization must in consequence be readjusted to its earnings. In such a case its bonds, no matter how stringent in terms, are worth only what the property is worth. Foreclosure could not disclose a method of drawing from the railway any new profit; and so it is often wiser to accept the final values through the shorter course of a reorganization. But from this fact and procedure the idea has slowly grown that if the junior securities require readjustment, the occasion should be seized to cut down the underlying liens as well. Instances will be recalled by every one of reorganizations of railways having complicated capitalizations, where the first mortgages on indispensable parts of the system have suffered with the less valuable mortgages. So far as now known, the proposed Richmond Terminal plan is open to this objection as to the good mortgages on the proprietary roads. Another instance is where a struggling road is purchased by a stronger system. Its bonds have been of uncertain value, and, though paying a rate of interest higher than that of good roads, are quoted below par. Upon the change of ownership, what is the duty of the purchasing company? In a case now under discussion it is claimed that the purchased line has not earned its interest; yet its reports for past years did not disclose the fact. Naturally enough, the controlling system wishes to adjust the fixed charges of the little road to its past earnings, so that any increase arising from the combination shall accrue to the system. Suppose, however, that a minority of the bondholders do not like the terms proposed to them, and ask for the carrying out of the contract of mortgage, or for the repayment to them of the face of their loan. Being in a minority, according to some present theories, their wishes can be disregarded and they can be forced to accept whatever terms they can obtain. Yet, looked at in the light of a bona-fide contract entered into by the corporation on the one side and the capitalist on the other, these bondholders should be given the benefit of the doubt which now hangs over the question of the actual earning capacity of the road when independent, and should be treated liberally in view of the better prospects now opening before the company. Another instance, the same in spirit though not in letter, is that of the South Carolina Railway. Though subject to a year of misfortunes following the earthquake, that company seems abundantly able to pay more than the interest on its first and second mortgages. Yet it is sought to foreclose these mortgages on technical grounds, though no commercial reasons exist to excuse that action.

In all these cases and in many more which will occur to our readers, one fundamental idea may be found—that a railway bond is not a "security" whose sacredness the stockholders are bound in honor to uphold, but rather that the bondholder is fair game, provided only that some chance occurs through which he may be worried out of his money. It is a fact that many European capitalists are coming to have something like a distrust of American investments on this very account. An English or German investor hesitates at times about buying our bonds. A particular mortgage looks safe enough, but, he says, we cannot tell what may soon happen, and we know that Americans will cut down our principal or interest on the first opportunity. It does not need extended argument to show that such distrust of American bonds at home and abroad is hurtful to our best interests, nor to prove that credit is worth all it costs, nor that the corporate honesty which leans towards the creditors is the best policy. We are indignant at the proposed Bland Bill, which would compel the ordinary creditor to take silver in payment of his debt at one-third less than its face value in gold, but we ought also to be sure that in other ways we are not violating the same rule of justice. All must acknowledge that it is not easy at times to draw a line distinguishing between real inability to pay corporate debts and a desire to escape payment through a combination of circumstances. Yet it is a line which should always be drawn so as to guard the interests of the creditor in every way possible.

RUSSIAN RAILWAYS AND EXPORTS.

PARIS, February 4, 1892.

M. PONTZEN is a distinguished civil engineer

who has written a voluminous book on American railroads. He has lately been sent by the French Government on a mission to Russia, in order to study the Russian railroads, especially in their relation to the exportation of cereals. Western Europe becomes unable to feed its people, and we have yearly to import cereals from the east of Europe and from the United States. I have twice visited Sicily, even in its interior; it used to be called the granary of Rome. It is a very poor granary now, and bears very thin crops. It is the same with many of the old corn-growing districts; their fertility can be kept up only by expensive additions of manure, of phosphates and nitrates. The enormous extent of Russia and the nature of its still unexhausted soil give a great interest to that country, in an agricultural point of view. This year it is in some parts desolated by a famine, and the Government has been obliged to forbid the exportation of wheat on its eastern frontier; but this only proves that Russia is still in the undeveloped state in which were most of the Occidental countries before the great development of their roads and railways. The report made by M. Pontzen on the means of communication in Russia is extremely interesting; it shows clearly that everything in this great empire is, directly or indirectly, the work of the Government. There is an official department of railways, which is more active than the ordinary bureaus of public administration, and which exercises a commanding influence over the building and the working of the Russian railways.

The production and exportation of cereals constitute the chief source of wealth in Russia; from 1867 to 1889 the exportation has steadily grown. From 1867 to 1871 it was 2,448,400 tons; from 1872 to 1876, 3,275,500 tons; from 1877 to 1881, 4,628,400 tons; from 1882 to 1886, 5,116,300 tons; from 1887 to 1889, 7,325,000 tons. In Russia itself the consumption is not very variable: it is about 220 kilogrammes per year for each inhabitant. The exportation of cereals, which, between 1870 and 1879, represented only 14.7 per cent. of the total production, rose to 20.5 per cent. during the period 1883–1889. It takes place chiefly by way of the eastern and southern frontiers. It is reckoned that from 1885 to 1888, 37 per cent. of the total exportation took the eastern road and 54 per cent. the southern. The ports of the Black Sea, of the Sea of Azov, of the Baltic, are the chief centres of this exportation. Odessa, St. Petersburg, Rostov, Libau, Nikolaiev, Königsberg, Dantzic, Sebastopol, Riga, Taganrog, Reval, Mariupol, are the most important, and I have placed them in the order of their importance.

Nobody can rival Russia in the markets which she furnishes with cereals except the United States. Where Russia sends 35 tons of cereals, you may say that the United States send 33; such is the present proportion, according to official statistics. Together, Russia and the United States provide 68 tons out of every 100 tons bought in the European markets; after them, at a great distance, come Rumania (8 tons), India (7.5 tons), Austria-Hungary (4.3), the Argentine Republic (3.6), Canada (2.8), Australia (2.3), Sweden (1.6), Chili (0.8), Servia (0.7). These figures are very eloquent; if it were not for Russia and the United States, Europe would starve. I have been surprised at the importance of Rumania; its exportation augurs well for the future of this kingdom, made out of the ancient principalities of the valley of the Danube. France receives a great quantity of Russian cereals at Marseilles, and hence a curious phenomenon: while we import in the south, chiefly from Russia, we export in the north, chiefly to England. A sort of current or stream of cereals constantly runs through the country, much to the benefit of the railways.

It is not for me to write of your American elevators. I have wondered at the gigantic buildings which play the part of reservoirs for the great streams of cereals which run from the West to the East of the United States. I need not explain their utility or working. These great receptacles are called in Europe *silos*. The original silo was a mere hole dug in the ground and covered, after it was filled, with earth. When the Russians began to export cereals on a large scale, they thought it necessary merely to make *silos* at the ports of exportation. At Rostov, as well as at Taganrog, the docks are not very well placed, and wheat often receives but an imperfect covering in wooden sheds. At Odessa, silos having a capacity of 27,000 tons have just been finished; they are placed at several kilometres from the port, but are united to it by a railway.

The silos are useful, but they cannot serve as regulators between the ports and the centres of production. The Russian Government is much preoccupied now with the necessity of having elevators in these centres of production. The Government banks make advances on the cereals which are deposited in the storehouses; the advances being for as much as two-thirds of the value, and bearing an interest of 7 per cent., which seems rather high. But the private banks have followed the example of the Russian Bank, and make better terms for the producers. The ports of the Sea of Azov (Rostov on the Don, Taganrog, and Mariupol) and those of the Black Sea (Sebastopol, Odessa, and Novorossisk) have been much improved, but are not yet in the best condition. Novorossisk is quite a new port, having been in use only three years, that is to say, since the railway to Vladikavkaz was finished. The exportations are rapidly increasing, and it has a great future. It has the advantage over Odessa of never being blocked by ice.

I need not describe here the arrangements which have been made for the rapid shipping of grain. M. Pontzen has been chiefly concerned, in his report, with the movement of cereals on the railroads and with the tariffs established by the Russian Government. In a purely autocratic country, it is not surprising that these tariffs have been determined by the Government, or under its dictation. The principle which has been adopted is a gradual diminution of the kilometric tariff as the distance increases. The kilometric ton pays 7.15 centimes from 1 to 213 kilometres, 6.44 centimes from 213 to 384 kilometres, 2.15 centimes from 384 to 1,707 kilometres, 0.86 centimes from 1,707 to 3,200 kilometres. This tariff, though made for the transport of cereals to the ports of exportation, applies equally to interior transportation.

At the end of 1888 the network of Russian railroads comprised 26,884 kilometres; 4,965 were directly administered by the State, the other 21,919 kilometres were in the hands of forty-nine companies. The issues of securities necessary for the construction of all these lines amounted to 9,200,000,000 francs; the shares amounted to 1,803,875,329 francs, the bonds to 7,404,990,135. The Government guarantees the interest on all these bonds. It may be said that on an average each kilometre earns 31,516 francs, though the net earning is no more than 13,618. This does not amount to 4 per cent. on the capital invested, and the guaranteed interest is 5 or sometimes 6. The railways thus become every year a source of expense for the State, especially as the interest on a majority of the bonds is payable abroad in gold, and there is a wide margin between the paper ruble and gold. In fact, the Government spent in 1888, 124,535,380 francs for the payment of interest on the bonds emitted for the establishment of the railroads. But the State recoups itself, partly at least, by the higher rates levied on fast freights.

Great efforts have still to be made in order to complete the organization of the vast system of transportation for cereals in Russia. M. Pontzen believes that ten years at least are necessary to make it as perfect as it can be. Russia has not alone commercial interests in view; in her present state she could not mobilize her immense army with the same rapidity as Germany or France. Between these last two countries there has been for several years, and there is still, a sort of race on this question of mobilization. Our generals are obliged to count the days and almost the hours which a general mobilization would require; our railway officers have had to make every preparation for such an emergency. Russia is far behind in this respect; she is incapable of mobilizing her army with great rapidity. We must, therefore, much as we may admire her defensive powers, consider that she cannot conduct an offensive war against Germany with great advantage. Germany and Austria are thoroughly prepared for such an aggression; they could bring immediately enormous forces against an invading Russian army. These possibilities of war are, alas! always in our minds, though we always speak of peace. For the present there is a sort of lull in our European politics; but at any moment questions may arise which would be difficult to solve. "Si vis pacem, para bellum." Russia, if she wishes to follow this dictum, has two difficult tasks: she must reorganize her administration, which is too corrupt; she must complete her network of railways.

OLD MASTERS AT THE ROYAL ACADEMY.

LONDON, January, 1892.

SHORTLY before the opening of the winter exhibition in Burlington House, I was talking to a Royal Academician, and I asked him what would be done when the supply of old masters in the country gives out. For the Royal Academy's "winter atonement," as it is jocularly called, is always as delightful as the summer show is deplorable, and, this year's being the twenty-third, it does not seem possible that private picture collections can stand the annual drain much longer. But they would just begin exhibiting them all over again, was the R.A.'s answer, since nobody really remembered them from one year to another.

However, the supply is not yet quite exhausted. It is true that some of the canvases included in the present collection have been seen in comparatively recent years. The R.A. notwithstanding, there has not been time for everybody to forget Raphael's large "Crucifixion," with its Perugino-like skipping angels and Tuscan background, originally painted for the Gavari Chapel at San Domenico, Città di Castello, and now hung again, apparently for the convenience of its latest owner, the Earl of Dudley, who prefers horses to art, and who seems to be using the Royal Academy as a show-room for the Italian work he is anxious to sell. Then there is the little "Listener," by Nicholas Maes, from Buckingham Palace, which reappears periodically; and

there are several others pleasantly recognized as old friends.

Still, on the whole, the exhibition is far from being a mere repetition. In general interest it holds its own with those that have preceded it. The canvases to be passed unnoticed are in as marked a minority as will be those worth stopping for among the mediocrities destined to cover the same walls in a few months to come. On the other hand, there is nothing of supreme importance, like the Velasquez and Rembrandt series which have made previous winter shows so memorable. No great treasures have been suddenly unearthed for the benefit of the nation; no one man is specially represented, as Frank Holl and Alfred Stevens have been on two different occasions; no one school takes preëminence, unless, indeed, it be the British. In the Italian, German, Dutch, and Flemish sections—the Spaniards are omitted entirely—there is as high an average of excellence as in many a permanent exhibition of fame, but not an individual master who cannot be studied to better advantage in the National Gallery. In the British, however, are some of the most distinguished examples of the most distinguished painters.

The oftener one sees the work of the primitives, the more one is convinced that a picture gallery is the last place to see it in. The Earl of Dudley, whose collection is rich in the early Italians, has sent, for the inspection of possible purchasers, his Giottos and Fra Angelicos, his Crivellis and Botticellis, his Peruginos and Francias, which are to bring him so many horses in exchange. All are curious and interesting and good of their kind; but as they are but mere parts of a large decorative whole, we must confess, were we only honest, that, away from the altar screen or cloister wall for which they were designed, half their artistic charm and all their beauty of appropriateness are lost. Shown in fragments, their conventionality is over-aggressive, so that where there is great strength of character in types or loveliness of color in any one canvas, it at once asserts itself and stands out in striking relief among the others, as does a wonderful "Virgin and Child and Angels" by Piero della Francesca. The faces of the angels are those you still see among many of the youths in Italian monastery or seminary, the color of the crimson draperies against a neutral gray background is a pleasure in itself. The later Italians are represented either but indifferently well or else not at all, except Titian and Tintoretto, who lend to one side of a large room something of the glory of the Doge's Palace in Venice, though the naked female figure in the former's "Omnia Vanitas" forces upon one a not altogether favorable comparison with that perfect Venus by Velasquez which hung in almost exactly the same place two years ago, and though Tintoretto has adorned church and palace with many a nobler composition than his "Apollo and Marsyas." It is really his two Senators, quiet and dignified, and full of character, in their gorgeous crimson robes of office, which duly uphold the greatness of the great Venetians, and serve as reminder, were one necessary, that, as colorists and portrait-painters, Reynolds and Romney, who make such a strong showing on the opposite wall, are not supreme.

To those who have been to many winter exhibitions at the Royal Academy, the Germans and Flemings and Dutchmen must be a disappointment. Their art has been so consummately illustrated in previous years that the absence of masterpieces by them seems but the more conspicuous. The few primitives are successful enough. The Earl of Dudley has come to the fore again with a little "Celebration of High Mass," by Van Eyck, full of his careful study of faces and detail; and the Queen has contributed a large "Adoration of the Magi," by Lucas van Leyden. But it is not among the primitives one looks for the highest expression of Dutch and Flemish and German art; and of the masters of a later age there is no epoch-making work, no picture or portrait of more than usual note. The painters of small cabinet pictures suffer as much from being seen in a large gallery as the earlier decorators of church and monastery. When their canvases are hung together, one can but kill the other; and even if they are not so overcrowded here as in those endless cabinets of Dresden or Vienna, many are overlooked which, seen alone, might make quite a different and striking impression. As it is, but two, a little interior by Peter de Hooghe, and another version of his well-known model by Vermeer of Delft, maintain their proper distinction. It is no wonder that the occasional painter to-day who can afford to keep his work out of the public market, objects to sending it to the average picture show, and prefers electric light and red hangings to the test of contrast with other and perhaps better things. One fine but very small head of a man, by Rembrandt, the hanging committee, with their usual discrimination, have skied, so that it virtually cannot be seen; while the other Rembrandt, which must always have been somewhat commonplace, looks as if the restorer had been tampering with it of late. There is a fairly good Franz Hals, the portrait of a blonde man, with slightly insipid face, in black and holding his yellow gloves carelessly in one hand, but it is not quite up to the standard of the National Gallery portrait. And when I say that Van Dyck and Rubens are seen in their most pot-boiling and least artistic moods—Rubens on one canvas of the painted-photograph species, collaborating with Snyders to show how marvellously well both could do what no artist ought ever to attempt—I have said enough to make it clear that this division is the least satisfactory of all.

It seems as if special care must have been devoted to the selection of British work. Certainly, the assortment of those later "deceased British masters," as the catalogue calls them, who ought to be allowed to die a speedy and natural death, is not so lavish as of yore, while the examples of the true masters are of more than ordinary merit. Gainsborough, for instance, almost overshadows his greater contemporaries. The wide range of his powers is shown in the equal excellence, though not charm, of his Mrs. Portman, a large, elderly lady, in rather shapeless skirts, whose face, however, with none of its plainness or the signs of age toned down, is one of the strongest he ever painted, and of his beautiful Mrs. Billington, young and fair, her head, with its mass of golden hair, set against one of his most effective tapestry-like backgrounds. Actresses, from Nell Gwynn to Ivette Guilbert, have always inspired portrait-painters, and if the "Mrs. Billington" is the most charming Gainsborough here, there is no more beautiful Romney than the "Mrs. Jordan," as *Peggy* in "The Country Girl," which has been engraved so often that it is one of the best-known of his pictures. There are other Gainsboroughs, distinguished men and women of his time; and other Romneys, prettily affected beauties posing in front of wide landscapes or rich masses of foliage; and there are strong Sir Joshuas—the little girls from whom painters of our generation have borrowed all the sentiment and none of the technique; the portrait of Mrs. Seaforth and her child, glowing with a golden light which would not be unworthy of Titian.

But when all is said, the interest centres about the comparatively few landscapes. I do not mean the Turners, which vary from his strange messes of color, perhaps good once, before they faded, now but grotesque parodies, to his stately classical compositions and his large, genuinely powerful seas. Nor do I mean the landscapes of Richard Wilson, an R.A. in his day, who to the classicism of Poussin and Claude added a decided individuality—that is to say, a style of his own which makes his work always worth looking at. Both belonged to the old conventional school, of which they were among the most distinguished exponents. But they can have no more lasting influence on the landscape-painters of future generations than Giotto and Cimabue have on the portrait-painters of to-day. The men who broke away from the old traditions and infused new life into landscape-painting, who endeavored to paint Nature as they saw her, and not according to certain accepted formulas, were Constable and Bonington, and, after them, Crome and Cotman and the Norwich group, never adequately recognized until after their death. There is but little of their work, but that little, to the artist, is of as much value as, if not more than, anything in the collection. The one fine Constable has for subject the opening of Waterloo Bridge in June, 1817, with Whitehall Stairs in the foreground; and the large distance which Constable always loved, and always treated with such masterly effect, shows the great sweep of the Thames from Charing Cross to the Temple, with the dome of St. Paul's rising still further beyond. The foreground suffers somewhat from that curious way he had of flecking his canvas with white, which, carried to excess, threatened to degenerate into spottiness, as indeed it did with his too careful imitators—a fact well illustrated by the large and vigorous outdoor sketch of Müller's, hanging in another room, which at a glance might pass for a poor Constable. How little the movement, of which Müller's work was the result, was appreciated at first, receives new proof in the indignant inscription which, the catalogue explains, is written on the back of this sketch and signed with Müller's initials: "Left as a sketch for some fool to *finish* and ruin."

I have seen much better examples of Bonington and Crome at other times and elsewhere, but nothing to excel the one large canvas by Cotman, a stretch of hilly country, with here and there a windmill rising against a brilliant sunset, put in with the utmost simplicity, but with the unerring truth of the master who knows how to see for himself and to record his impressions in his own way. It was but in the natural order of things that, in a country like England, painters who have had the widest influence, not on mere provincial academies, but on the art of the whole world, who were the admitted forerunners of the Barbizon school, and the creators of modern landscape-painting, should have received none of the honors that it was in the power of their fellow-artists or the nation to bestow upon them. I know that Constable was made an Academician, but he was not allowed to enjoy his official rank in peace, while the most popular and prejudiced so-called art critic that England has yet produced, has wasted pages and chapters of his rhetoric in the effort to damn him to all eternity—an effort as unsuc-

cessful, however, as all of Mr. Ruskin's technical criticism. Bonington (it may be said because he was still too young when he died, though youth did not stand in the way of a characterless sentimentalist like Mr. Frank Dicksee), Müller, Crome, Cotman (and in their case there is no possible excuse) never shared the privileges of the Royal Academy, though, at the time they lived and worked, obscure painters, now forgotten, were thought qualified to write the magical (that is, magical with the public) initials R. A. after their names. But mediocrity and respectability have always, with some very notable exceptions, been the rule in the Academy. And if, as this exhibition reminds one, an unquestionably mediocre artist like Morland was sometimes left in the same distinguished outer darkness as Crome and Cotman, it was simply because socially he was found wanting. He was usually sottishly drunk.

A series of the real British water colors is again included, but it is not so complete as last year's collection. Cotman, in this department also, maintains his supremacy: he understood the art, and his sketches of landscape and architecture are crisp, and strong, and simple. De Wint, too, when he was content not to elaborate all art out of his work, was vigorous in his out-door impressions. And often Turner's sketches are delightful as notes of strong pure color. Of such work at its very best, too many examples cannot be shown. But nothing can redeem from utter dreariness the lifeless studies of Prout and the labored sentimentalities of William Hunt. It were charity to consign them to the bonfire or to Mr. Orrock, their prophet. N. N.

Correspondence.

KIRK'S ALLIBONE.

To the Editor of The Nation:

Sir: I must ask permission to occupy a little of your space with some comments on your recent criticism of my 'Supplement to Allibone's Dictionary.' You decline to express an opinion in regard to the general accuracy of the work, and your notice deals chiefly with its defects. The former point I leave to the test of use and time, and to the candid judgment of those who can appreciate the difficulties of the task. But I venture to call in question the correctness of some of your strictures, and the importance of them all as affecting the ultimate verdict.

You say that I have made no mention of "E. Walford, the author of a Life of Bayard." This statement, short as it is, involves three errors: (1.) Walford was not the author, but the translator, or more probably the editor of the translation—for his preface leaves the matter in doubt—of the little book referred to. (2.) This "E. Walford" is Edward Walford, a well-known miscellaneous writer, and, far from having made no mention of him, I have given him half a column, in continuation of a column given to him by Allibone. (3.) The book was published in 1867, and as Allibone brought down his entries under the later letters of the alphabet to 1870, the omission, such as it is, was not mine, but his.

Another writer whom you say I have not mentioned is "E. W. Davies, a novelist." This is a mistake. I have mentioned him by his full name, Edgar William Davies. You further say that I have made no mention of "William Barnett Phillips, who was an author so early as 1867." This is correct; but his authorship seems to have ended as well as begun in that year, which, under the letter P, does not fall within the period covered by the 'Supplement,' and I had the less occasion to mention it that it was duly recorded by Allibone.

You say also that I have made no mention of "A. A. Graham, who wrote not only a history of Indiana (1876, 750 pp.), but also ten large histories of counties in Ohio, Indiana, and Illinois." This is not quite correct, as I have mentioned him under the name of a writer with whom he collaborated in the production of some county histories. For the rest, I can only plead that I have been the victim of a conspiracy of silence in regard to this eminent and voluminous author. There is no record of his achievements in any catalogue or other bibliographical work known to me, nor are they to be found in any collection to which I have had access, or about which I have been able to obtain information. They are not in the Public Library of Cincinnati, of Cleveland, or of Indianapolis, where one might especially expect to find them; nor in the library of the British Museum, for which particular pains are taken to collect books of this description; nor, as I am informed, in the Library of Congress, to which, if copyrighted, the law would have required them to be sent. I do not for a moment question their existence, but the knowledge of them, if not strictly a private possession, is at least one from which I have been debarred.

Of actual blunders or *mis*statements in my book you have detected some half-a-dozen. Three of these are wrong dates—slips of the pen or of the types, such as occasionally occur even in the catalogue of the library of the British Museum. The others—like some of a more serious nature than any which you have pointed out—originated with the authorities, generally trustworthy, on which I relied. I will cite, in exemplification, one of the instances you give: "In the case of Elizabeth and 'Emily' Bellamy, one author is made into two." 'Appletons' Cyclopædia of American Biography' ascribes to "Emily" the two books, published under a pseudonym which I accordingly entered under that name. The title-page of the other book is entered in the 'American Catalogue' and in other catalogues under the name of "Elizabeth," with no indication that she was the author of the former works, published many years earlier. There were too many pitfalls of this kind to allow of the hope that I had avoided them all.

But your indictment is founded mainly on my sins of omission—failure to give biographical data respecting some not very conspicuous or prolific writers (you might have enlarged the list indefinitely)—failure to detect as pseudonyms several names which you say are obviously such, but all of which, with one exception, are well-known family names; failure to mention the change of name by marriage in the case of certain ladies whose names I have given as they appear on the title-pages of their books. I regret all the faults of my work, but these, I fancy, will be thought by most persons to merit but light penance. The maxim *de minimis* has evidently, however, no place in your rulings, for it is on such evidence that you charge me with having shown "want of care" and with having been "decidedly remiss" in the execution of a task on which I expended several years of strenuous and conscientious labor. The mistakes and oversights, real and imaginary, all of them comparatively trivial, which you have enumerated do not amount to one-fiftieth of one per cent. in the whole number of my statements—biographical and bibliographical. On the other hand, I have pointed out errors amounting to several per cent. in your statements—errors, not of omission, but of commission; errors occurring, not incidentally in a work filled with innumerable details, and designed simply to communicate information, but in a couple of paragraphs, directed solely to the exposure of my ignorance and incompetence.

It is natural, perhaps, that there should be more joy in the critical soul over the one statement that can be corrected than over the ninety-and-nine just statements that need no correction; but, in order that this sentiment should be one of full serenity, the critic, one would think, should himself be impeccable. —Very respectfully yours,

John Foster Kirk.

Philadelphia, February 13, 1892.

[We will not enforce against Mr. Kirk our general rule not to print rejoinders to our reviews. As we made no pretence to an *exhaustive* examination of his two volumes, he should not plume himself on the fact that the errors we pointed out "do not amount to one-fiftieth of one per cent. in the whole number" of his statements. Each critic will be likely to test such a work on one or two lines with which he is most familiar. We took care to say that while we had noticed "several" errors, "we should hesitate to say that they were numerous in proportion to the total number of statements." We regret that Mr. Kirk should attribute to our remarks a severity which was not intended: examination of the context of the phrases quoted will relieve us of the imputation. We did not say that the editor was guilty of "want of care" or of having been "decidedly remiss" with reference to the work as a whole, but in two particulars only. We maintain that our criticism here was justified.

We cannot allow that our review indicated inability to "appreciate the difficulties of the task," or that it "dealt chiefly with the defects" of the work. We will say now, however, that a more thorough, though limited, examination of the 'Supplement' makes us quite ready to believe that, as Mr. Kirk says, he has discovered errors "of a more serious nature than any which we have pointed out." He lays the blame of these errors on his "authorities"—that is, previous compilers—which leads us to say that, while using all works of the sort for what they are worth, he ought not to have relied upon them. The alternative to doing this was to base his statements on contemporary reviews and advertisements. We have now tested the work by comparing its entries with the record of the American books published during the year 1859 and the early part of 1860, in so far as these were mentioned in some of the magazines of the day. Of books so mentioned (but a small proportion, of course, of all published) the following escaped the attention of Messrs. Allibone and Kirk: J. S. C. Abbott, 'South and North' (New York, 1860); Histories of Austria, Russia, and Italy, three vols., large 8vo (New York, 1859-'60); J. W. Alexander, 'Letters' (New

York, 1860, two vols.); Samuel Batchelder, jr., 'Poetry of Bells' (Boston, 1859); Joseph Belcher, 'Historical Sketches of Hymns' (Philadelphia, 1859); George Bishop, 'Every Woman Her Own Lawyer' (New York, 1859); R. B. Carroll, 'History of the United States' (Charleston, 1859, 309 pp.), interesting as an attempt to provide a narrative for Southern readers free from the perversions, respecting slavery, universal in Northern publications; G. W. P. Custis, 'Recollections of Washington' (New York, 1860, 644 pp.); S. S. Cutting, 'Historical Vindications' (Boston, 1859); F. M. Dimmick, 'Anna Clayton,' a religious novel (Philadelphia, 1859); D. S. Durrie, 'Steele Genealogy' (Albany, 1859); J. M. Field, 'Major Thorpe' (New York, 1859); C. F. Fairfield, 'Aguecheek,' a book of foreign travel (Boston, 1859); Eliza Lee Follen, 'Home Dramas' (Boston, 1859, 441 pp.); H. C. Goodwin, 'Pioneer History' (New York, 1859, 456 pp.); H. Harbaugh, 'Poems' (Philadelphia, 1859); A. M. Hillside, 'Geology' (Philadelphia, 1859); J. H. Ingraham, 'The Pillar of Fire' (New York, 1859), as well as 'The Throne of David' (Philadelphia, 1860)—Bible novels which enjoyed enormous popularity and are still sold—and 'The Sunny South,' edited by the same hand (Philadelphia, 1859); Meredith Jones, 'Boys' Book of Modern Travel' (New York, 1859); P. R. Leatherman, 'Moral Science,' a volume of pro-slavery ethics (Philadelphia, 1859); J. McLennan, 'Fisher's River' (1859); Elizabeth Sara Sheppard, 'Almost a Heroine' (Boston, 1859); George H. Derby, the well-known humorist, entered under pseudonym only, while "Doesticks," another representative of American humor ('Witches of New York,' N. Y., 1859, and 'Elephant Club') is entirely ignored; H. N. Day, 'Art of Elocution,' 384 pp.; George S. Fisher, 'Law of the Territories,' reviewed at length in the *Atlantic* (Philadelphia, 1860); J. C. Mangan, 'Poems,' recently the subject of a long magazine article (New York, 1859); S. B. Beckett, 'Hester,' a poem, also reviewed in *Atlantic* (1860). "Walter Aimwell" is not recognized as a pseudonym of Walter Simonds, and only one out of a series of six books published by him in 1859 and earlier is given.

Here are books in almost all branches of literature; but if we test the 'Dictionary' by a shelf of books of one kind only, we shall notice an equal number of omissions. Thus, of Massachusetts local histories no mention is made of 'Abington,' by D. Hobart, 1866; 'Boxford,' by S. Perley, 1880; 'Bradford,' by J. D. Kingsbury, 1883; 'Brookline,' by H. F. Woods, 1874; 'Gardner,' by W. D. Herrick, 1878; 'Great Barrington,' by C. J. Taylor, 1882; 'Lee,' by C. M. Hyde, 1878; 'Lexington,' by C. Hudson, 1868. The reader will observe that this list includes less than half the alphabet of one State only.

Mr. Kirk says that our statement concerning E. Walford "involves three errors," and alleges that "This E. Walford is Edward Walford, a well-known miscellaneous writer." In criticising the book referred to, the *Athenæum's* critic made the same assumption as Mr. Kirk, whereon the "well-known miscellaneous writer" pointed out that this E. Walford was *not* he. As to A. A. Graham, Mr. Kirk will find full bibliographic details in the annual report of the American Historical Association for 1889. The report was not published in season for Mr. Kirk to use it, but the character and size of the works named would justify a librarian in expecting to find mention of them in Mr. Kirk's 'Dictionary,' for, notwithstanding the maxim *de minimis*, it is for information concerning obscure authors that we largely prize a dictionary of this class.—Ed. Nation.]

SCIENCE IN AMERICA.

To the Editor of The Nation:

Sir: Permit me to make a few additions to your remarks relating to Mr. Stille's letter in your issue of February 11 on "Science in America." In addition to the courses mentioned in Prof. Cajori's report, Clark University offers several courses in modern geometry, in which, in connection with lectures, the treatises of Von Staudt, Reye, Cremona, and Klein (lecture notes) are used. Courses are also given in the less generally treated subjects of non-Euclidian and enumerative geometry. Ten years ago the writer obtained his first introduction to the fascinating subject of projective geometry in a sophomore course at Harvard, given by Prof. Byerly, which now, unfortunately, seems to have disappeared. At Harvard, also, a very rich course in the theory of functions, according to Cauchy, Riemann, and Weierstrass, was introduced some six years ago, and came to stay. I hardly need state that the same subject, now recognized as the backbone of all that part of mathematics having to do with the infinitesimal analysis, finds ample representation (and is, as you say, *really* studied) at Clark University, as well as are its natural successors, the theories of elliptic and Abelian functions. In fact, as far as concerns the theory of functions, it seems to me that things are not so bad in this country as your correspondent would have us infer, as most of the colleges making any pretensions to advanced work now offer courses in the subject.

On the other hand, it seems to call for remark that a subject which has for the last twenty-five years occupied the attention of some of the keenest mathematical minds of the Continent—the theory of the functions defined by linear differential equations—has hardly received notice in our universities; and the number of the latter at which courses are given on the subject may be easily counted on the fingers of one hand, the thumb being barred. The fact that no book has appeared in this country treating of a subject (as alleged by your correspondent for projective geometry), is not always a fair criterion of the attention given a subject, since in the case of the subject just mentioned a thick volume has been published by Prof. Craig of Johns Hopkins, with a second volume promised.

Your correspondent asks how many readers of the *Nation* know anything of the work of Steiner. I should like to add: "Nay, more, how many know anything of Gauss?" But I submit that this is too much. We cannot ask the American public to bother itself about Steiner and Gauss, or even Newton, when it has all it can do to keep itself informed about the wonderful discoveries that Edison is probably going to make. Helmholtz is still alive, but his name is seldom in the papers. If I should speak of Thomson, I should feel safer in stating that I meant Sir William, and not "Thomson-Houston." After all, if Thomson's name is not quite unfamiliar, it is probably because of his inventions in regard to cable telegraphy and his electrical measuring instruments rather than because of his being a great physicist.

In this connection and in conclusion, let me quote the following as characteristically American. A few weeks ago one of the electrical journals cited, as showing the "tremendous advance of electrical science in the last few years," the statement of a "prominent inventor" that twenty years ago he prided himself on possessing the largest electrical library in the country, and that it consisted of five volumes. He now finds in the list of works sold by the journal in question two hundred and fifty odd. Shade of Faraday! Twenty years ago Maxwell's greatest paper had been published seven years, and Faraday, Ampère, Gauss, Poisson, and Green had lived, worked, and died. And yet a "prominent inventor" could raise only five books on electricity, and we are led to infer that the greater part of our knowledge of electricity has come since then! How long shall this country confuse "prominent inventors" with men of science?—Very truly yours,

Arthur G. Webster.

Worcester, Mass., February 13, 1892.

CHRISTIANITY, PRIMITIVE AND MODERN.

To the Editor of The Nation:

Sir: There is much truth in your article on "Modern Church Membership" in the *Nation*, February 4, which may well be heeded by modern Christians; but you miss, as you naturally would from your philosophical point of view, the chief characteristic of the Christian Church, which, if understood, would explain the matter of which you write.

The Church, in the esteem of the primitive Christians, was not an association of godly men uniting for good works. It was the mystical body of the Lord Jesus Christ, possessing, through the gift of the Holy Spirit, divine powers for the regeneration of human nature, the redemption of souls from sin, the uplifting of the human race by imparting the life of Christ to those who were made members of the body. Thus the special work of the Church was to seek for sinners to bring them to repentance, to rescue those who were lost, to inject into the corrupted shell of paganism the life of the Son of God, and raise to a new existence that which was "dead in trespasses and sins."

As you well say, the receiving of such a repentant sinner as you describe was the usual work of the Church, and it is now frequently. There would be no question regarding it, were it not for the fact that the philosophical view of religion which you take has prevailed among many who are called Christians, depriving them of ability to discern that Christ Jesus is the power of the Church through the working of the Holy Spirit. It is safe to say that this philosophic view will never have any large influence in improving the world, for it never has had hitherto, and never possessed life enough to continue its existence except as it assumed the appearance and ideas of the

Christian Church without having its inner power.

The contrast between the futility of Seneca's philosophy and the divine life of the Christian Church, redeeming the world, is shown strongly in Archdeacon Farrar's 'Darkness and Dawn.' One can scarcely read that story without recognizing the source of the power by which Christ's Church prevailed over the degraded humanity of the Roman Empire and lifted it up to light and health. In the present age, when the forces of the world and the evil elements accompanying our boasted civilization and the philosophical indifference which sets itself above the idea of sharing the warmth of souls fired by the spirit of God, are bringing back many of the conditions which were in pagan Rome in the first century of our era, we can certainly answer your query by declaring that the restoration of primitive Christianity is desirable, and it is possible if we maintain the Apostolic conception of the Church of Christ.—Yours, J. H. WATSON.

[Our correspondent should have noticed that we wrote as commentators, not advocates; and hence that any "view" he is pleased to attribute to us is quite gratuitous.—ED. NATION.]

AUGHT AND NAUGHT.

TO THE EDITOR OF THE NATION:

SIR: I believe that most Americans who will take the pains to bring back to mind the days of their childhood, will remember that they and their companions called the arithmetical *0* "aught," and that their teacher did the same when she "wasn't thinking," or did not guard herself against the danger by using "cipher" or "zero" instead of the troublesome English word. A visit to almost any schoolroom, East or West, will reveal the fact that it is now as it used to be. How it is in England I do not know, and should be glad to learn.

The explanation of this interesting phenomenon occurred to me some time ago. It is a case of improper analysis of sentence amalgamation. When a teacher first tells her little ones, "This is a naught, this is a two," etc., or when she says, "Now place a naught after the seven," she, of course, says *ənɔt*, just as she pronounces "an eight" *ənеit;* and as the child analyzes the latter he analyzes the former, and reads 8–5–0 as "eight, five, aught." The same thing has happened, as is well known, in other words, notably in *an adder* from *a nadder;* cf. also *apron*, *auger*, *umpire*, etc.

In consideration of the fact that *0* is called "aught" about ninety-nine times to once "naught," is it not about time to "recognize" usage in this case too? GEORGE HEMPL.

ANN ARBOR, MICH., February 9, 1892.

[We can supply at least one classical use of *aught* which would have entitled the word to a place in Dr. Murray's Dictionary. In the first series of the 'Biglow Papers' Lowell wrote:

"Wy, into Bellers's we notched the votes down on three sticks,—
'Twuz Birdofredum *one*, Cass *aught*, an' Taylor *twenty six*."

—ED. NATION.]

Notes.

HARPER & BROS. have nearly ready 'Selections from Lucian,' translated by Emily James Smith; 'Roweny in Boston,' by Maria Louise Pool; 'That Angelic Woman,' by James M. Ludlow; 'In the Vestibule Limited,' by Brander Matthews; 'Lord Palmerston,' by the Marquis of Lorne; and 'Concerning All of Us,' selections from Mr. T. W. Higginson's periodic contributions to the *Bazar*, uniform with the little volumes made up from Curtis, Warner, and Howells.

Mr. John Fiske's 'Discovery of America'; 'Personality,' by the Rev. S. R. Fuller; and 'The Rescue of the Old Place,' by Mrs. Mary Caroline Robbins, are in the press of Houghton, Mifflin & Co.

Little, Brown & Co. will publish during the spring 'A Half Century of Conflict,' the final volume in Francis Parkman's "French and English in North America."

J. B. Lippincott Co. will soon issue "The Tempest," the ninth volume in Mr. Horace Howard Furness's Variorum Edition of Shakspere; 'The Idealist,' by Henry T. King; and 'Typewriting and Business Correspondence,' by O. R. Palmer.

A Life of Mr. Spurgeon, by the Rev. George C. Lorimer, is in preparation. It will be published in Boston by James H. Earle.

Charles L. Webster & Co. announce 'The American Claimant,' a new novel by Mark Twain; 'Selected Poems by Walt Whitman,' edited by Arthur Stedman; and 'Life is Worth Living,' by Count Tolstoi.

P. Blakiston, Son & Co., Philadelphia, are about to bring out a monograph on 'Physical Education,' by Frederick Treves.

A work on the 'Hygienic Treatment of Consumption,' by Dr. M. L. Holbrook, will bear the imprint of the firm of which he is the senior partner.

The most elaborate of Browning publications yet recorded is 'The Browning Cyclopædia. A Guide to the Study of the Works of Robert Browning, with Copious Explanatory Notes and References on all Difficult Passages,' by Edward Berdoe (Macmillan). The author had previously signalized his devotion to the poet by a volume of exposition and comment, and prepared us to find very thorough work in this more comprehensive labor, for which he thinks only his scientific training would have sufficed. He aims to give "an exposition of the leading ideas of every poem, its keynote, the sources—historical, legendary, or fanciful—to which the poem was due, and a glossary of every difficult word or allusion which might obscure the sense to such readers as had short memories or scanty reading." This was truly an herculean task, and Dr. Berdoe fitted himself for it by attending "nearly every meeting of the Browning Society," reading all papers and books on Browning, and obtaining aid from obliging students of the subject. The result is nearly 600 pages of closely printed matter, practically the annotator's work, though he has incorporated, by permission, the special notes of Prof. Sonnenschein on "Sordello," and acknowledges similar obligation to a few other co-laborers. Here is hived the honey that the Browning societies seek for; and now that every one who will can find at once both the ideas of the poet and all his allusions explained, is there anything more to be desired? A scant dozen "unsolved difficulties," duly advertised, alone are left, if we may trust the author. The use of this cyclopædia to the twentieth century is undeniable; and yet the very bigness of it shows the size of the obstacle that Browning's fame must then overcome.

To most English readers 'Italian Explorers in Africa' (F. H. Revell Co.), by Sofia Bompiani, will open a new chapter in recent African travel, in which are to be found numerous examples of devotion to science and the welfare of mankind, as well as romantic adventures. The Italians have not been so successful in their discoveries or in the extent of their journeys as the English, but this is owing rather to the extraordinary difficulty of the task tacitly assigned them by Europe than to any lack of courage or enterprise. Their work has been to explore and open up to commerce Abyssinia and the country of the Galla and Somali, peoples who resist the progress of the traveller with far greater determination and success than the weaker negroid races. The most widely known explorers, however, are not those who have been engaged in this region, but Romolo Gessi and Count Pietro di Brazza. The former, the ablest of Gordon's lieutenants, besides being the first European to circumnavigate Lake Albert, showed great ability as governor of one of the provinces of the Sudan, whose infesting horde of slave-traders he utterly destroyed in a series of brilliant campaigns. Di Brazza, beginning his explorations on the west coast as a French naval officer in 1874, has acquired for his adopted country a large territory to the north of the lower Congo. It is rather surprising to find that but two or three Italians have travelled in Tripoli and the Libyan Desert, a region whose proximity to Italy would seem to have especially induced exploration by them. Madame Bompiani writes easily and entertainingly, but naturally treats her subject in a very superficial manner, being obliged to compress the accounts of more than twenty travellers into a compass of two hundred pages. A series of interesting portraits accompany the sketches, but the book contains neither map nor index.

'Missionaries in China,' by Alexander Michie (London: E. Stanford), is a valuable and suggestive discussion of one of the most perplexing problems confronting the Christian world. The writer, who has lived for many years in various parts of the country, endeavors to explain the causes of the universal detestation of missionaries by a people who are completely tolerant of two great foreign religions, Mohammedanism and Buddhism. These causes he divides into the political and the religious, and closes with an attempt to suggest a *modus vivendi*. Chief among the former are the fact that the recognition of the missionaries was forced upon China, for which reason they are inseparably associated with the humiliation of the empire; an explicable race hatred; and the superstitious belief among all classes that the missionaries bewitch the people, their houses and grounds, and are kidnappers of children. The religious causes are the moral condition of the Chinese, which differs radically from that of any other non-Christian race, and the aggressive manner with which Christianity has been presented. Mr. Michie accuses the missionaries (with, of course, many noble exceptions) of being either ignorant or indifferent to what is good in Chinese ethics. The unrestricted circulation of the Bible he believes also to be a real hindrance, since in its entirety it "is not a proper book to be indiscriminately read by people quite unprepared for its teachings and out of sympathy with its spirit." He adds that "the foulest attacks made against Christianity by the Chinese *literati* are loaded to the muzzle with missiles from the Bible." In his opinion, there is apparently little hope of any change of feeling for a generation at least. The task would be less difficult, however, if the missionaries would give up their foreign protection and permit the official supervision of their missionary establishments. If this were done, the Government would, undoubtedly,

vigorously suppress all such inflammatory placards and calumnious brochures as preceded and fomented the recent riots.

'Log of a Japanese Journey, from the Province of Tosa to the Capital,' is the title in English of a charming unpaged booklet by Flora Best Harris. Stitched, bound, and illustrated in Japanese style, its outward dress comports with its contents. The Tosa Niki, or diary of Tsurayaki, one of the imperial governors sent out from Kioto by the Mikado to take charge of the province of Tosa, was written in the tenth century, and is a classic. It is simply a pretty word-picture of coast, land and sea. Daintily and carefully the translator has rendered into English this white "plum flower" of Oriental literature, and well deserves thanks for her task. Both prose and poetry are happily presented, and the appropriate illustrations are by a native artist, Toshio Aoki. The charming little nothing, which has held its place in Japanese literature by virtue of its style alone, is a fresh illustration and lesson to young writers of the worth of form. Flood & Vincent, Meadville, Pa., are the publishers.

'Shepp's Photographs of the World' (New York: Frank Hegger) is a handsome volume designed to illustrate a tour of the globe, going eastward from Ireland and ending at the Capitol at Washington. The series is well selected, with a fair degree of freshness, is printed pretty evenly in heliotype from plates of uniform size, and has a few lines of guide-book explanation at the foot of each view. This text must not be scrutinized too closely in detail, either for what it says or what it omits to say—*e. g.*, the overthrow of the Vendôme Column is not mentioned, and the so-called Aztec calendar-stone, here rightly shown in the *patio* of the National Museum in the City of Mexico, is said to stand "at the foot of the left tower of the Cathedral." The views, too, are occasionally not the most recent in cases where this is of some consequence, as in that of Athens, and one cannot praise the choice or execution of the few representations of painting and statuary. But, all deductions made, this is an attractive book for the centre-table, and contains some souvenir for almost every tourist.

Mr. Huish's 'Year's Art' (London: J. S. Virtue & Co.) makes its regular and welcome appearance for 1892. Besides its varied information concerning British and, indeed, Anglo-Saxon art bodies and exhibitions, and its pictorial memoranda of the latter, it continues its invaluable series of portraits of artists with those of the members of the Royal Institute of Painters in Water Colors. Mr. E. A. Abbey is one of the number, and amid the new matter is to be remarked the instructions to artists respecting our new Copyright Law, together with information in regard to the art exhibition at the coming World's Fair. Such captions as the Art Sales of 1891, Engravings Published in 1891, List of Fine Art Dealers, and Directory of Artists, speak for themselves.

'Hazell's Annual for 1892' is a seventh appearance of this useful book of reference, which has a character quite its own, taking its color from the year as the chameleon from the surface to which it adheres. The complexion of 1891 was social even more than political, and hence one finds the labor agitator and reformer prominent among the biographies of new men —for example, John Burns, who, it appears, was born in 1858. The story of the dock strikers is told under the head of Labor, which fills nearly ten closely printed pages. Trade and Trade Unions take up but little less space. Continuity between one edition and the next of this Annual is maintained by back references, and the lack of a table of contents (or of classes) as a guide even to the alphabetic arrangement is partly supplied by cross references. The volume must be examined and studied to be appreciated.

The appearance of so many manuals of heraldry as we have noticed in the past three years proves the existence of many students of the art. To them we can recommend Mr. F. Edward Hulme's 'History, Principles, and Practice of Heraldry' (London: Swan Sonnenschein & Co.; New York: Macmillan), as containing one pleasant variation from its recent predecessors. Mr. Hulme has incorporated herein many quaint extracts from the early writers, and has thus enlivened what is usually a very dry topic. It is hardly necessary to say that there are no possible novelties in the matter itself, unless some recognized government shall sanction a new color or a new class of devices. Every good manual must repeat the old rules and definitions, and each publisher must seek for customers only by offering new and pertinent illustrations.

Mr. George Ashton Black contributes to the Political Science Series of Columbia College an essay entitled "The History of Municipal Ownership of Land on Manhattan Island, to the Beginning of Sales by the Commissioners of the Sinking Fund in 1844." The subject is of rather limited interest, but this essay will no doubt be of assistance to students of our local antiquities. It might have been made of very great value to conveyancers, but, owing to the omission of particulars which they require, it seems likely to be of little service to them. Incidentally, some of the financial history of the city is given, and copies of certain rare maps are furnished in the appendix.

A new Boston venture in the shape of a periodical is set down for appearance on March 5, and on every succeeding Saturday thereafter: *Two Tales* is the self-revealing name of it, and No. 1 promises a short story, "Juliza," by Mary E. Wilkins, and "Halifax Borough," by A. C. Gordon. It will be seen that for ten cents the Sunday reading is assured, and it will probably be of good quality, to judge from the list of well-known writers interested in the project. Considering the amount of fiction which the better class of monthly magazines cannot accommodate, *Two Tales* does not seem likely to perish of inanition.

The library of Cornell University contemplates a catalogue of the May Anti-Slavery Collection, now embracing nearly 4,000 titles of books and pamphlets. In the December *Bulletin* of the library a list is given of documents, chiefly society reports, which it is desired to procure by gift or purchase before beginning the catalogue.

We have received from Dietrich Reimer, Berlin, the third instalment of Dr. H. Kiepert's special map of Asia Minor on the large scale of 1:250,000, which is now completed. A sheet showing the political administrative divisions of the part of the country comprised in the map accompanies the last of the plates. The authority and utility of this great labor need no words from us.

—The latest issue of Peacock's novels is 'Nightmare Abbey' (London: J. M. Dent & Co.; New York: Macmillan). It is provided with an excellent portrait of Peacock at the age of seventy-two. This is the novel which is supposed to have a special interest as containing a sketch of Shelley in the character of "Scythrop," and it appears that Shelley himself supposed that this character was studied from him; but, as the editor remarks, it is only so far as "Scythrop" embodies the traits of the sanguine enthusiast, and exhibits sensitiveness to real or imaginary unkindness, that the character seems indebted to Peacock's personal observations of the poet. Other eminent men have a place in the volume, notably Coleridge, who had already appeared in 'Melincourt,' but is here more justly delineated—a change which the editor attributes to Shelley's influence. In the literary movement of the time the novel is placed by the editor as subsequent to the misanthropy of Byron, itself following on the crude romance of Monk Lewis. "'The ghosts,' says Mr. Flosky, in this novel, 'have been laid, and the devil has been cast into outer darkness, and now the delight of our spirit is to dwell on all the vices and blackest passions of our nature, tricked out in a masquerade dress of heroism and disappointed benevolence.' At this juncture Peacock came forward to defend 'the cheerful and solid wisdom of antiquity' against Childe Haroldism as impersonated in Mr. Cypress and the Coleridgean transcendentalism of Mr. Flosky and the political methods of 'Spartacus Weishaupt, the immortal founder of the sect of the Illuminati'; to say nothing of the blue-devils chargeable partly upon climate and domestic worries, partly upon 'tea, late dinners, and the French Revolution.'" We make room for the quotation because it brings out the fantastic traits of the Peacockian novel, and also illustrates its interest as a highly intellectual criticism of the time.

—Believing that the time has come when "the people want to know intimately and without glamour or false coloring the father of his country as he actually lived and labored," Dr. J. M. Toner has begun his long-promised issue of a "complete collection of all the writings of George Washington, from his youth to the close of his eventful life" with an exactness so literal as to approach the methods of the Chinese. Such a task might well dismay a young man; but Dr. Toner has the enthusiasm and energy to carry on the work, and if we may judge by the 'Journal of 1747-'8' (Albany: J. Munsell's Sons), the most critical can find little fault. The admirer of Washington will approve of the method; the historical writer and biographer will use this text as final; and the book-collector will welcome the large print, wide margins, and handy form. There can be no doubt to what school of writers the genial editor belongs—the critically sympathetic. There is a preface, an introduction, the Journal, with many notes, Washington's crude memoranda, poetry, early letters, and finally the rough memoranda of surveys—in fact, all that is to be found in a small pigskin note-book in the Washington Collection. There are tracings of surveys, and a reproduction of Sparks's engraved plan of Mount Vernon. Thoroughness is the leading idea, and textual accuracy the end. The mention of a knife leads to a note nearly two pages in length on the use of knife and fork at table. Another note of a page tells much about the wild turkey. The editor believes Washington to have had humor, and never to have been indiscreet in the use of wine; and throws doubt upon the alleged affairs of the heart that rumor has attributed to the youthful surveyor. Our space forbids further notice of the varied contents of this entertaining volume, but it may be recommended to all collectors of Washingtoniana. It might be suggested that, instead of tracings (a clumsy contrivance), a photographic reproduction be employed. The lithograph of Mount Vernon is on too small a scale to be legible; the

engraving in Arthur Young's volume would have been better. Then, too, we wish the editor had given a page of the Journal in facsimile. As one of the earliest of the Washington MSS., such a page would prevent such stupid impositions as the so-called "Washington's Prayers."

—A recent address to the Mississippi Bar Association by its President, Mr. R. H. Thompson, upon the changes in the organic law of that State made by the new Constitution of 1890, concerning which there was so much said during the last session of Congress, is printed in the current number of the *American Law Review*. We learn from it that Mississippi was the first State to give married women property rights. The act of the Mississippi Legislature passed as long ago as the year 1839 has been followed by nearly every State in the Union and also by England. As Mississippi was the first to remove woman's property disabilities by statute, so she is the first to guard her entire emancipation in this particular by constitutional provision. Section 94 of the new Constitution deprives the Legislature of all power to create by law any distinction between the rights of men and of women to acquire, own, enjoy and dispose of all kinds of property, or their right to contract in reference to it. Mr. Thompson adds the surprising information that the sources of Mississippi's first married woman's law were the tribal customs of the Chickasaw Indians then residing in the State, and that its author was a member of the Legislature who was about to marry a rich widow and who was himself harassed by creditors.

—At the session of the Académie des Inscriptions of January 15, M. Salomon Reinach read an interesting memoir on plastic art in Gaul in connection with Druidism. He said that after the efflorescence of art in Gaul, at the reindeer epoch, we find a long period, from the era of the megalithic monuments to the time of the Roman conquest, in which sculpture is almost wholly lacking. The passages in Cæsar and Lucan which have been cited to prove the existence of carved images of the gods have been misinterpreted. They refer only to rough stone pillars, or squared tree-trunks—works quite unworthy of the advanced industry of the epoch. One is obliged, therefore, to attribute the absence of statues in Gaul to a religious interdiction. As among the Romans and the Persians, this prohibition was the work of a religious aristocracy. In Gaul this aristocracy was the College of the Druids, to the influence of which M. Reinach attributes the dolmens and menhirs. These last are not Celtic, for Druidism was anterior to the Celts, who accepted in part the Druidic religion just as the Greeks did the Pelasgic. The aversion of Druidism to representations of the gods is not attested by any formal text, but Plutarch says that it was Numa, the pupil of Pythagoras, who forbade images to the Romans, and other writers relate that Pythagoras was a pupil of the Druids. These legends have no great authority in themselves, but they bear witness to an affinity of doctrines. Druidism, like Mosaism, was hostile to anthropomorphism, and this explains the absence of images in Gaul down to the time of the Roman domination.

—The Academy of Vienna has just received an important communication from Prof. Kraal upon the Etruscan text discovered at the Museum of Agram. This text was written upon a band of papyrus that covered the mummy of a woman, brought from Egypt in 1849. It was first examined by the learned Egyptologist H. Brugsch, who could make nothing out of it, and declared it untranslatable. Then Prof. Kraal set himself at work, and his studies soon convinced him that what he had in hand was an Etruscan text very much longer than any hitherto known. It contains 1,200 words, divided into 200 lines. The ink and the papyrus are incontestably of Egyptian make. The authenticity of the text is affirmed by Drs. Bücheler, Deecke, and Pauli, and these scholars have no doubt that if this precious relic shall be deciphered, we shall have at last a key to the mysterious Etruscan tongue. Herr Kraal has attempted a first reading of the fragment together with some restorations, and Herr Deecke adds explanatory notes. Another addition to Etruscan linguistics was made in a paper sent in to the Académie des Inscriptions at its session of January 31 by M. Casati of the Court of Paris. This gave an account of an Etruscan burial-place recently discovered at Castiglione del Lago, on the borders of Lake Thrasymene. It consists of a certain number of tombs hollowed out in the tufa, and separated by passages about a metre in width. These tombs have already been dug into and in part despoiled, but, notwithstanding this, some fifty funeral urns bearing inscriptions have been brought to light. M. Casati gave a translation of the more interesting ones, in which appear some Etruscan family names already known. He called special attention to a termination *alisa*, which appears in an inscription. The precise sense of the termination *al* is already known from a bilingual inscription: it designates maternal descent in the first degree. M. Casati believes that *alisa* designates the same descent in the second degree. He added some interesting information as to the diggings that have been made this year at Todi, the Tutere of the Etruscans, where many noteworthy objects of art and archæology have been found—mirrors bearing figures of the male genii known as *lasas*, arms, armor, bone jewelry, etc.

THE MAN OF GENIUS.

The Man of Genius. By Cesare Lombroso, Professor of Legal Medicine in the University of Turin. [The Contemporary Science Series.] Charles Scribner's Sons. 1891.

Prof. Lombroso comes to us with a proposition not absolutely new, but which he makes claim now to prove for the first time. It is that genius is a mental disease, allied to epileptiform mania and in a lesser degree to the dementia of cranks, or mattoids, as he calls them; so that, far from being a mental perfection, it is a degenerate and diseased condition. The inevitable corollary must be, though Prof. Lombroso does not draw it, that the whole of civilization is due to insanity. If so, it is a disease like pearls, fat livers, and ambergris, which we had better try to propagate, in others. But our Napoleons, our Pythagorases, our Newtons, and our Dantes must no longer run at large, but be confined in Genius Asylums as fast as they betray themselves.

To prove his proposition, Prof. Lombroso proceeds inductively. In order, therefore, to judge of his work, we will examine the first induction he offers with some care. This first generalization is that geniuses are, on the average, of smaller stature than ordinary men. Here is his reasoning:

"Famous for short stature as well as for genius were: Horace (*lepidissimum homunculum dicebat Augustus* [Lombroso fails to note that this implies that Augustus was himself large]), Philopœmen, Narses, Alexander (*Magnus Alexander corpore parvus erat*), Aristotle, Plato, Epicurus, Chrysippus, Laertes, Archimedes, Diogenes, Attila, Epictetus (who was accustomed to say, 'Who am I? A little man'). Among moderns one may name Erasmus, Socinus, Linnæus, Lipsius, Gibbon, Spinoza, Haüy, Montaigne, Mézeray, Lalande, Gray, John Hunter (5 ft., 2 in.), Mozart, Beethoven, Goldsmith, Hogarth, Thomas Moore, Thomas Campbell, Wilberforce, Heine, Meissonier, Charles Lamb, Beccaria, Maria Edgeworth, Balzac, De Quincy, William Blake (who was scarcely five feet in height), Browning, Ibsen, George Eliot, Thiers, Mrs. Browning, Louis Blanc, Mendelssohn, Swinburne, Van Does (called the Drum, because he was not any taller than a drum), Peter van Laer (called the Puppet), Lulli, Pomponazzi, Baldini, were very short; so, also, were Nicholas Piccinino, the philosopher Dati, and Baldo, who replied to the sarcasm of Bartholo, 'Minuit præsentia fama,' with the words 'Augebit cetera virtus'; and again Marsilio Ficino, of whom it was said, 'Vix ad lumbos viri stabat.' Albertus Magnus was of such small size that the Pope, having allowed him to kiss his foot, commanded him to stand up, under the impression that he was still kneeling. When the coffin of St. Francis Xavier was opened at Goa in 1890, the body was found to be only four and a half feet in length.

"Among great men of tall stature I know only Volta, Goethe, Petrarch, Schiller, D'Azeglio, Helmholtz, Foscolo, Charlemagne, Bismarck, Moltke, Monti, Mirabeau, Dumas père, Schopenhauer, Lamartine, Voltaire, Peter the Great, Washington, Dr. Johnson, Stein, Arago, Flaubert, Carlyle, Turgeneff, Tennyson, Whitman."

Now we remark, at once, that the thirty names in the latter list are nearly all great names; while to collect the sixty in the former list, the anthor has been compelled to descend to Narses, Chrysippus, Laertes, Mézeray, Lalande, Thomas Campbell, De Quincey, William Blake, Does, Laer, Pomponazzi, Baldini, Piccinino, Dati, and Baldo! Nor are the statements always accurate. As for Epictetus, his expression of submission to God has nothing to do with his stature, concerning which there seems to be no information. Ancient references to his person merely allude to the story of his master breaking his leg. It is quite unlikely that Plato was diminutive, because his beauty was such that he was believed to be the son of Apollo. The statements about Epicurus and Diogenes are very doubtful; and that about Archimedes far from certain. Attila was short, like all Huns, but not shorter than the average. Balzac, instead of being small, was colossal; Spinoza and Hunter were about of medium height, notwithstanding the measurement given of the latter; George Eliot and Linnæus were somewhat above the average; and Erasmus, though not tall, was not noticeably short. Let us be glad that Signor Lombroso's credit for fairness is saved by one mistake on the other side, Schopenhauer being under the middle height.

Making these corrections and disregarding the insignificant names, the two lists are not far from equal. Taking, however, a list of great men* that was drawn up some years ago, without the slightest thought of their stature, and which therefore may be supposed to afford a fair sample, we have looked up the heights of as many of them as we readily could, with the following result:

Short Men.—Alexander, Archimedes (?), Aristotle, Francis Bacon, Beethoven (5 ft., 6 in.), A. Comte, Descartes, Epicurus (??), Erasmus, Faraday, Frederick the Great, Garrick, Jacob Grimm, Harvey, Warren Hastings, Horace, Howard, Kant, Thomas à Kempis, Kepler, Locke, Louis XIV., Mendelssohn, Montesquieu, Mozart, Napoleon, Schopenhauer, Wagner, St. Francis Xavier—29.

Middle-sized Men.—Attila, Burns (5 ft., 10

* That is to say, of those who make a certain impression upon us in advance of any critical examination.

in.), Calvin, Camoens, Cromwell (5 ft., 10 in.), Dante, Jeanne Darc, George Eliot, John Hunter, Lagrange, Linnæus, Machiavelli, Mahomet, Clerk Maxwell, James Mill, Milton, Rachel, Adam Smith, Spinoza—15.

Tall Men.—Alcibiades, Aquinas, Balzac, Bismarck, Boyle, Cæsar, Carlyle, Champollion, Charlemagne, Clive, Columbus, Constantine, Darwin, Dürer, Dumas père, Queen Elizabeth, Emerson, Fielding (over 6 ft.), Gilbert, Goethe, Hawthorne, Helmholtz, Alexander von Humboldt, Lavoisier, Leonardo da Vinci, Lessing, Abraham Lincoln, J. S. Mill, Mirabeau, Molière, Moltke, Peter the Great, Petrarch, Rumford, Schiller, Shelley (5 ft. 11 in.), Mrs. Siddons, Tennyson, Titian, Voltaire, Washington, Daniel Webster, Wellington, William the Silent—44.

This is an honest induction, from a list of instances drawn up without reference to the character for which the sample was to be examined, and seems to show that great men are a little above the average height.

It may perhaps be suspected that the above quotation does not do justice to the general run of Prof. Lombroso's reasonings; but, in point of fact, the induction examined is one of the best in the book, being quite exceptional as showing some effort, however feeble, to be fair. His ordinary method is to take up each symptom of insanity, and to search high and low for instances which may look as if some men of genius have had that symptom. Such reasoning would be rejected without hesitation were there not such a deluge of cases as must give us pause. In considering their value as premises, the first question to be asked is how many men there are in universal biography whom Prof. Lombroso would call geniuses. That his standard is pretty low, his first list in the above extract suffices to show. He never puts himself to the trouble of making the reader or himself understand what he means by "genius." He delights in repeating that by *genius* he does not mean *talent*, and finds fault with Galton for confusing these qualities. But the truth is, Galton is far too sound a reasoner to potter over the meaning of two popular words, mere accidents of language. Such categories can be of no use in reasoning until they have passed through the fire of a scientific revision such as Prof. Lombroso seems little to dream of. He covers his confusion of thought by the commonplace that "genius is original, talent not." Of course, maniacs are original enough, if the quality of the product is nothing. But to look at his instances, he does not seem to stickle for originality very much. Among his geniuses we find Mrs. Southey, whose nearest approach to brilliancy was going crazy; Nathaniel Lee, absurdest of dramatists; Bishop Dupanloup; the poet Thomson; Buhl, whoever he may be; Sir Everard Home; Ann Lee, the Shakeress; Lord Palmerston; Florence Nightingale; George Washington, a truly great man, but hardly, one would suppose, within Lombroso's category of genius; Prof. Asaph Hall, a remarkably sane mind; Talleyrand; Mrs. Stowe; William Pitt; Richard Steele. Addison and Pope are mentioned as men of genius, and in one place even as "normal" men of genius; yet when their traits do not seem to fit the theory, they are set down as men of talent, merely. In short, the author ranks almost anybody as a genius whom it happens to be for the moment convenient to reckon as such.

There is a well-known book called Phillips's 'Index of Biographical Reference,' said to contain over 100,000 names. We have set down in a list the first name on every twenty-fifth page; and we find among these names, thirty-nine in number, no less than seven that impress us as fully as distinguished as some of Lombroso's instances of genius. Namely, these seven are: Biela, for whom a comet is named; Sir James R. G. Graham, a well-known statesman; Naumann Köprili Pasha, the last of his celebrated family; Gen. Longstreet; Alexis Piron, the French satirist; Robert Semple, the early Scottish poet; and Evelina Stading, the contemporary Swedish painter. In that proportion there should be no less than $100{,}000 \times 7 + 39$, or 18,000 "persons of genius," in Lombroso's sense of the term, named in Phillips's Index. But, notwithstanding the diligent researches of the learned Italian, it may well be supposed that five-sixths of these (or whatever Italian names might replace some of them) could have symptoms of insanity without his being likely to know of it; so that we will suppose he is drawing his cases from only 3,000 geniuses.

The question next arises how much insanity he finds. There are, perhaps, a thousand cases of symptoms of insanity in the book; but they are, for the most part, of the slightest nature—to show how slight, we here give the first case on every tenth page for the first hundred pages:

(1.) Volta had the largest brain known (p. 10). The next largest was that of an idiot.

(2.) Dante wrote:

> "Son un che, quando
> Amor mi spira, noto, ed a quel modo
> Che detta dentro vo significando."
> —(p. 20.)

"I am one that, when love inspires, note, and in what manner he dictates within, proceed to express." This is supposed to indicate something like epilepsy.

(3.) Boileau could not hear any one praised, not even his shoemaker, without annoyance (p. 30).

(4.) Ann Lee saw Christ coming to her (p. 40). This is supposed to be a hallucination of *genius*.

(5.) Tolstoi confesses that philosophical skepticism at one time brought him to a condition approaching insanity (p. 50).

(6.) Petrarch's love-misery was a mere pretext for writing poetry (p. 60). This is supposed to be an example of that insensibility which is said to be a common trait of genius and insanity.

(7.) There was insanity in Baudelaire's family (p. 70).

(8.) Swift had a softening of the brain (p. 80). This came on ten years after he wrote 'Gulliver'; and the subsequent disease is supposed to be an evidence of derangement at the time the great work was writing.

(9.) The story-teller Hoffmann was a drunkard (p. 90).

Now, we may fairly assume that for each case of real insanity there would be at least ten cases of symptoms like the average of the above; for these would not occur all ten in one person. If so, Lombroso's thousand instances imply only about a hundred cases of insanity; and 100 cases of insanity *at some time in the lives* of 3,000 persons of intensely active brains, and for the most part in uncomfortable circumstances, is not extraordinary. Certainly, it by no means compels us to suppose that the whole body of them were more or less crazy their whole lives long. On the whole, therefore, the main argument of the book proves nothing and renders nothing probable. At most, it creates a problematic state of mind, and makes us wish to see the subject treated with a stricter attention to the logical conditions of valid induction.

But Prof. Lombroso presents another and much stronger argument. Namely, he shows that an unbroken series of cases exists, ranging from those where there is undoubted genius through imperceptible gradations to cases of undoubted mania, in which last the patient performs intellectual feats of which he would be utterly incapable in his normal state. Thus, he may write poetry, speak a foreign language, or play a game of chess, being unable to do the same thing in his ordinary health. A patient said to his physician, who thought him convalescent, "I am not quite cured; I am still too clever for that. In my natural condition I am stupid; wait, and I shall become so again" (p. 168). In these cases there were *other* symptoms of mania. But as for this disease of genius, if it consists *solely* in the brain functioning more perfectly than when it is well, why, what a very peculiar disease this mental disease must be! There would certainly be no difficulty in finding an unbroken series of cases passing by imperceptible gradations from cases of the working of undoubted genius to cases of the working of plain common sense. Accordingly, if the first series proves that genius is insanity, the first and second together prove that good sense is insanity.

But, after all, there is a puzzle about the matter not easily resolved; and those who are themselves visited with genius have always been ready to admit there is something like a malady about it. No doubt, our ordinary sense of behaving rationally is in the main, though not entirely, an illusion. The right hand, for instance, is connected with a certain part of the brain, and that is joined by commissures to other parts connected again with the eye, ear, tongue, etc.; and it is the structure of the commissures, medial and lateral, between different parts of the brain which determines how we shall act under given stimuli. It is true that, no matter how, we can control our actions to a certain extent; at a short notice, only slightly, but if time for preparation be allowed, a great deal. We can force ourselves to take habits, certain commissures becoming partially atrophied, while others are brought into activity under exercise. But in the main we behave as it is our nature to, like wild animals; and, as it happens that our nature is adapted to our circumstances, we take occasion to compliment ourselves upon our rationality. If the brain becomes diseased, the connection between certain parts get broken, and we begin to act in new ways. As we acted right in the main before, to act differently is to act ill. Yet it may happen, in special cases, that the breaking down of certain commissures may cause certain special actions to be done better than before; because the wave of nerve action is restricted to certain channels and its dissipation prevented. Indeed, it is probable that an excess of medial commissures, or those between the two halves of the brain, causes stupidity, deliberation becoming impossible when the thinking vessel leaks so fast. If so, we can see how disease of the brain may cause an improvement in the general intelligence.

Now, the brain of a genius, say of a great mathematician, a Gauss or a Dirichlet (of which two brains Prof. Lombroso gives drawings), is seen at a glance to be quite unlike that of a common man. It may be larger; it is certain to be far more complicated and implicated. These foldings imply that the parts are more disconnected. Its connections of parts being different, such a brain must act differently from common brains; and consequently it will in general be less adapted to the ordi-

nary purposes of life. It is not disease, but greater development; yet the unfortunate man whose shoulders have to carry it, becomes the victim of his own higher organization. Of course, there will be special things for which such a highly complicated brain will be specially adapted; and in being exercised continually on those things, as it naturally will be, it will grow more adapted to them. Such actions will not be insane; they will be like the operations of common sense, only more perfect. In doing such work, such a brain will take steps for the advancement of mankind of which ordinary heads would be quite incapable. The world will reap the benefit of it, and the unfortunate individual will have to pay for it. But, circumstances being generally unfavorable, the energies of such a brain are largely spent in vainly trying to make it do things for which it is entirely unadapted, though other brains do them with ease. The result is, that first derangement, then disease ensues, and we get the phenomenon of aberrations of genius.

MORE NOVELS.

Peter Ibbetson. By George Du Maurier. Harper & Bros.

In the "Stranger People's" Country. By Charles Egbert Craddock. Harper & Bros.

The Lady of Fort St. John. By M. H. Catherwood. Boston: Houghton, Mifflin & Co.

An Imperative Duty. By W. D. Howells. Harper & Bros.

The Little Minister. By J. M. Barrie. John W. Lovell Co.

A Modern Aladdin. By Howard Pyle. Harper & Bros.

The Spanish Galleon. By C. S. Seeley. Chicago: A. C. McClurg & Co.

Prisons of Air. By Moncure D. Conway. United States Book Co.

OCCASIONALLY an author who has not developed from small beginnings beneath the public eye, by making his literary début in a long novel justifies the rashness of his choice. This rare occurrence is perhaps the foundation for the commonly accepted belief that the art of writing is the only art for which no special training is needed. Mr. Du Maurier's remarkable book, 'Peter Ibbetson,' is a very valuable illustration in support of the argument that writing is natural to man, even as breathing—much more valuable, for instance, than the literary achievements of great soldiers, from Julius Cæsar down to General Grant; men who had not first to invent their story and then tell it with more or less reference to the conditions and conventions of art, but only to narrate lucidly and exactly events in which they took a prominent part.

Mr. Du Maurier, in this his first novel, scores two successes, one through the extraordinary interest and charm with which he invests the lives of a number of people remarkable for nothing except gentle manners and good looks, and the other through the imaginative force by which he makes incredible things appear possible, if not always probable. We have nothing of its kind in fiction more refined and natural than the description of the tranquil domestic life of the Pasquiers and Seraskiers at Passy; and if there is some disappointment of expectation in the failure of the engaging Gogo Pasquier, become by adoption Peter Ibbetson, to develop brilliantly, the compensation of that just vengeance which in a moment transforms the kindly giant into a hero and a criminal, is great. The reasons why the nephew could not help killing the uncle are so clear and sufficient that the sudden tragedy is divested of violence, even of any appearance of deliberate dramatic surprise. If it were possible for the law in meting out punishment to take cognizance of the character of the offender as compared with that of the victim, Peter Ibbetson would have been awarded a public ovation, not condemned to twenty-five years of stone walls and prison fare. The situation to which this tragedy leads is as novel as it is audacious.

We are being so thoroughly educated away from incredulity by dabblers in extra-natural and superhuman mysteries, that no theory or statement boldly advanced is so strange as not to win qualified acceptance, or at least to escape unqualified repudiation; but he who represents himself as selected for experiences still far beyond the ordinary, must not insist too much, nor invite criticism by too voluminous detail and an infinite extension of his situation. Mr. Du Maurier seems to us to have fallen into the error of over-elaboration, an error which an accustomed novelist would almost surely have feared and avoided. We accept the original conception, startling though it is. That the dream companionship endured through twenty-five years is no more marvellous than that it should ever begin. Our deep sympathy with the misfortunes of Gogo and Mimsey makes us willing to believe that they were given a shadow of happiness more complete than the substance they had missed, but sympathy doesn't stand the strain of their retrogressive incarnations and prehistoric gambols with the mammoth. Why did they stop short of a first cause and deprive us of the joy of announcing 'Peter Ibbetson' as the greatest book ever written in any age or tongue? But it is near enough to greatness to tempt one to extravagant epithet. There are no suggestions of mediocrity. The pathos is true, the irony delicate, the satire severe when its subject is unworthy, the comedy sparkling, and the tragedy, as we have said, inevitable. One or two more such books, and the fame of the artist would be dim beside that of the novelist, as in this one the artist is properly secondary. It has been said that the story is mere text for the illustrations. The expectation of such a performance is the only foundation for the accusation. Most of the drawings are cleverly illustrative, but some in which the figures are crowded have been so much reduced that they are neither explanatory nor decorative.

Zealots in the pursuit of science are notoriously cold-blooded, but seldom promoters of disorder and crime. Mr. Shattuck, the scientific gentleman in 'The Stranger People's Country' is preëminently a man of peace, yet before the tale of his persistence in desecrating the graves of the "Leetle People" is told, the "straight-shootin'" Guthree and the desperado Cheever, with his gang, appear by comparison with him blood-guiltless. It is a very interesting tale, one of the best that Miss Murfree has told us, though if fiction really were, what many people pretend that it is, good only in proportion to its beneficial effect on a common moral sense, all Miss Murfree's stories are bad, and this one of the worst. It must be confessed that the chief interest in almost all stories of American frontier life of our mountains and prairies is a demoralizing one; that we care for the people most, not on account of their primitive and spasmodic virtues, but for their absolute contempt of law and order, their uncontaminated ruffianism. Our frail sympathies gush most warmly towards the permanently intoxicated Col. Starbottle, or that professional exponent of the blandishments of poker, Mr. Jack Hamlin—in this instance, towards the straight-shootin' Fee Guthree. When the clatter of hoofs down the defile announces that the sheriff is after some one, our heart stands still with anxiety—not that the Sheriff may catch his man. When the ruffian stands over six feet in his long boots, rides straight and stiff in his stirrups, has fair hair and a sentimental cast of mind, Sir Galahad in competition is nowhere. Such a charmer is Fee Guthree; his romantic splendor much enhanced, his power for demoralization infinitely extended, by contrast with the correct, dull, scientific grave-robber, Mr. Shattuck.

But one thing Miss Murfree might have done to depreciate Guthree and excite a mild esteem for Shattuck—that is, to have made the latter the victim in the culminating tragedy. By choosing another course, she fails as a moralist, which is not her office, and also as a story-teller, which vocation is her birthright. A novelist may legitimately make use of all possible situations and developments of character, but we demand for our satisfaction (the reason why is deeply philosophical) that he shall choose the most probable; or, probabilities being equal, that which does not spring upon warm emotions an ice-cold shower. If some one had to be shot, it might as well have been Shattuck as Guthree. Such a catastrophe would have been humanly and artistically fitting. All along we are keenly in sympathy with the local superstition and veneration for the unknown dead, and that Shattuck should come to his death when in the act of rifling the grave would be as the lightning-stroke of vengeance from the offended gods of the long-buried Little People. The spectacle of such respectability stalking unchecked in the Tennessee mountains is exceedingly irritating, and we dismiss as arbitrary sentimentality the picture of the freakish Letitia, wearing out her bright youth with waiting for the fulfilment of a promise no sooner spoken than forgotten by the man who made it. How much closer to probability and gratifying to expectation would be a picture of Letitia (her fancy for Shattuck converted into resentment for his desertion) keeping her eye on the sacred graves and her hand on the family shotgun, for prompt reply to any one who should come "vagrantin' round inquirin' for them as be dead and done with the livin' long ago." Letitia of the last page contradicts all that goes before, and we can account for her only by supposing that Miss Murfree gave way to a rare fit of sentimentality which obscured her judgment. To the same blindness may perhaps be ascribed those final paragraphs in one of which reference is made to the heavy doom that fell upon all who were implicated in the attempted disturbance of the Little People, while, in another, we take farewell of the chief offender, Shattuck, middle-aged and prosperous, indulging in reminiscences of the Tennessee mountains, with no suspicion that his behavior there had been open to censure.

Discontent with an author whose fictitious tragedy is weak is mild compared with that excited by the author who spoils an actual tragedy by surrounding it with fictitious circumstance. About five years ago there appeared an anonymous novel, entitled 'Constance of Acadia.' This book, though defective in arrangement and style, showed study and comprehension both of the details of the feud between Charles La Tour and D'Aulnay de Charnizay and of contemporary New England history. The remarkable character and heroic

life of Constance La Tour were depicted with admirable fidelity and understanding. A second more or less fictitious version of this romantic but, in its results, insignificant historical episode, would seem superfluous, unless the person attempting it should be possessed of notable literary skill. In Mrs. Catherwood's 'Lady of Fort St. John' such justification is not apparent. The fort, by the way, is historically and commonly known as Fort La Tour, or the "habitation of the River St. John," and the Lady as Constance, on which, either for sound or significance, Mrs. Catherwood's Marie is hardly an improvement. The events of the story immediately precede and comprise the surrender of the fort by Mme. La Tour to Charnizay. Excepting a few particulars of the surrender, the book is unadulterated and commonplace fiction. The characterization of Charnizay is unduly harsh, if not false, and that of La Tour and his wife vague and inadequate. It is to be supposed that the weird creature who rides or flies about on a swan is a pure creation of the fancy, and her importance casts a doubt on the sincerity of the author's prefatory scorn of "shadows and types, when we may go back through history and live again with people who actually lived." Learning and inspiration together probably fall short of exact truth in an effort to reproduce the past; but the combination often succeeds in arraying the most credible narration of events, and in describing characters and motives with a perfect resemblance to truth. In Mrs. Catherwood's story, facts are few and so narrated as to lose most of their inherent picturesqueness, while imagination is chiefly expended on the impossible.

'An Imperative Duty' may be best described as a situation involving two rather difficult problems of conduct. For the particular instances, the given solutions seem natural and proper, but the wisdom of a general application would be doubtful. The weakness of Mrs. Meredith's solution is, that if it were accepted as unequivocally right, conscientious people might always relieve themselves from bearing peculiarly unpleasant consequences of their own acts. The impeccability of a conscience that compels a woman most cruelly to wound one who has always been dependent on her affection, is at least debatable. Mr. Howells, without expressing an opinion, shows how Mrs. Meredith was driven to tell Rhoda about her antecedents by the lash of a hypochondriacal conscience, applied to hysterical nerves. We feel that Olney's solution of his problem is, for him, right and just and admirable, but, supposing that he had known of Rhoda's mixed blood from the beginning of their acquaintance, would marriage with her have been so commendable? The inference from Mr. Howells's presentation of the case is that it would, and yet it is certain that such marriages increase the war between temperament and character which he declares to be "the fruitful cause of misery in the world, where all strains are now so crossed and intertangled that there is no definite and unbroken direction any more in any of us." But it is fair to hold Mr. Howells responsible only for his particular instance, and to regard some of Olney's utterances as mere lover's extravagance, not as condemnation of all men who would not do as he does, nor as an adjuration to young men in search of an object of special pride to go get a wife with a strain of negro blood. The situation is described and argued with that lucidity, force, and grace which give to all Mr. Howells's stories a rare distinction.

The story of 'The Little Minister' is told by that dominie whose acquaintance is made in 'A Window in Thrums.' It is a poetical, passionate story, with a plot so romantic as to appear quite old-fashioned. Unlike most clever writers of character sketches, the dominie has understood that a long novel is the better for a sustained plot, and none the worse for an air of mystery and the leaven of a few dramatic situations. The blind god never played a more mischievous trick than when he arranged the meeting between the little minister, Gavin Dishart, and the elusive gypsy, in the elf-haunted shades of Caddam Wood. An Auld Licht minister is, after all, but a man, especially when at the age of twenty-one and complacently scornful of the frivolous sex. When Gavin got the "call" to Thrums, and was able to establish his devoted mother in the manse, the troubles of life seemed to lie behind and the future shone fair, provided his physical vigor should prove equal to the demands of Thrums for loud-voiced denunciation of all things natural and agreeable to weak humanity. Poor Gavin had not counted on an "Egyptian limmer" coming dancing out of limbo, straight into his cut-and-dried life, dictating heaven or hell for him by the ring of her voice and the light of her eyes. But when, at last, he understands the wonderful, terrible force that sweeps away all his well-known self, except his stanch integrity, then let Thrums rise and with imprecation stone him from its limits: Babbie is his and the joy thereof passes understanding. Mr. Barrie leaves us in doubt about the action taken by Thrums when the news of the marriage over the tongs was confirmed, but the inference from the behavior of "lang Thammas" is that they accepted what couldn't be helped, and proceeded to vindicate outraged righteousness by proving to Babbie how far from a bed of roses is the lot of a minister's wife.

'A Modern Aladdin' and 'The Spanish Galleon' are modern versions of very old tales. The mysterious personage who wears in a crystal ball hung round his neck the charm that wards off old age and death, has flitted casually across the page of history, and has long been the property of story-tellers. In Mr. Pyle's hands he has really the freshness of youth, he is as good as new, and has that polish, elegance, and unabashed wickedness which centuries of high society and moral irresponsibility should properly bestow. The narrative of his capture of that good rustic, Oliver Munier, and of what he did with him, is exceedingly ingenious and amusing, and is told with an attention to salient detail that gives it an air of sober fact.

The author of 'The Spanish Galleon' has not spared detail, and if there breathes a man or boy whose early education has been so neglected that he knows neither 'Robinson Crusoe' nor the 'Swiss Family Robinson,' he may read with pleasure this prolix account of solitary life on a desert island and recovery from ocean's depths of a Spanish treasure-ship. Mr. William Morgan appears to know more about applied science than Crusoe did, and is certainly not such a favorite of Fortune as was the ingenuous Swiss family; yet neither learning nor self-reliance gives him the charm of those old friends, to know whom is to make comparison inevitable.

It is kind to regard Mr. Conway's 'Prisons of Air' as a freak of genius, and not amiss to remind him that few literary reputations are so firmly established as not to suffer from indulgence in such freaks. There is a limit beyond which public confidence cannot be forced, and that limit is reached in 'Prisons of Air.' Knowing Mr. Conway as a sane if sometimes excursive littérateur, we expect to find in a novel by him some indications of literary cultivation, of knowing how to do it, and are willing to excuse, if necessary, the lack of any aptitude for story-telling. All that we do find is a perfect illustration of how not to do it. Time was when the romantic office boy or chambermaid might have followed with starting eyes the woful doom of the Redleghs extending through nine generations in fulfilment of a gypsy's prophecy, but the indications of publishers' ledgers are that that time has gone by, and that Lady Amanda and Lord Adolphus, with their whole spectacular equipment of dooms and weirds, lost wills and wandering heirs, can no longer be said to draw in this enlightened land. This is one of the most encouraging signs of the times, and we regret that Mr. Conway, in his 'Prisons of Air,' should so elaborately have written himself down a reactionary.

Letters of Field-Marshal Count Helmuth von Moltke to his Mother and his Brothers. Translated by Clara Bell and Henry W. Fischer. Harper & Bros. 1892. 8vo, pp. 317.

Von Moltke's letters to his mother and to his brothers Adolf and Ludwig compose the fourth volume in the German edition of his collected works; in the order of issue they are the second volume, the first in the order of publication having been the History of the War of 1870 (vol. iii. of the works); a third volume has been recently issued containing miscellaneous writings, and forming vol. ii. of the works. The translation of the letters is by the same hands that furnished the English version of the History, and, while it reads smoothly and may, in the main, be pronounced fairly correct, it contains some odd blunders which cannot, in this case, as was done in our review of the former book, be ascribed to the technical character of the work, but are evidently due to an imperfect knowledge of German and to a lack of literary instinct. The wonder still grows that people who know so much of a foreign language did not contrive to know a little more. For instance, it is almost incredible that any one undertaking a task like this should not know that *Rechentafel* means the slate familiar to every schoolboy and not a "counting-board," as it is translated on page 15. Two pages further on, we find "Hosen" rendered "gaiters," instead of "trousers," although later on in the book the same word is correctly translated. Errors of this kind are trivial, and will not disturb any reader who has not the original before him, but the offence is more serious when the translators actually represent their unfortunate author as saying the very reverse of what he actually did say. Thus, on page 15, we read: "I am glad to think that I shall soon have done with surveying." What Moltke wrote is, in the original: "Eben erhalte ich einen Brief aus Berlin, der einen Thaler vier Groschen porto kostet, es sind Messinstrumente dabei für die Schule; ich freue mich sehr darauf, die Aufnahme geht nun bald los." That is to say, he is glad the instruments have come, as they will enable him to go right on with the work. Some of the mistakes are very hard to explain, as they occur in passages that present no difficulty whatever, as on page 26, where it is said that "The Kospoths *interest themselves in everything* that is fashionable and distingué in Silesia." This is nonsense, but becomes quite plain when for the four words we have italicized

we substitute the following: "are related to everybody." Perhaps the most comical blunder of all is the following passage (on p. 14): "I have lately made the acquaintance of Countess Blumenthal and her family, *who have been to Gutsnachbar in the Liebethal*, and say they recognized me by my family likeness." We again italicize the words which contain the error. The translators evidently take *Gutsnachbar* to be the name of a place; it is simply an every-day German common noun, and means the proprietor of a neighboring estate: Moltke simply wrote that the Blumenthal family had been on a visit to neighbors. Probably most readers will be puzzled to read, on page 34, "I arrived here safe and sound by mail on Sunday," and will wonder whether human beings were forwarded in that way sixty years ago; Moltke really says that he is "mit der Post eingetroffen," that is, "arrived with the mail," or, in other words, he travelled in the mail coach, which had not as yet given way to the railroad.

We had noted a few other instances of mistranslation, but they are not of importance and do not seriously impair the value of the book for non-German readers, to whom this translation will sufficiently convey the substance of Moltke's letters, although they will, to a great extent, miss the charm of his natural and unaffected although highly cultivated style. Those of them who still regard the great general as nothing but a cold, grim, taciturn strategist, with no genial traits to soften his iron character, will be led by his familiar letters to revise their preconceived estimate. It is to their autobiographic revelations, and to the side-light they cast on Moltke's inner life, that these letters owe the greater part of their interest. They enable us to follow him from his early struggles with poverty, and to appreciate the dogged perseverance and industry with which he carved out a career for himself. He writes a good deal about money, about the economy he is forced to practise, about his debts and the like, which might seem sordid if it were not in letters to his mother, to whom he opens his heart freely on every topic; at the same time, although his finances are not brilliant, he offers to set apart for his mother's use five thalers a month, when his own pay is only forty-five thalers. On another occasion he offers to his father the proceeds of a book he has written; he is always ready to help his brothers from his own scanty means. His warm affection for all the members of his family, from his earliest youth to the very end of his career, is a specifically German trait; not quite so German is the generosity with which he is willing to aid them in proportion to his increasing wealth. Moltke had the reputation of being almost as stingy as that other Field-Marshal, Wrangel; he says himself in one of these letters that it is hard to shake off in his old age the habits of economy which were forced on him by the poverty of his youth.

His intellectual activity and energy were untiring, and serve in great measure to account for his commanding position. If he had not been a great general, he would probably have been a great writer. As it was, he published a considerable number of books, mostly potboilers, but nevertheless not devoid of merit. He undertook a translation of Gibbon, and, with the assistance of his brother, completed it, although it was never published, as before he got to the end the money troubles which had prompted him to begin it had ceased to oppress him. Aside from his literary labors, he dabbled in painting. His accomplishments as a linguist are proverbial.

His distinguished career was but the natural result of his abilities and the good use he made of them. His rapid rise after he had once attracted the attention of his superiors is an additional demonstration of the high degree of intelligence with which the Prussian monarchy has always selected its servants, thereby in great measure securing its constant increase in power and prestige. Although Moltke was thirty-three before he reached the grade of first lieutenant, he was promoted captain two years later, and on this occasion he wrote to his mother, under date of April 21, 1835:

"With regard to my promotion, four of my seniors in my old regiment are still second lieutenants. I have passed over their heads and the whole body of twelve first lieutenants. Even in the Guards the men who got their commission at the same time with me are only just made first lieutenants, and I am perhaps the only captain in the army who entered so late as 1822. Thus I have made good the four years I lost in the Danish service."

Taken as a whole, the correspondence here published reveals an interesting and sympathetic personality. The reader feels that he is in the presence of one of the world's great men: a great man morally and intellectually. Moltke was in no sense a happy accident; there was no element of mere luck in his career. He stands as a perfect representative of everything that is best and most worthy of admiration in the German national character, and his unrivalled military genius is but one of a harmonious assemblage of traits that enabled him not only to command success, but to deserve it.

A Universal English-German and German-English Dictionary. By Dr. Felix Flügel. Being the fourth, entirely rewritten, edition of Dr. J. G. Flügel's Complete Dictionary of the English and German Languages. New York: B. Westermann & Co. 1891.

THE creation of adequate and comprehensive polyglot lexicons appears to be one of the latest and least cultivated occupations of modern scholarship. While such monumental works as the dictionaries of the English Philological Society, of the Century Company, of Webster and Worcester, of the French Academy, of Pierre Larousse and of Littré, of Sanders and of the Grimm brothers, indicate what may be accomplished within the limits of a single tongue, the work or works which might form the binding links between the three great modern languages have not yet been evolved and compiled, though a rich mass of material awaits the fortunate combination of patient and accurate scholarship supported by enlightened commercial enterprise.

Among the contributions towards such an undertaking might be mentioned the admirable and ingenious little French and English dictionary by John Bellows, the great French and German lexicon of Sachs-Villate, and the English and German dictionary of Flügel, the concluding number of which has just been issued. The fourth if not final edition of this well-established work recalls the interesting relations of the Flügel family to this lexigraphic inheritance. It was the elder Flügel who laid the practical foundations of the work during a long residence in this country. Visiting the United States as a merchant about 1803, he remained here fifteen years, travelling up and down the Mississippi for more than a decade in his own vessels. His charts and log-books, still preserved, would afford valuable reminiscences of the early navigation of the great river. Later he published an English grammar and taught at the Leipsic University, where his grandson Ewald, the accomplished editor of *Anglia*, now discusses English and American literature. As United States consul in Leipsic and agent of the Smithsonian Institution, offices efficiently filled afterwards by his son Felix, he rendered useful services to the land which he represented. In 1830 was published the first edition of his Dictionary, a work which was copious for its time, and boasted a larger vocabulary than even the current English lexicons. It is this work which, after passing through various editions and revisions in Germany and England, now appears anew in charge of the second and third generations.

The position of the present edition seems secure. It is destined to remain for a long period the standard dictionary of reference for translating between English and German, and a place should be found for it on the desk of every teacher and every advanced student of the two languages. For daily and ordinary use in reading and travel, abridged dictionaries like Thieme-Preusser, Cassell-Heath, and Longman will still remain useful and convenient helps; but they will need to be supplemented by frequent consultations of Flügel not less than of Sanders, Grimm, Weigand, Heyne, Heyse, and Kluge. For that no one lexicon may satisfy all demands is a discovery made at an early stage by every student, and in lexicography at least the proverb holds good that only in a multitude of counsellors there is safety.

The typographical effect of Flügel's dictionary is excellent. The page is divided into triple columns, and the leading word of each article is in full-face. The type is small but clear, and all German words are consistently printed in German characters, while the extremely revised orthography is conservatively avoided. The pronunciation of the English words is indicated—so far as pronunciation may be indicated—after the method of Worcester, by a simple key repeated as a running caption; but the page is not sown with any elaborate system of symbolism to mark by various familiar and unfamiliar devices the classification of the vocabulary. The range of definition includes the technical or scientific terminology. Foreign terms, in Latin as well as in other languages, are not excluded, and geographical nomenclature and proper names, including classical mythology, are exhaustively illustrated. Nautical phrases are well represented. Tables of strong verbs and irregular nouns are given, and a summary of the marks of pronunciation. Abbreviations are found scattered through the text under the initial letters, the articles on which are replete with information. Etymologies are wisely avoided. A formidable tale of English authors cited is enumerated, but the list appears to be fully utilized in the text, with chapter and verse indicated. The excerpts in the English-German part range from Shakspere through the usual seventeenth and eighteenth-century worthies, on which German students of English are often overfed, down through the present century to our own Mark Twain. In extent and attractiveness of quotation the work compares advantageously with Webster and Worcester, and although this feature may be intended more for the foreign reader, the possessor of the work in England or America will turn to these quotations with interest and satisfaction.

Both divisions of the Dictionary have been enlarged by collections of materials made by the author—collections so rich that it has been feasible to make only partial use of them. The principal lexicons in both languages have also

been utilized, but for this employment due acknowledgment has been made. Attention is incidentally called to the fundamental value of Johnson and Todd, whose treasures have been freely plundered by later laborers in the same field. It would appear that some German lexicographers, like Lucas and Grieb, have not abstained from following similar traditions of plagiarism.

To sum up, the Flügel Dictionary is the fruit of honest, long-continued, legitimate scholarly work. An undertaking of this sort, which is no slight influence in aiding two peoples to a more intimate understanding of each other's literature and life, is worthy of a cordial welcome on this side of the ocean too.

The Afghan Wars, 1839–42, 1878–80. By Archibald Forbes. Charles Scribner's Sons. 1891.

Mr. Archibald Forbes has written an excellent account of those two very remarkable episodes of Anglo-Indian history, the Afghan wars. He has compressed, with a light hand and by a very clear arrangement of his materials, a great many important events and transactions, political as well as military, into a handy volume which contains all that the general reader could wish to know upon this subject, explaining concisely the connection of of the two wars, and bringing up to the present date the history of the relations of India with Afghanistan.

The period which he traverses extends from 1839, when an Anglo-Indian army first crossed the Afghan frontier, up to 1880, when, at the close of the second war, the last British regiment evacuated the country. The story of the first war, which ended in 1842, includes a vivid and very accurate description of the great disaster which overtook the British troops in their attempt to retreat from Kabul in January, 1842, when some 4,500 men, with a much larger number of camp-followers, were totally destroyed by the Afghans. No sterner example could be found, in all the annals of warfare, of the consequences of irresolution, imprudence, and incapacity; and never were the conditions of Asiatic fighting more pointedly illustrated than by this narrative, which shows how a well-disciplined and well-armed force, ill led and badly handled, can be exterminated by a horde of barbarians. In the second war, nearly forty years later, precisely the same lesson was enforced at the unlucky battle of Maiwend, where a British division of about 2,500 men was completely routed by the Afghans, with a loss of 964 killed. If any one desires to understand quite plainly how *not* to conduct campaigns against an Asiatic enemy who gives no trouble to Europeans that know their business, he has only to study carefully Mr. Forbes's account of these military operations. If, on the other hand, he prefers to learn how these things should be done, he will find in the defence of Jellalabad, in Gen. Pollock's advance to Kabul (1842), and in Sir Frederick Roberts's march from Kabul to Kandahar in 1880, choice specimens of the best workmanship in the art of Oriental war. To the civilized European, with his arms of precision, it seems at first sight equally simple to rule barbarians and to rout them in the field; but they give no quarter in war or in politics, and mistakes are apt to involve massacres.

Of both Afghan wars the political motives and causes were the same: the English desired to bring the country under their influence, and particularly to exclude the ascendancy of Russia. England has virtually proclaimed a kind of Monroe Doctrine in Asia with regard to all those States which surround the frontiers of India. Just as the United States do not permit the interference, within certain limits, of European Powers on the North American continent, so the English Government bars all encroachment by European rivals within the regions bordering upon its Indian possessions. It was the rumor of Russian advance upon the northern frontier of Afghanistan that caused the expedition of 1839, the invasion of 1879, and very nearly brought on a rupture with Russia in 1885. This principle is the backbone of English policy in the East; and Mr. Forbes explains, with remarkable power of comprehensive view, combined with great precision of details, the working of this principle throughout the last fifty years. He also draws true and striking portraits of the principal actors in the stirring scenes that he describes—of Dost Mahommed Khan, the ablest Ameer of the Kabul dynasty, of his son Akbar Khan, who shot the British envoy at a conference, and of the present Ameer, Abdurrahman Khan, who for the last ten years has been ruling the Afghans with bloody severity, who has mastered the fighting clans, and has nearly reduced them to the melancholy condition of a tame and orderly people. To the English generals who have from time to time distinguished themselves in Afghanistan by brilliant feats or disastrous failures, Mr. Forbes distributes impartial credit or censure; and on Sir Frederick Roberts, who commanded at Kabul during the perilous vicissitudes of the campaign of 1879–1880, he bestows well-merited praise. He shows a true insight into Afghan character, and a generous appreciation of the patriotic valor with which these hardy tribesmen united against the English garrison at Kabul, and spent their blood in the determined attack upon the English position in the winter of 1879. We may approve or condemn the proceedings of the English in Asia, we may regard the steady expansion of their dominion as the progress of civilization or as unjustifiable territorial aggrandizement; but the subject is of unending and world-wide interest; the story is full of tragic incident and heroic enterprise; and the book now before us describes some of the most important and effective scenes of the great drama.

English Colonization and Empire. By Alfred Caldecott. Charles Scribner's Sons. 1891.

The success of University Extension in England has prompted an endeavor to furnish the general reader, through a series of manuals, that combination of principles with facts and methods with results which has been the essential feature of the best extension lectures. Some thirty manuals are announced, and several have already appeared. The present work is filled with well-digested matter set forth in an engaging style. Apt literary references and illustrations, such as a cultivated lecturer would naturally introduce, relieve the narrative here and there, and in one or two other respects the personal tone recalls the lecture-room. For example, it is not England or the English people, but "we," who did this and that. This is a rhetorical blemish in a text-book designed in part for America.

Stated most succinctly, Mr. Caldecott's subject is "the diffusion of European civilization over the face of the inhabited and habitable world." After an introduction admirable alike in matter and form, the work of Portugal, Spain, and England in the pioneer period of discoveries, and the international struggle for supremacy, are described. The historical section is concluded with chapters on the rise of the English power in India and more recent dependencies, and on the development and separation of the American colonies. The rest of the volume, about three-fifths of the whole, deals with the government of the empire, trade policy, supply of labor, native races, education, and religion. As characteristic features of this diffusion of European civilization over the world—differentiating it from earlier migrations—Mr. Caldecott notes: Knowledge of the whole surface of the earth; practical mastery of it and control of the forces of nature—"space obstacles yield to steam, and time obstacles to electricity"; recognition of the oneness of the human race; wealth, under the form of capital, highly mobile, available in any part of the world; the finality of physical science as regards truths in actual possession; and lastly, the moral influence of Christianity.

The sketch of colonization is extremely well done. The author brings out clearly how thoroughly the Spanish colonial policy was dominated by monopoly, but he leaves somewhat indistinct the same feature of the English policy. In regard to the American colonies he doubts whether the broad effect of the navigation laws gave "any serious ground for complaint," as the interference with the natural course of trade was not considerable. The prevalence of illicit trade and smuggling points towards a modification of this judgment.

The section on Africa is a convenient and timely description of the present political condition of that continent brought down to the spring of 1891. One is surprised, upon comparing the maps, to see at what a rate taking possession of Africa has gone on in the last eleven years. There is nothing like it in the previous history of colonization. In this movement the English have a marked advantage in possessing the best part of South Africa with its temperate climate.

In discussing emigration, Mr. Caldecott estimates the value of an immigrant at what it costs to raise one in the mother country. The figure he gives—£175—is Dr. Farr's estimate of the present value of an immigrant, which is found by multiplying his annual net earnings into his expectation of life. In other words, the value of an immigrant to the United States is not what it cost to raise him in Germany, but what he will contribute to the production of wealth in the United States. Among the suggestive comments scattered along Mr. Caldecott's pages one or two may be cited. He compares the modern syndicate with the old chartered trading companies. One secures monopoly by force, the other started with it, but, the monopoly once acquired, the problem of management, the strength and weakness of the organization in both cases, are much the same. The comment on the exclusion of the Chinese is very happy: "In America and Australia, men are practically acknowledging that the Chinaman was right in closing the ports of his country against men of different civilization, for they are now reverting to his policy."

In conclusion we may note some errors that should be corrected. The explanation, page 18, how Brazil came to belong to Portugal is confused and erroneous. More serious is the ante-bellum Southern view of our Federal Union: "The 'States' of America are sovereign States acting under a compact. To speak of 'federating' Great Britain and her colonies is to acknowledge the virtual independence of the latter." This is an extraordinary misapprehension in so well-informed a writer. Not so grave an error, but a statement either indicat-

ing little familiarity with our polity or suffering from too great brevity, is that on page 195, that slavery was abolished by "Presidential decree in 1864, during their great secession war." On page 193, in speaking of the early colonial period, Mr. Caldecott says: "In Pennsylvania slavery was soon disallowed." It was not until 1780 that the movement really began with the passage of a gradual emancipation act. On page 47 Irving is enumerated among the sons of New England. The statement on page 218 that "the existence of non-Adamite man is still an open question" savors more strongly of theological apologetics than of scientific ethnology.

The Antiquities and Curiosities of the Exchequer. By Hubert Hall. With illustrations by Ralph Nevill, and preface by Sir John Lubbock. London: Elliot Stock; New York: A. C. Armstrong & Son. 8vo, pp. xvi., 230.

THE author of this first instalment of the "Camden Library" begins his preface with the assertion that the Exchequer "is certainly the stock from which the several branches of administration originally sprang." This is a sweeping generalization which cannot be accepted without reservation. The best authorities on constitutional history rightly maintain that the Exchequer is one of various central institutions which emerged from the "Curia Regis" of the early Norman kings of England. All will agree with Mr. Hall, however, in ascribing to the Exchequer great importance in the development of the English Constitution. In his book he aims to draw attention to the "quaint surroundings and mystical practice" of the Exchequer, "its working staff, and all the chief appurtenances of its mediæval existence." Most of the results embodied in this work have already appeared in the form of essays, printed in periodicals and in the publications of the Pipe Roll Society. This fact should have been more clearly indicated in the preface.

In chapter i. an attempt is made to determine the official seat of the Treasury in the twelfth century. The author declares in favor of Westminster, but thinks that there were various secondary treasuries. The most important of these was at Winchester, and it was specially designed to accommodate plate, regalia, and jewels, for which a permanent repository was not provided at Westminster until early in the thirteenth century. It cannot be said that Mr. Hall proves these conclusions, and in the *Antiquary* (June and July, 1887) Mr. Round advances some strong arguments in favor of the view that Winchester Castle was the chief treasury in the reigns of Henry I., Stephen, and Henry II. We must also take exception to the remarks on p. 7 concerning the Treasury in the time of Edward the Confessor, which are based on biographies of that King written in the twelfth and thirteenth centuries. From the statements in these sources Mr. Hall infers that the Treasury organization under the Confessor was similar to that of the twelfth century. But he presents no evidence to show that the biographer of the twelfth century is not describing the Exchequer as it existed in his day, rather than in the time of King Edward. Non-contemporary chroniclers of the Middle Ages did not take pains to make such incidental references to institutions of the past conform to facts.

Chapter ii. contains an account of the contents of the mediæval treasury—the coin, regalia, plate, and records. From the earliest times national records were kept for safety in the king's hoard. Those at Westminster were first carefully arranged in 1327. The author briefly describes some of the principal categories of records and the manner in which they were stored away.

The "Exchequer House" and the "Officers of the Exchequer" are the titles of chapters iii. and iv. respectively. Mr. Hall thinks that, during the twelfth century, the chief Exchequer building was in the river-garden of Westminster Palace. His description of the upper and lower chambers is derived from the well-known account given by the author of the 'Dialogus de Scaccario.' The ancient Exchequer buildings were much changed after the end of the thirteenth century, the "upper chamber," or "Exchequer of Account," being removed from the premises occupied by the "lower chamber," or "Exchequer of Receipt." Occasionally it was found necessary to locate the Exchequer temporarily at some other place. For example, in 15 Edward II., the paraphernalia of that institution, including eighteen cart-loads of records, were removed to York, owing to the exigencies of the Scotch war. The letters printed in chapter iv., relating to the domestic affairs of certain Exchequer officers, do not seem to be very instructive or valuable.

The "chess game," or mode of reckoning accounts on the Exchequer table, is described in the next chapter. The author follows the 'Dialogus' in seating seven officials at the head of the table, within a space of about two and one-half feet. It is unfortunate that the explanation of the diagram illustrating the method of computation at the Exchequer (p. 115) seems to contain errors. It is not clear how the lower line of the figure can represent a deficit of £14 17s. 4d. That there is something wrong with Mr. Hall's calculation or statements is evident from the fact that he makes the same diagram represent a deficit of £3 1s. (p. 221). Apart from this dubious two-fold use of his illustration, there is certainly an error in his computation on page 221; for the combination of dots or counters in the fourth row makes £12 19s. 2d. (cf. p. 129), not £12 18s. 2d. We fear that many uninitiated readers will fail to comprehend "this formidable-looking cryptogram," though Mr. Hall made the meaning of the "dot-system" quite plain in volume vii. of the Pipe Roll Series. In vol. iii. of the Pipe Rolls he did not seem to accept the ordinary view that the Exchequer table in the twelfth century was covered with a checkered cloth or had the appearance of a chess-board, but in the work before us this view is adopted. It would be interesting to know whether he has found any new material that has led to this apparent change of opinion. The author of the 'Dialogus' presents no clear evidence in favor of either view.

Chapter vi. ("Exchequer Problems"), which is mainly an abstract of book ii. of the 'Dialogus,' contains an account of the Pipe Rolls, summonses and writs of the Exchequer, testing of coin, etc.; and chapter vii. ("The Making of the Budget") gives a brief history of the sources of royal revenue in the Middle Ages. The latter is one of the best chapters in the book, though it contains some doubtful speculation. On p. 178 we are informed that there is no evidence to show when or how the old folk-lands became crown-lands; but on p. 204 this change is said to have occurred at the end of the ninth century. On p. 205 the author speaks of the Laws of Edward the Confessor as though they formed an authentic code, made by that monarch "with the approval of his wise men"; but historians now agree that they are a private compilation of the twelfth century.

It is clear, from what has been said above, that Mr. Hall's work is wanting in scholarly accuracy and critical method. It is also disappointing to find, in a book claiming to give "original" results, very few references to the sources from which the material has been obtained. For example, an interesting document is printed on pp. 25–28, which "is translated here from the Norman-French of the original record"; but we are not told where the record may be found. Another striking defect of the book is the author's obscure style. Every chapter is marred by many misty phrases and sentences. The following are a few of them: "the next fifty years," p. 8; "the Tower," pp. 33–34 (it seems at first view to mean the Tower of London, but apparently this is not the meaning); "only a century later," p. 38 (later than what?); "contents of the record repository," p. 49 (what repository? He has spoken of several; cf. pp. 35, 60); "the records deposited in the royal treasury were preserved in similar receptacles to the bullion," p. 49; "former" and "latter," p. 60; "King Edward's day," p. 65 (Edward the Confessor or Edward I.?); "throughout the reign," p. 72 (what reign?); "between the two," p. 80; the definition of a tally, p. 120; "placing a counter in every tenth place for intervening units in the second and third columns," p. 127; "on each of these rotulets lines were ruled, ample space being left between each, and also between the top and bottom of the joint membranes," p. 139; "both items," p. 169; "their" (apparently referring to "the alien"), p. 199; "the etymology of the word," p. 200 (what word?); "these early records," and "of the latter," p. 201.

In the preface the author intimates that the older historians of the Exchequer are too erudite to be intelligible to ordinary readers. But they will probably find Madox and Thomas easier to understand than Hall; and learned readers will long for some of Madox's formidable foot-notes and cautious reasoning. In closing the volume before us, we feel that it contains some valuable results, which cannot be found in older works, but that a better book should have been produced by a writer who is regarded by many as the best recent authority on the history of the Exchequer. Forthcoming volumes of this series should be written in either a more popular or a more learned style, and they should be provided with better indexes.

Mutual Thrift. By J. Frome Wilkinson. [Social Questions of To-day Series.] London: Methuen & Co. 1891.

THE virtue of providence is the cornerstone of human progress. Like charity in the realm of ethics, it is in the economic world the greatest of virtues, without which the others profit nothing. It is not the most amiable of traits; the prudent man may be sometimes avaricious, envious, harsh, and mean. His conduct does not give color to life or furnish subject for romance. His aim may be narrow and his motive selfish, but he renders to society a service that is indispensable to its advance. Moreover, his habit of mind becomes inevitably, as a rule, bound up with the reproductive instinct, and comprehends the welfare of the family as well as of the individual. Nor does the broadening of this form of egoism stop here, for it is the lesson of civilization that the good of the individual is best attained through the welfare of

others. It is to a particular application of this general principle that Mr. Wilkinson has devoted this most instructive volume, his text being that "by the contribution of the savings of many persons to one common fund, the most effectual provision can be made for casualties liable to affect all the contributors."

The extent to which associations for this purpose have been formed in England is amazing. Mr. Wilkinson has not included either the co-operative societies or the trade-unions, and he takes no account of deposits in savings banks, nor of the life-insurance companies patronized by the middle and upper classes. But, with these deductions, the figures are still of the most impressive magnitude. Those friendly societies known as "affiliated orders" have a membership of over 2,000,000, and funds amounting to over £14,000,000. Twenty-six of these bodies had in 1886 an income of £2,786,000, and disbursed in sick benefits and funeral allowances £1,735,000. If we add other societies, we have the enormous total membership in societies insuring for sickness as well as death of 4,394,696, with funds amounting to over £20,000,000. In addition to all these, there are "collecting" societies, which are intended to provide only for burial expenses, with a membership of over 3,500,000, but with funds amounting to only about £2,500,000. With large allowances for double membership, it yet appears that these societies are now insuring over 6,000,000 persons, or more than one for every family not possessed of affluence in the United Kingdom.

In the class of societies insuring against death should apparently be included the "Industrial Assurance" societies. The largest of these are stock companies, whose stock is owned by persons other than the assured, and is extremely lucrative property. Three-fourths of the business done by these companies, which number fourteen, is in the hands of one of them, the "Prudential." The number of its policies now in force is probably 9,000,000—in other words, a fourth of the population of the United Kingdom are its policy-holders! The stockholders seem to receive annually about 100 per cent. upon the capital originally invested. The average amount insured for life is somewhat over £9, the total of insurance being about £83,000,000. The expenses of management are, however, enormous, consuming nearly one-half of the receipts for premiums. The growth of these societies has been in recent years extremely rapid. In 1878 their premium income was about £1,500,000, in 1887 it was £4,180,000. In the former year the death claims paid amounted to a little over £500,000, in the latter year the amount had risen to £1,664,000.

Mr. Wilkinson gives the insurances effected by the middle and upper classes—which are not included in the above figures—as amounting to about £400,000,000, divided among some 750,000 policy-holders. We may add that a reference to Mr. George Howell's account of the trade-unions shows that the membership of these bodies is probably nearly 1,500,000, having an annual income of about £2,000,000, and reserve funds of the same amount. Although the impression is common that these bodies aim chiefly to support their members during strikes, this is by no means the case, their principal function being to insure against less avoidable casualties. If we consider also the large sums deposited in the Government and other savings banks, it is impossible not to admit that the charge commonly brought by the English against themselves that they are a thriftless race, is a most unwarranted calumny. On the contrary, there is abundant ground for asserting that, had it not been for the mischievous effects of public and private almsgiving, the English people would have abundantly protected themselves against the pecuniary ills that flesh is heir to, and that, even as it is, the great masses of the deserving poor have so protected themselves.

We cannot follow Mr. Wilkinson in his interesting account of the origin and growth of these "mutual thrift" societies. The earlier ones were generally secret, with much mummery in their proceedings and a somewhat excessive predominance of the convivial element. Even now many of these associations have their meetings in public houses—places, it is true, not having the disrepute in England that they have in this country, but not in all respects unobjectionable. It goes without saying that the principles of life and casualty assurance were not at first understood, and that great numbers of these bodies came to grief owing to the lack of this knowledge. It is still true that these principles are imperfectly understood, and many failures now occur and will continue to occur until the lessons of experience have been generally learned. But what is especially impressive at the present conjuncture is, that these bodies have been until recently hindered and not helped by the attempts of Government to regulate their affairs.

As is well known, the jealousy with which combinations of workmen were regarded by English law was for a long time so extreme as to include associations for all purposes that were not clearly of a kind not likely to lead to conspiracies to raise wages or otherwise lessen the control of masters. Where they were not positively prohibited, the law at least refused them its assistance, as in cases where officers of these friendly societies had misappropriated the funds intrusted to them. Even when this injustice had been remedied, great injury was done to these societies by the arbitrary power of the officer to whose discretion their registration was committed. The Government, moreover, practically insisted that they should do business according to life tables that were eventually proved to be so defective that their use necessarily resulted in disaster. But the evil effects of governmental folly were most severely felt at the time when the abuses under the Poor Law were at their worst. The practice of granting allowances in aid of wages ruined almost all mutual-insurance societies where it prevailed; and yet these societies sprang at once from their ashes when the abuse was stopped. So dependent upon the virtue of their members for their success are these bodies that they seem to flourish best when most let alone. Mr. Wilkinson remarks upon the feebleness of those that have been patronized, and Mr. Howell declares positively, "No trade union started under patronage has long survived."

We would gladly dwell upon the noble work accomplished by some of the devoted men who have labored for these organizations with little reward except the establishment of the work of their hands, but we must refer those who are interested in such themes to Mr. Wilkinson's pages. Eventually these men worked out the principles upon which their business must be conducted to be enduring, and it is now only a question of time when these methods will be generally adopted. Perhaps we should rather say that it would be only a question of time were it not for the threatening aspect of the State insurance scheme. The Socialistic craze is now so strong in England that it is not improbable that this scheme, which embodies the exploded fallacies of the old Poor Law, will be adopted, in which case the most disastrous results to this magnificent structure of voluntary mutual insurance will follow. As Mr. Wilkinson impressively says, "Any legislative proposal, however plausible and helpful it may appear, that in the smallest degree lessens the healthy cultivation and exercise of the economic and moral virtues of self-reliance and self-help, as seen in the great voluntary mutual-thrift institutions of our country, will strike a deadly blow against national progress."

The Campaign of Fredericksburg, Nov.-Dec., 1862: A Tactical Study for Officers. By Brevet-Major G. F. R. Henderson, York and Lancaster Regiment. Third edition. London: Gale & Polden. 16mo, pp. xx, 145, colored maps.

The Battle of Spicheren: A Study in Practical Tactics and War Training. Same author and publishers. 16mo, pp. xxx, 300, colored maps.

THE first of these books is well known through the earlier editions, the original publication being anonymous, "by a line officer." The second is on the same general plan, being the detailed military history of the first battle on the Moselle frontier in the Franco-Prussian war. The form is compact, the printing good, the binding neat and suitable for use in camp. Both are models in their way of a good handy volume, flexible and easily packed in a valise or carried in a pocket, and yet so legible as to be read with comfort. In the matter of maps they are far beyond any books of moderate price published in this country. The outlines are clear, the indications of topography simple but good, and the positions and movements of the opposing forces are contrasted by bright red and blue colors, so that the eye follows them without hesitation or fatigue. The author's study of the official material has been conscientious, though, in the Fredericksburg, he does not conceal his sympathy with the Confederate side. This very fact will perhaps make the little book more instructive to the officers of our army, as they will be the more stimulated to independent examination of his statements and to a comparison with the full official records of that campaign, which are now published. In the Spicheren, he draws very forcibly the contrast between the uncertain and irresolute handling of the French armies, under the guidance of a general staff which he characterizes as utterly incompetent, and the systematic and strong combinations of the Germans, the fruit of the long discipline of both staff and line under the master mind and the firm hand of Moltke. The style is clear and direct, and the general reader (as well as military ones) will find it easy and interesting to follow the detailed movements of the battles described, aided so well by the comments of a competent guide and by the liberal array of charts and sketches.

Mr. Sponge's Sporting Tour. [The Jorrocks Edition.] London: Bradbury, Agnew & Co.

WHEN this book made its first appearance, just forty years ago, it was received with immense enthusiasm by youthful and sporting readers in England. *Tempora mutantur*, and though things change very slowly in the English shires, it seems scarcely possible that, even there, such dreary stuff can be admired to-day. The hero is a mean, shameless scamp, and the other characters, male and female, are either

vile or insipid; while the whole book reeks of stale tobacco and gin, and leaves a bad taste in the mouth. Even Leech's illustrations, which young gentlemen of a quarter of a century ago regarded with reverence as works of art, are "standpoints overpassed," as our German friends say. Some of the devoted followers of the anise-seed bag in this country may take an interest in Mr. Sponge's adventures, but it is to be hoped that there is no general demand for this species of literature.

"The weary brain requires some nerve sustaining element as food."—HERBERT SPENCER.

Crosby's Vitalized Phosphites.

The vital principle of animal and vegetable life isolated from the ox brain and wheat germ.

The loss of memory, the tired and exhausted feeling, the dull, unrefreshed sleep, or nervous sleeplessness, brain weariness, depressed vitality, are simply the brain and nervous system calling for their necessary food. In this condition the Vitalized Phosphites give great relief. It restores the true protagon, the brain phosphoid, increases brain and nerve power by specially feeding the nerve centres. It reinvigorates brain and body.

For thirty years endorsed by leading physicians, and the world's best brain workers. Formula on the label. Pamphlet free to those who write for it. Druggists or by mail, $1.00. 56 W. 25th St., N. Y.

F. Crosby Co.

Exhaustion.

HORSFORD'S
ACID PHOSPHATE.

A wonderful remedy, of the highest value in mental and nervous exhaustion.

Overworked men and women, the nervous, weak, and debilitated, will find in the Acid Phosphate a most agreeable, grateful, and harmless stimulant, giving renewed strength and vigor to the entire system.

Dr. Edwin F. Vose, Portland, Me., says: "I have used it in my own case when suffering from nervous exhaustion, with gratifying results. I have prescribed it for many of the various forms of nervous debility, and it has never failed to do good."

Descriptive pamphlet free.

Rumford Chemical Works, Providence, R. I.

Beware of Substitutes and Imitations.

CAUTION: Be sure the word "Horsford's" is on the label. All others are spurious. Never sold in bulk.

SOON TO APPEAR.

XENOPHON'S ANABASIS. With Notes. Edited by Professors W. W. Goodwin and John Williams White of Harvard University. With an Illustrated Vocabulary by Professor White. 12mo, half morocco, 536 pages. Price by mail, postpaid, $1.65. *Ready this month.*

XENOPHON'S HELLENICA, BOOKS V–VII. Based on the edition of Büchsenschütz. Edited by Charles E. Bennett, Professor of Classical Philology in Brown University. Sq. 12mo. NEW BOOKS.

SOCIAL STATICS.

By HERBERT SPENCER. New and revised edition, including "The Man *versus* the State," a series of essays on political tendencies heretofore published separately. 12mo. 420 pages. Cloth, $2.00.

Having been much annoyed by the persistent quotation from the old edition of "Social Statics," in the face of repeated warnings, of views which he had abandoned, and by the misquotation of others which he still holds, Mr. Spencer some ten years ago stopped the sale of the book in England and prohibited its translation. But the rapid spread of communistic theories gave new life to these misrepresentations; hence Mr. Spencer decided to delay no longer a statement of his mature opinions on the rights of individuals and the duty of the State.

MORAL TEACHINGS OF SCIENCE.

By ARABELLA B. BUCKLEY, author of "The Fairy-Land of Science," "Life and Her Children," etc. 12mo. Cloth, 75 cents.

"The book is intended for readers who would not take up an elaborate philosophical work—those who, feeling puzzled and adrift in the present chaos of opinion, may welcome even a partial solution, from a scientific point of view, of the difficulties which oppress their minds."—*From the Preface.*

MANUAL OF CHEMICAL TECHNOLOGY.

By RUDOLF VON WAGNER, translated and edited by WILLIAM CROOKES, F.R.S., from the thirteenth enlarged German edition. With 596 illustrations. 8vo. Cloth, $7.50.

The present English version differs so widely from that which appeared in 1872, that it may be regarded as substantially a new work. It is founded on the thirteenth German edition of 1888, brought out by Dr. Ferdinand Fischer, and remodeled in accordance with the many important changes which have been recently effected in chemical industry.

IT HAPPENED YESTERDAY.

By FREDERICK MARSHALL, author of "Claire Brandon," "French Home Life," etc. No. 88, Town and Country Library. 12mo. Paper, 50 cents; cloth, $1.00.

This story shows a subtle and admirable literary art; it is a story, in some respects, characteristic of "the end of the century," but one which, unlike many of the latter-day essays in what may be termed psychological fiction, succeeds in arresting and holding the reader's attention. In some respects the author shows a gain upon "Claire Brandon," which will be remembered as a work of admirable quality.

For sale by all booksellers; or will be sent by mail on receipt of price by the publishers,

For Light, Power and Traction. By JOHN B. VERITY, M. Inst. E. E. (London).

Fully illustrated. This little manual explains for non-scientific readers and inquirers the different modes of producing electricity; all about the Dynamo; illuminating, lamps, incandescent lights, etc.; storage of electricity; the wiring of a house; arrangement and working of plants, public and private; transmission of power by electricity, motive power, traction, etc.; electrical engineering as a calling, and glossary of electrical terms, etc., and index.

SECOND YEAR OF PUBLICATION.

In 12mo size, limp cloth cover. Price, 50 cents.

Barker's Facts and Figures for the Year 1892.

Containing an amazing amount of valuable and statistical information, alphabetically arranged, about England in particular, and all parts of the world in general, and on every conceivable subject—commerce, government, insurance, agriculture, population, education, finance, health, religion, railways, wealth, etc.

It is confidently believed that the *facts* are *reliable.* They are certainly curious, entertaining, and exhaustive.

Now ready, in 12mo, cloth. Price, $1.00.

John Ruskin; His Life and Teaching.

By J. MARSHALL MATHER. *Third edition revised.*

This volume is not a criticism, but simply an outline of Ruskin's life and teaching, intended for those who purpose a careful and detailed study of his works.

"The tendency of Ruskin's influence is to purify and ennoble, to enthrone duty, reveal goodness, and encourage hope and love."—*The World, N. Y.*

Of all booksellers, or mailed free, on receipt of price, by the publishers.

No. 3 Cooper Union, 4th Ave., New York

A
Consecration Sermon

The Living Temple of Christ's Church and the Two Witnesses of the Word Written and the Sacraments.

A sermon preached at the consecration of the Rev. ISAAC LEA NICHOLSON, D.D., as Bishop of Milwaukee, at St. Mark's Church, Philadelphia.

BY THE
RT. REV. CHARLES C. GRAFTON, S.T.D.,
Bishop of Fond du Lac.

A forcible and masterly epitome of the theology taught by the Episcopal Church.

8vo Pamphlet, Price 15 Cents.

PUBLISHED BY
THE YOUNG CHURCHMAN CO.
Milwaukee, Wisconsin.

FOR SALE BY
E. & J. B. YOUNG & CO., Cooper Union.
J. POTT & CO., 14 Astor Place.

Gustafson's Study of the Drink Question.
Gives the most complete review of the question ever published. Impartial and careful in its evidence, fair and fearless in its conclusions. $1.50.

"The best book for the study of the temperance question."—*Dr. Lyman Abbott.*

For sale by booksellers, or sent by mail, postpaid, on receipt of price.

The Nation.

NEW YORK, THURSDAY, MARCH 3, 1892.

The Week.

THE United States Supreme Court in the *Sayward* case has declined to consider the question of national jurisdiction in Bering Sea outside the three-mile limit. It would be a mistake, however, to suppose that the *Sayward* case had not had a great influence in settling the dispute with Great Britain. It was a noteworthy fact that the first real steps toward arbitration were taken immediately after the *Sayward* petition was presented to the Court. Mr. Blaine had informed Lord Salisbury what the President would consider the points available for arbitration without, however, committing himself to arbitration. When the *Sayward* case came up, a purpose was manifested for the first time of really settling the question in a rational and decent way, instead of prolonging the wind-bag dispute till the next Presidential election. When the case came to argument, the Attorney-General betrayed his anxiety by announcing in open court that the terms of arbitration had been agreed upon. He offered this fact as a reason why the Court should not decide the question of jurisdiction over the waters of Bering Sea beyond the three-mile limit. The Court was evidently glad to avoid that question, but if the position of affairs had been the same now that it was when the petition was filed, the decision would perhaps have been commensurate with the actual emergency.

The decisions of the Supreme Court in the Custom-house cases involving the validity of the McKinley Tariff Act, could hardly have been different from what they are without throwing the Government into confusion and creating embarrassments of the most serious character for the past, the present, and the future. The main point decided is that the invalidity of one part of a revenue act does not invalidate the whole act. When this principle was settled, the objections to the act based upon the reciprocity clause, the omitted tobacco sections, and the sugar bounty really disappeared. Yet the Court considered the two former objections separately. It holds that the reciprocity clause did not put legislative power in the hands of the President, but merely the power to ascertain a fact the determination of which should put the law in operation. The point here is a very fine one, namely, whether the President is to ascertain a fact, or to settle his own convictions and state of mind regarding a certain concatenation of facts. Naturally the Court would, in so narrow a dispute, decide in the way that would produce the least embarrassment. Regarding the two sections that were passed by Congress (as the journals show), but were omitted from the enrolled act, the Court holds that the best evidence for the courts of what was passed by Congress is the act itself, and that it is not competent under existing laws to introduce the journals to contradict the act itself. Of course, Congress can establish a different system of interpretation if it chooses. In the Ballin-Joseph case, where the Special Worsted Act was called in question, the Court holds that the rule adopted by the Fifty-first Congress for "counting a quorum" was within the competency of Congress, and that a law passed in that way will not be declared unconstitutional for that reason only. The propriety of such a rule is not passed upon by the Court, and obviously could not be. In the same case the Court has reversed the decision of the court below, which held that the Worsted Act had not changed the duties on worsteds, but had changed the classification. It is decided now that the change of classification changed the duties *ipso facto*.

Chairman Springer's report on the wool and woollens tariff, although late in coming, is a strong document, and, if followed by a vigorous debate, will help to put the Democratic party on its feet again. That bewildered organization has been wandering hither and thither in an aimless way ever since the election of Speaker Crisp. It has been in the critical situation and desperate plight of not knowing what it wanted. In all cases where a political party does not know what it wants, the country properly says, "Then we don't want you." The question now is whether Chairman Springer and his Committee can make sufficient stir to convince the people that the party wants tariff reform, and intends to fight for it till it gets it. The wool tariff is a good place to begin. There never was any reason for putting a tax on wool. Not even the canons of protection furnish a decent pretext for it. Wool-growing needs to be let alone, and needs nothing else. This is proved by our experience and by that of Great Britain. Wool was practically on the free list from 1857 till 1863, and the business was prosperous. It began to decline when the high tariff of 1867 was adopted, and continued to decline until the free-grazing domain of the Western Territories was made accessible by railroads. In Ohio, the only State that is rabid on the subject of the wool tariff, the number of sheep has declined from 6,730,000 in 1868 to 4,061,000 in 1891. The price of domestic wool has fallen also, and in a still greater ratio, yet the pagans of Ohio are demanding a prohibitory tariff, and are telling us that carpets are a luxury, and that people who buy them ought to pay whatever price it costs to make them of American wool.

Now as to woollen goods, it should be borne in mind that the tariff of 1883 was satisfactory to the manufacturers except as to worsteds. No woollen-manufacturer would have thought of disturbing that tariff had not the pagans come forward with their demand for higher duties on wool. Consequently, to gauge the proposed bill of the Committee of Ways and Means we must take for comparison the tariff of 1883, and ask ourselves what would have been fair and equitable if the McKinley Bill had never existed, and if, instead of that, Congress had repealed all duties on wool. Tested in this way, the bill now proposed will be found to be not only fair, but generous to the manufacturers, and we venture to predict that when the debate comes on, Gen. Stevens, who is the largest individual woollen-manufacturer in the United States, and who is a member of the Committee making this report, will put to shame the organs of protection that have been whining for a month past over what they call the "ruthless cut" at their industry. The truth is, that no tariff reform will ever be accomplished with their consent. If we have to wait till they give the word, the sounding of the last trump will find us under an advancing stage of McKinleyism. The report of the Committee shows that these people declared in writing in 1867 that all the protection they wanted was 25 per cent. net. This bill gives them 35 per cent. net, and now they call it a "ruthless cut." We hope that all the tariff-reformers in Congress will lend a hand to carry this measure through.

Senator Vest's speech on reciprocity is to be welcomed, if for nothing else than the fact that it marks the willingness of at least one Democrat to resume the war upon the McKinley tariff. The managers of the Democratic party at Washington have been so busy bargaining and intriguing to get away from the man who made the tariff issue for them, that they have been so many dumb dogs thus far in the session. They know that as soon as any one opens his mouth to attack McKinley he thereby advocates Cleveland, and hence they have been keeping back their tariff bills to the latest possible moment. Senator Vest has broken the ignoble silence, and his example will give courage to members of the House in the tariff debates. He was perfectly right, too, in saying that the only defence of the McKinley Bill which the Republicans have is to point to that reciprocity clause of it which has, in so far, made the bill inoperative and void. Nor is there any dodging the point he made that the way to get real recipro-

city, the way to make a treaty which will really favor agricultural exports, is to make a treaty with the largest consumers of our agricultural exports. The Republican party could easily give our farmers a better price (because a more active demand) for their staple products in Europe, and at the same time give them cheaper clothing and other necessaries of life—all by means of commercial treaties with France and Germany and Austria. But that, of course, would be a surrender of those precious privileges of being swindled which no true American can part with without tears.

There was an important debate in the Commonwealth Club on Friday evening on the silver question. The first speaker was Mr. Louis R. Ehrich of Colorado Springs, whose recent addresses to the people of his city and State have been so highly commended, and have won for him so much reputation. Mr. Ehrich put the silver situation before his hearers in an illuminating way. He said that the decline in the price of silver was due in large part to the unnatural and artificial purchases of the United States Government. "If a crank should declare his intention," said Mr. Ehrich, "to buy $100,000 worth of Pears's soap every year and put it away, and should carry his intention into effect, the first and immediate result would be to advance the price because the demand in the market would be a little in excess of the previous supply. But the supply would soon overtake the demand, and then a contrary result would be observed. The buyers of soap would begin to be afraid of the accumulating stock in the warehouse of this crank. They would be afraid that he would change his mind and stop buying, and perhaps sell some of his accumulations. They would know that he couldn't go on buying for ever. The larger his hoard became, the more apprehensive they would be, and the more they would curtail their own purchases. So the market would be shorn of its bona-fide purchasers while this crank was giving it an artificial support. The United States, the crank among nations, has been playing the same perilous game with the silver market. It has frightened the other nations by these artificial purchases and this towering accumulation, so that all who can dispense with silver are doing so, and all are cutting down their purchases to the minimum." This diagnosis will be recognized by every financier who has knowledge of what is going on in Europe. Austria has been driven toward the gold basis by sheer terror of the American accumulation of silver. To all silver-standard countries, including India, this is as a leaning tower, liable to fall upon them at any moment. Austria will pawn everything she has in the world in order to avert that danger, and it is not unlikely that she will extract from us the gold necessary to her deliverance from it.

That the stagnant condition of our money market has some connection with the silver question is the opinion of nearly everybody who is able to form an opinion on the subject. The last London *Economist* sums up the situation thus:

"A point of considerable importance in considering the probable future of the market is that there appears to be some probability of a renewal of the flow of gold hither from the United States. It is to that, at all events, that the present monetary policy of the States is tending. Although there is a superabundance of currency, and the banks are holding unprecedentedly large deposits, yet the Government is compelled to keep adding steadily to the superfluity by the issue of nearly £1,000,000 of Treasury notes each month in payment for its purchase of silver. The natural result of that is to drive out the portion of the currency which is of use outside of as well as in the country—viz., the gold currency. Any immediate relief which the European markets may obtain in this way is, however, almost certain to be realized at the cost of subsequent trouble. The fear that the States are drifting into monetary difficulties has already disorganized the silver market, which is kept in a chronic state of apprehension lest the Treasury should be compelled to dispose of a portion of the enormous stock of the metal it has accumulated. That is the root cause of the extreme weakness of the silver market, and it is a menace also to the stability of the money market, since it is impossible to say to what devices the United States Treasury may be forced to have recourse in its efforts to maintain the parity between gold and silver."

"The root cause of the extreme weakness of the silver market" is exactly what the *Economist* points out. All the world knows that the Treasury purchase of silver must stop some time. Many people believe that when buying ends, selling will begin. In either case silver will fall ten to twenty points, and not even free coinage would stop or hinder it. Free coinage would put an end to Government purchases and leave silver to sell for what it is worth in the world's markets. It would enable the holders of silver to pay their preëxisting debts in a debased metal, but beyond such temporary cheating it would do them no good, for they could not buy a pound, a gallon, or a yard of any kind of property for future delivery except at the gold value thereof.

Secretary Noble's testimony before the Pension Bureau Investigating Committee on Friday left no doubt as to the full truth of one of the worst of the many scandals charged against Gen. Raum's management. The charge was that Gen. Raum's son had taken money as a reward for using his influence to secure an appointment in the Bureau, and in reference to this Mr. Noble said:

"The case against young Raum was very strong, for it was shown conclusively that he had taken money in consideration of securing Smith's promotion. It has never been my practice in the office to wait very long under such circumstances, and I immediately inquired for further information. I investigated the facts, and, as he was the son of the Commissioner, I accepted his resignation, and gave him time to find something else to do. I treated him as moderately as I thought the circumstances required on account of his relationship to the Commissioner, but with promptness."

When Mr. Noble was asked if he remembered the affidavits of two other Bureau employees to the effect that young Raum had demanded money of them, promising promotion in return, he replied that he could not give details, but would look the matter up. That young Raum, after having been proved guilty of one instance of blackmail, should have been permitted to resign and escape all punishment, was itself a scandal of the first magnitude, for which the responsibility rests mainly upon the President.

The following observations about the extraordinary situation of affairs at Albany are made by the *World*, which is doing its best to make it appear that the Hill-Tammany-McLaughlin-Murphy gang constitute the Democratic party for the State of New York:

"The events at Albany during the past week show the existence of a dangerous power in the hands of *four* men. It is evident from these proceedings that, as matters now stand, any legislation desired and agreed upon by Lieut.-Gov. Sheehan, Edward Murphy, jr., Richard Croker, and Hugh McLaughlin, will pass, and that any measure opposed by these men will fail. These men are essentially party bosses. They practise politics for a living—and something more—to themselves and their followers. Neither separately nor together do these men represent the leadership of intellectual and moral forces, devoted to the success of principles and the furtherance of ideas which alone make politics noble and government beneficent."

But why does the *World* not put Hill's name with the others? He is their boss, as they are the bosses of the parts of the machine which he has organized. They stand for him and his methods. They worked under his orders to pack his Convention and his delegation to the National Convention. They are working under his orders now in passing the "jobs" which the *World* is denouncing, for the main object of those "jobs" is to supply money to be used in the Hill-Croker-McLaughlin-Murphy scheme for securing the Democratic nomination for the Presidency. Those jobs are designed to enable Hill to put his hand into the public treasury to get money for campaign purposes, in the same manner that he put it in in 1886, when he took $15,000 from the $30,000 obtained on a swindling aqueduct contract. Are these "jobs" any worse than the theft of the Senate?

The *Iowa State Register*, which still assumes to be the chief organ of the Republican party in its State, although Mr. J. S. Clarkson is no longer its editor, is out with an appeal that the Iowa delegation to the Republican National Convention "be sent to Minneapolis under instructions to cast Iowa's vote solid for the great party leader whose matchless ability as Secretary of State has made the whole Administration popular at home and throughout the world." The *Register* concedes that "President Harrison has proved himself by many titles to be great," but it insists that he "is not great enough," and that the party should take "the strongest man," who is, of course, James G. Blaine. It holds that "he will poll 10,000 more votes in Iowa than any other man that can

be nominated—a gain of 10,000 for the Republicans and a loss of an equal number for the opposing candidates—and Blaine will poll about that number of votes more than any other man, in proportion to the population, in all other States." The best comment on this outburst is found in certain figures regarding the last three Presidential elections in Iowa contained in the *Tribune Almanac*, which we subjoin:

	Rep. Vote.	Opposit'n	Rep. Maj.
1880	183,927	139,138	44,789
1884	197,089	178,788	18,301
1888	211,958	192,532	19,426

It will be seen that Blaine had only 18,301 majority in Iowa in 1884, although Garfield had received 44,789 in 1880, and that even the man who "is not great enough" got a decidedly larger majority in 1888 than "the strongest man" could command in 1884.

One of the indirect effects of the expulsion of the Jews from Russia is the revival of the agitation in England for laws restricting or at least regulating immigration. This agitation attained considerable proportions after the influx of Polish and German Jews in 1881 and 1882, and again in 1884, when Bismarck began his Jew-baiting; but it subsided with subsiding immigration, so that in 1889 Charles Booth wrote: "Whatever may have been the cause for alarm presented by the immigration of the Jew, it is all over now—at least for the present." He was wise to add the last modifying clause, as the immigration has been renewed in the past year and a half in a way to excite great uneasiness. Just how many immigrants have entered England during that time it is impossible to say. A curious anomaly in English statistics is the lack of any adequate system of numbering immigrants. Masters of vessels are required to report the number of aliens on board their ships on entering an English port, and to state how many are en route to America or other countries; the inference being that those not so reported intend to become residents of England. Besides the evident fallibility of such an inference, the admitted fact has to be taken into account that the reports of the masters are drawn up in a very slovenly manner; they often enumerate only the heads of families, and in other respects leave much to be desired as an accurate or trustworthy register of immigration. Yet even these imperfect returns make it clear to Mr. Giffen that there was a "notable increase" in immigration during 1890 and 1891. Taking them, together with Board of Trade reports and testimony gathered from the administrators of the Poor Law and the Boards of Jewish Guardians, a competent writer, Mr. W. H. Wilkins, concludes that between 85,000 and 100,000 immigrants became residents of England in 1891, a very large proportion of whom were destitute.

In view of our own rigid legislation on the subject of pauper immigration, and of the similar measures which have been enacted by the great English colonies—Canada, Victoria, Tasmania—the backwardness of England in the matter appears surprising. The only Alien Act now in force is that of William IV., and this simply relates to the reporting of aliens to customs officers by ship-captains. The result is, that the only action which England can now take to protect herself from pauper immigrants, is the publishing in foreign newspapers circulating among the class from which such immigrants come of notices like the following:

> "Her Britannic Majesty's Consul-General at —— has been instructed to cause it to be made public that destitute persons intending to emigrate to Great Britain to seek employment are likely to be disappointed on arrival, the prospects of obtaining employment being very limited."

England's reluctance to do anything which might look like a retreat from her traditional position as a home of the oppressed is highly creditable, but probably will not operate much longer to prevent the passage of some law protecting herself against a pauper invasion. The labor unions are taking the matter up, no less than forty-three different organizations having passed resolutions calling for the restriction of immigration.

The Emperor William, in his speech at the Brandenburg banquet, virtually says to the German people: "You must not only do as I tell you, but you must think as I tell you." This crazy saying is addressed to forty millions of the most intelligent people on earth, including leaders of the world's thought in many departments of philosophy, literature, and science. To these men and all others he says that it has unfortunately become the fashion to criticise every step taken by the Government, so that many persons have become imbued with the idea that the country is the most unhappy and the worst governed in the world. He advises all such critics to take themselves out of the country at once. If they do not go, he does not tell what may happen, except that he intends to have his own way. All this sounds like an echo of the seventeenth century, but it should be remembered that these and similar wild utterances come from a man who is suffering from a disease which undoubtedly affects his mind. It is known that in the last week in January one of the most distinguished specialists in Germany, Prof. Madelung of the University of Bonn, was summoned to Berlin to study the Emperor's case. Alarming reports of his grave fears for the patient leaked out through the professional and official reserve which was naturally maintained on all hands. There appears to be little doubt that the Emperor suffers increasingly frequent seizures of excruciating pains in the head, or that his medical attendants are apprehensive of serious brain complications. The language which he holds is certainly much like that of incipient mania, though he would be a rash man who would undertake to discriminate, on all occasions, between a man who is merely an egregious fool and one who is an out-and-out lunatic.

Official and parliamentary circles in Berlin are much wrought up over a sweeping attack upon the methods of naval administration, made by Capt. Stenzel in a pamphlet lately published. He points to the expenditure of $110,000,000 upon the navy during the past ten years, and then asserts that the fleet has been neither augmented nor improved by that vast outlay. Some of the vessels constructed are so unwieldy that they cannot be manœuvred at all, he says, and he recalls the fact that the cruiser *Leipzig* had recently to be towed from Yokohama to San Francisco, not being able to make the passage herself, owing to badly planned and built engines. To the same cause was due the great delay of the German squadron in reaching Chilian waters during the civil war. Capt. Stenzel lays the blame of the whole upon the bad organization of the Navy Department of the Government, which he urges should be completely made over if Germany is to be in condition to fight by sea as well as land in a future war. His pamphlet is but a sharp and open presentation of what has long been hinted by various Germans in public life; and, though it is open to the suspicion of exaggeration, and of being timed so as to get a big appropriation from the Reichstag, it seems to expose a really weak spot in German bureaucratic government.

About the only tangible public property that the Argentine Republic can lay its hands upon in these days, when it is gathering together what it can out of the wreck, is its railway system and its harbor works. Both might be regarded as sound public investments, were it not that so many of the millions expended upon them stuck to the fingers of corrupt officials and favored contractors. A recent debate in Congress brought out the fact that the Buenos Ayres port has already cost something like $35,000,000, though it is not yet nearly done. The absurd extravagance of such an outlay is seen by comparison with the very similar work done at Hamburg. At that port, where one third more shipping is handled than at Buenos Ayres, the channel was deepened and quays built for one-twelfth of what has so far been spent at the capital of the Argentine Republic. Another wild scheme of the flush times was the building of the La Plata harbor, only a few miles from Buenos Ayres, where President Roca proposed to create a second Chicago. Fully $10,000,000 was devoted to building that harbor, yet it is scarcely used to-day, the total duties and charges collected there during 1891 being only about $865,000.

POWER OF THE INDEPENDENT VOTE.

CONGRESSMAN BRECKINRIDGE of Kentucky has an article in the *North American Review* which Democrats who despise independent votes, and think their party has no need of them in a Presidential campaign, will do well to read. He is writing as to the issues which will be decisive in the next campaign, and, after beginning with the suggestive remark, "Assuming that the Democratic party has not already thrown away the Presidency," he goes on to say:

"In each Presidential contest there must be some leading issue or issues; and to select wisely and skilfully the issue to be made pre-eminent in a particular canvass is becoming more important because of the increase of those troublesome voters upon whom party ties sit lightly, but who reserve to themselves the privilege to vote as they please. And it is not exaggerating the importance of this increasing class of voters to say that they have much to do with the formation of issues in a given canvass. They hold the balance of power."

The main issue in the approaching canvass will be the tariff, he says, and the particular form in which it will be presented "will depend upon the action of the present House, and largely upon the past history and present views of the candidates selected by the Democratic party, and somewhat upon the platform adopted by our Convention." He warns the leaders of both parties, especially those who control the party machinery, that the "people understand this question, are in earnest about it, and cannot be fooled by careful but ambiguous declarations in platforms, or speeches in obscure rhetorical and oracular phrases," adding:

"For two months the country has been in a condition of expectancy; thousands of independent voters in a state of uncertainty. This will not continue long, and that party will win which soonest impresses upon the country that it is sincere and will follow its convictions to their logical results."

Every observer of political sentiment during the past few weeks knows how true that statement is—knows also that the state of uncertainty with very many independent voters is approaching a state of decision against the Democratic party. The do-nothing policy in the House, the seat-stealing and jobbery at Albany, the Hill Convention and Hill delegation, are filling thousands of independent voters with such disgust for the Democratic party that nothing, except the best of behavior by that party in the near future, can win them back. Mr. Breckinridge points out that these voters have no party ties to bind them. "They care but little," he says, "as to the party which holds power, and nothing as to the persons who fill offices, but much as to the success of views which they hold to be superior to party affiliations." All that is true, and when Mr. Breckinridge says that the Democratic party needs the aid of these voters in order to win, he might have gone further and said that it needs also the support of the independent newspapers, daily and weekly, in the prosecution of its campaign. Think, for example, of trying to carry the country for a Democratic candidate with all the illustrated newspapers arrayed in solid mass against him. How are the independent voters, whose votes "hold the balance of power," according to Mr. Breckinridge, who is a first-rate Democratic authority, to be persuaded to support the Democratic cause if all the independent newspapers are arguing against it?

The most foolish mistake which the "regular" politicians make is in despising the independent vote because it is small. It does not need to be large to decide an election in this State. Ten thousand independents make a change of 20,000 votes in the result, and even a Hill-Tammany man will be forced to admit that there are as many as that in this State. In a national election, which always calls out in New York State a much larger Republican vote than ever appears in a State election, the loss of 10,000 votes to the Democratic party would mean defeat in this State. Instead of only 10,000, however, there are from 50,000 to 100,000 such voters in the State, as the figures of State and national elections since the war conclusively demonstrate. There are more of them in this State to-day than ever before, and the same thing is true of Massachusetts, Rhode Island, Connecticut, and in fact every Northern State. Many of them parted company with the Republican party in 1884 because of Mr. Blaine's nomination, and many more of them have been shaken in their allegiance to the same party because of the McKinley tariff abomination. All of them, however, would go back to it instantly were the Democrats to make such a nomination as that of Hill, or Gorman, or any candidate whose position on the money question is doubtful.

In addition to these Republican Independents, there are in New York State many voters of Democratic affiliations who are to-day in open disgust, if not in open revolt, with their party because of the Hill-Tammany-McLaughlin-Murphy domination. If any one doubts that, let him look at the town elections and see for himself. In 1890, on the tariff issue squarely and honestly put, the Democrats carried this State in the Congressional elections by an aggregate majority of 75,000. In 1891 they carried it again, with the aid of many tariff-reform and independent voters whom Mr. Cleveland's personal leadership brought to Mr. Flower's support, by a majority of 47,000. In the town elections of this winter, there has been a complete revolution, and the Democrats have lost more than 30 per cent. of the strength which they showed in the same elections of a year ago. That is sufficient evidence that a large percentage of the regular Democratic voters is dissatisfied with the present policy of managing the party as if it were an association of brigands.

Mr. Breckinridge, like every other politician worthy of the name, recognizes the fact that in every campaign each party seeks to win success by attracting to its support the voters who are not "regular." The "regulars" of both parties are never appealed to: they are sure to vote with their party under any conditions; but no politician claims that either party has enough of such voters to enable it to carry an election. In fact, if there were enough of them, there would be no necessity for making a campaign. All the arguments in speeches and documents, all the mass-meetings of a campaign, are designed, not to influence the regular voters, but to persuade the undecided and doubtful voters. That is admission by the professional politicians themselves that the doubtful voters constitute the deciding force in the election. Yet the Hill-Tammany proposition is to drive the entire body of these voters to the opposite party before beginning the campaign!

THE BAILIWICK OF THE BAR ASSOCIATION.

IN an interview with Mr. Wheeler H. Peckham, in the *Times* of February 24, he said, if correctly reported, that "the Bar Association of this city had no jurisdiction over Justice Maynard, and could prefer no charges against him; that he did not live in New York, and was not a member of the Association; that the Committee on Grievances [of the Association] was instituted for two purposes: to prefer charges against members of the Association, and to prefer charges against lawyers not members of the Society, but within its bailiwick, with the view of bringing them before the General Term of the Supreme Court for disbarment."

Now, if we remember rightly, it was the Bar Association which set on foot and prosecuted to conviction the impeachment of Judge Barnard in 1870. It is true that Barnard and Cardozo were both Judges of the Supreme Court in this district, and, therefore, strictly speaking, within the bailiwick of the Bar Association; and it may be, therefore, that the Bar Association would be within its right in leaving to the bar of other districts the duty of impeaching judges guilty of misconduct in office in such districts. But the jurisdiction of the Court of Appeals covers the whole State. Its decisions settle the law, without further recourse, for the whole State. One of these has just deprived the city of New York of one of the most valuable public bequests ever made. There is hardly any case of importance involving life, liberty, or property which does not go up to it for final judgment. The judges of the Court are therefore within the bailiwick of all the bars and all the bar associations of all the judicial districts. Every lawyer of the State of New York and every lawyer's client, as well as the public at large, have a deep interest in the composition of the Court and in the fitness and good behavior of its judges. It was largely through the exertions of the bar that the amended judiciary article lengthening the terms of the judges was submitted to the people and

passed in 1869, and it has been owing largely to the influence of the bar that both the great political parties have, during the last twenty years, concurred to a very great extent in ceasing to treat seats on the bench of the Court of Appeals as simply party spoils. In fact, if the bar got into the way of considering the character of the highest court as no concern of theirs, where should we be? What other body or person is competent to pass on the fitness of the judges? Of what other body or person are lawyers willing for one moment to admit the competency as critics of the judges? Certainly not the newspapers, for lawyers treat press comments on legal decisions with ridicule and contempt.

The special function of the "Committee on Grievances" of the Association is of no great consequence in a crisis like the present one, in view of the fact that among the "objects" of the Bar Association, as defined in its Constitution, are "to maintain the honor and dignity of the profession of the law, and to increase its usefulness in promoting the due administration of justice." It does not require any straining of language to conclude that the appearance on the bench of the highest court of the State of a judge accused, in a judicial proceeding, of grand larceny in the second degree, committed in order to aid in the perpetration of an election fraud, seriously touches "the honor and dignity of the profession of the law." Nor can any man be very far astray who holds that such an appointment does seriously impair "the usefulness of the profession of the law," and seriously interfere with "the due administration of justice."

Of course, it may be said, and probably will be said, that Judge Maynard's offence having been committed, if committed at all, before he became a judge of the Court of Appeals, it affords no opening for an attack on him as a judge; that the real grievance to be assailed is the abuse of the appointing power committed by Gov. Flower. But this is really a distinction without a difference. It is, and we trust always will be, the presumption of both lawyers and laymen in all civilized countries, that a man who bears the burden of an unanswered criminal charge is, *ipso facto*, unfit for a high, or indeed any, judicial office. It makes no difference how he gets the office as long as the accusation is unrefuted. Of his failure to answer it every citizen and every lawyer is bound to take notice.

We have tried, before making these remarks, to get hold of some of the addresses made by eminent lawyers at the opening of great gatherings of the legal profession in this and other States, and to the graduating classes of law schools. It is in these discourses that one finds the duties of the bar towards the community set forth with most fulness and solemnity. We have, however, not had time enough for a successful search. We may return to these documents hereafter. But we venture to affirm, without being able to quote at this moment, that they lay on the lawyer a burden of responsibility with regard to *everything* that concerns the life, liberty, and happiness of the citizen, which any profession might be proud to bear, but with which no other profession is honored. They confine this responsibility within no "bailiwicks" or districts. They make it as broad as the State, and, in some of its aspects, as broad as the civilized world. Wherever there is a fountain of justice they put lawyers on guard over it, to see that, no matter in what direction it may flow, it shall not be defiled on any pretext whatsoever.

From this point of view it looks as if the Bar Association, even if it cannot impeach Judge Maynard, ought not to allow it to go down to posterity in legal annals, that an appointment like Judge Maynard's was made in this State in the year 1892 without one word of protest from the proper and self-appointed guardians of "the dignity and honor of the profession of the law." And then there is a Committee on "Judicial Nominations." Surely the functions of this Committee extend also to judicial appointments. Is there another nice distinction here?

OLD-AGE PENSIONS IN ENGLAND.

THE remark attributed to Sir William Vernon Harcourt, "We are all Socialists now," finds fresh illustration in the scheme which Mr. Chamberlain, with the backing of the National Provident League and many members of the clergy, is seriously urging upon Parliament and the country for the pensioning of all workingmen when they reach the age of sixty-five. In its original form his plan was a pretty close copy of the German model—that is, the workingman himself, his employer, and the State, were each to contribute in equal proportions to a fund out of which insurance against sickness and pensions in old age could be paid, the whole process to be made compulsory by law. But there was needed only a little public discussion to make it evident that some modifications would be necessary. First the sick-pay part of the scheme was dropped; then it was made voluntary instead of obligatory upon laboring men, and employers were freed from the necessity of contributing to the reserve fund. As nearly as can be gathered from Mr. Chamberlain's reserved intimations, the final form restricts the application of the plan to Scotland, for the present, and provides that if a workingman deposits £5 with the Government before he is twenty-five, the latter will add £15, so that the accumulations would suffice to pay a pension of five shillings a week after the age of sixty-five.

As the intention is evidently more to abolish old-age pauperism than merely to promote habits of thrift, the question at once becomes pertinent to how great an extent old-age pauperism exists under the present conditions. It has been assumed, (and, indeed, this is the basis of the whole movement), that it exists to an appalling extent. A frequently repeated statement of Canon Blackley, the head of the National Provident League, is that "one in every two of the wage-earning classes who pass the age of sixty-five dies as a pauper." Others have put it that "45 per cent. of *all persons* in England who reach the age of sixty years die as paupers." Mr. Charles Booth puts the proportion of paupers in the total population above sixty-five at 38 per cent., but he admits that his figures are misleadingly high, since he has to class as a "pauper" every one who has received any parish assistance whatever. This whole aspect of the case has just been rigorously investigated by Mr. J. F. Wilkinson. He shows how loose and exaggerated the statistics quoted are, proves that there has been a steady decrease in pauperism as a whole in the past thirty years—it was 4.7 per cent. of the population in 1859, and but 2.8 in 1889—and makes it probable that the whole number of paupers above sixty-five is now no more than 350,000 at the very highest. Thus the extent of the evil which it is proposed to remedy has been very greatly magnified at the start.

Apart from this preliminary oversight, the impracticability and impotence of the measure advocated by Mr. Chamberlain are at once apparent. The deposit of £5 or £10, as may be agreed upon, is to be entirely voluntary. Now, the very class of people who are most likely to turn out paupers at sixty-five are either naturally improvident, so that they will not make their deposit, or are so close to starvation even in youth that they cannot. On the other hand, those forehanded workmen who have savings, already enjoy opportunities for placing them where they will serve both as insurance against sickness and a pension after working days are over. They have the Post-office system of annuities, and, above all, they have their own Friendly Societies. These societies have now a membership of about 4,500,000, and funds amounting to no less than £20,000,000.

It is precisely from these organizations that the most effective opposition to Mr. Chamberlain's plan has come. They stand for the principles of thrift and self-help and coöperation, and have let it be clearly known that no bill can go through Parliament which will interfere with the conduct and progress of their affairs. The head of the Foresters said in a recent address: "Determined opposition should be offered to preference or patronage being given to any State fund." At the same meeting the following resolution received the votes of all the 721 delegates present:

> "The question of superannuation has also come to the fore from the interest lately evinced in the subject by the Right Honorable Joseph Chamberlain, M.P.; but it should be well understood that State aid means State interference, and we are of opinion that no such thing will be tolerated by members of Friendly Societies."

In the same tenor were the remarks of

the Master of the Manchester Unity at the annual meeting of that great society:

"We have no desire to see set up another great Government Department, with its army of officials, to further tax the community under the plausible profession of benefits to the aged."

Mr. Chamberlain has endeavored to meet the objections of these organizations of workingmen. At their behest he has abandoned the compulsory character of the measure as originally conceived, and has attempted to annex their own pension system to his Government plan. But to do the latter, it would be necessary to have a Government inspection of the affairs of the Friendly Societies, and that they would never assent to. In fact, his scheme is now so cut down from its first magnificent proportions that it has little to recommend it except its sentimental aspect. Mr. Morley lately said that he "thought the man or the party who solved the question of preventing a man who has worked hard all his life, maintained his family, has been a good citizen, from going in his old age to the workhouse, would deserve more glory than by winning battles on the field." In this he expressed a feeling which is highly commendable, but which is no excuse for running into Socialistic schemes that will not bear examination.

RECONSTRUCTION IN IRELAND.

LONDON, February 15, 1892.

THE two last and the present sessions of Parliament have, regarding Ireland, opened in manners diametrically different—that of 1890 in assured hope and enthusiastic confidence; that of 1890-91 in the blackness of despair; the present, with a feeling of encouragement, especially if we consider the results of the English by-elections, yet not without a grave conception of the magnitude of difficulties before us when we remember the Parnellite success at Waterford. To most of the Irish members there appeared no possibility of difference regarding Mr. Parnell's duty and the right course to be pursued when, in November, 1890, they determined to bring him to book regarding the O'Shea verdict and his attitude towards the Liberal party and themselves. If their mental vision was then unsealed, and for the first time the selfishness of spirit to which he had declined stood fully revealed before them and the world, they also realized as they had never realized before his consummate adroitness and superb resource. A difference hinging entirely upon personal conduct of his which could be defended by no one, was, in a speech of a few minutes and in a short manifesto, made to turn upon totally different issues. They, not he, were put upon their defence. He recognized the subsistence of tense cords of feeling in the Irish heart which they thought had been for ever unstrung, and the growth of others of which they had been unaware. Suspicion and hatred of English parties and of the English people were again aroused. The cry of "No priests in politics" was raised when it was found that the priests were opposed to him. The issues before the country were deliberately confused.

The history of Irish affairs since has been the history of an effort, in the main successful, to reëstablish the Irish movement upon the basis, and carry it forward upon the lines, which Mr. Parnell himself had originally laid down, but which he and his followers had so strangely abandoned. His and their object thenceforward was to uproot the very foundations of an agitation carried with infinite toil, at infinite sacrifice, through twenty weary years almost to success. The crisis was desperate. The organization of the National League remained in Mr. Parnell's hands. The principal organ of public opinion in Ireland—theretofore also the organ of the Catholic bishops—supported his policy, and dared his opponents (the majority of the Irish party) to show their faces in Ireland. On the side of the nation as against a man, Davitt was more of a philosopher than an organizer. Sexton, supreme as a parliamentarian, was ill-fitted by disposition to face mobs and blackthorns. Dillon and O'Brien were in America, and on their return, after futile attempts at a settlement, went into prison with words of doubtful import on their lips. Justin McCarthy, the new chairman, whom every one respected, was not the man for a rough-and-tumble fight. It was Mr. Healy in the main that saved the situation. If the storm was to be faced and beaten down, it was he that stood in the forefront. If within a few weeks a daily organ, the *National Press*, was started, and the reorganization of the country set about, if within a few months the *Freeman's Journal* was compelled to swing into line with the majority of the nation—to him, more than to any other man, was the credit due. And yet, by the violence of his language, Mr. Healy was between many a cause of profound difference, and he is pointed to by the Parnellites as a permanent impediment in the way of reconciliation. There can be little doubt that his writings and utterances alienated many sensitive souls, incapable of perceiving that extravagance of language in support of right cannot warrant men in turning their backs upon the right. The question they should now ask themselves is, not whether they might not have preferred to have the crisis met in a spirit of complaisant and respectable amiability, but whether, remembering the language used by Mr. Parnell himself at the outset, and the course of action embarked upon by him and his adherents, it would have been possible, with any chance of success, so to have met it. That Healy and men like him are hated by the Parnellites not on account of their language, but in proportion as they are dangerous opponents, is proved by the fact that just as Dillon, O'Brien, and Davitt, whose language has been studiously moderate, have come to the front, they have come to be hated in like manner. Scarcely worse treatment has by howling crowds in the streets of Dublin been meted out to Mr. Healy than has been meted out to men who, by their desire for forgiveness and reconciliation, have run the risk of being considered half-hearted.

Nevertheless, the time has now come when scornful invective and denunciation had better give place to moderation. Mr. Parnell died, worn out by his own frantic efforts to undo his life's work, all by which he will yet be remembered. The evil passions resuscitated by him still bear sway in the breasts of his followers, and operate to a dangerous extent in many of the Irish constituencies. A daily paper has been set on foot to sustain and advance the cause of faction. It must indeed be difficult for Irishmen abroad to understand why there should not again be unity in the Irish party. If they withhold their help and countenance until there is union, if they hold their reason in abeyance in judging as to which side is deserving of their confidence and support, they will fall into the same error as that into which British statesmen for so many generations fell. Union is no more possible in Ireland than in other countries. If it is necessary that she should in Parliament be represented for the present by a homogeneous body of representatives, and if there is no longer any question regarding Mr. Parnell's leadership, the only intelligible basis of union that remains is that the minority should subordinate their feelings to those of the majority. More especially is this to be demanded when all the best-known and best-tried men—those who have striven longest and suffered most—are to be found on the side of the majority. Well might Irishmen stand in doubt if Davitt, Dillon, O'Brien, McCarthy, Sexton, Healy, Sullivan, or one of them, advised union with the minority. The minority is largely composed of fresh additions to the ranks of the National party. The task they set before themselves and the country is to sweep the majority from political life; upon the strength of their own character and services to build up a pure and reliable party; to hamper, embarrass, and destroy the Liberals; to begin again where Mr. Parnell himself began, but without him, without the power of parliamentary protest possible under the old rules, without the possibility of resuscitating a land agitation.

Surely, there never was a wilder programme placed before any people. If we cannot but admit that many of them are honest and devoted, we are driven to the conclusion that they are carried away by some aberration of mind almost amounting to political lunacy. Their main reliance is upon the chivalrous devotion of the Irish people to the memory of Mr. Parnell; upon a feeling against clerical dictation, wholesome enough in itself, if not warranted in the present juncture; upon national pride as against what they style Mr. Gladstone's interference in our affairs. Reason is being held in abeyance; feeling is to take its place—such feeling as led the French to receive Napoleon back from Elba and to elect his nephew; such feeling, if we are to judge from a remarkable article in the January *Atlantic*, as swayed the slave States when they went into rebellion. All hope of settlement in our day and generation would be at an end if such feeling moved the majority of the Irish people.

That it does sway large numbers with a depth and fervor blinding to all best national interests is deeply to be deplored. Strange as it may appear, Parnellism is confined more to town than to country districts, where the people gained most from the agitation of the past twenty years. We always looked forward under home rule to Mr. Parnell leading the conservative instincts of the country against the towns; in place of which in his extremity he appealed to the radical and revolutionary instincts of the towns against the country. So long as the Parnellites can sustain their daily organ, the *Independent*, the longer the general election can be adjourned, the better for them and the Conservatives. They are now a much more potent factor in Irish politics than they are likely to be after the electors have dealt with them. The advent of the Liberals to power, and the introduction of a satisfactory Home-Rule Bill, would entirely cut the ground from under their feet. Poor as has been the success of Mr. Balfour's Land Act, the agrarian movement is apparently breaking down under present complications. Ireland is not the fashion to the extent that she was. These considerations undoubtedly carry weight in Conservative counsels. Nevertheless, the

Liberal leaders and the English people, however discouraged regarding Ireland, have undoubtedly grasped the principles upon which alone the Irish difficulty can be solved. The anticipations of their opponents will be belied. Present trials and difficulties reveal more clearly than would under previous conditions have been possible, the real opinions of the Irish people. Much is now being brought to the test and fought out that would otherwise have had to be left in doubt until after the establishment of home rule. And, after a general election, whatever measure is accepted as final by a large majority of the Irish people is much more likely to be lasting and final than if it had been accepted by a majority elected merely upon the fiat of Mr. Parnell. D. B.

THE DRINK QUESTION IN GERMANY.

DRESDEN, February 18, 1892.

A NEW idea is just getting above the horiz n of German thought. A body of citizens, small in number, but containing a large proportion of the thoughtful and competent observers of the social situation, are by no means content with the drinking habits of the people. They believe that, even if violent drunkenness is still rare, the physical and moral fibre of the nation is being weakened from year to year; and it is this sentiment which has now found expression in the recent Bill for the Repression of Drunkenness. The fact that agitation on the subject has been able to reach the Reichstag, has been commended by the Emperor, and has been supported by some of the most important persons in the State, certainly makes a very important incident in German social history, and I use the present moment of discussion to point out what seem to me the social influences and movements which lie behind the bill.

The contents of the present bill make up a strange mingling of some proposals which to an American seem very elementary, with others which seem very harsh. It is curious to hear the appeal to personal liberty made at such different points in different lands. The American citizen has grown accustomed to having his liberty infringed in the case of drink, but thinks of Germany as a monument of Governmental interference because it has State railways and telegraphs and compulsory army-service. The German, on the other hand, takes these institutions as in the course of nature, and is even willing that the State shall put drunkards under guardianship and sequestrate their estates; but he draws the line of personal liberty at his own right to unlimited beer. Much more interesting, however, than the fate of the present bill is the question what the influences are which lie behind it, and which will remain of importance even if the bill is wholly lost. These influences appear to be of two kinds: first, the growth of organized temperance organizations in Germany; and second, and much more effective, the serious impression felt by many of the best-informed citizens that a social crisis for the country is near at hand in which the liquor question must have its part. As to the first of these influences, the story for Germany is short, and, until very lately, insignificant. Most of the movements which have got any foothold in Germany have come to it from without. The Blue Cross organization has come over from Switzerland and secured some little following among evangelical Christians in Germany. The Good Templars have come down from Denmark and have a limited membership in Schleswig-Holstein. An International Temperance League has been organized within the past year with its bureau in Denmark, and has begun the publication of a monthly journal devoted to the cause (*Internationale Monatsschrift zur Bekämpfung der Trinksitten*). Three small societies rally the German total abstainers, one under the lead of Prof. Forel, the director of an insane asylum in Zürich, one under Prof. Bunge, a physiologist of Basel, and one directed by a most devoted and intelligent leader in all social reforms, Dr. W. Bode of Dresden. Of these societies the Swiss stands more especially for State prohibition, and the Dresden Club for personal influences. Each branch is active with tracts and periodicals, but none of the three numbers more than seventy members.

The only considerable temperance association is the "Verein gegen den Missbrauch geistiger Getränke." This society, founded in 1883, may be said to have a real social importance. It numbers about 10,000 members, grouped in some thirty local associations. Its membership is almost wholly recruited from the educated and influential class. Among its first supporters were the Emperor Frederick, Gen. von Moltke, Field-Marshal Herwarth von Bittenfeld, and the Oberbürgermeister Miquel, now Prussian Minister of Finance and one of the most important persons in Germany. It has also among its members many physicians, prison officials, directors of asylums, pastors concerned with missionary work, charity experts like Dr. Emminghaus of Gotha, economists like Prof. Böhmert of Dresden, and many other persons brought professionally or by their philanthropic activity into close relations with the question of drink. This society demands no pledge of abstinence; indeed, at its Congress last summer in Bremen, wine was served on the tables. It calls for nothing more than a general interest in moderation, and unites all who feel the social danger of drink. The present Emperor, following the example of his father, has formally expressed the hope that this society may prosper. It is in reality the parent of the present bill, for which it has repeatedly petitioned. As early as December, 1887, it formulated its wishes in almost the same language. The law now proposed may thus be fairly described as offered to the country by its expert philanthropists, and as having its strength through the social position of a few of its adherents.

Yet this amount of direct agitation is not, I think, sufficient to account for the new interest in the drink question in Germany. Quite apart from the efforts of these reformers, there seems to be an impression in many minds that both the money and the physical strength of the people are being seriously wasted, and this, too, at a time when both are terribly needed. The fact is that the nations of Europe are now engaged in a contest for life itself—a contest which has been until very lately for military supremacy, but which has now been abruptly and happily transferred to the field of trade. The demand in each country is so great, the competition so close, and the results may be so portentous, that intelligent men are setting themselves to consider every factor of the case which may have any weight; and in Germany, at least, many observant persons have come to see that one important factor is the drink-habit. The nation which first checks the present increase in the use of liquor will have, it is seen, a tremendous advantage both in physical and economic warfare. The first newspaper article which suggested to me that the Germans were aware of the social danger of drink was, curiously enough, the *Army Journal*. It described the autumn manœuvres at Erfurt, where a detachment of reserves was called out to take part in those days of vigorous drill. These men, summoned thus abruptly from their ordinary pursuits, soon showed that they were in poor physical trim and quite unfit for active service; and the military critic attributed this fact to the inactive, beer-drinking habit of life into which they had sunk. "Unless," he wrote, "Germany redeems herself from the saloon, she will look in vain for competent defenders when the test of war is to be met. A man cannot rise from his 'Kneipe' and fight well for his fatherland."

This judgment, made from the military point of view, appears even better justified when one considers the present economic situation in Europe. Germans, on the whole, agree with their Emperor that the new reciprocity treaties begin a new period in European history. But with this change in diplomacy, a new importance is given to questions of social science. A new test of supremacy is presented. The nation, or the group of nations, which is internally the healthiest, the most self-contained, and the most productive, will best meet this new test. The most sober and thrifty nation will have a tremendous advantage in this industrial competition. Where, then—people are beginning to ask themselves—is there any great waste of income, and where can any saving be made? This question points directly to the drink habit. Add to this new industrial diplomacy the present extreme dearness of the necessities of food, partly the result of vicious legislation and partly of the bad harvest of the year. Bread has cost more in Germany this autumn than in any year since the so-called famine year of 1847. The common price through the last twenty years of the coarse rye bread of the country has been about two and a half cents a pound, and often it has gone as low as two cents. It has cost this autumn nearly four cents. Germany is, on the whole, a nation of poor people. In thousands of homes life is sustained on an incredibly narrow margin of income. The average income per head in the kingdom of Saxony is about $106, and there are scores of cases in the Saxon district of Zittau in which whole families of weavers, man, wife, and from one to four children, make both ends meet on $100 a year. In such a state of things a new importance is given to the question: How much does Germany spend on drink? Is it not an unreasonable amount, and does it not seriously limit both the food production and the financial strength of the country?

These questions have seemed to me so important that I have asked a most competent expert, Dr. W. Bode, to make an abstract of the imperial statistics for the year 1889–'90, bearing on this subject. The result of this examination will make the first study of the kind in Germany, and will soon be published in pamphlet form under the title of 'The German Drink Question' ('Die Deutsche Alcohol-Frage'). The facts which will there be described in detail are, briefly stated, as follows: The production of material manufactured into beer, wine, and spirits in Germany occupied in 1889–'90 just about one-fifteenth of the cultivated land of the whole country, a territory somewhat larger than the kingdom of Saxony or the grand-duchy of Baden, and somewhat smaller than the kingdom of Würtemberg. If this immense field, thus devoted to the liquor traffic, were diverted to the production of food, there might be raised on it in a year 1,637 millions of kilogrammes of rye, a quantity sufficient to make 3,272 millions of pounds of the bread on which the poorer classes chiefly live. The fifty millions of

people of Germany would be able to have of this bread 65½ pounds apiece, or a family of eight persons, 524 pounds; enough to give them their entire food for six or seven weeks. The loss in money value may be estimated at a total of 458 millions of marks—a loss to each inhabitant of 9 marks 17 pf., or to a family of eight of 73 marks, enough to pay all the expenses of a weaver's family for about eight weeks. In the direct service of the liquor traffic, agriculture, manufacture, and retailing, about one and a half millions of men are engaged, out of the twenty and one-half millions occupied in all the industries of the land. In other words, about one-quarter of the productive energy of the country is devoted to this business. The consumption of drink per head of the population gave in 1889–90 the following figures: Wine, 6.44 liters; distilled, 4.64 liters (pure alcohol); beer, 106.3 liters.

In the presence of facts of these dimensions it is in vain to say that the temperance question in Germany is not serious and pressing. Here, as in other lands, it is at least one possible key of the economic situation. Professor Schmoller of Berlin, perhaps the most important leader of the younger political economists of Germany, has expressed himself unequivocally on the subject as follows: "Among our working people, the conditions of domestic life, of education, of prosperity, of progress or degradation, are all dependent on the proportion of income which flows down the father's throat. The whole condition of our lower and middle classes—one may even without exaggeration say the future of our nation—depends on this question. If it is true that half our paupers become so through drink, it gives us some estimate of the costly burden which we tolerate. No other of our vices bears comparison with this." FRANCIS G. PEABODY.

Correspondence.

MR. COLE'S ENGRAVINGS.

TO THE EDITOR OF THE NATION:

SIR: In view of the closing of the series of engravings from the early Italian painters, now in course of publication in the *Century*, a desire has been expressed by several artists and amateurs of art, of high distinction, among whom I may mention E. Burne-Jones, G. F. Watts, and W. B. Richmond, to obtain from Mr. Cole a series of engravings of a still more important character, from the same epoch of art in which he has shown so thorough an appreciation and such masterly power of reproduction in the *Century* engravings. Those who have followed the series will have noticed that in the course of the publication there has been a curious diversity in the style of the engraving, which is not explained by the relation of the prints in their order. The reason for this is, that when Mr. Cole went to Europe, he fell first under the influence of the later painters of the Italian school, and began his work in the Louvre, with the "Entombment of Titian," Da Vinci's "Mona Lisa," etc., and it was only when he had been some time in Italy and had become acquainted with the earlier painters, that he entered fully into the spirit of the Italian Renaissance, and his engraving from that time changed its character entirely, as will be seen by the reproductions of Gentile da Fabriano, Duccio, Botticelli, Mantegna, etc., etc., and the engravings which come later in the course of his work are certainly the most masterly and conscientious transcripts to black and white that have ever been made from that school. Mr. Burne-Jones says of them that they are better than any photograph; Mr. Watts says that they are incomparably the best renderings of early Italian art ever made. M. Hébert of the Académie de France has said to me, among other most flattering expressions, that "line could go no further in fidelity to the spirit of the originals." Richmond says that they are incomparable in their truthfulness; and old Cavalcaselle, the veteran critic of Italian art, says that they are the best reproductions of their epoch ever made.

Mr. Cole would be glad to be enabled to do, at a living price, a series of prints four times the size of those in the *Century*, from the earlier painters, and from works either never reproduced or unsatisfactorily reproduced; and I propose, on behalf of the admirers of Mr. Cole's work, to call for subscriptions for a series of wood-engravings which I believe would be the most important reproductions of the noblest school of painting the world has ever seen, both as to size and fidelity. The blocks would be about ten by sixteen inches, and it is proposed to limit the edition to 250 copies. Mr. Cole desires to make the series of twelve, but it seems to me that it would be better to limit the subscriptions to a series of six, which would be delivered, printed under the engraver's own eyes, for $50; and if the subscribers then desired to renew their subscriptions for another six, the way is open. Mr. Burne-Jones is confident of securing fifty subscribers in his own circle, and if 200 can be got, Mr. Cole would set about the work at once, his work for the *Century* being about completed. The half of the subscription would be payable as soon as the number is complete and the work determined on, and the other half when the prints are delivered. This is rendered necessary by the fact that the artist has not the means of support for the period in which he would be engaged in the undertaking.

If some enterprising and liberal publisher would undertake the work at his own risk, the matter would be simplified and the end of the friends of Mr. Cole's art equally attained; the only requisite being that he should be left free as to the choice and treatment of the subjects, which would be from Giotto and Duccio down.

Yours truly, W. J. STILLMAN.

ROME, February 18, 1892.

THE SUFFERING IN RUSSIA.

TO THE EDITOR OF THE NATION:

SIR: I was interested in your recent article on "Aid for the Starving Russians." I have already sent receipts for cooking cornmeal to Russia. They will be published far and wide, so that when the meal contributed by our generous Northwest reaches the sufferers, they will know how to deal with it. The receipts which I selected were mush, Johnnycake, and Boston rye-and-cornmeal bread. Molasses is scarce and dear in Russia, and will probably be omitted from the Boston bread, for that reason and because the taste there runs to sour, not to sweet, bread. I sent these receipts only by way of precaution. Cornmeal (*kukurúza*) is by no means unknown there. My friends in Petersburg told me that they bought it whenever they could, but I never chanced to see any on the table, or to find any in the shops, though the dealers knew what I wanted. In one of the imperial parks, near Petersburg, I have seen corn used as a fine variety of leaf-plant. One ambitious stalk had attained the height of a foot and a half, and sported a tiny ear and silk. It will not grow as grain until a hot region eight hundred or a thousand miles south of Petersburg is reached. A recent paragraph in a Russian newspaper states that cornmeal is now being shipped from Odessa to the suffering districts in the interior, and the peasants have, without doubt, already discovered some ways of cooking it, where they were not already familiar with it. There is no difficulty about grinding it, as they make several sorts of meal (*krupá*) in Russia. Oatmeal is not among them. After a long and wearisome search, when I was informed condescendingly, in shop after shop, that oatmeal was fit only for animals, I succeeded in getting a little, in St. Petersburg. I never repeated the experiment. No amount of cooking could make that improperly prepared oatmeal fit for human consumption.

The highest aristocracy of Russia is now forming into groups, proceeding in person to the villages which are distant from railways and other means of communication, and administering help to the sufferers. This has been found to be one of the most efficacious methods of rendering aid. Those who cannot go themselves are choosing the most afflicted localities, and sending their contributions to persons of whose honesty they are perfectly sure, and corresponding with them to keep track of the work. Thus, the cousin of Count L. N. Tolstoi, who writes me these details, has chosen for her sphere of activity (being of an age and health which preclude personal activity on the spot) three districts: in Saratoff, where a little hospital has been organized for women and children reduced to beggary; in Orel, where a cousin, Prince V., is distributing succor himself day and night, to prevent any deception; in Penza, where, in a very poor convent, the nuns feed and shelter between 80 and 100 starving people a day, though they have hardly enough to eat themselves. In this manner, the proper expenditure of every penny is assured and is a real benefit. The Count's cousin has raised funds for her work, among other means, by translating 'Miss Toosey's Mission' into French. She has already realized $350 and expects at least $500 from 'Miss Toosey.' It may be of interest to Americans to learn how active and practical the Russians themselves are in this crisis.—Yours truly,

ISABEL F. HAPGOOD.

NEW YORK, February 27, 1892.

THE PERIODIC LAW.

TO THE EDITOR OF THE NATION:

SIR: Without detracting an iota from the fame of Prof. Mendeléef, who is one of the greatest chemists of this or any age, I may venture to correct the statement made in the *Nation* of February 4 (review of 'The Principles of Chemistry'), that this great Russian scientist was the discoverer of "the Periodic Law." In 1882, it is true, the Royal Society of London did award the Davy medal to Prof. Mendeléef, conjointly with Lothar Meyer, "for their discovery of the periodic relations of the atomic weights." This action was taken in ignorance of the fact that in 1864, a number of years before Mendeléef and Meyer had begun their investigations, Prof. John A. R. Newlands of England had pointed out the law of octaves and the periodicity of functions. For some strange reason the discovery attracted little notice at the time, but after the Royal Society had honored his rivals, Prof. Newlands claimed recognition as the original discoverer. The fact having been conclusively established, the Royal Society in 1887 awarded the Davy medal for that year to Prof. New-

lands "for his discovery of the Periodic Law of the Chemical Elements," adding, "Although in the somewhat less complete form in which the law was enunciated by him, it did not at the time attract the attention of chemists, still, in so far as the work of the two foreign chemists above mentioned was anticipated, the priority belongs to Mr. Newlands" (*vide* Proceedings of the Royal Society of London, 1887–'88, vol. 43, p. 195).

Even Newlands was almost anticipated by Beguyer de Chancourtois, who was catching a gleam of the great truth enunciated by Newlands, and elaborated by Mendeléef, when he brought out his treatise in 1863, entitled, 'Vis Tellurique, classement naturel des corps simples ou radicaux, obtenu au moyen d'un système de classification hélicoïdal et numérique.'—Yours truly, C. De K.

New York, February 5, 1892.

[If our correspondent will read carefully what the Council of the Royal Society say about Newlands, he will see that they do not commit themselves very far. In truth, the step taken by him was not a difficult one. The principal precursor of Mendeléef was, as it seems to us, that penetrating intellect, Josiah P. Cooke, who first proved that all the elements were arranged in natural series. For though his classification was not free from uncertainties, which have since been removed, nor from such mistakes as the association of borax and silicon according to the ideas of that day, yet his memoir could leave no real doubt of the general serial arrangement; and this was a great advance upon what Dumas and others had done. After the new atomic weights came in, it was inevitable that every well-informed and ingenious chemist, in speculating upon the relations of the properties and atomic weights of the elements, should be led to write the different series in a certain succession, somewhat as follows:

Li	Na	K	—	Rb	Ag	Cs	
7	23	39		85	101	132	
—	Mg	Ca	Zn	Sr	Cd	Ba	Pb
	24	40	65	87	112	137	206
C	Si	Ti	—	Zr	Su		
12	28	48		90	118		
N	P	V	As	Nb	Sb	—	Bi
14	31	51	75	94	122		210
O	S	Cr	Se	Mo	Te	W	
16	32	52	78	96	128	184	
Fl	Cl	—	Br	—	I		
19	$35\frac{1}{2}$		80		127		

It would also be remarked that the atomicities of these series seemed to be i, ii, iv, iii, ii, i. No doubt, many a chemist in those days drew up a table more or less like this, but refrained from publishing it, feeling that a great discovery was imminent. An obscure American chemist actually assigned this as a reason for not attaching his name to such a table. Yet this was all, if not more than all, that Newlands did; and his papers, in a very widely circulated journal, made no sensation.

Of all those who were puzzling over the relations of the elements, Mendeléef alone had the sagacity to discern the true scheme of relationship; and this he was aided in doing by his more profound study of the relations between their general properties. His wonderfully vivid conception of the scheme, as well as his clear perception of its evidence, is shown by the formal and audacious descriptions he gave of the properties of several elements then undiscovered, but required to fill blank spaces, and by the subsequent triumphant verification of his predictions, especially of what seemed the most wild and improbable of all—that relating to gallium. Very few inductions in the whole history of science are worthy of being compared with this as efforts of reason. The work of Lothar Meyer also has great value as supplementary to that of Mendeléef. In all branches of physics, inductions concerning periodic laws are most difficult to establish; and the pursuit of indications of periodicity leads all but the most wary of minds to some wild-goose chase. Yet how quickly and completely the periodic law of chemistry was put out of doubt!

While we are upon this subject, we may suggest that if there are atomicules that are Boscovichian points, two or more of these might attract one another according to such a law that they would approach one another in spirals without ever becoming separated; and in this way it might be supposed that the atoms of most of the existing chemical elements have been built up from a few different kinds, and that it is in this way that the relations between the atomic weights have arisen. —Ed. Nation.]

PROTECTION.

To the Editor of The Nation:

Sir: Your issue of December 17, 1891, contained some pointed remarks with regard to the action of the firm of Jas. W. Queen & Co., in complaining to the Government that certain professional persons were obtaining microscopes, ostensibly for laboratory work, and afterwards selling them to students. Their virtuous indignation over this matter called to my mind a conversation of some months since with a gentleman who told me that he had seen in an English medical journal an advertisement by this firm, offering a case of optical test lenses at a certain price, adding below that the same case was $15 more in the United States. As they are not known to be in business from purely philanthropic motives, it is probable that this American firm can not only compete with foreign manufacturers of test lenses, but can make a fair profit in so doing. The iniquitous "protective" tariff, however, makes it possible for them to demand and obtain $15 extra profit from me. Opticus.

Philadelphia, February 27, 1892.

To the Editor of The Nation:

Sir: Gen. Walker's suggestion that the Government should charge immigrants $100 each is offered, I presume, because of the widely diffused conviction that the class of immigrants we have received has debased our political life; but from a protectionist standpoint I do not consider the amount large enough. I am a laboring man, thirty years of age. I earn (say) $300 per annum, and shall probably continue to do so for ten years, making the value of my labor $3,000. I pay a tax of from 30 to 100 per cent. on my wearing apparel, furniture, tools, etc.; why should I not be protected by making my foreign competitor pay at least 20 per cent. tariff on his $3,000 worth of goods, or $600 instead of $100?—Respectfully yours,

Thos. F. Anderson.

Chicago, February 26, 1892.

SCIENCE IN AMERICA.

To the Editor of The Nation:

Sir: The fine aphorism of Calgacus, "Omne ignotum pro magnifico est," has its obverse in the fact that "Omne proximum pro ignobili est." One would hardly suspect, from reading the interesting and excellent letter of Mr. Stille in your issue of the 11th inst., that the doctrines of the complex variable, of conform depiction—*zusammenhangend und in den kleinsten Teilen ähnlich*—of multiply compendent multifoliate Riemannian surfaces, with their *Windungs- und Verzweigungspunkte*, *lacets fondamentaux*, *et id omne genus*, were taught carefully and studied zealously almost within ear-shot of the writer. Yet such is the case. The enclosed conspectus shows that courses in such subjects not only are offered—there is little art in that—but are actually pursued at the University of the State of Missouri. Next year the class will meet not three times, as now, but five times per week, throughout the year, and follow in the fresh tracks of Hermite, Halphen, and Weierstrass. But even Freshman students here are familiarized with $x+iy$ and imaginary exponentals, while for the whole body of geometric discipline the researches of Bolyai, Lobatchevsky, and Riemann are regulative.—Respectfully,

William Benjamin Smith.

Columbia, Mo., February 19, 1892.

[We are pleased to learn that mathematics is so deeply studied in Missouri. The lectures of Hermite form a good introduction to the theory, and the work of Halphen to the practical side, of the doctrine of functions. As we are unacquainted with any treatise of Weierstrass capable of being used for a text-book, the study of this author (concurrently, perhaps, with that of the orations of Calgacus) cannot fail to impress us very much. Nothing is said of projective geometry, which ought to be a compulsory study where there are any compulsory studies; but we cannot expect a relatively small university to cover every branch of mathematics, nor would such an ambitious attempt be wise. We are glad the ideas of Riemann (including doubtless those of Cayley and Klein) are regulative, and that Lobatchevsky is at hand for students who wish to approach the non-Euclidian geometry by the elementary method. Bolyai is a make-weight.—Ed. Nation.]

KIRK'S ALLIBONE.

To the Editor of The Nation:

Sir: Had I been aware of your rule not to print rejoinders to your reviews, I should certainly not have had the presumption to claim exemption from it. But since you have published my letter, with a reply which is calculated, however undesignedly, to convey a wrong impression as to the scope of my book and the principles on which it was prepared—a matter not exclusively of personal importance—I must ask the further indulgence of being permitted to offer a brief explanation.

The work is not a *revision* of Allibone's, and I am no more responsible for his defects than he, if he were still living, would be for mine. The evidence I found that a revision of his work would some day be necessary, led me occasionally to omit entries which could not so appropriately be inserted in the 'Supplement' as in a revised edition of the original work. This will account for the omission, among others, of Mrs. Follen's book, Allibone having mentioned her earlier works, but without dates, etc., so that what seemed to be really required was an entirely new statement in his 'Dictionary.' The omission of Miss Sheppard's name was also intentional, and was obviously necessary if my work was to have any definite limits; for Allibone had recorded her death, which occurred several years before the date at which the 'Supplement' takes up the entries under the letter S, and there was no more reason for my resuscitating her on account of his having failed to mention 'Almost a Heroine' than there would have been for my going back over the whole field of English literature in search of similar cases. J. C. Mangan's death is not mentioned by Allibone; but it occurred within his period, and hence the 'Poems,' a posthumous work, did not appear to me to call for admission in the 'Supplement.'

Several other omissions, among those which you have noticed, may be defended on the same or similar grounds. Thus, Custis's 'Recollections of Washington' was omitted because Allibone had inserted it under Washington's name, where readers would be pretty sure to look for it when they failed to find it under that of the author. George H. Derby was omitted because Allibone had inserted his books under the pseudonym under which they appeared. "Doesticks" is an entry which, in accordance with the rule mentioned in my preface, I should not in any case have made without some fuller knowledge of the personality of the writer; but you will be glad to learn that this "representative of American humor" was not "entirely ignored" by Allibone, who, on the contrary, gave a presumably full list of his immortal works under his real name—Mortimer J. Thompson.

Your suggestion that I ought to have based my statements on contemporary reviews and advertisements seems to me to involve a misconception of the comparative value of such authorities and of the feasibility of such a course. A certain number of my entries were, in fact, derived from these sources; but to have made an exhaustive research among them, especially for American books, would have been to postpone to an indefinitely remote period the completion of the 'Supplement' on the chance of adding a few hundred titles to the ninety-three thousand there enumerated, while it would not have saved me from the commission of mistakes such as I have referred to as "serious."

Very respectfully yours,
JOHN FOSTER KIRK.

PHILADELPHIA, February 29, 1892.

Notes.

A. D. F. RANDOLPH & Co. have nearly ready 'The Early Religion of Israel,' by Prof. Robertson of Glasgow University; 'The Life Beyond,' by George Hepworth; 'The New Life,' by Andrew Murray; and 'A Girl's Winter in India,' by Mary Thorn Carpenter.

Charles L. Webster & Co. will add to their "Fiction, Fact, and Fancy Series," edited by Arthur Stedman, a collection of 'Merry Tales by Mark Twain'; 'Selected Poems from Walt Whitman'; 'The German Emperor and his Eastern Neighbors,' by Poultney Bigelow; and 'Don Finimondone: Calabrian Sketches,' by Mrs. Elizabeth Cavazza.

Harper & Bros. announce 'Monsieur Henri [de la Rochejacquelein]: A Footnote to French History,' by Louise Imogen Guiney; and 'Van Bibber and Others,' short stories by Richard Harding Davis.

Worthington Co. will publish immediately a translation, by Lita Angelica Rice, of Hector Malot's 'Conscience.'

'Ground Arms!' an English version, by Mrs. Alice Asbury Abbott, of Baroness Bertha von Suttner's novel, 'Die Waffen nieder!' is about to be issued by A. C. McClurg & Co., Chicago.

Dr. Prompt, author of several monographs on matters pertaining to the study of Dante, and M. Maignien, librarian at Grenoble, announce the speedy publication of a photographic reproduction of the manuscript of Dante's 'De vulgari eloquio,' which is preserved in the library of Grenoble. This is not only one of the two important manuscripts of the work in existence, both dating from about the end of the fourteenth century, but is probably the more important of the two, being that used as a basis for the *editio princeps* of 1577 by Corbinelli, whose marginal notes are still legible. The reproduction is nearly the size of the original, and makes a book of some fifty pages. Subscriptions, at seven francs, are to be addressed to M. Maignien, Conservateur de la Bibliothèque de Grenoble. Still another forthcoming publication shows the growing interest in France, long indifferent in such matters, in Dante studies. Lecène & Oudin, who recently published M. Édouard Rod's 'Dante' in their series of "Classiques Populaires," now announce Mlle. C. Augis's translation of "l'importante étude de J. A. Symonds sur *Dante, son temps, son œuvre, son génie.*"

'La Femme au point de vue du Droit Public' is the title of a work by M. Ostrogorski which has been crowned by the Faculté de Droit of Paris, and appears in the series published by Arthur Rousseau. The author has compared the electoral laws of the principal countries of the world, finding that female suffrage in its unlimited form prevails only in our State of Wyoming. In a modified form, generally as connected with the possession of property, it is to be found in the Isle of Man, in Austria, Sweden, and Italy. But in local affairs, and for special purposes, women have rights of voting in almost all parts of the earth—rights that are for the most part, except in this country, of ancient date. The author also gives the established rules for female succession to the throne, for regency, etc., and adds chapters upon the capacity of women for holding office and following various public occupations. A translation of the work is to appear in Sonnenschein's "Social Science Series."

We spoke the other day with approval of Prof. Teegan's treatise on 'Elementary Education in France,' and drew from it an augury which its readers will find confirmed in M. Jost's *Annuaire de l'Enseignement Primaire*, now in its eighth year (Paris: Armand Colin & Cie.). This is, for 1892, a solid little volume of 600 pages, equally divided between statistics and personnel of the primary department, and papers on a variety of topics such as, we fear, are caviare to the majority of our primary-school teachers. One of these, "Ne bouleversons pas notre orthographe," by M. Martel, is an able and sensible objection to the proposals of French spelling reformers, and can be read with profit by our own. Of wide application, also, are the papers on "Les Musées scolaires," "Un Musée scolaire dans une école rurale." Another treats of public instruction in Tonkin; and Germany and England, with "abroad" generally, are included in the conspectus of the various contributors. At the end are to be found book reviews for 1891, geographical and scientific surveys, a necrology, and a bibliography.

From the same publishers we have the new periodical launched last month, *Revue Universitaire*, of which the object is to improve secondary education in France. M. Lavisse opens the ball with an article on necessary reforms in this direction, and Mlle. M. Dugard takes up the theme in behalf of her sex. M. Lavisse looks to a special training of professors, and would have them instructed in the current ideas of England and Germany by missionaries sent each year to report on them. Mlle. Dugard shows that in the ten years since the higher education for girls was fairly organized, there have sprung up 24 *lycées*, 26 *collèges*, and fifty courses; this in spite of much opposition, not yet wholly overcome. Extracts from Dr. W. Douglas Hogg's official report on English and French college life are begun and will be continued. The last part of the *Revue* is taken up with examinations and competitions, themes, etc., and with notes and news.

The periodical third in the scale, devoted to "l'enseignement supérieur," is the *Revue Internationale de l'Enseignement* (A. Colin & Cie.), now in its twelfth year. In the January number twenty pages are devoted to an account of Wellesley College (Mass.), by E. Stropeno, who cannot withhold his praise from programme and performance, yet feels that in trying to give women, in Molière's language, "des clartés de tout," the college overdoes, and "virilizes" female education instead of "feminizing" the courses laid down for men. But he observes that this tendency is not confined to Wellesley or to America.

Last year's great earthquake in Japan has been studied and described, with the aid of twenty-nine photographs, by Profs. Milne and Burton, and the work has been published in that country at once sumptuously and at a low price. The seat of origin of the catastrophe was "a basin of palæozoic hills where there are neither volcanoes nor volcanic rocks," but which has a very bad record in the matter of earthquakes.

The twenty-ninth volume of Sidney Lee's 'Dictionary of National Biography' (Macmillan) ranges from *Inglis* to *John*. The Scottish and English monarchs, James and John, fill a large space together, the sketch of James I. of England being from the pen of Mr. S. R. Gardiner. The editor himself writes to good purpose on Ireland and his forgeries, and Mr. Leslie Stephen deals tenderly with Jeffrey. Dr. Richard Garnett gives a very clear idea of Edward Irving's character and career. Other noticeable articles are on Richard Jefferies, Jenner, Douglas Jerrold, and W. S. Jevons. The Rev. M. G. Watkins sums up the cannibal incident which clouds the memory of Stanley's lieutenant, J. S. Jameson, on the Congo, by saying: "Of the inhumanity thus imputed to Jameson he was undoubtedly incapable, but that he was guilty of reprehensible callousness is apparent from his own version of the affair." The pugilist Jackson, "Gentleman Jackson," as he was called by the nobility whom he instructed, was employed, we are told, at the coronation of George IV., "with eighteen other prize-fighters dressed as pages, to guard the entrance to Westminster Abbey and Hall." In the notice of the second Charles

Inglis we descry an error in the thirteenth line, where "Auchnutz" is printed for Auchmuty, whose assistant at Trinity Church in this city Inglis became. *Per contra*, the biographer of William James, the naval historian, rebukes Cooper and Lounsbury for styling him an American and a renegade as well as a felon and a horse doctor; and Appletons' 'Cyclopædia of American Biography' is challenged to prove that Gen. William Irvine graduated at Dublin, for his name does not appear on the list of graduates.

It appears from a new edition of Mr. Barrie's 'The Little Minister' (John W. Lovell Co.) that the copy on which our recent review was based was incomplete. The story was published as a serial in *Good Words* during the year 1891, and the final chapters in the December number of that magazine were not in the book. Mr. Barrie, instead of leaving us in the midst of an interesting situation, tells all we could desire to know. His description of Babbie, become a most respectable person, quite adored by Thrums, perhaps properly rounds out a romantic love story, but we cannot think it so probable as the development conjectured without the author's aid. Still, we are disposed to forgive Thrums so agreeable an inconsistency.

A number of reprints are before us which do not call for many words. From the Harpers, Mr. Black's 'Strange Adventures of a Phaeton,' the second volume in the new and revised edition of his popular novels; and Sir E. Creasy's 'Fifteen Decisive Battles of the World,' which has passed its fortieth year of steady demand. From Nims & Knight, Troy, N. Y., a second edition of Mr. Augustin Daly's 'Woffington,' which has naturally found a larger number of eager buyers than the 150 to whom the first edition (1888) was confined. The volume is still of the handsomest, adorned with nineteen illustrations. From J. W. Bouton, the Aldine edition of Sterne's 'Sentimental Journey,' illustrated by Stanley L. Wood, whose designs are sufficiently clever and enhance the typographical comeliness of the book. From Percival & Co., London, 'Selections from Defoe's Minor Novels,' edited by George Saintsbury in a short introduction to pieced extracts taken from 'Captain Singleton,' 'Moll Flanders,' the 'Memoirs of a Cavalier,' 'Colonel Jack,' and 'Roxana.' From Macmillan, the 'Religio Medici, and Other Essays by Sir Thomas Browne,' in the "Stott Library's" attractive pocket form, with a portrait of Browne and a good prefatory sketch of his life by Dr. D. Lloyd Roberts. The essay on cremation ("Hydriotaphia") has a revived interest in these days. From the Clarendon Press (Macmillan), 'The Oxford Shakspere,' edited by W. J. Craig. Its characteristics are—adherence to the text derivable from the quartos and the first folio, sparing emendations by the editor, a thorough revision of the punctuation, a glossary, and a numbering of the lines by four instead of a longer interval. The plays and the poems are included. The print is fine in double columns, and thin (but not too thin) paper makes an unbulky volume of 1,264 pages, 12mo.

Prominent among the more valuable of the publications recently issued by the Bureau of Ethnology is Prof. Cyrus Thomas's 'Catalogue of Prehistoric Works East of the Rocky Mountains.' Although filling a volume of 246 pages, the list is necessarily incomplete, owing to the indefinite character of some of the earlier accounts, and to the fact that there are thousands of mounds, graves, etc., scattered about the country which are unknown outside of the immediate neighborhoods in which they exist. So far as it goes, however—and a glance at the different maps will show the distribution as well as the number and character of these works—the record is believed to be correct. This, of itself, is a great gain, and when we add that the account is supplemented by a bibliography of the explorations that have been made at certain well-known mound centres, it will be seen that the student has cause to be thankful for the volume.

The grave of Gov. Simon Bradstreet, the common ancestor of the Danas, the Holmeses, Channing, and Wendell Phillips, is the subject of the leading paper in the *Salem Press Historical and Genealogical Record* for January. Bradstreet's portrait in the Essex Institute is reproduced, and there is a view of his tomb. Mr. Perley Derby begins an abstract of the County Court records of Essex County, Massachusetts, 1636–1693, in which the curious will find fresh illustrations of the phase of lax sexual morality recently discussed by Mr. Charles Francis Adams before the Massachusetts Historical Society, as well as of the rigor of church discipline considered in the same connection: presentments of man and wife for their confessed "offence before marriage"; of a certain William Winter of Lynn, "for saying that Mr. Cobbett of Lynn taught things against his own conscience"; of several for alleging "baptism of infants no ordinance of God"; of William Goult of Salem "for unseemly speeches against the rules of the Church; set in stocks one hour and severely whipt on Lord's day"; of Jeffrey Estie "for much sleeping on the Lord's day in church," etc.

The same press has put out, to subscribers, the first part (part ii.) of a 'History of the Putnam Family in England and America,' by Eben Putnam, illustrated. The work is expected to be finished by summer. It is limited to 300 copies. "Many surprises," promises the editor, "are in store for the great body of our name. . . . Never have characteristics, mental and physical, remained so fixed as in our family." This instalment treats of the Putnams of Danvers, and has much to tell of the witchcraft delusion as related to the Putnam family. One member, Joseph Putnam, was conspicuously opposed to the witchcraft trials.

Another bit of Puritan annals is 'Early Grants and Incorporation of the Town of Ware,' by Edward H. Gilbert (Fords, Howard & Hulbert). It is very largely documentary, and has been edited with great scrupulousness and caution. Important are the four maps—one an original compilation, the others representing the grants as found delineated in the Massachusetts Archives.

Mr. Arthur G. Webster writes to us from Clark University: "In my letter last week I spoke of a course including projective geometry formerly given at Harvard, and remarked that it seemed to have disappeared. I have to-day received the pamphlet describing the mathematical courses at Harvard, and am pleased to see that the course is still announced. I am glad to correct this apparent oversight, knowing as I do that it is not the custom at Harvard to take steps backward. I had consulted the catalogue of 1891–'92, in which the names projective or synthetic geometry do not appear, the course referred to being catalogued as analytic geometry (higher course)."

—The March *Atlantic* contains an important educational paper by Prof. Palmer upon the subject of "University Extension." He reviews the character and aims of the movement in England, and has little difficulty in showing the difference in the conditions there and here, the closer dependence of the American college on the people, and the richer and more varied resources, other than collegiate, for popular enlightenment among us; and he comes in this way naturally to the crucial point that the English movement enlists as teachers sufficiently capable men of education not otherwise employed, while in America it is proposed to draft the lecturers from the body of college professors. The doubt which he therefore expresses of the success or even wisdom of our imitation of the English scheme, rests on the probability that systematic college instruction will be weakened, and its grade lowered, in consequence of submitting professors to an amount of work too great to allow just attention to their prime duties. The paper does not lack friendliness for the efforts being made to extend intellectual interest among the people at large, and in particular for the work of Chautauqua, for which Prof. Palmer says the best and most useful word. It is plain, however, that the movement, as hitherto planned in this country, owes more to philanthropic sentiment than to either popular demand or well-considered methods of enlarging the domain of education; and now, rather than later, is the time to say that University Extension must be self-supporting, if it is to succeed, and cannot safely look to the colleges for more than advisory action. Otherwise, it cannot do more than repeat, with some improvement in organization and definiteness, the old lyceum system. This, at least, is the trend of Prof. Palmer's paper, which deserves very careful consideration from those interested in the matter. A second article, interesting because of the unusualness of its tone, is by Gamaliel Bradford, jr., on the "American Pessimist"; and, in fact, it reads rather like a study for some character in a novel than like an essay. Very sane and moderate in tone, and very interesting from its autobiographical nature, is Gen. J. D. Cox's exposition of the reasons which led Northern men to embark in the civil war. It is well calculated to impress thoughtful Southerners of the present or the previous generation. For the encouragement of those who have fancied that our poetry is running too much to "technique," we must refer to the verses entitled "A Metamorphosis," which make the old reader of the *Atlantic* rub his eyes. It were tedious to specify the curious infelicities of these lines, but the concluding couplet shall serve to exemplify them with a rhyme quite novel, we think, in these pages, however well suited to the latitude of Philadelphia:

"—his eyes are mild and calm;
The lion stands confessed a lamb."

Nor is it altogether a matter of rhyme and grammar; but the entire poem, from the time when the "beast of March" is "set free from out a cloud-hung arch" of skies that are as "cold as frosted violet's eye," to the moment of the transmogrifying rhyme above, is what, in the ancient days of criticism and poets, was called "doggerel." But the old "Demon of the Threshold," whom we all know, seems to have been throttled in the ante-room by Howells's "Christmas Boy."

—The *Popular Science Monthly* for March contains nothing that will be more interesting than Prof. Davis's sketch of William Ferrel, in which there are valuable additions to the article on this distinguished physicist which appeared in our columns, and President White's fifteenth chapter in the "Warfare of Science," wherein he outlines with much force the series of great battles fought regarding the relations

of the earth to the heavenly bodies. In the early church, the earth was in its last days, and at best the heavenly bodies could only be objects of pious speculation. Wrought into the foundation of the "Ptolemaic Theory," and based upon it, there was developed in the middle ages, by means of Biblical texts and theologic reasonings, a sacred system of astronomy which became one of the great treasures of the universal Church. A triad of great thinkers, culminating in Saint Thomas Aquinas, the "Angelic Doctor," mainly reared this resultant structure of the universe, in form so final and impregnable that to attack it was blasphemy. It stood for centuries. Many will for the first time learn from Dr. White's able writing that even Luther called Copernicus the hard names of "fool" and "upstart astrologer"; while even the mild Melanchthon's 'Elements of Physics,' not published till six years after Copernicus's death, is responsible for these strange words: "The eyes are witnesses that the heavens revolve in the space of twenty-four hours. But certain men, either from the love of novelty, or to make a display of ingenuity, have concluded that the earth moves. . . . Now, it is a want of honesty and decency to assert such notions publicly, and the example is pernicious. It is the part of a good mind to accept the truth as revealed by God, and to acquiesce in it." Later, and to clinch anti-scientific ideas more firmly into German Protestant teaching, Rector Hensel wrote a text-book for schools, entitled 'The Restored Mosaic System of the World,' which showed the Copernican astronomy to be unscriptural. "Doubtless," significantly comments Dr. White, "this has a far-off sound; yet its echo comes very near modern Protestantism in the expulsion of Dr. Woodrow by the Presbyterian authorities in South Carolina; the expulsion of Prof. Winchell by the Methodist Episcopal authorities of Tennessee; the expulsion of Prof. Toy by the authorities of another Protestant sect in Kentucky; the expulsion of the professors at Beirut under authority of the American Board of Commissioners for Foreign Missions [Dr. White is in error as to the ecclesiastical control of the Protestant College at Beirut] —all for holding the doctrines of modern science, and in the last years of the nineteenth century."

—The handsome second and third parts of Mr. Gotch's 'Architecture of the Renaissance in England' (Boston: Ticknor & Co.) more than sustain the interest of the first, which we noticed some ten months ago, and bring us to the end of the first volume. The subjects are on the whole more attractive than before, and the plates have gained something in quality. Some of the photo-prints of interiors are charming in light, clearness of detail, and picturesque quality—for instance, the Cartoon Gallery at Knole House, pl. 63, in spite of some intrusive and unexplained shadows, or the drawing-room at Bradfield, pl. 23, with its door in an inside porch as in an Italian church, but set in a corner, a device peculiar to these English houses. Of the exteriors, that of Rushton Hall, pl. 50-52, is the most attractive, and is indeed a model of picturesqueness, elegance, and good design. It must be said that the only signs of the Renaissance in it are the entrance gateway and the balustrade that sits rather uneasily above the cornice. Another exterior, Kirby Hall, pl. 45, is an interesting design of John Thorpe, and shows his work curiously commingled with that of Inigo Jones. It tells, also, how early (1570) Thorpe introduced into English building the idea of a single order running through two stories or more, which was the idea that revolutionized the Italian architecture of the sixteenth century; and with what lawless cleverness he pared the order down to a series of mere buttresses, running up into finials. Longford, pl. 33, is another of Thorpe's buildings. Its front, with a graceful second-story loggia, shows him at his best; its plan (a triangle with huge round towers at the angles, like one or two others here given) is characteristic of this most whimsical of architects. After all, one must conclude that Thorpe was a better architect than those about him, and had more sense of design, more fancy, more appreciation of proportion. It is borne in upon us that the English builders of that day were much stronger in surface decoration than in any other. Their arabesques, diapering, and strap-work were good; but their details in relief and their larger features were apt to be coarse, crude, and barbarously misproportioned. We have here, too, an example of the most repellent qualities of their architecture in Barlborough Hall, a bare, cold, rigid, and mechanical design quite in keeping with the clipped yew trees in front of it. It is full of the lean and hungry look which belongs to much of the English Renaissance, and which is due to spare mouldings, thin cornices, and as much as anything to the groups of windows, with their abundant mullions flush, or nearly so, with the face of the wall. Mr. Gotch's criticism is as judicious as before. His comments are always interesting and instructive, and sometimes entertaining; whoever overlooks them in examining the book will do so to his own loss.

—The valuable anthropometric data published in 1877 by the Massachusetts State Board of Health, have been rearranged and recalculated, in the form recommended by Galton, by Dr. Henry P. Bowditch ('The Growth of Children, studied by Galton's Method of Percentile Grades'). That is to say, having measures of 848 Boston school-boys five years old, Dr. Bowditch gives first the average height of the shortest forty-two (or five per cent.), then that of the next shortest forty-two, and so on. These calculations are made for each age from five to eighteen. Similar calculations are given for those of American and of Irish parentage. The same thing is then given in regard to weight, and finally the whole is repeated for girls. The numbers are then plotted in curves in various ways. Several new generalizations are thus brought to view. Of course, every man remembers that humiliating period when the girls of his age were bigger than he, and not only looked down upon him from a greater physical elevation, but still more from the supercilious heights of maturer minds. At the same time, he could not help thinking that the girls were dull. This period begins between ten and eleven with a retarded rate of growth of the boys, both in height and weight, which is coincident with a maximum of mental brightness. Indeed, many a man never after recovers the same penetrating intelligence, as distinguished from human insight. Somewhat later, from twelve to fourteen, the girls attain their most rapid growth, and thus, until the most rapid growth of the boys approaches, the girls continue to be the largest.

—All this was already sufficiently known. Dr. Bowditch's new treatment seems to show that all the phenomena of this age come rather earlier with large-sized than with small-sized children. The method of treatment of the statistics necessarily exaggerates this considerably; for the children who grow earlier are necessarily thereby thrown into the higher grades. Hence, it would be desirable to show the general fact by a method which should preserve the identity of the growers. The preliminary retardation of the growth of boys shows nothing of this, but occurs at about eleven for large and small, though it is much more decided for the former. But the acceleration of the increase of weight in girls (which is far more marked than that of their height) is for the largest girls almost at its maximum at eleven, for the middling girls is delayed to thirteen, and for the smallest does not come till fourteen. The result is, that the period at which the girls are taller than the boys of the same age begins at ten and one-half for the largest, and at eleven and one-half for the smallest children; while the period at which they are heavier begins at ten and one-half for the largest and not till fourteen for the smallest children. Then the boys take their start, the largest growing most rapidly in height and weight at fourteen, the middling ones at fifteen, the smallest at sixteen. Consequently, among the largest children, the boys catch up with the girls in height at thirteen, but among the smallest not till fifteen; while in weight, among the largest children the boys catch up at fourteen and among the smallest at fifteen and one-half. Many other interesting relations are brought out for which the pamphlet will be consulted. We hope that it may serve as a model for much future school anthropometry.

—The Japanese Government, with an enlightened consideration for illiterate foreigners, has caused to be translated and published the report of the Minister for Education, as well as the recent laws and regulations affecting schools and teachers. Although the Government of Japan is highly centralized, the elementary schools of the country are under the control of the local authorities, and supported by local taxation or other subvention. Tuition fees are charged to children attending these common schools, although they may be remitted in case of indigence, and apparently more than one-third of the scholars pay nothing. These fees amount to only one-fourth of the total revenue of the schools. The subjects taught in the ordinary elementary schools are morals, reading, composition, writing, arithmetic, and gymnastics. To this curriculum may be added Japanese geography and history, drawing, singing, handiwork, and, for girls, sewing. In the higher elementary schools foreign geography and science are added, and in some cases a foreign language or some other subject. The course of study in the lower grade is three or four years; in the higher, two, three, or four years; and, in addition to Sundays, not more than ninety days a year are allowed for vacation. The school age is the period of eight years between the sixth and fourteenth year of age, and attendance at school is obligatory, which of course involves the obligation on the part of all communities to provide schools.

—That these are not merely paper provisions appears both from the number of schools and scholars reported and from the disbursements. Controlled by local authorities are over 28,000 schools, of which 26,000 are elementary schools. The teachers number nearly 72,000, and the scholars 3,144,000. Adding those in other schools, the total number in attendance is about 3,410,000, or very nearly half the total population of school age. It is worthy of remark that teachers of elementary schools are forbidden to make use of corporal punishment. The intermediate and higher education is as yet in a

comparatively undeveloped state, the Imperial University being of course the most prominent feature. The total annual expense of the system of education is apparently not far from 9,000,000 *yen*, or, allowing for the depreciation of silver, say $7,000,000. Among the laws, we observe several providing for a system of pensions, the features of which seem to us highly objectionable. Unless human nature proves to be different in Japan from what it has elsewhere shown itself, the system will eventually be affected with serious abuses.

HISTORY MADE READABLE.

The Story of Massachusetts. By Edward Everett Hale. Boston: D. Lothrop Co.

Mr. Hale, with a view to readableness, as he says, has preferred to select twenty occasions of critical interest in the history of Massachusetts rather than to condense the continuous annals within his limited space. In the matter of proportion, his well-known Chautauquan text-book principle of concluding American history with the war of 1812 leads him to devote 319 pages to Massachusetts affairs down to and including that event, and just 14 pages to all that comes after. A "Study of Anne Hutchinson" fills 27 pages! No more slovenly piece of work has proceeded even from his hand, nor could a truly conscientious author allow this to go forth as history.

As to errors in names, Mr. Hale changes Phips to Phipps, Peirce to Pearce, Clap to Clapp, Say and Sele to Say and Seal, Denison to Dennison, Shays to Shay (twenty times). The reader must choose between the recollections of Capt. Roger Clap and of Richard Clapp; between Sir Edmund and Sir Edward Andros; between John Foster Williams and John Forster Williams; between Commodore Hull and Commodore Hall; between Weeden's 'Economic History' and Welden's. The Governor of Massachusetts from 1823 till his death in 1825 was William Eustis—previously of the Army of the Revolution, Member of Congress, Secretary of War, a prominent citizen; and not, as stated (p. 354), William Curtis.

"Sir Harry Vane" did not come over (p. 13) in the year 1633–34. Vane did not come till 1635, and he was not "Sir Harry" till after his return to England. "They [Robinson and his people] had arrived in August, 1608. They would hardly have come to Holland but for the suspension for a time of the 'Thirty Years' War'" (p. 25). The Thirty Years' War began in 1618. Gov. Bradford did not say, as quoted on page 41, "some to saw, some to drive," but, as quoted on p. 44, "some to saw, some to rive." The Massachusetts Company formed in 1627 "meant to make an establishment . . . where men could worship God as they chose, without being under the direction of Archbishop Laud, or of his court of the Star Chamber" (p. 53). Laud's court was the Court of High Commission, and he was not Archbishop till six years later. The "Wishing Stone" on the Boston Common was not (p. 76) below the Walnut Street gate; it was between paths which diverge from below Joy Street to Winter and to West Streets. "Very remarkable personal beauty has for at least a century past been evident in the immediate descendants of her [Anne Hutchinson's] blood" (p. 101). A large number of her direct descendants, including the present writer, have not been co-heirs of this comeliness; but as she is only one of 256 ancestors, they do not hold her responsible, as it may have been some others of the crowd "qui n'étaient pas si bien." It was Winthrop, not Weld, who said of Mrs. Hutchinson (p. 102) "that she had a ready wit and bold spirit." Thomas Hooker went to England and "became Cromwell's chaplain" (p. 117)! The Rev. Thomas Hooker, with Cotton and Davenport, was invited to go over in 1642 to assist in a synod, but he declined to go, was of course never Cromwell's chaplain, and died where he had spent most of his years —at Hartford. "The same earnestness of resolution that led John Cotton to quit his church in Boston, etc." (p. 143). Learned scholars would know what Boston; but the average reader would be helped by the addition of the word "England." At the time of Philip's war, Daniel Denison was indeed appointed commander-in-chief (p. 155), but, because of his illness, Maj. Thomas Savage led the forces. "Capt. Thomas Mosely . . . was a favorite, as he deserved to be, and he enlisted at once a hundred and ten men" (p. 154). We have never read about Capt. Thomas, but Capt. Samuel Mosely was a favorite with his volunteers and with the public, as a brave and skilful officer; he was, however, guilty of cruelty and injustice to the friendly Indians and of insolence and insubordination to his superior officers and to the Council.

"The idea of union for military purposes . . . readily became actual fact in the year 1776" (p. 206). The colonies appointed Washington commander-in-chief in 1775. The Treaty of Utrecht was not (p. 207) "in the year 1712," but in 1713. William Pepperell was of Kittery, not of Jeffery (p. 211), wherever that is. "Of these [Provincial Governors], Phipps, Dudley, and Hutchinson were Massachusetts men" (p. 226). Why leave out Belcher, born in what is now State Street, Boston? "The Earl of Bellomont was the brother of Bishop Burnet, and appointed, perhaps, from deference to his wishes" (p. 227). The previous page states that he was Richard Coote; how then could he be a brother of Bishop Burnet? Bellomont died in 1701, hence could not (p. 226) have been Governor till 1707. Would it not have accorded more with fact to state that Gov. William Burnet, whose lineage has been left untraced, was the son (not brother) of Bishop Burnet? Massachusetts derives her motto not (p. 333) from Philip Sidney, but from Algernon. This is like ascribing Dr. Hale's writings to his granduncle Nathan, "the martyr spy."

The Stamp Act was not (p. 350) in 1763. At the time of the Boston Massacre, the Custom-house was not "on the east side of King Street, now State Street, at the corner of . . . Devonshire Street" (p. 242). It was on the north side of King Street, at the eastern or lower corner of Royal Exchange Lane, now Exchange Street. The meeting of citizens to protest against the continuance of the two regiments in Boston was held in Faneuil Hall in the morning (p. 244), but it was adjourned to the Old South; it was to that old meeting-house that Sam. Adams brought tidings of his victory. "When the tea arrived, a town-meeting was held. . . . When the news of his refusal came the sun had set" (p. 247). The sun had set forty-three times from the first to the last of the eight meetings held upon that subject from November 3 to December 16.

The *Constitution* was "built at Hart's Wharf in Boston in 1796" (p. 312). There was no Hart's Wharf, nor was the *Constitution* built in 1796. The *Constitution* was built on Hartt's ways, and launched September 30, 1797; the ways are now covered by Constitution Wharf. "The commander of the *Constitution* in her first cruise was Isaac Hull" (p. 314). This was July 12, 1812. If the author refers to the first cruise during the war of 1812, this is correct; but in connection with the account of her building, it would mislead. Her first cruise was under Capt. Samuel Nicholson; this was July 20, 1798. "Lafayette visits Massachusetts, 1825" (p. 351). Lafayette visited Massachusetts in 1824, and returned there in 1825.

"General Butler called upon the Governor [Andrew] to say to him that he was sure . . . that it was the intention of the Southern leaders to bring the matter to the arbitrament of war. . . . Northern States should not be unprovided for such an emergency. Acting upon his advice, Governor Andrew sent a message to the Legislature, asking that it might be considered in secrecy, etc., etc., etc." (p. 328). It would be discreditable to any citizen of Massachusetts old enough to see and hear what was going on in 1861 to make this statement; it is positively disgraceful for one who pretends to write history. Early in December, Mr. (not yet Governor) Andrew visited Washington, and personally acquainted himself with the aspect of national affairs, and with the views of representatives of both North and South, and after that the Hon. Charles Francis Adams kept him acquainted, from day to day, with the progress of events; a confidential understanding was established with General Scott, also with Montgomery Blair and Edwin M. Stanton. There was a furious snowstorm on January 5, 1861, the day of his inauguration. Without waiting for it to abate, his first official act, immediately after the inaugural ceremonies, was to despatch a confidential messenger to the Governors of Maine and New Hampshire, to acquaint them with his determination to prepare the active militia of Massachusetts for instant service. The order for this mobilization was issued January 16, the equipments ordered February 6, after a consultation with Gen. Thayer of the United States Engineers and some other officers. A constant communication was kept up with Gen. Scott, who informed the Governor when the troops would probably be sent for, by what routes they should come, and other conditions. Contemporaries attributed these preparatory movements to Gov. Andrew, and blamed and ridiculed him accordingly; they rightly held him responsible, for it was he, and none but he, who took the wise initiative which placed Massachusetts then in the van.

"On the 9th day of April, 1861, Fort Sumter . . . was fired upon. . . . Gov. Andrew instantly issued his proclamation ordering into service the Fifth, Sixth, and Seventh Regiments. . . ." It was not on the 9th, but on the 12th of April that Fort Sumter was fired upon. On the 15th, Gov. Andrew received a telegram and subsequently a formal requisition for troops. He immediately (on the 15th) ordered the commanders of the Third, Fourth, Sixth, and Eighth Regiments to muster them forthwith, and the next day he sent the same order to the Fifth Regiment.

"On the 18th of April the Sixth Regiment was mustered on Boston Common in twenty-four hours after the proclamation was issued," which, according to Mr. Hale, was issued on the 9th or 10th, some 200 hours before. The fact is that, not on the 18th, but early in the morning of the 16th, the Third, Fourth, Sixth, and Eighth Regiments reached Boston, and, because of the howling storm, were not mustered on Boston Common, but barracked at once. The Third, Fourth, and Sixth all left in the afternoon of the 17th—the Third and Fourth for Fortress Monroe, by transports selected and held in readiness from the last of

January; the Sixth for Washington by rail. The Eighth was despatched on the 18th; the Fifth, together with a battalion of rifles and a battery of light artillery, at dawn of the 21st of April.

Mr. Hale's omissions are even worse than his commissions. He condescends, in the opening chapter, to bring "the history of these 270 years [of Massachusetts] . . . together in connected form," and stops short in his summary at April 30, 1789. As, in his 'Man without a Country,' he enforces the jingo doctrine of always following the flag, he makes no mention of the Hartford Convention in connection with the war of 1812, and skips over the Mexican war and Hosea Biglow altogether. His antipathy to the abolitionists makes him silent about the men who set Massachusetts over against South Carolina in the struggle for freedom; about Sumner's beating—a Massachusetts Senator — by a South Carolinian; about John Brown, at one time a citizen of Massachusetts, and finding his chief supporters there. He had previously called George Thompson and Miss Martineau "carpet-baggers," and he now "notes" that "the foreign orators who came from England to instruct us on these subjects were never cordially received," and that "Englishmen had better take care of England, and Americans of America"—a clear apology for the Boston mob of October 21, 1835, directed against Thompson. He will not name a mother's son of the abolitionists, and acknowledges only Mrs. Child as an "anti-slavery prophet." After her, the first name that pops up is that of Mr. Eli Thayer, as was to be expected.

We are dwelling too long on this hodge-podge, from which one would never learn what constitutes the State of Massachusetts. No list of her orators, statesmen, divines, philanthropists, educators, poets. Franklin's statue, Franklin Street, the Franklin School, the Franklin medals, the Franklin fund for loans to mechanics, yield nothing but casual mention of the great Bostonian in the text, and a line relating his birth in the list of "leading events." The Quincy statue, the Quincy School, Quincy Market, do not prompt mention even of the name of the greatest of the mayors. Horace Mann and his statue are ignored. Of Massachusetts's two Presidents, the "old man eloquent" wholly fails to catch Mr. Hale's eye. He can only see Webster opposing the Missouri Compromise, not fastening the Fugitive Slave Law on the country. Arthur Tappan, George Peabody, Dr. Channing, Bryant, Longfellow, Whittier, Hildreth, Prescott, Parkman—they form no part of the Massachusetts of Mr. Hale; Everett, Emerson, Theodore Parker, Lowell, but an incidental part. John G. Palfrey is thrice quoted—once "on salt-fish dinners"! Harvard College goes unmentioned save in connection with the civil war. Who is there that can lay down this book without applying to the historiographer the Whig clergyman's wind-up to a Democratic Thanksgiving proclamation — "Marcus Morton, Governor—*God save the Commonwealth of Massachusetts!*"

RECENT LAW BOOKS.

Mr. Stewart Chaplin's treatise on the 'Suspension of the Power of Alienation and Postponement of Vesting, under the Laws of New York, Michigan, Minnesota and Wisconsin' (Baker, Voorhis & Co.) deals chiefly, if not altogether, with statutory modifications, in the States mentioned in his title, of what is commonly called the Rule against Perpetuities. The subject should not be confounded with that of restraints on the alienation of *present* interests, the most common example of which is furnished by an income derived from a trust fund for the support of minors which a creditor cannot reach. Everything which ties up property is in a certain sense a restraint on alienation, since it makes it less marketable; but, as pointed out by Prof. Gray, in his valuable works on Perpetuities and Restraints on Alienation, the limitation of future estates does not affect the *power* of disposing of the present interest. What rules against remoteness are intended to effect is the suspension of the power of absolute alienation of the whole fee. During the lives in being of the ordinary rule, or the two lives of the New York statute, the remainder being vested in a minor, the absolute title cannot be conveyed. Something here is clearly in suspense, and in this particular case to call it the power of alienation might not introduce much confusion; but the difficulty is that if the remainder-man is of age, the life-tenant and remainder-man can, by joining, convey the whole fee. It is a curious illustration of the confusion in which the whole subject is involved that there is no common agreement as to what name the rule in question, which, in its various forms, more than any other, governs and limits the modern disposition of property by will, should receive. As a matter of practice, in those States which have adhered as far as possible to the common law, it is probably called most frequently the Rule against Perpetuities, while in those States in which statutory changes have been made it is probably called most often the Suspension of the Power of Alienation.

Mr. Chaplin has collected with great industry into a treatise of some four hundred pages several hundred cases which show the law as it exists in four States of the Union, of which one is, in matters of law and property, the most important of all. An appendix also gives statutes of seven other States. Mr. Chaplin declares, what is perfectly true, that the statutory changes have been of so radical a character as to render inapplicable, in a great degree, the treatises and reports embodying the earlier law. His work has been done with care, and will be found very useful to the practitioner.

The revisers of the New York statutes, some sixty years since, found the common-law rule against perpetuities in full force, and, persuaded that they could improve upon it, introduced the "two lives" rule, saying that "it is presumed that no argument need be advanced in favor of restricting, at least to the extent here proposed, the power of creating perpetuities." The difference between the old rule and the innovation they explained clearly. Entail had been abolished, but, by way of what were known as executory devises, estates might be tied up for a *life or lives in being*, and twenty-one years afterwards (the period of infancy). In this the revisers saw a great danger. By taking a large number of lives, property might be tied up for a very long time. This had actually happened in England. What more simple, then, than to limit the number of lives to two? The change needed, as they said, no argument to support it. And now mark the result. In those States in which the New York change has not been introduced, the imagined danger has never occurred, and the law is plain and intelligible, being developed by the judges on the basis of the old common-law principles. In New York the simple change introduced by the revisers has produced such confusion that it has been said by a good authority that "in no civilized country is the making of a will so delicate an operation, and so likely to fail of success, as in New York." Before the passage of the Revised Statutes, there seems to have been only one case before the courts in which the remoteness of a limitation was called in question. Now we have some two hundred.

It is an old story to lawyers, repeated now from year to year, that every new statute means a new crop of cases, less intelligibility in the law, and more litigation. From the time of the Statute of Frauds to the present day, the imposition by the Legislature of arbitrary rules upon the established legal usages of the community, as formulated by the courts, has been productive of nothing but trouble. The evil has reached its highest pitch in our time, owing to the constantly increasing ignorance of legislatures and the multiplication of statutes; but the history of the "two lives" rule in New York shows how dangerous may be even a very intelligent attempt at arbitrary interference with long-established rules of property. Of course the "two lives" rule was only a part of the changes introduced by the New York revisers. It is the corner-stone, however, of a systematic chaos which has not its counterpart anywhere in the world—the despair of judges and litigants—a "mighty maze," as to the plan of which even text-writers as ingenious and painstaking as Mr. Chaplin can in many places do no more than suggest a doubt.

Prof. Keener's text-book, called 'Selections from Leake's Elements of the Law of Contracts and Finch's Cases on Contracts' (Baker, Voorhis & Co.), is a notable product of the rivalry between two systems of legal education, one known as the "Harvard," the other as the "Dwight" method. These terms are not thoroughly descriptive, but roughly answer the purpose of distinguishing between a system in which decided cases play the first part, and one in which cases are subordinated to the commentary upon them, or are used as illustrations of the general principles from which the judgments in them are deduced. Our own opinion is that neither method of teaching, to the total exclusion of the other, is practicable, and that the opposition between the two, while real enough, is in practice always reconciled by a compromise. To teach law by means of cases alone, without any gloss, commentary, or explanation, is as impossible as it would be to teach astronomy by telling a pupil to lie on his back and gaze at the heavens. He would undoubtedly gain an acquaintance with the appearance of the heavens, but he would not become an astronomer. In the same way he might, by sitting in a chair and reading a collection of leading cases, fill his mind with a vast number of isolated judgments, but he would probably know very little of law. Every professor, no matter whether he adopts the "Harvard" system or not, explains his cases by means of a gloss. That he does not write down and publish his gloss, as Blackstone and Kent did, makes no difference. If law could be taught by means of cases alone, there would be no need of law schools at all. All the cases are to be found in the law libraries.

The truth is, that while historically our law is a series of judgments in particular controversies, every single judgment involves a resort to principles governing human conduct, some moral, others having their foundation in prudence, or convenience, or custom. No doubt the principle of decision is often given in the opinion, but in a great many cases it is not, in a great many others there is a difference of opinion among the judges as to what principle the judgment is to be rested on, while in still

others the decision turns out, after much discussion, to have been rested on an erroneous principle.

In his selections on contracts, Prof. Keener has coupled with a collection of leading cases a text or gloss made up from two well-known books. It is intended primarily for students, but the practitioner will find it of use as well. Selections of cases as they are usually made up for students are of no use except in the classes of the professor who comments upon them. No one else has the key. Such a book as Mr. Keener's, however, could be used by any one in any place, for purposes of instruction. The only criticism that we have to suggest is, that in another edition the selected cases should have head-notes. These are a great assistance to the student, and in our judgment he should not only be early familiarized with good head-notes, but taught to make head-notes himself, and, by comparing them with properly prepared syllabi, acquire the art of making correct abstracts. Our own experience convinces us that the number of people in the world who can do this well at present is about as large as that of those who can write a good law book.

In bringing out the ninth edition of Story's 'Equity Pleadings,' the industrious editor restored the text of the fourth edition, edited by Charles Sumner, and published three years after the author's death, and corrected and verified all the citations and quotations. In the present edition (Boston: Little, Brown & Co.) Dr. John M. Gould has nearly doubled the number of cases cited, and yet has only slightly increased the size of the book. The shelves of our law libraries are full of books on Courts of Chancery, their pleading, practice, and jurisprudence, but in the long list Story's 'Pleadings' still holds its own. Prof. Langdell's summary of 'Equity Pleading' is designed primarily for students. The last American edition of Daniell's great book appeared in 1879. Foster's 'Federal Practice' deals with the subject as it has been developed in the courts of the United States. A great variety of other books might be referred to which occupy the field in part, but, thanks in great measure to the careful editorial work of Dr. Gould, Story is still the latest American authority on 'Equity Pleadings.'

The National Reporter System, as applied to the United States Digest, began in 1887, and has already proved itself to be indispensably useful. The last gigantic volume of over 5,000 pages of 'The American Digest' (St. Paul: West Publishing Co.) brings down the decisions of all the courts in the United States for the year to September 1, 1891, while, with the aid of the periodical publications of the system, the lawyer can bring his researches to a much later date. Not only this, but the work is done on a good plan, and well done. Instead of the pages of paragraphs of abstract principles with which digests formerly deluged us—absolutely useless because detached from the facts to which they applied—the American digest has adopted the true principle of always giving the facts as concisely as possible, together with the conclusion reached by the court.

This is the twenty-second year of Hubbell's 'Legal Directory' (New York: Hubbell Legal Directory Co.), whose reputation is well established. Its chief rival is Story's 'Legal Digest and Directory,' but Hubbell's revision is the later of the two; so far as we have had occasion to consult them, they are equally trustworthy. One of their functions is that of serving as intermediary between lawyer and client. Mr. Hubbell has a list of "able and trustworthy attorneys" in the United States and Canada, compiled "from information obtained by our representatives," who are "constantly travelling through the country for the purpose of investigating the professional standing of attorneys," as also "by correspondence with more than 50,000 presidents or cashiers of banks, bankers, or leading merchants." But note, as the old books say, that in corresponding even with such attorneys as these it is best to "sign yourselves as subscribers to Hubbell." Over two hundred pages of "cards" testify powerfully to the declining influence of the old prejudice against professional advertising.

STONEWALL JACKSON.

Life and Letters of Gen. Thomas J. Jackson (Stonewall Jackson). By his Wife, Mary Anna Jackson. Harper & Bros. 12mo, pp. xviii., 479. Illustrated.

WHAT would appear a too free disclosure of domestic life in the case of a private person becomes a welcome aid to our completer knowledge and appreciation of a distinguished man. We cannot understand history except by knowing the characters who make history. Their public career is determined by the intimate and often hidden traits of private character. We feel the need of knowing them as a friend living by their side might know them, before we can form any adequate judgment of their conduct in the great events wherein they play their part. For these reasons everybody who feels true interest in the history of our civil war will be thankful to Jackson's widow that she has let us see with so little reserve the character and the life of the great Confederate soldier as it was revealed in the bosom of his family.

Mrs. Jackson does not pretend to tell us anything of her husband's campaigns, making only such references to them as are necessary to connect the letters which form the bulk of the volume. It is a fact worth knowing, however, that his habitual reticence as to his plans extended even to his wife, and that she knew little more than the rest of the world as to his purposes, his hopes, and his ambitions.

The memoir corrects, to some extent at least, the popular notion that Jackson was careless in dress and in regard to his person. He is described as a well set-up soldier, erect, neat in dress, scrupulous in cleanliness, and erring, if at all, on the side of over-precision in bearing and address. In war service his rigid conscientiousness in sharing the discomforts of his soldiers, especially in reducing baggage, made his uniform and equipments show hard usage, for he did not allow himself a change of exterior clothing. He had been a good horseman from his childhood, and his service in the artillery during the Mexican war had kept him in good form as a mounted officer. His habit of religious reverie and silent prayer when on the march is well established, and this no doubt made him neglectful of his seat on horseback when he forgot himself at the head of a plodding column. Absorbed in thought, his weary body might naturally settle into a collapsed and ungraceful form till aroused by some excitement or otherwise recalled to a sense of his forgetfulness.

It is not hard to see that even in the intensity of his religious life he was masterful and disposed to make his conscience the law for others; not in an offensive way, but by force of a strong will moved by convictions which made it a duty to exhort all about him to accept his standard of right. This is amusingly shown in his sabbatarian notions. He conceived it wrong to accept the use of the public post on Sunday, and would not write letters on days that would cause them to travel on Sunday, unless the whole journey were longer than a week. He would, in such cases, delay writing till Monday, having faith in a providential overruling of any mischief that might come from waiting. He applied the rule even to his correspondence with the lady to whom he was betrothed, and induced her also to act upon it.

He found a curious case of conscience, however, when, in his Valley campaign, he saw an opportunity to gain a military advantage by taking the aggressive and beginning a battle on Sunday. McClellan adopted a rule that he would not take the offensive on Sunday if the enemy observed the *status quo;* but Jackson, though grievously troubled, determined upon an attack, and seems to have followed it up for several Sundays running. His argument shows how easily men lose themselves in the mazes of casuistry. He wrote home deploring the fact, but says, "I believed that so far as our troops were concerned, necessity and mercy both called for the battle," "and this fact of its being necessary to success," he adds, "and being accompanied with success, and that a departure from it is accompanied with disaster, suggests that it must be right!" It is hard, even for a Puritan, to make war and religion entirely agree; but whatever may be the logic of Jackson's casuistry, there is no doubt of the soundness of his military ideas. Himself no slavery propagandist, he had performed the intellectual feat of persuading himself that the cause of the nationalizing of human slavery was God's cause, that the end justified the means, and therefore that success proved the righteousness of beginning a bloody battle in so good a cause on the Lord's day! Thoughtful people have long shrunk from the confident appeal to "the God of battles," and the confident conclusion that the result of war is the direct expression of a divine judgment; but what must such a mind and conscience as Jackson's have thought of his own argument, could he have seen the end of the struggle and the result to his cause and to himself?

Jackson's reputation as a soldier was made in secondary campaigns or in subordinate places in capital ones. His career has a strong likeness to that of Sheridan. Both had brilliant success in command in the Shenandoah Valley, both were looked upon as the right arm of their commanders in the great armies in front of Richmond. As to both it is necessarily an open question whether they would have succeeded if the burden of supreme responsibility had been cast upon them. In Jackson's case some light may be found in an interview with his brother-in-law, Col. Barringer of North Carolina, which Mrs. Jackson incorporates in her memoir. In this, Jackson is represented as saying that he had been in favor of raising the "black flag" at the beginning of the war, and meeting invasion by the policy of "no quarter to the violators of our homes and firesides." The time of the conversation was immediately after the issue of Pope's famous orders in regard to the conduct of the campaign of 1862. Jackson insisted that his original policy of "no quarter" should then be openly adopted. It is among the possibilities that a man of Jackson's fibre might have executed such a policy for a while, thinking he was fulfilling an order to "hew Agag in pieces before the Lord"; but one

prefers to think the humanity of the nineteenth century of the Christian era would have got the upper hand in a Christian man, and that slaughtering surrendered men of his own race would not have been as possible in practice as it seemed in theory. To accept it even in theory indicates a lack of the poise necessary for the commander-in-chief of a great army.

In the same conversation Jackson gave his ideas of a plan of campaign, which consisted in organizing the whole available fighting force into several "light movable columns." He would "hurl these thunderbolts of war against the rich cities and teeming regions" of the North, operating upon points "possibly hundreds of miles away, . . . all the way to Kansas." "These counter-invasions would be the main feature of my policy." It is hardly credible that a soldier of Jackson's intelligence and experience could have expected success from such subdivision of forces and such a scheme of scattered and distant raids. When we reflect that one of these "movable columns" in the heart of a Northern State would be travelling upon foot without communications, while the national armies could have the benefit of railways and telegraphs in concentrating, it would be hard to devise a more certain way of bringing each to grief, as John Morgan's flying column of horsemen came to grief when they were once committed to a traverse of the State of Ohio. If Jackson is rightly reported, it is well for his military fame that Lee planned the occasions on which to use his "thunderbolt of war."

In these pages the man stands out as an enthusiast in religion and in the secession cause. He was evidently warm in his personal affections, also, though very shy of exhibiting them publicly. Autocratic in temperament, he meant to rule for the good of his subjects, whether in his family or in his army; but he could hardly imagine that anything could be for their good except what seemed so to him. Thus he imposed his will on others, even on those he most loved, and could ill bear a divided command in public or in private. Add to this a personal courage of a high order, exalted almost if not quite to fanaticism by his religious enthusiasm, and it would be hard to find qualities better adapted to make a great soldier in all positions short of the highest. If we doubt whether he could have filled Lee's place, it is because his self-revelation does not indicate the highest or the broadest style of practical intellect.

Mrs. Jackson's editing is faultlessly done. Having decided to show something of the inner character of her hero, she never slips in taste, in modesty, or in the nice sense of the limits of reasonable disclosure. She indulges in no vituperation and in no needless laments over the lost cause. She is partisan only so far as loyalty to her husband and his cause demands. She falls into the common error of attributing to Gen. Pope an imaginary order from "headquarters in the saddle," and that myth will probably be immortal, though the revelation of Jackson's earlier "black flag" policy would seem to make criticism of Pope a little superfluous. The book is handsomely uniformed in Confederate gray, with the lieutenant-general's wreath, stars, and sleeve-knot upon the cover.

The Platform: Its Rise and Progress. By Henry Jephson. 2 vols. Macmillan. 1892.

To the American reader the title of this book does not suggest its subject. What Mr. Jephson aims to describe is not the history of the declaration of political principles by party conventions, but the growth of the habit of oral political discussion in England. According to his definition, "every political speech at a public meeting, excluding those from the pulpit and those in courts of justice, comes within the meaning of 'The Platform.'" It should be added that only discussion outside Parliament is meant. This habit Mr. Jephson properly regards as a political institution of recent development, although it is, perhaps, going too far to say that a century and a half ago there were only three great political institutions in England, the Crown, the Lords, and the Commons. It is certainly paradoxical to maintain that there was no public political discussion during such thrilling periods as that of the Reformation and of the prolonged struggle against the arbitrary government of the Stuarts. Doubtless much of this discussion took place in the pulpit, but it was none the less political because it was religious. Religion and politics were inseparable in those days, and Mr. Jephson's definition seems to us somewhat arbitrary in its exclusions.

This objection would be more serious had Mr. Jephson formed a different conception of the manner in which the history of the rise of an institution is to be traced. We think we do him no injustice in pronouncing him distinctly *not* a philosophic historian. His method is perfectly simple: he has industriously searched among records of all kinds for reports of meetings at which political discussion took place, and has entered them in his chronicle, frequently including long extracts from the speeches made on these occasions. As a result his book is swollen to over 900 pages, whereby, we apprehend, the number of his readers will be reduced to one-fourth of what it might have been. This is to be regretted, for Mr. Jephson had a subject of which much might have been made, and his failure to make the best of it is not at all due to any lack of exertion on his part. Even as it is, his comments upon the steady growth of freedom of speech are frequently judicious, and it is possible—through much skipping—to get from his pages a tolerably vivid picture of the steps by which this liberty advanced.

According to the view here taken, political activity in England, outside the ruling class, dates from about the middle of the eighteenth century. At a time when contested elections were comparatively rare, the voice of the people was occasionally heard in petitions originating in public meetings; but although the right of petition was secured by the Bill of Rights, that of meeting was practically controlled by the aristocracy. In fact, petitions almost always began — "We, the High Sheriff, noblemen, gentlemen, clergy, and freeholders." But it is the glory of England that there have always been members of the aristocracy ready to withstand not only the Crown, but their own order, when popular rights were invaded. Naturally enough, it was at the hustings that complaints of misgovernment were most clearly expressed, and the Wilkes episode, which is fully narrated by Mr. Jephson, may be said to have definitely established the right of free speech. Although little was formally conceded, a temper had been revealed that warned the Government of the danger of revolution if it persisted in its arbitrary course.

What had been won was apparently lost in consequence of the alarm caused by the excesses of the French Revolution. A small faction in England looked with pleasure upon the overthrow of monarchical government, but public sentiment was overwhelmingly against them. Reform was one thing, but revolution was another. It was accordingly easy for Government to proceed vigorously against agitators, and for many years political meetings, both public and private, were severely suppressed. After peace was restored, the harsh measures of the Government and the arbitrary decisions of the courts again aroused the spirit of liberty, and the massacre of Peterloo was such an anachronism as to make the demand for the right of free speech irresistible. The passage of the Reform Bill marked the termination of the era of repression, and after that great struggle the story of the platform becomes comparatively tame.

In our judgment Mr. Jephson would have done well if he had stopped with the winning of this victory, and yet it is not surprising that he was tempted to point out the manner in which the victory was improved. He evidently leans to the view that measures of government should really emanate from the people, their representatives being chosen merely to register their will. But this is a subject by itself, and requires for its treatment somewhat different qualifications from those displayed by Mr. Jephson. So long as freedom of speech was denied, it was an end in itself; when the right was established, it became a means to the attainment of other ends. To enumerate all the ends that may be attained in this way is an undertaking too comprehensive for a single work. But however this may be, we need not hesitate to thank the author of this book for the materials that he has so industriously accumulated.

East Coast Yarns. By P. H. Emerson. London: Sampson Low, Marston & Co.

Mr. Emerson's 'Pictures of East Anglian Life' were so fresh and so suggestive that the reader will naturally look for the same qualities in 'East Coast Yarns,' and we fear that he will be disappointed. Although Mr. Kipling's success has brought short stories into vogue, it has not made the writing of them any easier. It is one of the necessities of the case that the reader shall be introduced to a succession of kaleidoscopic pictures having little or no connection with each other. If the writer possesses exceptional skill, he can, in a dozen pages, paint his picture in such striking colors that it remains fixed in the memory, and cannot be easily displaced by what follows. But, unfortunately, such skill is rarer than the black swan of the Latin grammar, and Mr. Emerson is not among the happy possessors thereof. The first and most ambitious story in this volume, "The Wreck of the Asia," has nothing to do with the East Coast, being, in fact, an account of a shipwreck on the coast of Wales. Its incidents are neither striking nor dramatic. A number of characters are introduced, and rather carefully labelled and catalogued, without any sufficient motive in the story to warrant the mental effort on the part of the reader to differentiate them. Some of the shorter sketches are decidedly more lifelike and have a distinctly East Coast flavor, but on the whole the collection must be pronounced unsatisfactory.

The Government of Dependencies. By Sir George Cornewall Lewis, K.C.B. Edited with an Introduction by C. P. Lucas. Oxford: Clarendon Press; New York: Macmillan. 8vo, pp. lxviii, 392.

The Government of Victoria (Australia). By Edward Jenks, Dean of the Faculty of Law

in the University of Melbourne. Macmillan. 8vo, pp. xliv, 403.

THESE two books may be said to give us the theory and the practice of England in governing dependencies. Lewis's treatise is an analytical and philosophical discussion of the fundamentals of government and of dependencies, and of the relation between the principles and the objects of their exercise when found in colonies and provinces. He treats the subject somewhat after the manner of Locke and Montesquieu, developing the logical connection of a principle and its application to particular real or supposed cases, and trying thus to draw, *a priori*, the lines of limitation between the practicable and the impracticable, the probably successful and unsuccessful. Mr. Lucas, the editor, has written a long and valuable introductory chapter, showing the actual development of colonial government since Lewis's death, and the practical success of steps which the original author could hardly accept as possible. Lewis enriched his treatise with abundant references to the history of his subject in ancient and modern times, so that his notes are a classical repertory of its literature.

Mr. Jenks's book is at the opposite pole in its treatment of colonial dependence. His is an historical digest of the laws under which the progress of the little settlement of Port Philip in New South Wales was guided, from the time when a few English settlers from New Zealand landed there till it has grown into a great State with responsible government. It began as a little dependency under the almost absolute sway of the Governor of New South Wales; it passed through a crisis of separation, and now, at the end of little more than half a century, is independent in everything but the name, and is working out the most complicated social and political problems with an enterprise and an initiative force and fertility which fasten the attention of the world. Those who will read these books together will be greatly struck with the way in which a new and raw community grapples with and overcomes difficulties in the way of governmental progress which Lewis, the wise and philosophical conservative statesman, looked upon as insuperable. Such readers will also be apt to conclude that the success could have been achieved only by a community in which the genius for representative institutions had become hereditary.

BOOKS OF THE WEEK.

Anderson, Capt. L. Among Typhoons and Pirate Craft. London: Chapman & Hall; New York: Scribners. $1.75.

NO. 59 WALL STREET, NEW YORK.

Wanted—Work in Translating from German into English

Or from English into German, by German lady who studied at Oxford (England) and who has lived for over seven years in England and in America as a teacher of languages. Continuous literary or philosophical work preferred. Address "GERMAN TRANSLATOR," care the *Nation*, or care Prof. H. A. Rowland, Johns Hopkins University, Baltimore, Md.

AUTHORS.—The skilled revision, the competent and unbiassed criticism of prose and verse are the specialties of the N. Y. Bureau of Revision. Established 1880. Unique in position and success. Address Dr. Titus M. Coan, 20 W. 14th St., N.Y.

FOR SALE.

AUDUBON'S BIRDS. Octavo, 1840-1844, seven volumes. Quadrupeds, three volumes. Also, folio edition of Quadrupeds. ISAAC HAMMOND, Charleston, S. C.

Makes Purest Bread.

GOVERNMENT Chemist Mott:

"The Royal Baking Powder is undoubtedly the purest and most reliable baking powder offered to the public."

"The weary brain requires some nerve sustaining element as food."—HERBERT SPENCER.

Crosby's Vitalized Phosphites.

The vital principle of animal and vegetable life isolated from the ox brain and wheat germ.

The loss of memory, the tired and exhausted feeling, the dull, unrefreshed sleep, or nervous sleeplessness, brain weariness, depressed vitality, are simply the brain and nervous system calling for their necessary food. In this condition the Vitalized Phosphites give great relief. It restores the true protagon, the brain phosphoid, increases brain and nerve power by specially feeding the nerve centres. It reinvigorates brain and body.

For thirty years endorsed by leading physicians, and the world's best brain workers. Formula on the label. Pamphlet free to those who write for it. Druggists or by mail, $1.00. 56 W. 25th St., N. Y. *F. Crosby Co.*

Exhaustion.

HORSFORD'S ACID PHOSPHATE.

A wonderful remedy, of the highest value in mental and nervous exhaustion.

Overworked men and women, the nervous, weak, and debilitated, will find in the Acid Phosphate a most agreeable, grateful, and harmless stimulant, giving renewed strength and vigor to the entire system.

Dr. Edwin F. Vose, Portland, Me., says: "I have used it in my own case when suffering from nervous exhaustion, with gratifying results. I have prescribed it for many of the various forms of nervous debility, and it has never failed to do good"

Descriptive pamphlet free.

Rumford Chemical Works, Providence, R. I.

Beware of Substitutes and Imitations.

CAUTION: Be sure the word "Horsford's" is on the label. All others are spurious. Never sold in bulk.

Economic History Since 1763.

Selections illustrating Economic History since the Seven Years' War. Compiled by Benjamin Rand, Ph.D. Second edition, revised and enlarged. 8vo, pp. 567. $3.

These selections have been chosen from the following brilliant writers and authorities: Adam Smith, Walpole, Von Sybel, Seeley, Morier, Levi, Porter, Levasseur, Bowring, Legoyffe, Cairnes, Wells, Kolb, Griffin, Walker, Wright, Atkinson, Swank, Neymarch, and Neumann-Spallart.

BOOKS WANTED.

We are prepared to buy FOR CASH at full market rates large or small libraries of books. Executors or others address

FRANCIS P. HARPER, 17 East 16th St., N. Y.

Back Numbers of "The Nation."

In response to frequent inquiries from subscribers:

An incomplete set of THE NATION has little or no market value. Partial sets, bound and unbound, are always obtainable (usually lacking the earliest volumes), and do not command high rates. The bindings generally count for nothing, owing to great diversity of styles. Volume I. has readily brought $10 and upward when complete, bound or unbound, but will bring very little in proportion if a single number is missing. Volumes II. and III. are also scarce, but not so high-priced as the first.

Complete sets, both bound and unbound, have sold for $100, with tolerably quick bidders, and have an increasing value year by year.

Single numbers not more than a year old can usually be supplied by the publishers at 10 cents each. For numbers more than a year old purchasers are referred to Mr. J. W. Christopher, 47 Dey St., New York; Mr. A. S. Clark, 34 Park Row, or H. Williams, 195 West Tenth Street.

The publishers no longer undertake to buy or sell numbers or volumes more than a year old, and can only recommend sellers or purchasers to negotiate with a dealer or to advertise in THE NATION.

[Publication was begun July 1, 1865, Vol. I. comprising the last half year. Two volumes per year have since been issued, Vol. LII. comprising the first half-year of 1891.]

School Trustees,
Principals,
Teachers,

And others interested, are invited to consider the advantages offered by the *Nation* as an advertising medium. School advertisements are printed in a uniform typography, with the address in the first line, classification being made by States, alphabetically, unless especially ordered displayed on other pages.

The *Nation*, in its special field of political and literary criticism, is unlike any other periodical, American or foreign. At least 10,000 copies are circulated weekly, but these figures do not accurately represent the number of its readers. It is taken by reading-clubs and literary associations in a large number of places, and may be found on file in every library of importance in the country. There are probably few weekly periodicals whose columns offer so favorable an opportunity for reaching an audience interested in educational matters.

Advertising rates, 15 cents a line each insertion, with the following discounts: 5 per cent. on four insertions, 10 per cent. on 8 insertions, 12½ per cent. on 13 insertions, 15 per cent. on 26 insertions, 20 per cent. on 39 insertions, 25 per cent. on 52 insertions.

The *Nation* is sent free while advertisement continues.

Orders may be forwarded through any responsible advertising agency, or directly to

THE NATION, 208 Broadway, N. Y.

The Nation.

NEW YORK, THURSDAY, MARCH 10, 1892.

The Week.

WE are not among those who desired to have the vote on the Bland Silver Bill postponed till the next session of Congress. On the contrary, we think that it is altogether desirable that the people should know before the Presidential campaign begins what they can depend upon. There ought to be no concealment of the issues of the campaign. If the silver question is an issue at all, it will be the overshadowing and controlling one. It will be so because it does not admit of dallying or postponement. The tariff question we have had with us for a hundred years, more or less. A few years more will not make much difference in the total. The silver question has such sudden and tremendous consequences that the people will and must make it paramount to everything else. We do not attach much importance to the vote taken on Monday. It was quite proper that a time should be set for considering the Bland Bill. We find no fault with the forty-nine Republicans who voted with the majority to fix a day for its consideration. Most of those who so voted are opposed to free coinage. All of them probably voted as they did in order to gain a political advantage. For this they cannot be blamed. The preliminary skirmish settles nothing to the disadvantage of the country. If the Republicans are wise, they will vote against the bill when it comes to a vote, because in no other way can they make the issue sharp and decisive, as they must make it in order to win. If it can be said in the campaign that they are just as bad as the Democrats, then the contest will turn solely on the goodness of the candidates.

The Pension Bill is bringing out the annual display of partisan recrimination. The dominant party in the House, responsible for expenditures, is always held up as the enemy of the old soldier because it will not vote unlimited millions for him, while the minority, able to display its consuming love for pensioners by the inexpensive process of introducing lavish measures which have no chance of passing, is always able to pose as the only true friend of the men who saved the country. In the last Congress such Democrats as Mr. Springer and Mr. Holman stood ready to vote about $100,000,000 more for pensions than the Republicans would allow to go through, and took occasion to advertise Democratic generosity to the veterans, as compared with the niggardly spirit of the Republicans. This year the Democratic House passes a pension bill some $12,000,000 below Secretary Foster's estimates, and $35,000,000 below Commissioner Raum's; and although this amount is fully as great as that carried in last year's bill, the Republican chorus of accusation at once breaks out, the *Tribune* correspondent telegraphs dreadful things about the "blow at pensions," and the same old farce is renewed. There is this element of tragedy in it, however, that the claim-agents and demagogues play upon partisan fears to send the appropriations higher and higher, so that the country has to carry the burdens of war in a time of profound peace.

It seems likely that there will be continual danger of attempts to tinker our copyright statutes until they have been submitted for revision and codification to a commission of such recognized dignity and authority that respect will be insured for the results of its labors when enacted into law. The sooner such a commission is appointed for this purpose the better, for in few directions is our legislation so far behind that of the rest of the world as in the matter of the protection accorded to literary and artistic property. Meanwhile we hope that Congress will not encourage the latest so-called "amendment" of the Copyright Law, which was presented to both houses of Congress on February 15. This proposes to require each person who takes out a copyright to make a deposit of two copies for the United States, and one copy for each of the States, of every book or other article desired to be protected. This bill (S. 2185; H. R. 5975) was not conceived with any desire to improve the copyright statutes; but, certain property belonging to other people being coveted, it was devised as a scheme by which the desired property could be secured without paying for it. It does not make the matter any better that the books are coveted for State universities or "similar institutions," for these are no more justified in committing robbery through Federal legislation than are private persons. Besides, if it is justifiable to levy a special tax upon the property of authors and artists in order to enrich the libraries of State institutions, it is equally just to tax the property of other classes for the same purpose. The whole conception of such a bill is wrong. There is no justification for taxing an author who is granted a copyright, for the benefit of others; and the demand for copies of his book or other article proposed to be protected must be made upon the sole ground that such deposit is for his benefit, as necessary properly to identify and make secure the right granted to him.

Our contemporary the *Sun* has a learned article on the breach of constitutionalism in Greece, from which it argues the worst consequences to the reigning sovereign of that country. But it has nothing to say about the recent elections in the State of New York or their probable effect upon the ex-Governor and his Presidential prospects. We will accordingly direct the *Sun's* attention to a few leading facts which ought to possess more interest for its readers than the wrongs of Mr. Delyannis, the David B. Hill of Greece. There was an election in Elmira the other day, a regular city election. The chief office to be filled was that of Mayor. The city is the home of David B. Hill. It is a Democratic city. It gave about 1,000 Democratic majority two years ago, and exactly 512 majority for Flower last fall. In the more recent election it gave a majority of 1,284 against the regular Democratic nominee, who was a particular friend of Hill and the brother of his Cornell University friend and admirer, Prof. Collin. If this had been an isolated event, it might have passed for an accident, but, coming in conjunction with a perfect rainstorm of Democratic defeats in this State, it must be taken as a sign that the people are against Mr. Hill and all his works and ways, and that they are all the more against him in proportion as they are nearer to him and better acquainted with him, to wit, at Elmira, in the county of Chemung. This would be interesting matter to the readers of the *Sun*. If our contemporary will excuse us, the misfortunes of the Hillenes are a more engaging subject just now than those of the Hellenes.

Mr. Hill is credited with saying of the town elections in this State that they are of no especial significance, merely showing that there is a "family row" in the Democratic party. We quite agree with him that there has been a "family row" between the party and its rascals, the significance of which he will see later if he does not perceive it now. The latest returns tell the whole story in language too plain to be misunderstood. Elections have been held in forty of the sixty counties of the State. A year ago the Democrats had majorities in the Boards of Supervisors of 12 of these counties, the Republicans had majorities in 23, and in 5 the Boards were evenly divided between the two parties. To-day the Democrats have majorities in the Boards of only 4 counties, the Republicans have majorities in 33, and in 3 the Boards are evenly divided. Out of a total of 352 Supervisors which they had a year ago, the Democrats have lost 99, or 28 per cent. of the whole. The loss of 8 counties out of 12 is a loss of 66 per cent.

We find in the *Cornell Daily Sun* of February 17 a report of an address by "Prof. C. A. Collin of the Law School," before the History and Political Science Associa-

tion, on the subject of the "Machine in Politics," in which the following passage occurs:

"It is the duty of every true citizen who has any spark of patriotism about him to assist the Machine in one way or another. No one should feel himself above the work of political fighting. *The man who sells his vote for money is more to be respected than the man who stays away from the polls and does not vote.*"

Prof. Collin is the moralist who devotes the greater part of his time to the task of writing eulogies of David B. Hill. His labors in that field are silly and harmless, but when he is allowed by Cornell University to teach its students that the Dave Hill variety of political science is laudable and worthy of their imitation, the matter becomes much more serious. The kind of political science embodied in the passage we have quoted is practised in Tammany Hall, but the teaching of it is a startling innovation in the curriculum of a college.

The unanimous declaration of the Rhode Island Democratic State Convention in favor of Cleveland's nomination grows more significant the more that is learned about the preliminary campaign. The State had been picked out by Hill as a good one in which to work his scheme of getting Hill delegates elected "on the sly" by sharp work in the caucuses; and two or three of the most disreputable "workers" in the party conferred with him as to how they should play the game. But the matter could not be kept quiet. Men like Mayor Honey of Newport and Congressman Lapham warned the people of the plot to cheat them, and stirred up the voters to attend the caucuses and declare their preferences. The result was such an expression of public sentiment in favor of Cleveland everywhere that not a vote was cast in the Convention against the adoption of the strongest Cleveland plank that could be framed. Rhode Island is not exceptional in this respect. The only hope of the Hill men anywhere is in underhand methods. They do not dare to encounter a fair expression of party feeling.

Some remarks of the Rochester *Post-Express* on Dr. Parkhurst's charges against Tammany illustrate admirably the shrewdness of the Tammanyites in getting hold of the Grand Jury lists. The presentment of the Grand Jury signed by two members of the Tammany General Committee, (one of them an ex-keeper of a low dive,) treated the charges made by Dr. Parkhurst against the city authorities in connection with the McGlory case as utterly baseless, and added an amusing comment on the mischief done by "unfounded charges of this character, in creating distrust in the minds of the community with regard to public officials." Accordingly, the country Tammany papers, like the *Post-Express*, make it the text of a homily on the risk the pulpit runs in trusting city newspaper stories about the good men in the City Hall. This furnishes an almost complete explanation of Barney Martin's appointment as Commissioner of Jurors. The fact is that Dr. Parkhurst's charges were absolutely correct, except in the one point of the District Attorney's office having been requested to furnish the evidence against McGlory. And we have little doubt that if the whole truth were known, it would be found that this omission had something to do with the experience of many Grand Juries really anxious to punish criminals who have a "pull," as McGlory had. This experience has shown the danger that when news reaches the District Attorney's office that the Grand Jury is about to pursue a particular malefactor of this class, it will leak out, and the dive-keeper will get warning, and the officer sent after him will come back with the old story—"Impossible to get the evidence." To say this is not necessarily to cast an imputation on the District Attorney himself. But his office is a large office, and a "pull" operates through all sorts of people. The notion that a dive so notorious as McGlory's, and given up to indescribable vileness, could be kept open for a whole year, without the knowledge or connivance of the police or of *anybody* in the District-Attorney's office, is a little too ridiculous for belief. In fact, the November Grand Jury proved its absurdity by sending two of their own number to get the proof, after the captain of the precinct had impudently denied the proof, and they got it without the smallest difficulty. There is always a touch of *bouffe* about Tammany doings, and it was not wanting in the present instance. Has Offenbach anything more comic than an old dive-keeper's signing a "presentment" rebuking a clergyman for saying that a brother dive-keeper could have been found out and punished earlier if the officers of the law had done their duty, and warning him of the danger of "impeaching the integrity of public officials"!

Secretary Foster is credited with saying in London that he has been asked many questions about the alleged system of sending convicts to this country from Great Britain, and with having made the following explanation:

"The question in Parliament in regard to the matter, and the comments of the papers, were based on a misapprehension that the whole Commission was responsible for the report. When I appointed the Commission, I deemed it right to select among the five Commissioners one direct representative of the labor interest. That was Mr. Powderly; and I do not find fault with his report. But that story about ex-convicts had its origin in Mr. Schulteis's report. People on the other side will treat the story on its merits. Here the mistake is made by taking the statement as supported by the whole Commission."

Mr. Foster appears to know very little about the official reports which are made to him and by him given to the public, if that explanation is authentic. The convict charge was not made by Schulteis, but by his fellow-commissioner, Judson N. Cross, and, as printed in the *Tribune* of February 8, was that he had "positive proof that from England, Ireland, and Scotland during the last eleven years there has been a systematic, widespread, and thoroughly organized movement, known, encouraged, and patronized by the Government of Great Britain, for the purpose of sending convicts and ex-convicts to the United States," and that "the passage and money to keep them while seeking employment here is furnished directly by the Government of Great Britain." Mr. Cross sustained this charge with details of the system, saying that the sum paid by the British Government to each convict sent was six pounds. Both Cross and Schulteis, as well as Powderly, were Mr. Foster's appointees, and he has made their work his by adopting and publishing it. His attempt to escape all responsibility by putting it on Schulteis, and then repudiating Schulteis, is a pretty small performance.

Free evening schools were established in New Haven about thirty years ago, and have been maintained ever since, but for several winters past the attendance upon those conducted for English-speaking pupils has been steadily diminishing. It might be supposed that this indicated less desire to overcome the defects of early education among the immigrants, who have always comprised the larger part of the pupils, than was the case in the sixties; but the *Palladium*, which appears to have investigated the matter, says that the truth is that there is much less occasion for such schools now than there was a score of years ago. It says that young Irish immigrants now are usually able to read with ease and to write fairly well, and have a fair knowledge of the rudiments of arithmetic, and it seems doubtful whether it will long be necessary to maintain free evening schools for English-speaking pupils. There has been a good attendance the past winter at the evening schools maintained for Italians, Scandinavians, and Russian Jews, but the principal object of the pupils has been to learn the English language. Our Swedish and Norwegian immigrants are usually well educated when they arrive here, and the *Palladium* says that, so far as New Haven's experience goes, "the Italians are fairly well educated, and the Russians and Poles, while giving evidence of having had few or almost no advantages in this direction, show a brightness and industry which make their progress rapid." This is a very encouraging report, and deserves attention at a time when there is so much anxiety about the ignorance of our immigrants.

Gov. McKinley issued an appeal the other day for subscriptions for the starving Russians. Why did he not issue one at the same time for the starving Austrians? Surely, if either of these classes of sufferers has a claim on him, it is the

latter. The Russians were smitten by the hand of Providence, the Austrians by that of McKinley. By putting a duty of 1,400 per cent. on pearl buttons, McKinley and his followers inflicted cruel misery on thousands of their fellow-creatures. Moreover, this is what they intended to do, and what their newspapers have been bragging about since; as though it were a creditable thing for them to bring about the same suffering that has been caused in a neighboring country by a drought and a bad harvest. We submit that it is incumbent on McKinley to call for subscriptions for the poor of Austria as well as those of Russia.

We hope that those physicians who are sticklers for the fine points of medical ethics have not failed to notice the harm done their profession by some of the expert medical testimony in the attempt to determine the sanity of E. M. Field. The extraordinary fact was brought out that one expert of high standing had at first given it as his written opinion that the man was insane—for which opinion, based though it was mostly upon the representations of others, he had been paid $250, and then had come into court to testify that he thought Field sane. Now, there was no particular discredit in his having changed his mind, except as it showed him to have been hasty and careless in reaching his first decision, but does not every one see how his taking an exorbitant fee for a medical service, simply because it was to have a legal effect, and then being compelled to admit that the service was really worth nothing whatever, brings the profession into disrepute? Such things would not be of so frequent occurrence did the medical associations make a rule, as they should, that only an ordinary charge should be made for expert testimony in legal trials. If a physician were to get for his time in court no more than he would get for the same time passed in his office or making his rounds, the ground for the increasing popular cynicism in regard to the honesty of medical experts would be cut away. Medical ethics is mostly confined to such questions as that of a doctor's advertising himself, or that of his committing the great crime of helping save life in company with a physician of another "school"; we think its sphere might profitably be extended so as to cover some of the evils of the system of expert testimony.

It appears that Lord Salisbury does not agree to a renewal of the *modus vivendi* for the present sealing season, or that he consents only to the drawing of a line thirty miles from the shore, within which sealing shall be prohibited while the arbitration is going on. Nobody has attempted to show that Lord Salisbury is under any obligation, express or implied, to renew the *modus vivendi*, even as to thirty miles from the shore. The main point in dispute is whether we have exclusive jurisdiction outside of the three-mile limit. That and some other things are referred to arbitration. Now our newspaper men insist that, while this arbitration is going on, Great Britain shall yield something else. The *Tribune* begins an article in this way—an article which will make its London correspondent writhe in torment when he sees it:

> "President Harrison may rest assured that the people will heartily sustain him in any measure he may find it necessary to take for the maintenance of the rights of the United States in the seal fisheries. The question has ceased to be one of dollars and cents. The British Government has chosen to treat it in a manner altogether indefensible and unfair. The elaborate and painstaking tardiness of Lord Salisbury appears to Americans deliberately intended to give Canadian *poachers* abundant opportunity to *plunder* and *pilfer* to their heart's content. If that is not his intention, he has a really wonderful faculty of acting, with friendly purpose, precisely as an enemy would act."

Poachers, plunder, and pilfer are handy words to stir up strife with. Bear in mind that the very question referred to arbitration is whether the taking of seals beyond the three-mile limit is poaching, plundering, and pilfering, or not. By referring it to arbitration we have allowed that it is doubtful. But if the peace of the world can be endangered till next November by using catchwords and making thoughtless people believe that the thing referred to arbitration is not doubtful, then let us take the risk.

The overwhelming victory of the "Progressives" — that is, of the Liberals—at the election of the London County Council, owes a good deal of its importance to the indication it offers that the majority of the London districts, which return sixty-two members to the House of Commons, will be carried by the Liberals at the approaching general election. Of the sixty-two, forty-nine are now in the hands of the Tories; it seems to be generally conceded that the proportion will be reversed at the next election, for the "Progressives" are nearly all Liberals. Their programme includes a great number of schemes, some of which are distinctly socialistic in their tendency. The most prominent is an attack on the great landlords of the West End, of whom the chief are the Dukes of Westminster and Devonshire and Norfolk, who have grown enormously rich through the famous "unearned increment"—that is, by sitting still and letting the city spread over their property. They sell no land, but simply lease it for building purposes, and thus escape the local taxation. There has been much agitation of late years for legislation compelling them to sell the fee, or at all events curtailing their leasing power, but the opposition in the present Parliament has been too strong. Dukes have great weight under the present Ministry. The new County Council will be overwhelmingly hostile to them, however, and will undoubtedly at least saddle them with a fair share of the rates which are now borne by the lessees or occupiers of the houses But it must be said for the great land lords that whatever beauty the West End of the city possesses has been due to them Hardly any of the great squares would exist to-day but for their forethought and enterprise in laying out their property and controlling the class of houses erected on it. But the "unearned increment" makes the mouth of the democracy water, and it is a most appetizing spectacle.

The London *Economist's* annual review for 1891 tells us what has become of Mr. Goschen's proposed financial reforms. These, it may be recalled, consisted of a proposed issue of £1 notes by the Bank of England, against four-fifths gold and one-fifth securities, and an authorization to *over-issue* notes in times of crisis on condition of paying the Government a high rate of interest on such over-issue. The *Economist* tells us that,

> "owing to the antagonism of bankers and the obstructive attitude of the Gladstonian party, there is no probability of its passing through Parliament. The only legislation that there is any chance of carrying through is a tentative measure, merely authorizing the Bank to issue £1 notes on the same conditions as it now issues notes of a larger denomination, and to confer upon it power to increase its fiduciary issues in the manner proposed by Mr. Goschen, but without any restriction as to the amount of gold it must hold before it can begin to exercise that power. That would leave many currency questions unsettled, and would also leave undetermined the question as to how the banks are to be induced or compelled to keep adequate cash reserves."

The *Economist* notes the fact that the joint-stock banks have voluntarily increased their reserves since Mr. Goschen made his speech at Leeds one year ago. Their proportion of reserve to liability in December, 1890, was 12.9 per cent. average. In December, 1891, it was 13.7 per cent. This is not a large gain, but it is something. It amounts in the aggregate to about two and a half million dollars. Probably the fear that has pervaded the money market since the Baring crisis has been quite as effectual in causing this increase of reserve as Mr. Goschen's speeches.

Even more striking than Emperor William's words is his action in having prosecuted for lese-majesty the half-a-dozen German newspapers that have expressed a mild disapproval of his recent absolutist speech. In that he advised those who did not endorse his policy to leave the country; he now seems to propose to give them the further alternative of imprisonment. It is not enough for a genuine reactionary to have his way: he must have it without a whisper of opposition, without a suspicion being anywhere intimated that his way is not the divinely ordained way. One of the half-crazy Spanish Bourbons once ordered pen, ink, and paper to be taken from his room. "How can I sleep with such deadly weapons near my bed?" he asked. In his nervous dread of discussion of any kind, William is showing himself a Bourbon of the Bourbons.

"GETTING THE DELEGATES."

ONE point has been made against the anti-Hill Democrats in this State which has a good deal of force in it, namely, that they witnessed unmoved Hill's cheating at the elections, and rose against him only when he called the Convention too early. We trust that now, in view of the way in which the voters are expressing their opinions about him at the county elections, his opponents here will be able to summon up courage to attack him, not simply as a man who calls conventions too early, but as a notorious trickster and corruptionist. For it is now being made manifest to the least perspicacious eye that the strategy which consists in "getting the delegates" and letting the other party get the offices, is an exceedingly unprofitable one, even when backed up by the authority of so accomplished a manager as Hill. Hill is plainly under the illusion in this matter into which nearly all our working politicians of his mental calibre fall. The early training of nearly all such men in politics consists in learning how "to get the delegates." Our nominating system is now so cumbrous and complicated that only trained professionals can work it successfully. Accordingly, everybody of the Hill type who wants to rise, devotes himself diligently to the art of "fixing caucuses" and primaries, so as to control or influence the composition of the nominating convention. In order to accomplish this he has to construct a machine, which is often a marvel of patient industry and ingenuity. When it is constructed, and gets to work, and turns out delegates of a satisfactory type, the inventor is naturally very much elated, and flatters himself that he has done all that needs to be done in politics in order to become a statesman. When Hill said, with a chuckle, that "the other fellows had got the mass-meetings and the brass bands, but he was getting the delegates," he evidently thought, in common with all his class, that the organization of the nominating conventions was the politician's final cause; and when Springer treated the "regularity" of Hill's delegation as ending all controversy as to who was New York's "favorite son," he expressed the same idea.

Hardly any of these men look beyond the convention to the elections, because preparation for the election involves the cultivation of the art of persuasion. It means the preparation of arguments addressed to the country at large touching the policy of the party and the character of the candidates. This art of persuasion they relegate now to a very subordinate place indeed. To the work to be done after the nominations, by way of carrying the elections, they, in fact, give hardly any consideration at all. If they get their man nominated, they trust to luck for the rest.

We are now describing exactly what has happened in nearly every Democratic canvass since the war. When McClellan and Seymour and Hancock were nominated, it was as plain as a pike-staff that no thought whatever had been bestowed on the arguments by which the voters were to be induced to elect them. The strength of the managers had all been expended in "getting the delegates" and "carrying the convention," so that there was no foresight or energy left for shaping a party policy or for commending it to the electors. When Mr. Cleveland got into the Presidency, and furnished the party with a policy — that is, with something to present to the country, after the nomination, in the nature of a programme—the managers were actually, as we now see, disgusted with the man; and when he showed no capacity for "getting the delegates," they set to work, might and main, to get rid of him, and substitute for him a trickster of the Hill type, who knows how to "get the delegates," although he knows nothing else.

When Hill "got the delegates" at the last election, the whole Democratic party in this State seemed awestruck. There was dead silence, even among respectable men, for a month after Flower's election. When it was broken, we heard nothing but glorification of the mighty man who had carried so many State elections, and was now going to send a solid delegation to Chicago to vote for himself. What Hill was to say, after getting there, or what anybody else was to say for him to the people of the United States, by way of proving his fitness for the Presidency, nobody seems to have considered for one moment. In fact, we verily believe that if he had not committed the professional blunder of calling the Convention in midwinter, he might have "got the delegates" in April just as readily as in February, and would have entered the Convention as a sort of Democratic Messiah, instead of as an exposed charlatan, and he might have secured the nomination, either for himself or some other "low rascal," on the pretence that he could carry New York for the Democratic candidate. The horror now expressed in some quarters about sending out a contesting delegation, because it "wouldn't be regular, don't you know?" shows how deep-seated the feeling is that greater skill and merit are shown in controlling Presidential conventions than in winning Presidential elections. We do not believe that to-day one respectable man among Hill's supporters has ever considered what he could say for Hill on the stump in case he were nominated, to voters in Illinois or Ohio or Iowa or Wisconsin, who would not be influenced by his smartness in "getting the delegates" in New York. They would actually be unable to offer a single other reason for electing him. His views on public questions nobody, not even himself, knows. His history as Governor is one long record of jobbery and intrigue. He is neither eloquent nor "magnetic," and his bodily presence is more or less repulsive. His associates and friends at home are mainly of the disreputable class, but he knows how to "get the delegates"!

His excesses as a cheat have, however, at last apparently waked his party up in this State to the fact that the final cause of a party organization is not to illustrate smartness, but to win elections, just as the final cause of a locomotive is not to carry people up and down the line as a display of curious mechanical ingenuity, but to carry people to their destination. A precious possession for the party Hill would be after a defeat deliberately risked on his account. To what use could he be turned? Who would take him off the party's hands, even for the humblest kind of farm work?

HILL'S RECORD REVISED.

WE sent recently a copy of the *Evening Post's* pamphlet on Hill's political record to a supporter of his, one of the few respectable Democrats whom he has been able to attract to his cause, with a request that he inform us whether "all this is true or not." After a brief delay the pamphlet has come back to us with annotations of various kinds marked in the margin against some of the more serious of the charges. As these annotations comprise the first and only defence of Hill that we have been able to get from any quarter, we shall review and answer them in their order, so far as they are of sufficient moment to call for consideration.

The first chapter, describing Hill's early political career in Elmira, is very slightly annotated, the critic confining himself almost entirely to underscoring sentences containing such charges against Hill as that he never mingled in respectable society, never hesitated to sell out his own party, bought votes with *crisp* bank bills, and that he raised the price of votes in Elmira till $20 was paid for a vote for Governor. All these charges we are prepared to prove, even to the fact that the bank bills were "crisp," for they were obtained direct from the bank in large quantities for this especial use. The critic asks for the names of "two responsible citizens" whom we cited as eye-witnesses of Hill's personal purchase of votes. We have them for him, or for anybody else who forces us to the proof of our statements. He underscores the assertion that "scores of lawyers and business men" will attest the fact of Hill's purchase of votes, as if the number were too great. It is the literal truth, and we can so prove it. These are fair samples of all the criticisms upon the first chapter.

In regard to the aqueduct scandal, the commentator has done a great public service in raising questions which will enable us to go more fully than the pamphlet into the details of that part of Hill's public record. His first annotation is as to our statement that Squire was "thrust into the office" of Commissioner of Public Works. In the margin he asks: "By Hill?" Certainly not. The charge is not that Hill put Squire into office, but that he formed an alliance with him after he

got in, knowing well that Squire was a rascal. The commentator then underscores the words "thick and thin" as applied to this alliance. A citation from Squire's testimony, given under oath on April 22, 1888, will show the strict truth of this definition. Squire testified that at Hill's request he called upon him at the Hoffman House in the fall of 1885, and that Hill requested his support in the approaching campaign; that he, Squire, then told Hill that Mayor Grace was trying to get him out of office on the ground that he was unfit, and that Hill replied to the effect that "I (Squire) need give myself no anxiety; that if I did not get convicted in a criminal court in matters connected with my department, where he couldn't stand by me, I might be certain that I should find him behind me; I told him that was very pleasant for me to hear, and I said: 'Governor, if there is anything in the Department of Public Works that I can properly and in order put at your service, let me know.'"

Squire went on to testify that at the same interview Hill arranged for his friend and former law partner, William L. Muller, to be the confidential agent between the two for the distribution of patronage and other favors. In support of these statements Squire produced letters to himself from the Governor written in February, June, July, September, and November, 1885, and as late as May, 1886, all couched in the most friendly terms, all addressed to the "Hon. Rollin M. Squire." The pamphlet annotator puts opposite the statement that he addressed Squire as "My dear sir," the exclamation, "Very bad!" Another Hillite, the *World*, said of these letters from Hill to Squire, when they were first published in April, 1888: "The worst that can be said of any of them is that the Governor of the Empire State should be in larger business than securing offices for his friends from such a man as Squire."

The annotator's next objection is to the statement that Hill knew of the existence of Squire's incriminating letter to Flynn before he joined with the Republicans of the Legislature in the passage of the "deal" Aqueduct Commission Bill. He implies that Hill's denial, which is also cited in the pamphlet, disposes of this charge. It does not, for the reason that the denial was a falsehood. Two witnesses swore that they had informed the Governor of the existence of this letter before the "deal" bill became a law and before the letter itself was published in August, 1886. William M. Ivins testified that he showed the Governor a copy of the letter in March, 1886; Squire testified that he informed the Governor of the fact of its existence in the Hoffman House interview. It is known, also, that the original of the letter was shown to the Governor just before he signed the bill. Yet, when the original was published, and Hill was forced by the publication to remove Squire from office, he made and published the following denial of a charge that he had seen it before its publication:

> "The statement is unqualifiedly false. I saw a copy of the letter in question for the first time when it was printed in the newspapers. I have never seen the original letter."

The annotator's next question is the following in reference to the charge that Hill's personal campaign notes for $10,000 and $5,000 were paid out of the profits made on an aqueduct contract which was awarded to O'Brien & Clark, whose bid was $54,000 above the lowest: "Were they not paid by a subscription list?"

On the first day of the investigation Thomas M. Robinson, Cashier of the Mount Morris Bank, testified that he remembered a note for $10,000 which was presented at the bank by William L. Muller. The note was presented, not for discount, but for sale. *It was signed by Gov. Hill*, and endorsed by John O'Brien and Heman Clark as individuals. Heman Clark testified on April 23 that O'Brien came to him in the campaign of 1885 and said he wished to raise $10,000 for Gov. Hill; that a note for that amount was drawn and signed by Gov. Hill and endorsed by Muller first, O'Brien second, and Clark third; that when it matured it was paid by another note signed by O'Brien and endorsed by Maurice B. Flynn; it was finally paid by O'Brien, and the money was charged to O'Brien's account on the books of the firm of Clark & O'Brien.

The Governor, in a statement which he gave out for publication on April 11, 1888, admitted the main facts in the case by saying that he signed the two notes in conjunction with Muller and O'Brien, and that after election the notes were "taken up and paid by contributions of friends and various Democrats, including Chairman O'Brien, who was the largest contributor." Alton B. Parker, who was one of the endorsers of the $5,000 note, testified that it was cashed by John Keenan, who was a member of the Democratic State Committee; that the cash was paid to him on Thursday before election. John O'Brien, Chairman of the Democratic State Committee, testified that he contributed $500 to take up this note; that Alton B. Parker, who in the meantime had been appointed by Hill a judge of the Supreme Court, contributed $500, and the balance was made up elsewhere; that it ran along for two or three months after that, and finally Muller came to him and he (O'Brien) endorsed Muller's personal note for $5,200 and raised the money in Rhinebeck, which was sent to Keenan to pay off the original note.

As to the awarding of the aqueduct contract at a clear profit of $30,000 to O'Brien & Clark, the annotator asks if the pamphlet is not in error in saying it was awarded by the reorganized commission. It is. The award was made by the old commission in compliance with the personal request of the Governor, through Muller, to members of the commission. Mayor Grace testified that he was asked to favor the award in order that the Governor's notes might be paid; he was positive that the amount of those notes was represented to him as $30,000. Comptroller Loew testified that he was requested to favor the award because the Governor wished it to be made,

In regard to the chapter on the theft of the Legislature, the annotator's first point is that Judge Ingraham's stay was a justification for the conduct of Emans in going to Albany to get back from the mails the legal Dutchess County returns. Judge Cullen has disposed of that by deciding that Emans had closed his official duty as to the returns when he put them in the mails, and that any interference with them by him after that was a "personal crime," not official misconduct. The annotator's next point is that Judge Ingraham's stay was in some way an excuse for the abstraction of the legal returns from the mails after their arrival. But the stay was issued after the returns had been mailed. If the stay were binding, why commit the theft? Judge Cullen's decision on this point is conclusive:

> "The [legal] returns were not before the Board of State Canvassers, not because of any defect in the transmission, nor of a disobedience of the order of the Court, but because, by the action of the Secretary of State, the Governor, and the counsel of the Comptroller, the *returns were taken from the several public offices where they had been properly received* and were given to Mr. Emans."

SILVER POLITICS.

THE authentic announcement has been made that Secretary Foster's journey to England has nothing to do with an international monetary conference, or with any public business. He has gone abroad for the sake of his health and for no other reason. All expectation that the nations of Europe will get themselves into a *financial* scrape in order to help us out of a *political* scrape, may therefore be abandoned. All those countries, except Austria and Russia, now have the single gold standard, and Austria is going that way with absolute certainty and as fast as possible. India would go the same way if she could, but she is too poor. The change of standard would involve the demonetization of such a prodigious stock of silver, coined and uncoined, that the task seems hopeless. As there is no legal ratio between gold and silver in India, the Government would naturally begin with the existing market value, and would decree that the gold rupee should be in law whatever it was worth in the market on the day the change was made. What to do afterwards with the silver accumulations of ages would be the perplexing question.

We have spoken of our silver mêlée as political rather than financial. This is exactly what it is, and the Europeans are not so dull that they cannot see its true complexion. The bad education our people have received during the past quarter of a century, beginning with the first legal-tender act and followed by the legal-tender decisions and by new legal-tender laws

and by the Silver-Purchase Act of 1878, is now yielding its natural fruit. The ideas of multitudes of people are turned topsy-turvy. The notion has got abroad that it is the duty of Government to furnish money to the people, and that the buying of silver is the furnishing of money to the people. It requires no great step to reach the conclusion that free coinage would give everybody all the money, and, therefore, all the good things of this life, that he wants. The Congressmen who know better (and there are very few who do not know better) are caught in this net, which is partly of their own and partly of their predecessors' weaving. How to get through the session without making matters worse than they are now, and yet so as to satisfy the misguided people at home that they have done all they could for free coinage, is the problem up for solution in Washington. It is this which makes the puzzle a political rather than a financial one. It is not confined to either party, although for the moment it is rather more embarrassing to the Democrats than to the Republicans. If the Republicans, however, should begin to toy with the silver question in order to see how nearly they could come to free coinage and still miss it, with the view of "putting the Democrats in a hole," as the saying is, they would find themselves in a position of much peril. The mischief is too great for any party to gain an advantage by playing games with it. "The Democrats have done all the threatening and the Republicans all the damage," said Mr. Williams of Massachusetts, the other day. That is true, and because it is true the Republicans cannot afford to take any doubtful position in the House when the fight comes on.

The damage done by the Republicans was begun when they passed the Bland-Allison Law of 1878. It was increased when they passed the law of 1890. Whatever overt acts have been committed up to the present time they are responsible for; and if it be true, as many skilled financiers believe, that the present exportation of gold is due to an apprehension that we are near to the silver basis, the Republicans are responsible for that also, for they passed the laws which caused this apprehension to exist. They raised the silver purchases from two millions to four and a half millions per month. They weakened the power of the Treasury to cope with this new evil by cutting down the revenues and increasing the expenditures of the Government. All the perils from silver that confront us at this moment are of their devising. If a premium on gold should be disclosed in the market to-morrow, the Republican party would be answerable for it. Whenever such a premium is disclosed (under present laws), that party will have to answer for it.

The avoiding of a gold premium is a problem of several unknown quantities. One of these is the state of the public mind both here and abroad touching the permanence of the gold standard. Every dollar of gold in this country belongs to somebody who is on the *qui vive* to take care of it and see that it does not depreciate on his hands. The Treasury gold is no exception, since that belongs to the holders of greenbacks, or (since the law of 1890) to the holders of any Government paper; in other words, it belongs to the first comers. Now there is nothing so well calculated to create a panic as any signs that the Republicans are weakening their opposition to free coinage. The public cannot know whether such signs are a manœuvre for position in the political campaign, or whether they betoken a real purpose to pass a free-coinage bill. The public may not wait to inquire. They may say: "We will take our gold now, and let them finish their manœuvres at their leisure." For these reasons any attempt on the part of overcunning Republicans to toy with this question is full of peril.

CLERGYMEN AND THE RICH.

THAT the voluntary system of church support inevitably makes the relations of a clergyman to his richer parishioners exceedingly delicate, no one will deny. Newman put the case as follows in the first of the "Tracts for the Times":

> "We know how miserable is the state of religious bodies not supported by the State. Look at the Dissenters on all sides of you, and you will see at once that their Ministers, depending simply upon the people, become the *creatures* of the people. Are you content that this should be your case? . . . Can we allow ourselves to preach smooth things and prophesy deceits? to make the way of life easy to the rich and indolent, and to bribe the humbler classes by excitements and strong intoxicating doctrine?"

There was a certain amount of rhetorical exaggeration about this. The servility of the Dissenter and the noble independence of the Churchman were neither of them as extreme as Newman would have had his readers think. But there was a core of substantial truth in what he wrote, so far as it relates to the tendency of the voluntary system; and it is a truth which has but gained in force and pertinence with the lapse of time. Since those days wealth has increased tremendously, and the owner of a large fortune has come to have, by that fact alone, a social and political importance vastly greater. Moreover, the main bulwark of the clergyman's position, behind which he could then securely stand and resent the tacit or overt aggressions of the rich pew-holder, has been almost obliterated. This was, the powerful tradition which marked him off as distinctively the educated man of the community, and the reverence for his office which had been inherited from former times. But as the prestige of wealth, as such, has increased, the prestige of the clerical profession, as such, has declined. With less than ever before to rely upon in indifference to the jingle of the guinea, with the standard of "success" and "acceptability" as a minister coming more and more to be identified with the amount of pew-rents, it is not strange that the bearing of a clergyman towards the rich should have come to be one of the severest tests of his character.

That many of the ministry fail miserably under it is clear enough. It is not often that they are so openly made tools of as they were in the early floating of the Northern Pacific Railroad's bonds, nor can we suppose that such unblushing worship of the golden calf as was indulged in a few nights ago by a company of Presbyterian ministers at the house of Jay Gould is a matter of common occurrence; but in less conspicuous and offensive ways the subservience of some among the clergy to men of wealth is as indisputable as it is unfortunate. We are perfectly aware that this subservience is frequently unconscious. A minister will go on accepting great personal favors from rich men, and according them a deference beyond the deserts of their character or attainments, without seeing how, on the one hand, he is degrading himself to the position of their steward, or, on the other, is for ever shutting his mouth against their shortcomings. And we know, too, how commendable, or apparently so, are the motives which often lead clergymen to honor the rich above other men. They sometimes do it in resentment of a false idea that the millionaire may not be a man for a' that. They are aware, as the public is not, of the immense amount of good done in an unassuming way by men who make their wealth a servant, not a master. Then they often say that it is idle to deny the fact that money wields an enormous power in the world, and that they are not to be blamed for trying to turn that power to the worthiest uses. They have a comfortable sense of being on an easy footing with men who wield the greatest forces of modern society, and easily transmute that feeling into an assurance that the Church and the cause of religion are made so much the stronger thereby.

We have not the slightest disposition to make out ministers sinners above all other men in this particular. In this they but share the tendencies of their time. If we were to be strict to mark iniquity in this matter, what college president would stand? The late J. G. Holland had in one of his stories a vulgar man of great but dubiously acquired wealth, who was long hunted and harried by searchers after educational endowments. The fellow took it all as a part of the mammon-worship he was accustomed to, but finally aspired to higher things, and confided to a friend that he was fairly pining for a theological seminary to endow. The satire is too close to the truth to be pleasant for some institutions. But the state of things satirized is to be found in no one class in the community: we are all in danger of giving in to the blind worship of wealth.

But while we cheerfully admit this to be true, we still maintain that the clergyman ought to be more jealous than other men of anything that would put him into com-

promising relations with the rich, because he is almost the only man in the modern world who can make an effective protest against the vulgarization of society and the demoralization of character which come from making wealth the sole and sufficient standard. He is about the only man who can, if he will, attack the excessive claims of riches, in things social, political, and religious, without falling under suspicion of insincerity. When the Anarchist raves against great accumulations of money in one man's hands, it is commonly understood that he wants his share of the plunder. Certainly, the average newspaper editor, with his pen controlled in the counting-room, cannot pose as a lofty moralist on the subject. Those writers who are not thus hampered, and who, in a daily paper or magazine article or essay, can freely speak their minds, must yet rest under a certain suspicion that their contempt for wealth is only provisional, and subject to revision if they get on in the world.

But the minister of religion has, or should have, by virtue of his office, renounced getting on in the world. His is the only profession which expressly rules out great pecuniary gains. Its ideal is a service of humanity, with only an incidental livelihood as a material reward. A man in that profession, if he is circumspect, can speak to the most vital needs of modern society as no one else can. Personally beyond suspicion of crooking the hinges of the knee, in a place of teaching made reverend and authoritative by long tradition, it is in his power, as it is in that of no other mortal, to expose and combat and defeat the evils of a society rapidly becoming plutocratic. People talk of the decayed power of the pulpit, but here is its unrivalled opportunity. Not that it is to "reconcile the interests of capital and labor"—may a kind Heaven spare us further sermons on that subject—but let it, by precept and example, exalt manliness and simple virtue above great possessions; let it insist that vulgarity and folly remain vulgarity and folly though tricked out in diamonds; let it apply the Scripture rule of taking gifts for religious purposes only when the giver shall have first expressed his willingness to restore fourfold if he has wronged any man. It is because we thus appreciate the immense usefulness within the grasp of the ministry of to-day that we deplore the way so many of its members are throwing it away by approving where they should rebuke, by going with the crowd, and, worst of all, by making themselves, in Newman's phrase, the creatures of the very men whom it is their business to instruct in righteousness

MR. BALFOUR'S FAILURE.

THE most striking event in foreign politics during the past month has been the collapse of the constructive policy of the Tories in dealing with the Irish question. There have been six years of coercion in Ireland, attended, they say, with complete success in restoring order, but this confession has been unfortunate, as it forced them to attempt constructive remedial measures in the last days of the present Parliament, after they have lost ground a good deal with the constituencies in England. Accordingly, Mr. Balfour, as soon as the present session opened and he had assumed the leadership of the House on Mr. W. H. Smith's death, brought in a bill for the establishment of county councils in Ireland—that is, for the government of Irish counties by popular representative bodies. Irish counties are now governed in the main by grand juries composed of the local gentry and selected by the High Sheriff. There is no question that, during the last half-century at least, this grand-jury government has been on the whole both pure and efficient. There is no likelihood that an elective council would give the taxpayers better results for less money. The great objection to it is, that it is the government of a class separated in feelings, traditions, and opinions from the main body of the population, and that as long as it exists, therefore, the Irish cannot get even rudimentary lessons in the art of self-government. It is, in fact, the want of the political training at home which makes the Irish peasantry such an undesirable political element when they emigrate to countries in which they enjoy a full share in the management of local affairs. Moreover, the more they emigrate, the greater the discontent of those who remain behind, over their exclusion from all share in local administration. So that, in introducing his "Irish Local Government Bill," Mr. Balfour's object was not to give the Irish better local government so much as local government that would be more satisfactory to the people, and tend to abate the agitation for an Irish Parliament.

The occasion was a very critical one in Mr. Balfour's career, for probably nobody knows better than himself by this time how hollow is the greatness which his career as Irish Secretary during the past three years has thrust upon him. What has given him his great fame as the rising hope of the Tories and the idol of London society, is his sudden development of very remarkable debating talent, after sixteen years of obscurity in the House of Commons, and the cool and jaunty way in which he enforced the Irish Coercion Act and bore the Irish taunts and insults which had broken down Mr. Forster and Sir George Trevelyan. In fact, it may be said that it was the latter which really made his political future, in conjunction with his relationship to Lord Salisbury. But in enforcing the Irish Coercion Act he showed no qualities which may not be found in great abundance among the young men of the upper class in England. He belongs, in fact, to a very common aristocratic type, which once played a great part in politics, but is now mainly represented in the army, viz., the cool, plucky, unsentimental, fastidious man, animated with considerable contempt for Celts and colored people, and enjoying immensely the sharp, short methods of military government. The government which was put in Mr. Balfour's hands by the Irish Coercion Act was essentially military; and by a vigorous use of it—that is, by locking up the orators and hunting down the turbulent with soldiers (for the Irish police are soldiers), and following the suspected, in the old Austrian fashion, with spies—he produced in the course of a few years an appearance of external tranquillity. His praises in his own set were then sung as loudly as if there were not a thousand officers of the British Army who could have done the work as well, and as if Cavour had never said, "Anybody can govern with 'a state of siege.'"

Moreover—and this is the most curious thing in his career—his friends have talked as if the chief object of his Irish administration was to reveal his debating talents and his courage, and as if, this being accomplished, his success or failure in really pacifying Ireland by reconciling people to the English connection was an entirely secondary matter. So that it has been a not uncommon experience, in talking with his admirers about him, to be told that, although it was quite true that the Irish were no more reconciled to English rule now than when he began, nevertheless every one now recognizes the force that lay under his dilettante exterior, and the marvellous ability with which he met the Irish and the Gladstonians in debate, and, therefore, he must be considered a prodigious success and the coming Tory leader.

The probabilities are, however, that he was not himself deceived, except in the first year or two, by this absurd flattery, and knew that the time must come when he would have to give better proof of statesmanship than clapping the Irish into jail. The time has come, and he has produced his first really constructive and healing measure, the first measure which was to offer the Irish a real share in the government of their own country. The necessity was the greater because his great charity measure—the vote of $150,000,000 to be lent to the tenants to enable them to buy their holdings from the landlords—has proved a failure thus far. Mr. Jackson, his successor in the Irish Secretaryship, had to admit this in the opening debate on "the address." Of the $150,000,000, only about $1,000,000 has been called for by either landlords or tenants.

The scene in the House of Commons when Mr. Balfour introduced the Local-Government Bill is reported to have been very extraordinary. His exposition of its contents was very spiritless, because it is known to receive only half-hearted approval from his own party. By the Liberals and the Irish it was received with shouts of laughter, which followed him to the end. What called forth the most up-

roarious mirth, and furnished the weapon which will probably have most to do with killing the measure, is his plan for preventing the county councils from misbehaving. He said, as reported in the London *Times:*

"Under the bill, application may be made by twenty cess-payers to a judge of assize for leave to petition for the removal of councillors of counties or baronies [loud Opposition ironical cheers and laughter] on the ground that the council has been guilty of persistent disobedience of the law [renewed laughter], or of corruption [renewed laughter], or of malversation or of oppression [loud laughter]."

The debate after this was a scene of great merriment. The places of the councillors "found guilty" by the judges were to be filled by appointment of the Lord-Lieutenant. But the mirth reached its height when Mr. Chamberlain, who had been dubbed by Sir William Harcourt the secret "mother of the bill," rose to defend this plan of having legislators tried for bad legislation by two judges and punished by the loss of their seats. The distrust of the constituencies displayed in it was not less comical than the assumption that the judgments of the two judges on the character of their measures would be received by the voters with reverence and acquiescence. As a feature of local self-government, it was of course a delightful Irish bull, but it had to be put in to satisfy the Tory distrust of the Irish capacity for self-government, and that curious Tory expectation that the Irish would acknowledge, themselves, that this distrust was justifiable. So when Mr. Chamberlain asked the Liberals what they were laughing at, and said the Supreme Court of the United States exercised just the same supervision over the State Legislatures, the joke assumed monstrous proportions. Said he:

"As I understand, the main safeguard, and the one spoken of by honorable members below the gangway as an insult to Ireland, is a safeguard which the Americans, the most democratic and independent people on the face of the world, have actually introduced into their Constitution. [Hear, hear.] At the present time there is not in the United States of America a Legislature in any of these governing States which cannot, in the words of the right hon. gentleman—the absurd, the theatrical words of the member for Newcastle—be put into the dock and tried and judged by a judicial tribunal.

"Mr. J. Morley—And suppressed?

"Mr. J. Chamberlain—No, not suppressed. My right honorable friend will not get off in that way. I am coming to suppression directly. The charge of the right honorable gentleman against the Government was that they were going to put county councils in the dock. No matter what the penalty was to be if convicted, the insult was that they were going to put them in the dock. [Cheers.] I say, in exactly the same way as these councils would be put into the dock, the Legislature of every State in the United States of America may be brought before the Supreme Court and 'put into the dock' and their acts declared to be *ultra vires.*"

This brought Mr. Bryce to his feet, and there followed this curious colloquy:

"I should like to know what any ordinary American would have said to the right honorable gentleman's argument if he had had the good fortune to be sitting in the strangers' gallery. [Loud cheers.] That American would have realized that there was no country where American institutions were so little understood as the country from which so many of them were derived. [Cheers.] The right honorable gentleman stated that there was no Legislature in the United States which might not be put into the dock and tried by a tribunal in exactly the same way as it was proposed to treat the Irish county councils.

"Mr. J. Chamberlain—I did not say that the cases were exactly parallel, or were exactly the same; nor did I say that the consequences would be exactly the same. [Home-Rule cries of "Oh."]

"Mr. Bryce said that the right honorable gentleman had undoubtedly used the word 'exactly,' for he had taken it down at the time. [Cheers.] The House might be interested to know that there was absolutely no power whatever in any American court to arraign or deal with the action of any Legislature at all. [Loud cheers.] No American court had any power to do anything but administer the general law of the land. The highest law of the land was the Constitution of the United States. The next highest was that constituted by those statutes of Congress which had been made under the authority of the Constitution and in the scope of the Congressional powers; and if any act of a State Legislature transgressed the Constitution of the United States or a statute made by Congress, that act might, in a private case arising between parties, be judged to be in fact null and void [Ministerial cheers, and "Hear, hear," from Mr. J. Chamberlain]."

CONSTITUTIONAL REFORM IN BELGIUM.

PARIS, Feb. 12, 1892.

CHANGES in the Constitution of Belgium have been agitated for many years, and certain reforms have even served as war-cries for political parties, but hitherto in vain. Recently, however, the Chambers have taken up the matter so much in earnest that it may now be worth while to examine the questions at issue, and, while the Committee is considering the bill proposed by the Government, inquire into the changes which public sentiment is loudly demanding. That Parliament feels the pressure is evident from the attitude of all parties since the opening of the session in November, and the general feeling seems to have been expressed in the words of M. de Lantsheere, President of the Chamber of Deputies, who, in his speech accepting reëlection to the chair, declared that "the present session ought to be the session of revision, and it will be." The ministerial project was placed before the House a few days ago.

The charter under which Belgium has been living dates from the birth of the country as an independent monarchy, and has suffered no change since that time. Like all documents of its kind, it was the result of compromise between the various parties, and came out as none of its projectors expected. But the year 1831 was a trying time for Constitution-makers, for not only was the struggle for separation from Holland not definitely ended, but the breath of revolution was blowing from France upon a population at the same time highly inflammable and by instinct conservative. A form of government was finally evolved under which Belgium has, indeed, advanced and prospered, but which contained certain features by no means consistent with more modern notions of a parliamentary State. One of these features was the basis of suffrage, which rested on a property qualification. The right to vote for members of Parliament was limited to those who paid at least forty-two francs in direct taxes; and for participation in provincial and community affairs the payment of twenty and ten francs, respectively, was required. This was not a limitation which would have been felt as much at that time as at present, for not only was the population much smaller, but the lower classes had not begun to think so much for themselves. The disproportion between governors and governed was then not so apparent, but at the end of sixty years it has come to pass that, out of a population exceeding 6,000,000, only about 133,000 may vote for members of Parliament. According to a very low ratio of voters to population, there must be 600,000 men of mature age in Belgium who have nothing to say about national affairs, as they might have in the United States. The Radical party, led by Janson, demands the emancipation of this great body of citizens by the introduction of universal suffrage.

What form of the franchise will be finally voted is difficult to premise. Up to within a very short time, any extension of suffrage whatever was frowned upon in political circles. Even the Liberal party was suspicious of change, and the persistency of the Radical wing brought the matter to the front only at the expense of a decided party split and a victory lost to the Conservatives. The Ministry does not favor universal suffrage, but proposes to put it upon a household basis. A minority of the Centre demands a lowering of the property basis to that required for participation in provincial and community affairs, namely, a tax of ten to twenty francs. Hence the outlook for manhood suffrage is at present not very bright. Even Laveleye, whose last literary work was a series of articles on revision in the *Indépendance Belge*, expressed himself against it, saying that it would do very well for Switzerland, but that Belgium was too little accustomed to self-government to succeed well with the general franchise at present. The deprived working-classes are naturally in favor of the change. In 1890 a popular convention summoned to discuss the question brought together 50,000 workingmen, who, with deliberation and without any exhibition of disorder, formulated the demand for a voice in political affairs; but the ruling classes are almost to the last man Roman Catholic in faith and conservative by instinct, and at present the clerical element is in power after an overwhelming victory.

The articles of the Constitution which regulate the Parliamentary electorate are intimately connected with those which organize the Chambers, and certain changes are projected, also, in the latter. At present the Chamber of Deputies is elected by districts, several members being elected on the same list from each district, and the qualifications are the same as for voters, except that the representative must be at least twenty-five years of age. The Senators represent the nine provinces, but their number must always equal one-half the membership of the Chamber of Deputies, and they are apportioned to the provinces according to population. Deputies are elected for two years, and Senators for four, by the very same voters, the Senate coming directly from the people. There are no appointed Senators, as in most European Governments, the only exception being the Crown Prince, who becomes a member by right at the age of eighteen. But this upper house is chosen from a very limited body of citizens, for the Senator must be at least forty years of age, and pay about 2,000 francs annually in direct taxes. Every year lists are published for the edification of the proletariat, showing what persons are eligible to seats in the Senate, and if the actual number of those fully qualified is not sufficient properly to represent the province, enough more are added from citizens paying the highest taxes to make the proportion of possible candidates one to six thousand inhabitants.

We have here, indeed, a Senate which cannot be made the tool of the Executive or of the party in power, by increasing its numbers, but it is a chamber without particular weight, being simply another House of Deputies on a smaller scale. The choice of candidates is often so narrow that fitness has to be left out of the question, and the good expected from a representation of the large landed interests or money power of the country has never been realized. As compared with certain other clubs of millionaires, it has the redeeming feature that its members enter it by the acknowledged rights of wealth, not by the hidden effects of money. The revisionists, however, propose to abolish the property qualification, though they do not seem to change the principle of election. The range of choice will be greatly enlarged and the limitation of number to exactly one-half the other Chamber removed, so that whether the Senate remains a representation of class interests or is made simply another elective body as a guarantee of deliberation in law-making, its effectiveness will be increased.

Minor changes which the project desires to effect include a certain degree of minority representation which could be brought about by provinces constituting themselves, if they so desired, into single electoral districts. Another amendment removes the distinction between provincial representatives and deputies from the capital. The latter now receive no pay, while the former get something like 400 francs per month. The Ministry is inclined to grant the city residents at least half pay. Although the highest salary hardly removes the occupation from the class of gratuitous services, Senators receive no remuneration. It is further proposed to make not only the heir-presumptive a Senator by right, but to grant the same privilege to all the princes of the royal family. If it be well to educate the Crown Prince to the burdens of the throne, it is doubtless proper to give other possible heirs the same experience; but this might lead the royal family into unpleasant political entanglements, and vitiate the personal irresponsibility of the crown, whose burdens are now carried by a Ministry.

Vastly more far-reaching is the proposal to remove from the Chambers the power to verify the election of their own members. This is a reform not demanded by Belgium alone, for, with three or four exceptions, every parliamentary government in the world is suffering from the evils of partisan judgment in contested elections. Americans do not need to hear examples cited. France is equally tainted with the same disease, for committees on elections find justice confined to their own party there as much as in other republics. Hence this proposition to remove future election contests in Belgium from the elected body to a regular court of justice should be welcomed by all friends of good government, and should act as an incentive to fall into line with England and Canada in abolishing an abuse so flagrant. Exactly what form this amendment will take can be determined only later, for the Government simply expresses itself on the principle. It is interesting to note in passing that the very last efforts of Laveleye were given to the dictation of an article on the "Vérification des Pouvoirs," which was printed a few days after his death. The matter is very similar to the corresponding chapter in his book on 'Gouvernement dans la Démocratie,' but is applied to the case in hand. No stronger statement of the question than that given in that chapter (tome ii., ch. 8) is needed to show the evils of the present system. The proceedings of the Greek Parliament of 1890, there mentioned, recall the French congressional methods of a century before. "Purging" is not a lost art if it is still possible in Greece for the Opposition to come to the Chambers with forty-five adherents and be shortly reduced, by contested elections, to fifteen.

The territorial divisions of Belgium as now regulated are somewhat antiquated. The former relations of Luxembourg to the German Confederation no longer exist, and as for colonial connections, the Government desires that the civil status of the inhabitants of the Congo Free State be accurately defined. The succession to the throne is now by direct male succession in order of primogeniture. The party of the Centre proposed at first to add to this another limitation, to the effect that "no one is qualified to succeed to the constitutional office of chief of state who is not the issue of a marriage contracted with the consent of the legislative power." This proposition, however, was abandoned, and the project of the Ministry calls only for the consent of the King to such nuptials. In default of male heirs, the King may now appoint his successor with the consent of the Chambers, but as the wording of the article seems to confine this privilege to Leopold I., it is desirable to remove the ambiguity.

The most interesting amendment of all is the new form of veto which it is proposed to put into the hands of the King. At present the only recourse left for the chief executive, in case he does not favor a bill, is to dissolve one or both of the chambers and call a new Ministry. The royal veto final is as dead as it is in England, and a dissolution of Parliament is a step taken only after very serious consideration, and has occurred but four times in the history of the Belgian monarchy. The proposition is now made, however, to give the King the privilege of submitting a bill to popular vote, and to let him govern his signature by the result. This is not an executive act for which the Ministry is responsible, but a weapon with which to protect himself, or the people, against legislatures. It is a combination of the suspensive veto, as we know it, and the *referendum*. It is not like the *referendum* in Switzerland, for there the bill goes before the people, either by force of law, as provided for certain financial measures, or on petition, which may bring any project to popular vote. In Belgium this is left entirely to the judgment of the King, who may not use the privilege at all unless he desires.

The value of this measure from the democratic standpoint naturally depends on the legal conclusiveness of the plébiscite. In Switzerland the popular vote is final: the Legislature has nothing more to do with the law; it remains only for the Executive to declare the result of the election, which, if favorable, makes the bill a statute as soon as promulgated. If the Belgian plan simply gives the King an opportunity to test popular opinion, it becomes, indeed, a step in advance towards democracy, but not a long one. The effects will still depend on the personal qualities of the sovereign, and public opinion may or may not thus find an opportunity of expression. The details, however, await the discussion of the Chambers, and the chances may turn against the project altogether. Opinion is very much divided. The Government bill was not received with any great warmth in general when presented the other day, and the prospects are good for heated discussion. M. Woeste, the great leader of the Clerical party, was tempted into epigrams, and expressed the opinion that this "royal referendum is nothing but personal power tempered by plébiscites." But M. Woeste is not the dictator he once was. Others see in the measure a corrective for misrepresentation in the Legislature, and an opportunity to show changes in public opinion between the regular elections to Parliament. But the plan is so new that the chances for success on the merits of the question are narrow. Even the enlargement of the franchise has but just come to get a respectful hearing, and the Government is accused of heaping up new and untried measures in order to profit by the complexity of debate. It is to be hoped, however, that in time this combination of royalty and democracy will be tried. Belgium has on the whole presented a model of enlightened constitutional monarchy, and offers a good field for this new experiment.

The machinery of constitutional revision is comparatively simple. The Legislature has the right to declare that amendments are to be made to such and such articles, and after this statement the houses become legally dissolved. A new election must take place within forty days, and the new Parliament must assemble within two months after the dissolution. It is this body which finally enacts the amendments, and these become law when signed by the King. The present Legislature will, however, determine the general outline of changes at present in view, and make the great discussion of principles. The prospects for democracy are as yet uncertain. *Nous attendons.*

RENAN'S 'DETACHED LEAVES.'

Paris, February 18, 1892.

There is a great deal to be said, after all, for the doctrine of realism; nothing survives but what is real. A good book is a book which has, to use the modern language, *vécu*—lived. Who reads now the 'Natchez,' or 'The Last of the Abencerages,' or 'The Martyrs,' or 'The Genius of Christianity' of Chateaubriand? These books have become mere phantoms, while we are all capable of reading over the 'Mémoires d'Outre-Tombe.' Long, very long, is the list of the works published by Renan; how many of them will survive him? I was conversing some days ago on this very subject with some members of the French Academy; they all agreed that the book of Renan's which has the best chance of being read thirty or fifty years hence is 'Souvenirs d'Enfance et de Jeunesse.' The polemical, the exegetical works will be forgotten, or at least they will be as little read as some of Voltaire's attacks against the Church. Few books have produced in their time a greater sensation than the 'Vie de Jésus,' but the revolution produced by it in the public mind has, so to speak, already exhausted its effect. Ask Renan's publisher if the volumes which have followed the 'Vie de Jésus' sell as readily as this first volume, which was a declaration of war on Catholic dogmas.

Renan tells us himself that he had a visit from his publisher some time ago. They talked over the fourth volume of the 'History of the People of Israel.' Most people have quite enough of the people of Israel, and as this fourth volume could only be got ready for publication by the end of 1892, the publisher (who himself belongs to this famous people of Israel, as his name Lévy shows) said to Renan: "Could you not, meantime, give me a volume of miscellanies? What we want of you now" (I here cite textually the preface of Renan's new book) "is a volume in the style

of your 'Souvenirs,' interesting to all, simple, personal." Note this word *personal;* we do want to know all about persons who have made great names for themselves. Sandeau, who was a colleague of Renan's in the French Academy, told him many years ago: "The public will always be satisfied when you speak of yourself." The new volume is conceived in this spirit. It is called 'Detached Leaves,'* and is made out of the leavings of the volume of 'Souvenirs,' with the addition of a little after-dinner speechmaking, of lectures, newspaper articles, academical discourses, and sundry letters.

The preface, as usual in Renan's books, is written with much care and is very characteristic. It is full of the lukewarm, commonplace optimism which has of late years been growing in Renan's intellect—an optimism which is a singular mixture of good nature and contempt, of a mild enthusiasm and mild indifference. Some friends of his were once discussing Victor Hugo; he began to speak, and praised almost with eloquence the genius of Hugo, his extraordinary imagination, the richness of his invention. After a while, when the flow of eloquence was over, somebody said: "That's all very well; but do tell us what will survive of Hugo's immense production a hundred years from now?" "What will survive? Well, well—nothing." Renan has invented a new kind of scepticism, a satisfied scepticism, which at times assumes the language of faith. Among the many articles in the new volume is a sort of philosophical examination of conscience, written in 1888:

"I have not much modified since," writes Renan, "my way of looking at the universe. More and more clearly I perceive that we know very little of what we should like to know. In philosophy, we must have confidence in the infinite goodness and guard ourselves against vain eagerness. We gain nothing by importuning truth, by soliciting it every day. Truth is deaf and cold; our ardor does not touch it. *Die neue Philosophie—die neuere Philosophie—die neueste Philosophie*—Heavens! how youthful these bids are! Why do we dispute about priority in error? Let us learn how to wait; there is perhaps nothing at the end of it. . . . Who knows? Perhaps truth is sad. Do not let us be in such a hurry to learn it."

Renan is surprised to see so much agitation in our French youth; he thinks that youth ought to be serene. "Have these young men not read the history of philosophy, nor Ecclesiastes—'The thing that hath been, it is that which shall be'? Why should you, dear children, give yourselves such headaches merely in order to end by changing your error? Amuse yourselves, since you are only twenty years old, and work also." And why should they work? you may say. In order to study science; for if philosophy is barren, science is not. There is always a harvest to be made in that field. If I were tempted to be more of a Renan than Renan himself, I would tell him that science, after it has fed me, and clothed me, and warmed me, is nothing to me, after all, if it does not give me a philosophy. I am sure I could find a hundred pages in the works of Renan expressing the greatest contempt for a purely material civilization. In this very preface, I read: "We shall have evil days: moral stocks will fall, it is certain; already the spirit of sacrifice has nearly disappeared. We see the day coming when everything will be the object of a syndicate, when organized egotism will replace love and devotion. Our century has made more and more perfect material tools, without seeing that the use of these tools supposes a certain amount of morality, of conscience, of abnegation." "Never mind," he says, a moment afterwards; "the resources of humanity are infinite. Eternal works will be accomplished, and the spring of living force, always coming to the surface, will never become dry. Science especially will continue to astonish us by its revelations, which will put the infinite of space and time in the place of a creationism that satisfies no longer the imagination even of a child."

I can only compare this method and this style to the movement of a pendulum. All established religions are wrong, all dogmas are fallacies; but "as two parallels meet in the infinite, so does religion become true in the infinite." Here and there, there is a touch of humor: after having praised virtue, he adds: "If virtue were a good investment, business men, who are so sagacious, would long ago have remarked it; they would all be virtuous. No, in the finite order it is a bad investment; but, in the infinite, all contradictions efface themselves." Renan has of late years discovered that the greatest virtue, the greatest recompense of a good life, is gayety. In the little after-dinner speeches which he makes in some of the Breton clubs, he is never tired of praising gayety; he has discovered it in Brittany, which had always been represented to us as full of gloom and melancholy. A gay Gascon seems very natural, but a gay Breton—well, Renan will have it that his compatriots are naturally very gay. "N'est pas gai qui veut," he says. "In order to be gay, you must belong to an old race, not *blasée;* you must also be satisfied with your own life."

This satisfaction is complete in Renan; it is sincere, and it gives him a sort of clerical serenity which is at times agreeable and sometimes also irritating. "My life," he says, "has been what I wished, what I conceived as the best. If I had to begin it anew, I would not change it much. On the other hand, I have a little fear of the future. I shall have my biography and my legend." He amuses himself with making this legend, having had some experience of ecclesiastical writers. "The legends of the enemies of the official Church are all cast in the same mould. The end which the Acts attribute to Judas (*crepuit medius*) is the necessary foundation of them. For one part of the tradition I shall end thus, in a manner combined of Arius and of Voltaire. Heavens, how black I shall be!—all the blacker that the Church, when she feels she is lost, will end in malice; she will bite like a mad dog."

To speak frankly, this seems to me in very bad taste; these pleasantries are forced, and seem to me vulgar. Who can tell what figure he will make in the great "Todtentanz"? Renan seems to me to care more than he says about the pious correspondent he speaks of, who writes to him regularly every three months these words: "There is a hell." He writes, it is true:

"This person . . . does not frighten me as much as he believes. I should like to be sure that there is a hell. For I prefer the hypothesis of hell to that of nothingness. Many theologians think that for the damned it is better to be than not to be, and that these unfortunates are perhaps accessible to many a good thought. As for myself, I imagine that if the Eternal, in his severity, should send me first to that dreadful place, I should succeed in getting out of it. I would send up to my Creator a supplication which would make him smile. The reasonings which I would make in order to prove to him that it is by his fault that I am damned, would be so subtle that he would have some difficulty in answering me. Perhaps he would finally admit me into his holy paradise, which must be very tedious."

The preferences of Renan are for purgatory, for there you meet the amiable sinners—those who have walked, as he does himself, on the tight-rope between virtue and vice, between corruption and incorruption—those who have led pendulous lives. He would like to meet them in this purgatory, which he represents to himself as an immense park, under a polar light, full of dark shrubberies, "where are purified loves begun on earth. What delicious novels are there finished! how little people must be in a hurry to leave it, especially for a monotonous paradise!" When you read such lines you often ask yourself, Is the author serious? What does he really mean? Is he laughing more at himself or at us? What notion has he of the mission of a writer? The extraordinary fluidity of Renan's style is the outward expression of a fluidity of thought, of belief, of unbelief, which is truly extraordinary. I have only touched so far on the philosophical part of his new work; there is another part on which I must dilate at some length—I mean the social part, the views which Renan takes of the relations of morality. But I have no more space to-day to touch on these delicate questions.

Correspondence.

PARTIES AND THE NATION.

To the Editor of The Nation:

Sir: It is very instructive to see the exultation of the Republican papers over the helplessness of the Democrats and their inability to make any progress with the public business. The argument is, in substance: "We are bad enough, but the other fellows are worse. You will have to come back to us." Is it not a pitiful thing for this great country that the question which the people are called upon to decide, is not which party is the best, but which is the worst? If anybody supposes that the Republican party, if it returns to power, will be merely what it has been, he is laboring under a grievous delusion. On the plea that its past action has been endorsed by the people, it will plunge into a fresh course of iniquities, and in its turn be displaced by a Democratic party still more helpless and disorganized. And so we shall go on, from bad to worse, till the country discovers that the root of the trouble is not in either party, but in the defective organization of the Government business. Meantime, the situation is a difficult one for the independent voter.

The matter cannot be better illustrated than by the state of the pension bills. As the *Evening Post* points out, neither party has the courage to offer the smallest opposition to this gigantic swindle. The reason of this is, that every member stands in direct awe of an active and influential minority of his local constituents, while he has personally nothing to hope or fear from the country at large. The Treasury, which is the real sufferer for the country, has no authorized representative or defender in Congress, while the impersonal and collective responsibility for its condition sits very lightly upon the members of either party, as compared with their relations to an eager group of political workers at home, especially when those relations are manipulated by a powerful and determined lobby.

Mr. Reed, in his article in the *North American*, says (and the sentence is an epitome of his whole argument), that the "billion-dollar"

Congress appropriated the money because the citizens of this country, who are the rulers of it, demanded it; upon which the inquiry at once arises, What citizens? If he means the citizens who pack caucuses and conventions and make members of Congress, the plea is no justification. If he means the 65,000,000 of inhabitants, minus the small percentage who benefit by pensions, the reply is that they have never been asked.

Suppose that Mr. David B. Hill were to succeed in packing the conventions of other States as he did that of New York, and were to persuade the country that, bad as he is, he is not as bad as the Republican candidate (and a case suggests itself in which even that argument might be maintained), would anybody dare to say that he was the choice of the people of the United States?

The truth is, that if this country is ever to redeem itself from the slough into which it is falling—if it is not to fail disastrously in its great mission as the champion and exponent of popular government before the world—some provision has got to be made for the expression of the will at least of the majority of the nation as a whole; and the only visible method is to give to the President and his Cabinet that share and voice in the guidance of legislation without which administration itself is nothing but an instrument for the intrigues and quarrels, the greed and the ambition, of contending factions. G. B.

Boston, March 5, 1892.

FREE COINAGE AND ITS CONSEQUENCES.

To the Editor of The Nation:

Sir: "Will the silver of Europe be thrown upon America when free coinage is established?" This is a question discussed by Mr. Leech and Mr. Bland in the March *Forum*. I think it will not, but upon grounds very different from those assigned by Mr. Bland. If free coinage, in the form of the Bland Bill, accompanied by certificates issued against bullion, comes at all, it will not be before June, 1894, and then only if the Democratic Convention nominate Hill or some Western man not pledged against such a measure. When the free-coinage bill becomes a law, its effect will have long been foreseen, and will *at once* come to pass in its full force. This effect will be simply that 371¼ grains of pure silver will be worth no more after the impress of the silver dollar is put upon them than before. Hence, no one in Germany, Austria, France, or Italy will have the least reason or motive for carrying his silver across the ocean to the United States.

I feel not at all sure that our gold coins will be exported. They will simply circulate at a premium. The necessities of the case will regulate the premium and keep them from fluctuating too wildly. It is very likely that ten-dollar gold pieces will come to pass, as a matter of course, as fourteen-dollar pieces. I recollect distinctly how in Prussia, in 1848, and for years before, Friedrich's-d'ors, nominally five-thaler pieces, were paid out at 5⅔ thalers, with as much regularity as if they had borne the inscription 5 thaler 20 groschen. We may thus have a truly bimetallic currency—though not in the sense in which some of the advocates of silver coinage predict, yet in the sense in which the rank and file of the silver party desire it, namely, that ten dollars' worth of either gold or silver, as measured by the present standard, will pay fourteen dollars of debt.

If there is to be a national bankrupt law, I think that between Torrey's bill and Bland's the latter is the most economical and simple. No clerk or register, no assignee or trustee, no marshal or messenger, no creditors' meetings, no suits to assail preferences, no opposition to discharges. Every man pays 70 cents on the dollar of what he owes, and gets his receipt in full. Solon tried the same relief measure in Attica 600 years B. C. In times nearer our own, such a measure worked itself out by the depreciation of the greenback. It may have its advantages. But let us freely admit that free coinage means this and nothing more.

Yours truly, L. N. D.

Louisville, Ky., March 1, 1892.

[Mr. Leech discusses in the *Forum* the question, "Would free coinage bring European silver here?" He holds that it would, but his whole argument goes on the hypothesis that there would be some period of time, long or short, during which silver could be brought to this country and exchanged for gold, dollar for dollar—*i. e.*, 412½ grains of the former for 25.8 grains of the latter (both of standard fineness). Now, we do not think there would be any such time, even one minute. We think that there would be a run on the Treasury and a forced suspension of gold payments before any free-coinage law could get into operation. After a suspension of gold payments, the holders of silver could get gold only by buying it as they do now. They could cheat creditors, and they might sell silver to "the debtor class" for a while at something more than the preëxisting rate. Mr. Leech says: "The moment our currency reached a silver basis, when our legal-tender paper money could only be exchanged for silver dollars, the profit to the foreign silver-owner for the interchange of his silver for our gold would cease, and silver would be imported then only as an exchange matter, just as gold is now." Quite true. We think that that interchange would never have a chance to begin.—Ed. Nation.]

BOND-SELLING BY THE TREASURY.

To the Editor of The Nation:

Sir: Statements like the following, from page 140 of your last issue, have frequently been made by writers on the subject, yet, as it seems to me, their erroneousness becomes apparent so soon as we follow to its practical operation the proposed remedy:

"Foreigners overlook the fact that the Secretary has the power, and is charged with the duty, of selling bonds if necessary to maintain gold payments. There is no reason to suppose that he would fail to apply this remedy in a crisis, *or that the remedy would prove inadequate.*"

I assume that you, in suggesting the selling of bonds, have in mind that by the conditions of the sale they are to be paid for in gold, since in a crisis the sale of them for any other kind of money would not help matters to any great extent. And by a "crisis" I assume that you mean a tendency to insist on the Government paying its greenbacks or other obligations in gold. However, even though you do not mean either of these things, they are what is meant and expressed by others who have with confidence used the same argument as yours, and may therefore seem worthy of consideration in your columns.

The idea is, then, that in order to get gold with which to meet the demands of those who present (say) greenbacks for redemption, the Government will replenish its supply of gold by selling its bonds for gold, refusing to accept greenbacks, Treasury notes, silver certificates, national-bank bills, or silver dollars.

Now, I claim that so long as the Treasury keeps these different kinds of money at a parity—and it is only to keep them at a parity that the sale of bonds is to be made—it will be impossible for it, in effect, to avoid taking in payment for such bonds money other than gold.

Suppose, for instance, that the Government does give notice of having bonds to sell for gold at the New York Sub-Treasury, and that a Wall Street banker possessed of $1,000,000 in greenbacks, but no gold, desires to invest it at the price at which the bonds are selling. All that he has to do is to go to the redemption department of the Sub-Treasury and exchange his greenbacks for gold, and then at once take this gold to the bond-selling department of the same building and hand it in in payment of his bond purchase. To say that the redemption department would not give the gold for the greenbacks, is to say that what we suppose the Government to be trying to avert is an accomplished fact.

Can any one doubt that should the Treasury ever, by the sale of bonds, advertise its precarious condition, the bonds would thus be purchased with its own gold withdrawn for that very purpose; and that the most that could thus be accomplished would be the withdrawal of some of the existing $346,000,000 of greenbacks? Any existing preference for gold over other money would by such action be increased rather than diminished, and the Treasury would probably have to pay out at one window more than it took in at the other.

If in like manner we follow through its practical workings the selling of our bonds abroad, it does not seem any more effective to accomplish the desired result, since the spot selected for making such sales has little influence in determining who are the real purchasers. The bonds would go to those willing to give the most for them, and such men care very little whether they send their bid to Wall or to Lombard Street. The Wall Street banker whom we before supposed to wish to invest $1,000,000 in them, would have the same wish in this latter case, and would proceed in much the same way to accomplish his end. As before, his greenbacks he would exchange at the Sub-Treasury for gold. Instead of at once returning this to the Sub-Treasury, however, he would take it to a dealer in foreign exchange, and, by means of the telegraph, inside of a few hours, if need be, the same weight of English sovereigns or gold bullion would be handed over to the London agent of our Government in purchase of the bonds. In fact, these elements of distance and time, which do not in the least interfere with the desire of the purchaser, might be very unfortunate for the Treasury. Its supply of gold might be very seriously lessened before the returns from the sale of its bonds could reach it.

In whatever way I look at the subject, it seems an absurdity for the Treasury, with a view to increasing its gold supply or restoring confidence, to discriminate against any kind of money in the sale of its bonds, and at the same

time continue to redeem in gold that same money. EDWARD F. SWEET.

CHICAGO, February 29, 1892.

[If the Government revenues were doubled, the silver crisis would be staved off indefinitely, because in that case the purchase of silver would not be an appreciable embarrassment. The silver notes put out would come back for redemption whenever they were in excess, but there would always be means to redeem them, and they would pile up in the Treasury. The law says that they "may be reissued," but there is no way to reissue them except in payment of Government debts; and under the hypothesis, the Government has sufficient money coming in to pay all its debts. The situation, therefore, would be simply a redundant revenue and the application of a portion of it to the purchase of silver bullion. It might be pig-iron, or pig-lead; the effects would be the same.

Now, the sale of bonds is, for all the purposes we are considering, the same thing as an addition to the revenues. It has the same effect upon the maintenance of gold payments. The fact that the bonds must be redeemed at maturity is a separate fact, interesting in itself, and having its own consequences, the most important of which is a probable increase of taxation to meet them. But for the present the effect of bond sales is simply an increase of Treasury receipts. If anybody can see how an increase derived from ordinary sources would stave off the silver crisis, he should be able to see how an increase derived from extraordinary sources would produce the same result.—ED. NATION.]

THE EDUCATION OF SOUTHERN YOUTH.

TO THE EDITOR OF THE NATION:

SIR: In your paper of the 25th inst., now before me, I read, under the caption of "An Interesting Question," your comment upon the editorial of the St. Louis *Republic*, and on what the Buffalo *Courier* also had to say upon what, for us of the South at least, might be called a *painfully* interesting question. The comments of the three papers are correct; but as far as the causes that have led to this condition of things in the South are concerned, all has not been stated, and the most painful effects not even been hinted at.

As to the causes in the Southern States: after the war, bread was the first cry, followed by the insatiable appetite for money-getting, to enjoy once again after four years the mere comforts of life. This led fathers of families to take their half-educated sons into their stores and offices, that the salaries they must pay if employers, or earn if they were employees, might aid in the family support; and the girls, after the household duties were performed, were put to their books under the mother's charge as schoolmistress. Consequently, the proportion of girls and young women who were being educated largely exceeded the number of boys and young men. Then, too, be it remembered, there were comparatively few schools and colleges open in the South for a year or two after the close of the war. And still another cause must be mentioned — one that should not have existed, though easy for us of the Southern States to understand. So many half-grown boys, and war-grown young men, had either been in the active army, or in the reserves, or at posts and depots, or in charge of the planting or other business of the fathers and elder brothers in the field, that when the war was over, these youngsters, having proved themselves to be in deeds, felt that in fact they were, men; a few—very few—were willing to return to their books, and full parental control was hard to establish. Had these war-worn and almost despairing parents (for the mothers were perhaps more worn than the fathers) had the means and the moral strength to insist upon their sons' returning to their studies, the young women of to-day would not so frequently have to complain of the want of intellectuality of their male friends.

Then as to the effects: in ante-bellum times parental control in the South "went without saying," and children looked up in deference to their elders—though not in fear of them. Now this is largely changed; young men, still in their teens, do not expect to ask permission to leave their homes after tea for the theatre or billiard-room, nor to account for either the hour or the condition in which they return. A general want of deference is observable on the part of the young to the old: the lifting of the hat is almost obsolete, and the man of middle age is fortunate if his friend's pert son does not call him by his Christian or nickname. This state of things, in the providence of God and the influence of his handmaidens, the future mothers, will cure itself; but to hasten it, fathers who can afford it (even when, as is largely the case, those who can afford it nowadays in the South are so-called "self-made men") should force their sons to take an education, even if they keep them at grammar and high schools until they reach their majority; and, failing in this, should enforce the law parental, at least in the homestead, and, like the wise German fathers, consider the son's wages as due to the head of the family until the fatted calf is killed and the christening bottle of wine broached on the twenty-first birthday.—Respectfully,

JAMES G. HOLMES.

CHARLESTON, S. C., February 27, 1892.

IS INDUCTION AN INFERENCE?

TO THE EDITOR OF THE NATION:

SIR: In the communication of Maxime Bôcher in the *Nation* of February 18, referring to the unsatisfactory condition of geometrical studies in our schools, he says:

"If we could lead the student first to see the truth of a proposition, and then, perhaps much later, to prove it, we might hope in time to have mathematicians in America. For every mathematical discovery is made in this way, let the mathematician conceal his footprints as he will; it must come as an intuition, and the man to whom it has thus come is its discoverer, even though he never succeed in finding a proof."

Is not this statement of general application? Is ever the boundary of knowledge advanced in any other way, whether in mathematical or physical science? Reasoning serves merely to verify and confirm the intuitions of genius by applying general principles to concrete cases; but *inference*, in any proper sense of the word, cannot *advance* knowledge—it cannot grasp more than is contained in the premise.

I know the common doctrine represents this as the province of induction. But induction is not reasoning; it is intuition, or happy guessing, if you like. Take any so-called inductive syllogism, and substitute for the major premise what is tacitly assumed, and it is converted at once into a strictly deductive argument. By no possible reasoning, or *inference* proper, could Newton have attained to the law of gravity. It was a happy guess, an inspiration of genius. It was based on wide knowledge, it is true; but it was not a necessary consequence of that knowledge. Assuming the law to be true, reasoning applied it, and the conclusions were found to agree with experience and observation. But the conception of the law was an intuition; it was not a *conclusion* involved in any known premises.

Take Whately's old school-book illustration of an inductive syllogism: "The ox, sheep, goat, deer, bison, etc., are a sample of the class 'horned animal,' or represent the class; the ox, sheep, etc., are ruminants, therefore all horned animals are ruminants." But what do you mean by "the ox, sheep, etc., are a sample, or represent the class 'horned animal'"? Evidently you mean that whatever is true of them is true of all horned animals. Unless this is true, your conclusion is worthless. But if you substitute this, which is tacitly assumed, the argument is deductive, not inductive. The same is true in every case of so-called inductive argument. The real induction—the advance in our bounds—is contained in the assumption that what is true in the cases we know will be found true in all cases having a certain other similarity to these. But this is not an inference, it is not reasoning, it is intuition.

J. McL. S.

DAYTON, O.

[It is plain that in no case of genuine induction is *everything* that is true of the sample true of the whole class; so, according to our correspondent, all inductions must be worthless. But he supports this position by nothing, nor does he notice a single one of the objections to it which have been urged from the days of Philodemus to our own, and are found in common American books, such as the 'Studies in Logic, by Members of Johns Hopkins University.' The main distinction between induction and statistical deduction (the only kind of deduction which bears much resemblance to induction) is that the prediction made by the deductive form of inference is applicable in many cases, and, while it may be false in any one, it will probably and approximately be true in the long run; but the inductive conclusion, on the other hand, may be false—only, if so, the further pursuit of the same method will in the long run probably and approximately *correct* it. The distinction is between getting confirmed in the long run and being corrected in the long run.

Our correspondent's proposition that induction is not inference will meet with less favor than it might do, owing to his use of the unfortunate word *inference*, which most people particularly appropriate to the designation of uncertain presumption, amounting to little more than conjecture. But in its philosophical sense inference is defined in the 'Century Dictionary' as "the formation of a belief or opinion, not as directly observed, but as constrained by observations made of other matters or by beliefs already adopted." For instance, we wish, let us suppose, to know whether

among negroes male births are more numerous than female births or not. This general proposition cannot be directly observed. We turn, then, to the compendium of the tenth census, and find a considerable excess of female over male births there recorded among negroes in this country for one year. This brings us to the belief that the same phenomenon would generally occur among large populations of negroes, and our proceeding is *inference* according to the received definition, as certainly as it is induction.

But the 'Century Dictionary' adds this remark: "The act of inference consists psychologically in constructing in the imagination a sort of diagram or skeleton image of the essentials of the state of things represented in the premises, in which, by mental manipulation and contemplation, relations which had not been noticed in constructing it are discovered." This recognizes an intuitive or perceptive element as an important part of reasoning itself—a doctrine which results from the study of the logic of relatives, where the perceptive element comes into great prominence. Proof believed to be conclusive has been offered of the truth of this view, which has been accepted by many philosophers. "J. McL. S." seems to offer no rational objection to it. He says, indeed, that Newton's discovery was "a happy guess, an inspiration of genius"—that is, it came directly from on high, or from the action of chance, and was not based upon any knowledge already in Newton's mind, or dependent from any luminous conception which he had carefully worked out. But the truth is, our correspondent seems to have taken his notion of reasoning from the 'Elements of Euclid,' which was written before logic was much understood, and from texts-books of logic inspired by theological doctors. If, as he says, "reasoning serves merely to verify [something] by applying general principles to particular cases," there is next to no reasoning in mathematics; for the *nodus* of a mathematical demonstration does not consist in the application of a general principle.

The original passage quoted has some truth in it. The mathematician usually sees a thing dimly before he sees it clearly. But between the processes of coming to see a mathematical truth as probable, and coming to see it as evident, there is no radical difference. It is all reasoning, and, as such, it is an act of perception—or, rather, of experiment, followed by observation.—Ed. Nation.]

"YOU WAS."

To the Editor of The Nation:

Sir: Mr. T. L. Kington Oliphant, in *The New English* (1886), vol. ii., p. 133, referring to Dr. Bentley's *Dissertation on the Epistles of Phalaris* (1699), writes: "The new use of *was*, just coming in, is seen in p. 299; 'when *you was* a boy.'" The fact, however, is, that the expression instanced was current at least ten years before Dr. Bentley was born, and all along in the latter half of the seventeenth century:

"But thus you will not have the same Indiuiduall Soul *you was* Christened with." Rev. Dr. Henry More, *The Second Lash of Alazonomastix* (1651), in *Enthusiasmus Triumphatus* (1656), p. 262. More has *you was* in his *Antidote against Idolatry* (1664), O 4 *v.*, *Divine Dialogues* (1668), vol. ii., p. 554, *Letters*, etc., also.

"Having known that *you was* there." "After *you was* departed from Valence." "*You was* about to marry the widow." Anon., Translation of *The History of Don Fenise* (1651), pp. 120, 240, 242.

"I have heard that *you*, Polymachus, *was* much offended when Aganacton was sick of this disease." Rev. Dr. Nathanael Ingelo, *Bentivolio and Urania* (1660), Part i., p. 108 (ed. 1682).

"What *was you* saying?" John Wilson (1664), *Works* (1874), p. 204.

"*You*, your self, *was* pleased particularly to shew me the place." Dr. Henry Stubbe (1670), *A Reply to a Letter of Dr. Henry More* (1671), p. 63.

"*You . . . was.*" Dryden and Lee, *Duke of Guise* (1682), Act IV.

"My sister told me *you was* pleased . . . to wonder I did so seldom write to you." Dean Swift (1692), *Letter to William Swift*, Nov. 29.

Other quotations could be given, as from Sir Aston Cokain (1658 and 1662), *Works* (ed. 1874), pp. 96, 297; and from Charles Cotton (1664), *Poetical Works* (ed. 1765), p. 62.

Mr. Barrett Wendell, in his *English Composition* (1891), p. 79, observes: "A slight examination of some of the best writers of the last century will show that, certainly as late as the time of Fielding, there was a great deal of good authority for *you was*, when the second person singular was intended." Fielding published from 1730 till 1754, the year of his death; and nearly all that he wrote was of the lighter cast of literature. But, as is shown below, in such literature, and more especially in familiar epistolary correspondence, *you was* continued to enjoy good repute long after his days:

"I find *you was* no more born for servitude than myself." Bp. William Warburton (1758), in *Letters from a Late Eminent Prelate* (ed. 1809), p. 263. In sixteen other passages in this volume, dated between 1749 and 1775, Warburton has *you was*.

"*You*, I was told, had been married, and *was* a widow." Mrs. Frances Sheridan, *Memoirs of Miss Sidney Bidulph* (1761), vol. iii., p. 119.

"*You was* the most lovely person in the world." "I learned, from Don Carlos, that *you was* resolved to go away with him." Oliver Goldsmith (*a.* 1774), Translation of Scarron's *Comic Romance* (1775), vol. i., p. 125; vol. ii., p. 83.

"As I told you, when *you was* here." "*You*, I think, *was* never a dabbler in rhyme." William Cowper (1780 and 1786), *Works* (1835–1837) vol. iv., p. 16; vol. vi., p. 17. Other instances of *you was* occur in vol. xv., pp. 33, 34, 45, 68.

"*You was* prevented, by Sir Joshua Reynolds, in your kind intentions of giving me the earliest notice of the honour you have done me." Bp. Jonathan Shipley (1780), in *Lord Teignmouth's Memoirs of Sir William Jones* (ed. 1806), p. 194.

"I am sorry *you was* disappointed of going to Vallombrosa." Horace Walpole (1791), in *The Journals and Correspondence of Miss Berry* (1865), vol. i., p. 367.

For *you was* could also be quoted: Dr. Hawkesworth (1773), in *The Private Correspondence of David Garrick* (1831, 1832), vol. i., p. 536; Miss Elizabeth Carter (1785), *Letters to Mrs. Montagu* (1817), vol. iii., p. 258, and often before; Richard Cumberland, *The Natural Son* (1786), *passim*; with many other writers between 1760 and 1800.

The quotations which follow are not without interest:

"*Was you* ever in Dovedale?" Lord Byron (1817), *Works* (1837-1840), vol. iii., p. 369.

"I understand that Pillans is to be succeeded by Carson, whom, if I am not mistaken, you saw while *you was* at Edinburgh." Professor Dugald Stewart (after 1819), in *Dr. Parr's Works* (1828), vol. vii., p. 552.

Byron, it may be surmised, picked up *was you* in Scotland, where, as I know from my own observation, it is still used by persons fairly well educated.

Writing of *was*, I am reminded of the barbarisms *I were* and *he were*, indicative; often heard, here in Suffolk, from rustics when, in addressing their superiors, instead of speaking naturally, they aim to speak elegantly. A neighbor of mine, a cottage-woman, giving her opinion of a clergyman, an Oxford graduate, who had lately visited her parochially, remarked that he could have had but little schooling. By way of a reason for this conclusion, she added that he had said, "I *was* there the other day." I asked whether she preferred "I *were*." "Of course," was her reply. The very elementary lesson in grammar which I thereupon ventured had, however, the effect, I perceived, of only convincing her that I was as great an ignoramus as the Oxonian cleric. This result was not wholly unexpected.

Your obedient servant, F. H.

Marlesford, England, Feb. 10, 1892.

AUGHT AND NAUGHT.

To the Editor of The Nation:

Sir: Surely there can be no disputing Mr. Hempl's account of the misuse of *aught* for *naught;* but his conclusion, that it may be "about time to recognize usage" as justifiable, may be questioned. *Naught* means *nothing:* will even the use of *aught* one hundred times instead of ninety-nine make *aught* mean *nothing?* In *adder*, *apron*, *auger*, *umpire*, the dropping of the first letter has led to no confusion. Shall we use *aught* for *nothing*, and say of an empty argument, or an empty bottle, that there is *aught* in it?

You supply "one classical use of *aught.*" Why only one, if the spelling of Hosea Biglow is to be considered classical? There are four such classicalities in the two lines you quote: *wy* instead of *why*, *aught* for *naught*, *fredum* for *freedom*, and *'twuz* for *'twas*.

W. J. Linton.

New Haven, Conn., February 26, 1892.

[Though but lookers-on in this discussion, we may observe that *aught* and *naught* present no greater contradiction than *either* and *neither*. Yet when Defoe writes, "However, I do not tell you that this was all at once neither," and we rewrite "——all at once either," precisely the same sense is conveyed. So "I can but believe," "I cannot but believe," etc. Mr. Linton's other "classicalities" belong in the phonetic category, and do not call for notice in a dictionary of orthography and etymology.—Ed. Nation.]

TOLSTOI AUTOGRAPHS FOR STARVING RUSSIA.

To the Editor of The Nation:

Sir: I have two autograph letters from Count L. N. Tolstoi, the famous author. Autographs of Count Tolstoi are rare, and I should like to sell these for the benefit of the starving Russian peasants.

Letter No. 1 is in English, with a few words of Russian. It refers to 'Robert Elsmere,' and to the Count's own 'Walk in the Light.'

Letter No. 2, which is longer, is also in English, with the exception of one Russian paragraph, which I will translate for the buyer. It expresses the great author's gratitude to America for her help and sympathy in Russia's present distress, and contains some characteristic remarks on the subject of autographs.

Both letters possess the advantage of giving specimens of the Count's English and Russian handwritings. I guarantee their genuineness.

I will receive bids for both these letters, separately, by number, until March 20, when I will award them to the persons who have offered the largest prices. In view of the object for which I consent to part with them, I hope the prices offered will be generous.

ISABEL F. HAPGOOD.

9 EAST TWENTY-SECOND STREET,
NEW YORK, March 2, 1892.

"MR. COLE'S ENGRAVINGS"—A NEW SERIES.

TO THE EDITOR OF THE NATION:

SIR: The *Nation* for March 3 printed an interesting suggestion from Mr. William J. Stillman with regard to a subscription scheme for new examples of Mr. Cole's engravings from the old masters. Though the proposition seemed to be authoritative, it was written, evidently, without a knowledge of Mr. Cole's latest plans. While it is true that Mr. Cole has finished the series of engravings from the old Italian masters now being printed in the *Century Magazine*, and hereafter to be issued in book form, it will be a mistake to infer that the *Century* Company has withdrawn its support from Mr. Cole's preferred work among the art treasures of Europe. He has recently engaged to produce another series in a new field for the *Century Magazine*, and this will keep his burin fully occupied for a long time to come. We offer this correction because inquiries are coming to us in furtherance of Mr. Stillman's suggestion, based on the supposition that Mr. Cole was in need of support to continue his work. THE CENTURY CO.

NEW YORK, March 7.

[We have no knowledge of the facts beyond the above letter and Mr. Stillman's. To the latter's project we have received several adhesions. They should be sent directly to him, addressed simply Rome, Italy.—ED. NATION.]

Notes.

CHARLES SCRIBNER'S SONS announce 'Across the Plains, with Other Memories and Essays,' by Robert Louis Stevenson; 'Essays on German Literature,' by Prof. H. H. Boyesen; 'Potiphar's Wife, and Other Poems,' by Sir Edwin Arnold; and 'The Dead Nymph, and Other Poems,' by Charles Henry Lüders.

Macmillan & Co. have nearly ready 'Gossip of the Century'; 'The Three Fates,' a story of New York by F. Marion Crawford; and 'A Picture of Pauperism,' by Charles Booth.

'A Human Document,' by W. H. Mallock, is in the press of the Cassell Publishing Co.

Harper & Bros. will shortly issue 'Studies in American Architecture,' by Montgomery Schuyler; and 'Tributes to Shakspere,' mainly in verse, compiled by Mary R. Silsby.

A popular 'Life of Balzac,' by his translator, Miss Katherine Wormeley, is in preparation for publication by Roberts Bros., Boston.

The Messrs. Longman will publish 'The Spanish Story of the Armada, and Other Essays,' by J. A. Froude.

The fourth volume of Moltke's *Gesammelte Schriften*, now in press, will contain a biographical sketch of the Field-Marshal by an officer of the General Staff, with interesting reminiscences of his youth and his reasons for exchanging the Danish for the Prussian service in 1822, and thus taking the most important step in his career. Preparations are also being made for the speedy publication of Moltke's 'Militarische Werke,' which will include his correspondence on military affairs during the wars of 1864, 1866, and 1870-71, the records of his activity as Chief of the General Staff of the Army, and other writings on military matters, partly historical and partly technical or professional.

Mr. A. H. Bullen's admirable collection of 'Lyrics from Elizabethan Dramatists' (Scribners) has been reprinted in a smaller and cheaper edition. Some of the poems have been omitted, as being less adapted for a popular issue, and the original collection is supplemented by the poems of Greene and Lodge, extracted from the editor's 'Lyrics from Elizabethan Romances.' The volume as it stands therefore fully represents the lyric poetry of the age, and contains the best of it.

Two new volumes have recently been added to Dickens literature. The collection of the 'Letters of Charles Dickens to Wilkie Collins' (Harpers), under the conscientious editorship of Mr. Laurence Hutton, was noticed by us on their original publication in *Harper's Magazine*, and their appearance in book form calls for no further comment except to say that we have here one chapter of that life of the novelist which Forster did not succeed in writing, and which must be sought by lovers of Dickens in detached fragments like this. At the same time, one should add that Dickens does not take any rank among English authors as a letter-writer. He never achieved more than a "note," whether long or short.

The second volume is an account, by William R. Hughes, of a week's journey among the scenes associated with Dickens or his characters, under the title 'A Week's Tramp in Dickensland' (Boston: Estes & Lauriat). This is a large book for its title, and contains over four hundred pages of exceedingly fragmentary description, personal reminiscences of Dickens collected on the journey, apt extracts from the works, facsimiles of this, that, and the other, and more than a hundred illustrations, of which half are new and the remainder reproduced from other Dickens publications. The whole makes an abundant scrapbook of Dickensiana, and is everywhere pervaded by an intense loyalty to its hero, who is exalted to make a third with Shakspere and Scott; but this is the right tone for such a collector as the author.

Echoes of the strife at Oxford between the friends of literature and the adherents of philology, on the subject of the precise terms on which modern literature shall be established as a study at the University, are brought to us in J. Churton Collins's 'Study of English Literature: A Plea for its Recognition and Organization at the Universities' (Macmillan). The volume is made up largely of articles previously contributed to different English magazines, and is a long and vehement argument for the literary as opposed to the philological method of study. The question is treated too closely in connection with English conditions to be of great value to educational discussion here, but those who are interested in the methods of teaching literature (and the methods in American schools and colleges are mostly unsatisfactory or experimental) may derive some suggestions from the volume. In our judgment the author does not wholly succeed in avoiding the objection that vagueness of treatment is inherent in the literary method, and that consequently examination or any test of progress made or work done is difficult. Many of his suggested questions for examination exhibit this vagueness in an exaggerated form, particularly where he undertakes to deal with foreign sources and influences in English literature; and hence his cause suffers by overstatement. We do not mean to intimate a doubt as to the rightness of his cause; but the fact ought frankly to be admitted that the philologists have a developed method of teaching, definitely made out and long tested, by which they are reasonably sure of obtaining the results aimed at, while those who insist on the "literary" method have an experiment on their hands, and must be contented to leave some matters in question to the proof of time.

A new Life of Jane Austen, by Oscar Fay Adams (Chicago: McClurg), attests the hardy nature of the fame of the favorite female author of the beginning of the century, which lives and flourishes in the midst of the dense growth of the modern press, apparently little affected by time and change. The charm her novels exercise is one of the problems of criticism which are difficult because of their simplicity. Mr. Adams cannot be said to throw light on the matter, but he has written very conscientiously all he could find covering the character of his author and the circumstances of her quiet life, and the labor has been one of devotion.

'The Moral Crusader, William Lloyd Garrison' (Toronto: Williamson & Co.; New York: Funk & Wagnalls Co.), is the title of Mr. Goldwin Smith's abstract of the four-volume Life of the "Liberator." He properly terms it a biographical essay, and this constitutes its prime distinction in the little library of such abstracts published in the past four years. It has been undertaken as a labor of love, but from an independent point of view, with freedom to interpret, judge, and approve or disapprove—moreover, with an essayist's discursiveness; the thread of the narrative being dropped *ad libitum* to philosophize, as in the chapter devoted to slavery, ancient and modern. If Garrison's non-resistance is a stumbling-block to the present as to many other reviewers, his persistence in keeping his agitation purely moral and non-political is justified, and the clerical apologists for slavery will find scant comfort in Mr. Smith's pages. His selections from the larger annals are mostly fresh and always pertinent, and perhaps none more characteristic of the reformer, writer, and orator could be brought together in such small compass. As a literary production, it is needless to say that this essay, which can easily be read at a sitting, has the charm of the author's well-known style. A trifling error may be pointed out on p. 15. It was not the Newburyport *Herald*, but the *Essex Courant*, that Garrison took over and transformed into the *Free Press*.

Bourget's 'Sensations d'Italie,' of which our French correspondent gave an account last October, comes to us from Cassell, done into English by Mrs. Serrano, and entitled, possibly in accordance with a suggestion of our correspondent's, '*Impressions* of Italy.' The same translator is also responsible for the English version of Señora Bazán's latest novel, 'The Angular Stone' (Cassell). Why such a rendering of 'La Piedra Angular' should have been adopted for the cover, while the phrase

has been translated, the two or three times it occurs in the body of the book, into the less staggering English, "the corner-stone," we are at a loss to guess. The translation as a whole, while fairly adequate, betrays, in occasional slips and "angularities," the haste with which it was done.

Mr. John Robinson's 'Our Trees' (Salem Mass.: The Essex Institute) is a collection of sixteen letters which appeared in the Salem *Gazette* during the summer of 1891. The author says modestly that they were written for popular entertainment and instruction, and are not intended as botanical essays, and that he would not have them so considered by professional botanists. Neither did Thoreau write 'Walden' for professional botanists, and yet they can read both the writings of that philosopher and these letters of Mr. Robinson with interest and with profit. The letters are well written, and the constant reference to individual trees in the streets and gardens of Salem gives them a fine local coloring. His remark that "the fine row of sugar maples on Bridge Street, before the residence of Mr. Jas. P. Cook, have shown signs of failing within a few years, and it is quite probable that the sealing up of the roadway with block-pavement and the broad brick sidewalk prevent any considerable amount of moisture from reaching their roots," contains a hint which Superintendents of Streets generally would do well to consider. Mr. Robinson still refrains from telling the world just where in Essex County there still exists a swamp of the sweet-bay magnolia. Certainly all tree-lovers will thank him for his silence.

Prof. Walter Hempel, in addition to many other claims to recognition as a chemist of distinction, stands *facile princeps* on the very important subject of gas analysis. His treatise on 'Methods of Gas Analysis' has been translated from the second German edition by L. M. Dennis, and published by Macmillan. The scientific treatment of the subject began with Regnault in France and Bunsen in Germany. It has been developed by the labors of many chemists, and now presents a fairly complete special branch of analysis. Dr. Hempel divides his theme into a number of sections, and treats of each of them with perfect clearness. A large number of excellent woodcuts serve to make the various methods intelligible. Part i. deals with general, Part ii. with special methods; Part iii. with the practical applications of gas analysis. The work is very complete, and forms an extremely useful and valuable addition to the resources of the analyst. The translation is well executed, and had the advantage throughout of the personal coöperation of the author, who is himself familiar with the English language.

Just four years have elapsed since we noticed the apppearance of Part iii. of Toller's Bosworth's 'Anglo-Saxon Dictionary' (Oxford: Clarendon Press; New York: Macmillan). The first section of Part iv. is now on our table, and carries on the vocabulary from Sár to Swídrian. We need not repeat our praise of this great improvement on the original work.

Prof. W. G. Hale's pamphlet on 'The *Cum*-constructions: their History and Functions' was issued four years ago, and, having gone abroad for scholarly recognition, now comes back in a German version by A. Neitzert (Leipzig: B. G. Teubner), and with a gracious preface by B. Delbrück—"ein paar Zeilen" of introduction to the German philological public. The volume is beautifully and most accurately printed.

The seventieth number of *Quellen und Forschungen zur Sprach- und Kulturgeschichte der Germanischen Völker* (Strassburg: Trübner) contains Dr. Emil Koeppel's studies in the history of the Italian novel in English literature of the sixteenth century, in which the author traces the sources of the plays of Shakspere and his contemporaries and the influence exerted upon them by Italian novels, their knowledge of which was derived chiefly from 'The Palace of Pleasure,' published in 1567–68 by William Painter, and recently reprinted in a sumptuous and expensive edition in England. Dr. Koeppel's "Studies" are only a preliminary survey of the field, but they are thoroughly scientific and in the right direction so far as they go. If for no other reason, they should be welcomed as a new departure in German Shakspere criticism from the elaborate and ingenious commentaries of Gervinus and the æsthetic-philosophical expositions of Kuno Fischer.

A fire in the printing-office of the *American Journal of Philology* has delayed for some weeks the appearance of the closing number of vol. xii. and perhaps also the first number of the new volume.

The *Pennsylvania Magazine of History and Biography* for January opens with a valuable article on Col. William Bradford's opposition to the landing of the tea in Philadelphia in 1773, by F. D. Stone. An etched portrait of the patriot printer and facsimiles of placards, etc., accompany the narrative. Mr. William S. Baker concludes his painstaking "Itinerary of Gen. Washington from June 15, 1775, to Dec. 23, 1783"; and now, we suppose, we may shortly look for it in a book.

Besides some "Recollections of Louisa May Alcott," profusely illustrated, a paper on "Harvard Clubs and Club Life," in which the *niaiseries* of D. K. E. are once more pictorially set forth, a more or less fresh instalment of "Negro Camp Melodies," and "Bryant's New England Home," attention will be drawn in the *New England Magazine* for March to Winfield S. Nevins's centenary "Stories of Salem Witchcraft." Many excellent views of houses, sites, and other antiquities are given in connection with the text.

Sun and Shade (N. Y. Photogravure Co.) for March is above the average in its collection of plates from nature and art. A capital portrait of Walt Whitman introduces the series.

The illustrated Italian fortnightly magazine *Natura ed Arte* (Milan: Francesco Vallardi) has improved steadily since its first number (the sixth is before us), and deserves to be examined by any reader of the Italian for pleasure. Each number has, besides many other embellishments, a photogravure portrait of some notability, as Verdi, Cialdini, Sardou, etc. In No. 5 the illustrious dead of 1891 are liberally pictured—George Bancroft among them; in No. 6, the leading actresses of the peninsula. Chronicles of news and finance, book and art reviews, and other standing departments, follow the entertaining papers which make up the body of the magazine.

In connection with the late historical exhibition illustrating the technical methods of the reproductive arts, with special reference to photo-mechanical processes, at the Boston Museum of Fine Arts, a catalogue was issued which merits permanent preservation for its account of the several processes in question, with their infinite diversity of nomenclature.

In the annual summary of geographical literature given in the December issue of *Petermann's Mitteilungen*, it is interesting to note the falling off in the number of publications, which in 1891 was 773 less than in 1889, and 286 less than in 1890. The greatest decrease has been in those relating to Europe, which fell from 1,172 in 1889 to 176 last year. The whole number for the year was 2,189, of which Africa has nearly a quarter, Asia and America following with almost equal numbers. Whether these figures are the result of greater discrimination in the selection of publications to be noticed, or show a real decrease in interest in geographical subjects, it is difficult to determine.

An entirely new map of Persia appears in the February Proceedings of the Royal Geographical Society, compiled under the supervision of Mr. George Curzon, M.P., and accompanied by a memorandum by him upon it together with a list of ninety-five maps used in its construction. Though nominally only of Persia, it includes all Beluchistan, the greater part of Afghanistan, and that part of Turkistan traversed by the Trans-Caspian Railway. Copies of the map, it may be added, with an index of places will be issued separately. The principal paper of the number is a discussion of the question, "Why are the prairies treeless?" by Mr. Miller Christy, F.L.S. After a brief statement of the theory that the lacustrine formation of the soil is the sufficient cause, he endeavors to show that the principal agent in bringing about the present condition is fire. Among other arguments he refers to the absence on the prairies of earthworms as well as of most species of mammals except burrowing ones. Following this is a summary, by Mr. D. W. Freshfield, of the explorations in the Central Caucasus in 1890, accompanied by a map.

—Mr. Howells takes leave, in *Harper's*, of the "Christmas Boy" and all the small images of outlandish literary gods which month by month he has put up in rows on the walls of the "Study," not without frank fear of what may now happen to these polyglot idols of his "modernity"; but he takes the wiser, and, as is his wont, the handsomer course, and attacks the besom of destruction with compliments instead of prayers. It is pleasant to find him ending with good words and not too serious a vein. Excess of seriousness, excess of emphasis, was possibly the bitter drop in the editor's amiability, which gave him the unhappy experience (to which he refers with a still lingering overstress) of finding that other men had opinions also regarding the old faiths of literary man and the new heresies of decadent or half-barbaric civilizations embodied in books. Reformers must, of course, be very earnest, especially in showing how different they are from other men; but, in fact, agreement with their neighbors in the main and fundamental matters is a vital condition of their success, and mankind is seldom far behind its leaders. For this reason Mr. Howells's fears are perhaps as exaggerated as were his hopes. His solicitude for the continuance of "Altruria," for instance, is wholly needless. "Altruria" was not his discovery. It was in all our geographies, and it will remain there so long as there are children to be taught what their parents possibly don't practise. His own experience in the attempt to erase the "Pays du Tendre" from the map should teach him that the cartography of the human heart is not made by critics though housed in "Studies." Similarly with that long tourney in which he has been engaged, with a vigor and persistence that even in the Arthurian Romance would seem incredible, during his five years' "foigning and traversing" with those who ride the lists on Sidney's and Shelley's side, there was never a time when he might not have heard the words that knights of old were wont to use—"Surely our quarrel is not so great but that we can leave fighting"; yet we fancy there is to be even now no real cessation, only a pause before the

new encounter is cried. But the pause gives occasion and opportunity for an expression of regard for faith, endurance, and purpose, though opposed; and finding, indeed, in the excellent customs of Romance none more binding than this "gentle courtesy," as it used to be called, and none more delightful in the exercise, we salute the "editor" as he retires from his familiar place, and wish him soon back in the field.

—The *Century* gives a prominent place to Paderewski, celebrating him with two portraits, a poem, some criticism, and a biography. This is full measure, and, if not pressed down, is certainly running over. But none of these things, we fancy, will at all take the place or give the quality of one of his notes; they can at most indicate to others how he has fluttered the metropolitan bosom. The illustration of the number is further enriched by some effective views of St. Paul's, three unrivalled cuts of Cole after Giorgione, and several altogether vivid representations of the life of the deep sea. The paper which accompanies these last is upon the work of the United States Fish Commission, and is a most interesting account of the history, voyages, methods, and "finds" of that useful branch of the public service. The first of Mr. E. C. Stedman's lectures on the "Nature and Elements of Poetry," which he gave at Johns Hopkins University and repeated this winter before Columbia, deals with definitions and does no more than open the subject. Towards the end of the number we come upon another fine portrait after Sargent, and also on a strong and resonant poem of Aldrich's, in which he gives a poet's praise to Swinburne for the latter's poetic qualities, and proclaims him the real poet-laureate to be, in the world's eyes, whatever false crownings may be attempted by royalty on the throne.

—Quite the most important poetical contribution, however, is the prize of *Scribner's*, which gives us the last verses of Lowell—a strongly framed and finely felt poem on Grant. Unfortunately it is in an unfinished state; though complete in structure, it is rough in surface, and there are more defects in it than the editor cared to point out in his note or indicate in the printing: the last line of the fourth stanza, for example, is not an Alexandrine. But such imperfections the reader will doubtless observe. A more important matter is the omission of the necessary comma (or even dash) after the word "primeval" in the fifth stanza, for the line as printed gives confusion to the first half of the stanza. The entire poem is in Lowell's most compact and condensed style, both in thought and construction, and needs all the subsidiary aid that can be given to it. The truthfulness of the portrait will be approved by all, and gives a striking sincerity to its praise; many of the lines are felicitous, both in phrase and style, and some will stick in the memory of the people. It is an addition to the patriotic verse of the country, and it is fitting that it should be the last work of his hand. In the remainder of the number we notice only the papers upon railway speed as of conspicuous interest.

—In the last report of the Treasurer of Harvard College, it is stated that the cost of conducting admission examinations in 1891 was nearly $1,500. The Treasurer of Yale College, in his report for the same year, records an expenditure of $1,504.24 for "examinations." These two universities are the chief defenders of the principle that the only safe way of determining the fitness of candidates for admission to college is by college extrance examinations, as distinguished from school graduation examinations. Why should the admission examination system be so costly? Harvard is now advertising that she will hold admission examinations this summer simultaneously in twenty-three different places, extending from Bonn on the East, to Tokio on the West, and including most of the leading cities and school centres of this country. Officers of the University are in most cases detailed to conduct these examinations, and in no instances are the question papers confided to the schoolmasters or to local committees. Both Yale and Harvard state in their catalogues that they are ready to conduct admission examinations at any point not within easy reach of existing examination places, provided a reasonable number of candidates apply for an examiner. It sometimes happens that examiners from Harvard, Yale, and Princeton meet candidates in the same building at the same hours, and conduct examinations which differ only in details, and which, theoretically, should be identical. Here is where the unnecessary element in the expenditures is found. We know no reason why these colleges (or their alumni) might not combine to maintain local boards to take charge of such examinations, and bear the burden of cost of services and rental. Such an economy would tend also to what is still more desirable, unification of examination papers.

—The most noteworthy piece of academic news that has been heard for some time is the creation in the Collège de France of a chair of General History of the Sciences, and the appointment thereto of M. Pierre Lafitte, the recognized chief of the French Positivists. Hitherto the philosophy of Comte has had no university standing in France, and it is to be noted that it is now rather as a science than as a philosophy or a religion that it comes into a high place. About all that Comte was willing to leave of the old philosophies was the history of them; his own teaching was meant to be rigidly scientific. His religion was, of course, quite another sort of thing, and this (although we believe that M. Pierre Lafitte personally holds to it) will not come within the scope of the new chair. All the rest of Positivism will fairly be included: the whole history of the rise of the sciences, and their passage through the three Comtian stages, theological, metaphysical, positive; their natural order, their coördination and subordination, and all their manifold relations with each other. The new professor will, then, have a wide field in which to abound *suo sensu*, and his work in it will be followed with much interested curiosity. It is almost exactly fifty years ago that Auguste Comte desired such a chair as this for himself. Guizot was then Minister of Public Instruction, and he was making many changes, and had given high places to such scholars as Ampère, Jouffroy, Eugène Burnouf, and Rossi. Comte, almost unknown, called upon the Minister and urged the founding of a professorship of the history of the mathematical and physical sciences. Guizot tells the story of their interview in a well-known passage in his 'Mémoires.' He could not in the least understand Comte, although, in order to do so, he condescended with all his might. He could hardly avoid, he says, expressing his astonishment that a clever man should be so limited in mind as not to see the bearing and relations of the facts he was handling, or that a man of moral sentiments —"moraux malgré lui"—should not perceive the immoral falseness of the ideas he was putting forward. "He wrote me a long letter a little while afterwards," Guizot goes on to say, "renewing his request for the creation of the chair which seemed to him indispensable for science and society. Had I thought fit to establish it, I should certainly never have dreamed for a moment of giving it to him."

RODWAY'S BRITISH GUIANA.

History of British Guiana, from the year 1668 to the present time. By James Rodway, F.L.S. Volume I. 1668–1781. Georgetown, Demerara: J. Thomson. 1891.

GUIANA is that vast country which lies between the great Rivers Orinoco and Amazon, in the northeastern portion of South America. This extensive region is shared by various nations, so that one may hear from time to time something of Venezuelan Guiana, British Guiana, Dutch Guiana, French Guiana, and Brazilian Guiana. Dutch Guiana is more familiar to us by the name of the principal part of it, Surinam. Few people are aware of the interesting fact that the colony of New York became an English colony practically in exchange for the colony of Surinam, under the provisions of the Treaty of Breda. It was agreed in that treaty that the English and Dutch were to retain what places they had conquered during the war, as they possessed and enjoyed them on the 10th of May, 1667. The English had captured the Dutch colony of New Netherlands, and the Dutch had taken the English colony of Surinam, and had retaken Essequibo and its dependencies, which had been captured by the English in 1665. It is true that New York was subsequently retaken by the Dutch and restored to the English, but, the fact remains, until that colony developed into a State, the original title by which it was held by Great Britain was identically the same as that by which the Dutch held their possessions in Essequibo as well as in Surinam.

The name of Cayenne, again, is more familiar than is that of French Guiana, the territory of which it forms but a part. Lying between Venezuela and Dutch Guiana is British Guiana. This colony is divided from the Dutch possessions by the broad waters of the River Corentyn. Great Britain and Venezuela dispute its boundary line to the northwest. The British dominion now comprises the three countries of Demerara, Berbice, and Essequibo, which take their names from three considerable rivers, and the northwestern district, which borders upon Venezuela. The name of Demerara is associated with a very high standard of sugar-making, so that "Demerara crystals" have come to be appreciated the wide world over. The El-Dorado of Sir Walter Raleigh had its airy abode somewhere in the region between the upper waters of the Essequibo and those of the Orinoco.

In his message to Congress on the 9th of December last, President Harrison referred to the dispute between Great Britain and Venezuela regarding the northwestern boundary of British Guiana, in these terms:

"I should have been glad to announce some favorable disposition of the boundary dispute between Great Britain and Venezuela, touching the western frontier of British Guiana, but the friendly efforts of the United States in that direction have thus far been unavailing. This Government will continue to express its concern at any appearance of foreign encroachment on territories long under the administrative control of American States. The determination of a disputed boundary is easily attainable by amicable arbitration, where the rights of the respective parties rest, as here, on historic facts, readily ascertainable."

The present is, therefore, a very fitting time

for the publication of a History of British Guiana. Such a work has been undertaken by Mr. James Rodway, the Librarian of the Royal Agricultural and Commercial Societies, and the author of 'Annals of Guiana.' It is being published by Mr. James Thomson, the proprietor of the *Argosy* Press, in Georgetown, the capital of British Guiana. Mr. Thomson has done yeoman's service to the cause of literature by his enterprise in publishing various works, mostly upon West Indian subjects, which, but for his courageous undertaking, might not have seen the light.

The first volume only of Mr. Rodway's History is published. This treats of the history of the colony from 1668 to 1781, when what is now British Guiana formed part of Dutch Guiana. The Dutch West India Company were the lords of the soil, but their authority was but slight in Berbice, where a tributary company (latterly of the Van Hoorns) held sway. Even in Demerara and Essequibo, the West India Company were far from absolute proprietors, for they were often troubled by the claims of the Zeelanders who were the first traders and settlers on the Wild Coast, as the Dutch called Guiana. Mr. Rodway has given an interesting account of the small beginnings from which has been developed the considerable possession now owned by Great Britain. Much of the information given by the author must have been collected by arduous labor alone, seeing that the sources of his narrative are mostly in the Dutch language.

It is pleasing to find how careful the Dutch authorities were to enjoin upon their officers that the native Indians should be kindly treated. A full account is given of the slave insurrection in Berbice, in 1763 and 1764. Persons interested in the colony will find in this volume the beginnings of the Government, of the Church, and of the various agricultural industries; the origin of land grants, of taxes upon land, and of taxation in general. The building of forts, and the first coming of lawyers and the provision of law books are touched upon. What is called the Legislative Council in other British colonies is, in British Guiana, called the Court of Policy, the Dutch name which has been continued. The origin of this body and of the Courts of Justice will be found in Mr. Rodway's book.

Americans will note with interest the restrictions placed by the Dutch upon the trade of New England with these colonies. The colonists needed horses and mules. To get them they had to relax the restrictions in 1752 so that if a vessel brought a certain number of animals in proportion to its tonnage, then she would be admitted. If the horses died during the voyage, their heads, salted, were to be produced as evidence of good faith. It was illegal to export sugar or cotton by such vessels, but molasses and rum might be shipped by them. Every New England vessel was bound to bring six animals, or their heads, failing which no vessel could enter. The North American ships brought the Dutchmen, besides animals, salt meat, fish, and flour. Before clearing, the captains had to affirm, on oath, that they had no sugar on board. Mr. Rodway says, however, that "there was very little money in Essequibo and Demerara, and, as may be supposed, the masters of the light New England schooners were not too scrupulous to slip past the fort in Essequibo, or the Brandwaght in Demerara, during the night, and load a few hogsheads of sugar." This shows that, after all, New Englanders were very much like other people. The shock of the American Revolution made its vibrations felt even among the Dutch colonists in South America. In March, 1777, the Dutch West Indian Company prohibited the colonial authorities from honoring the flag of the revolted British colonies. In the following month the exporting of ammunition to North America was prohibited. In the early part of 1781, when England and Holland were at war, two American privateers visited Demerara. On the 27th of February, in the same year, the colonies surrendered to English vessels of war. Notwithstanding this, two American vessels were in the Upper Demerara shortly afterwards. The English commander, on learning the fact, rated the Council, or Court of Policy, roundly for permitting the vessels to come there, and he threatened to report the matter to the Admiral, the famous Rodney; which, says Mr. Rodway, "made the Council very uncomfortable, although they excused themselves in the best way they could."

Although the volume before us does not treat of the boundary dispute, it may not be amiss to refer to certain public facts within the power of every one to investigate. As has already been stated above, the Treaty of Breda, in 1667, arranged that the English and Dutch should retain their respective acquisitions. Now, in 1665, the English had possessed themselves of the Dutch settlements in Essequibo, which were subsequently retaken by the Dutch. By the Treaty of Breda, therefore, the Dutch held their possessions by as good a title as the English held New York. The commander of the English forces which captured the settlements in Essequibo subsequently wrote an account of Guiana, which is preserved in manuscript in the British Museum (Sloane MSS. 3662). In this account of Guiana, written, be it remembered, after the English had been turned out by the Dutch, the writer says respecting the year 1665:

> "This yeare the English could boast of the possession of all that part of Guiana abutting on the Atlantick Ocean, from Cayan on the South-East to Oronoque on the north-west (except a small Colonie in the River Berbishes), which is no lesse than six hundred English miles."

From this it is clear that, so far back as 1665, the English regarded the Orinoco as the boundary of the Dutch possessions on the coast of Guiana. The British, however, do not claim quite so far as this. They claim that the Amacura, a small stream next door to the Orinoco, is the dividing line on the coast. This is the division which is known as the *Schomburgk* line. Any one who would approach the boundary question with impartiality, may easily learn that the Amacura was regarded as the boundary long before Sir Robert Schomburgk was born or the Venezuelan Republic came into existence. Old charts show this over and over again. Take, for example, the map of South America by D'Anville and Bolton, published in 1755; that gives the Amacura as the boundary.

Now, having shown above that the Orinoco was regarded as the line of division in 1665, let us inquire what was considered to be the boundary in 1781, the year with which Mr. Rodway's first volume ends. In 1781 the colonies again fell into the hands of the English. In 1782 the French took them from the English. In 1783 the French restored them to the Dutch. When the colonies were in possession of the English in 1781, they were for a time governed by Capt. Thompson, the commander of a ship of war called the *Hycena*. In 1783, when the Dutch were again in possession, De la Rochelle published a chart of the coast of Guiana, from the Orinoco to the Amazon. In this chart the line of division is given at the Barima, the river which, after the Amacura, comes next to the Orinoco. While, however, putting the Barima where he should have put the Amacura, he has at the same time put the Amacura where the Barima ought to be—that is, within the Dutch area. This mistake is made by at least one other cartographer of the period. In either case it goes to show that the Dutch dominion extended to the Amacura.

It is, further, proper to distinguish carefully between mere shadowy claims and substantial rights of occupation and dominion. The Venezuelans claim that their boundary extends to the left bank of the Essequibo, where Dutchmen and Englishmen have for generations been born and buried. This, too, in despite of the fact that when the English were again in possession of the colonies, in 1797, a Spanish force was sent across from the left side of the Orinoco—the right bank being but little inhabited, and then only high up the river—to attack a part of the Essequibo coast known as Capoey, with the result that the Spanish force was there and then annihilated by Dutch troops which had consented to remain in the colony in the service of the English Government. The records of the colonial Legislature show that a pension was awarded to the children of Capt. Rochelle, who commanded the victorious Dutch soldiers, and who died from his wounds.

When President Harrison alluded to "encroachment on territories long under the administrative control of American States," he could hardly have referred to the northwestern territory of British Guiana. British subjects are settled within that territory, not Venezuelans. But what is the fact as regards the Venezuelan side of the Amacura? Just this, that about six years ago the Venezuelan Government appointed a commissary for this then desolate district, and, for want of inhabitants of its own, conferred the office upon a British subject named Robert Wells, who had gone over from British Guiana. For some time Don Roberto Wells, in a thatched shanty, and his family, were the representatives of Venezuelan population in the grandiloquently styled Manoa district. So far is this district from being peopled that at the present time a Venezuelan official is doing his utmost to induce persons living in Georgetown, the capital of British Guiana, and others in the country districts, to come and settle on the Venezuelan side of the Amacura. So great are the inducements offered that it is very likely a measure of success will attend this scheme of peopling a desolate region in Venezuela with settlers brought from British Guiana. There is something comical in such a procedure, especially when it is remembered that Great Britain is charged with making encroachments upon Venezuela.

The historical connection between Dutch and British dominion over the Dutch colonies now comprised in British Guiana can be very shortly stated. In 1796, the colonies surrendered to the British, who kept them until 1802, when, by the Treaty of Amiens, they were restored to the Dutch. In 1803 they were again surrendered to a British force. Finally, in 1814, they were ceded to Great Britain, in whose hands they have remained.

BUTLER'S BOOK.

Butler's Book. By Benj. F. Butler. A review of his legal, political, and military career. Illustrated with 125 engravings, maps, photogravures, etc. Boston: A. M. Thayer & Co. 8vo, pp. 1,154.

EXPECTED sensations are commonly disap-

pointments. They turn out to be much less thrilling than the hints and announcements led us to believe. Butler's book is no exception to the rule. It is probably less trenchant than it would have been if he had written it earlier. The position of certain great figures in the war-epoch has become so fixed that there is less temptation to hurtle against them. Those who remember the *on dits* of '65 can read between the lines the traces of griefs in regard to Lincoln, Grant, and Stanton, which have been almost though not quite obliterated in the lapse of nearly thirty years. Part of this is due to prudence, part, no doubt, to the softening effect of time and reflection, for even Butler shows occasionally a gleam of geniality and an old man's tendency to think kindly of the antagonists of his earlier life. The instances are not frequent enough to prove that he has lapsed into charity towards all mankind, for among those who could be said to come into rivalry or collision with him, few enough are they who escape the knife that has been long whetted for them. On this point, indeed, he avows his unrepentance, and insists that the "hard words" which he so freely uses "are the only ones which ought to be used."

The casual reader who has himself no personal recollection of the public events with which Butler deals, would be likely to find his first feeling, on reading the book, one of amazement that the country should not have thrown itself bodily into the hands of the consummate statesman and hero who alone of all his compatriots knew exactly what should be done in every crisis. But as he goes on, he discovers a cumulation of little slips which, though of no consequence separately, beget a growing uneasiness, and a diminishing faith in the omniscience he was disposed to rely on with comfortable assurance. Butler has exhibited his triumphs at every step, from the common school to the leadership of armies and the government of States; yet each victory—dare we say it?—rings a little false. Each sample of the harvest of honors shows, as Tennyson says, some "little pitted speck in garnered fruit."

In his schoolboy class in parsing, he was sent to the head for construing a couplet from Pope, though we have a torturing doubt that if the master had been more familiar with the poet's diction, he might have remained at the foot. As a geography exercise, he compares the relation between Washington and Annapolis to that between Paris and Havre. The "thirty odd miles" between our capital and the Chesapeake he finds "about the same distance" as between Paris and the port at the mouth of the Seine, though the maps have a queer way of making the latter, say, five times as great a distance, as the crow flies, or ten times as great if we follow the actual navigation of the river. In military history he makes a point of what Napoleon "told his men at Saragossa, when they were falling around him," while hitherto historians have omitted to record the presence of the Emperor at either of the two sieges of Saragossa which occurred in the Spanish war; though the opening words of his Majesty's remarks, "Never mind, boys!" might still be apposite.

In navigation Gen. Butler surely is strong, for no Essex County man could be otherwise than familiar with Bowditch. Yet, to our mystification, the ancient mariner now in command of the *America* tells a strange sea tale of his transport ship getting on the Frying-pan near Cape Hatteras. It looked for a time as if they were likely to get out of the Frying-pan into the fire of the rebels at Fort Macon, but the seamanship of Gen. Butler saved them. The ship, "drawing eighteen feet of water," ran upon the sandy shoal. The captain was a traitor or an imbecile. Butler assumed command, and ordered him to "get your deep-sea lead and come forward with me!" So the captain shouldered the hundred-weight of metal and ten-score fathoms of line and went forward. We put behind us the question what need of sounding, since they had the land aboard at a draft of eighteen feet. But why the deep-sea lead? The lightest of hand-leads, nay, a fishing-line and a sinker, might have sufficed. We admonish the doubting reader that though the Corinthians of Marblehead indulge in irreverent mirth, there lies therein a mystery of the deep sea.

In the politics of the country in the period before the war, who could be at home if not he who was a member of every Democratic Presidential Convention and had an active hand in every phase of his party's conflicts in Massachusetts? Butler tells us he was prominent in the coalition made between the Free-Soilers and Democrats in that State in 1849. He speaks, therefore, as one having authority when he defines the position of parties at that time. "The proposition of the Free-Soil party," he says, "as enunciated by Mr. William Lloyd Garrison, one of its leaders at that time, was that the Constitution was a covenant with hell and a league with death." This proves how much stranger truth is than fiction, and how the most curious inversions of fact have long passed current as the most solid of verities. The Free-Soil party actually pretended to revere the Constitution and to limit their anti-slavery purposes to the Territories, over which that Constitution gave full control. The hypocrites! And the good Butler was making a league and covenant with them at the time, for the purpose of dividing the offices.

Scarcely less novel and startling is the light he throws on the party struggles of 1860. He tells us he voted for Jefferson Davis in the Charleston Convention, "with intent to preserve the Union and ward off that very secession which Greeley long afterwards justified, advised, and did all that he could to incite." After reading this, one instinctively glances ahead to see whether the next paragraph will not reveal Stanton as the *de facto* Confederate Secretary of War. He does not say this, but, what is almost as interesting, he tells us that he himself left the Douglas Convention at Baltimore and went with the Breckinridge men, for one reason, "because I would no longer sit in a convention where the reopening of the African slave trade, made piracy by every law of God and man, was advocated and applauded." The epoch-making character of the book is sufficiently attested by these revelations. Comment could add nothing to their significance.

Next in value to the nuggets of pure gold in the form of hitherto unknown facts in history, are the characterizations of leading men with whom the author was in more or less intimate contact. Lincoln we learn to know as a good, easy man, fairly able to see a point when a competent mentor at his elbow instructs him with proper painstaking; but as soon as Butler is gone, he falls from grace and does "the evil he would not." Often acknowledging Butler's military and civil genius, he is led by designing men to remove from successive important commands him who should have been his mainstay. Stanton, also, is credited with good intentions, but is a warning example of the dangers of slipping into the place which is proverbially paved with them. Whether he did most to baffle the bad purposes of Butler's (and the country's) enemies, or they did most in making use of him to wrong the great man, is left an open question. Seward, "the man Seward," appears often on the scene as a Mephistopheles thwarting the patriotic purposes of the good man and the hero. He is "weak-kneed," one who "would instantly deny" the truth, intending "to aid the French Emperor in his attack on Mexico," sending "that secession spy and agent, Reverdy Johnson, to New Orleans" to help France, making a "cowardly and unjust administration of the State Department." All this is the more curious inasmuch as Napoleon III., Maximilian, and Marshal Bazaine all thought that Seward had defeated and ruined them. Chase is exposed in trying to corrupt the incorruptible Butler by sending to him one "who at the time controlled the means of enabling men to make fortunes greater in number and larger in amount than any other Treasury official has ever held." It seems that Lincoln and Chase each wanted Butler to be candidate for Vice-President on his ticket. Welles was a Secretary of the Navy "who thought cowardice excusable," and who was hoodwinked by the officers of the blockading squadrons, who discriminated in catching blockade-runners, preferring to let them run in and catch them running out, as prize-money was increased thereby.

Senator Wilson of Massachusetts appears to be a small, inconstant man, "afraid of Andrew," the Governor, and, through unworthy jealousy, defeating a bill to give Butler one of Twiggs's swords, by putting it "in one of his pigeon-holes, where it has ever since slept the sleep that knows no waking." Senator Sumner, in the matter of enlistments for the New Orleans expedition, "did everything he could to disturb me and to serve Andrew. Sumner had plenty of leisure for this sort of thing. Although he was in the Senate for more than a quarter of a century, ten lines of laws upon the statute books of the United States drawn by him are yet to be found." As for Governor Andrew, "he had the good quality of cultivating malignity as a parlor-plant." More is said of him, but what need of more?

If we turn to the military men in despair at finding civil affairs in the hands of the wicked, the revelations are not more reassuring. Winfield Scott is shown to have treated Butler with "studied unjust treatment," "as he has always treated those whom he knew would be effective if he gave them the means, retaining everything in his own power and under his own immediate control, so as to monopolize all the reputation to be made." This last quotation is from a letter to Butler which he adopts, and it has therefore the authority of the great man himself. He had bearded Scott in his den, had told him he "did not know what he was writing about," nor, in fact, anything else; he had repudiated Scott's authority, and had bowed himself out with a "Good-morning, General," without giving the old General-in-Chief the opportunity to slip in a word of reply edgeways. Who before had ever done this and escaped the bilboes? Yet the heaven-born to command did it, and Scott cooed him as gently as any sucking dove in the next interview, congratulating him on his assignment to Fortress Monroe, where "hog-fish have just come in." McClellan was made to hasten the expedition to the Mississippi by Butler's intimating that otherwise Lincoln would do violence to his modesty by putting him in command of the Army of the Potomac. Halleck he found to be his arch-enemy, and depicts his wickedness in

many passages full of "hard words," summing it up at last by saying, "to speak plainly," he was a "lying, treacherous, hypocritical scoundrel, with no moral sense."

The author's treatment of Grant deserves a fuller study and analysis than one brief paper can give. It would be easy to miss the subtle irony under the guise of hearty praise. As to military matters, it must suffice to say that, in the campaign on the James, Butler fulfilled his task and had done all that he agreed to do. Grant had done nothing that was planned, and the despatches from his headquarters were "in every substantial particular misleading and untrue." In the matter of the exchange of prisoners, he tells us that the lives of those who died "from cold, starvation, and pestilence in the prison pens" of the South, "were spent as a part of the system of attack upon the rebellion, devised by the wisdom of the general-in-chief of the armies to destroy it by depletion." He thinks "the loyal mourners" will "appreciate all the more highly the genius which conceived the plan."

The military men of less rank who, instigated by the devil, disobeyed or thwarted our hero, are flagellated without mercy. *Inter arma* mercy is silent. From Col. Lefferts and the Seventh New York at Annapolis in 1861, to Admiral Porter at Fort Fisher in December, 1864, no guilty one is allowed to escape. They are hanged, drawn, and quartered as a terror to like evil-doers in the future, that the path of the Butler of the next war may be made easier. Of these, however, Gens. Gillmore and W. F. Smith and Admiral Porter are *facile principes*, unless Halleck should be admitted to rivalry. The epithets explode as fast as the bombs from the mortar-boats in the Mississippi, and Butler assures us that they do greater execution. "Cowardice," "mendacity," "falsifier," "dastard," "villanous," "ridiculous in his cowardice as he was false in his statements," "reckless, consciousless [*sic*] and impudent liar," fly about in a way to bewilder the enemy; and last, and worse even than malodorous Chinese missile, he flings into a bomb-proof casemate a "MEPHITIS AMERICANA" in upper case! Of course the garrison must surrender at discretion.

What has been said may put the reader sufficiently in the personal point of view of the author to enable him to estimate, in some measure, the true value of the graver historical matters to be found in the pages of the book. It would be preposterous, within our limits, to attempt to deal with the tithe of them. An equal volume would be required. It is only due to such a statesman and hero, however, to put him on his guard against some of the plots to weaken his influence. He has shown that there was deep mining in the War Office in Halleck's time; but even he is not wholly aware how deep. Foreseeing, or perhaps foreordaining, the charge that he was then seeking one of the vacant major-generalships in the regular army, "which," as he says, "I never thought of or desired," his enemy has embodied in the Official Records, now published, a pretended letter to Lincoln, dated May 17, 1864, in which he is made to say: "Do you think I have done enough to entitle me to one of the vacant commissions in the army, to date from May 16, 1861?" Lincoln is made to answer on the next day, "As to the major-generalships in the regular army, I think I shall not dispose of another; at least, until the combined operations now in progress under the direction of Gen. Grant, and within which yourself and command are included, shall be terminated." Gen. Butler should, in justice to himself, see that these wicked interpolations are excluded, if the whole edition of the Records has to be recalled. Such a commission, dating from May, 1861, would have outranked Sherman, Sheridan, and Meade.

In his later political lucubrations there is also evidence of a mischievous hand at work, seeking to bring him into contempt. The plot may not go beyond the composing-room of his publishers, but it needs looking after. He is made to say that the authorized issue of the five-twenty bonds, in 1867, was "fifteen thousand millions." If figures had been used, they would hardly need to be noticed, but the words are spelt out in full. So he is made to talk wisely of "terminal annuities" in several places, and "courtileges" and the like. It may be well to watch even the printers. Some of them might be weak enough to think that nothing could be more nonsensical than his financial oration on fiat money, and may have amused themselves with adding to the jumble.

The Silva of North America. By Charles S. Sargent. Vol. III. Boston: Houghton, Mifflin & Co.

THIS volume contains fifty plates illustrating six species of *Anacardiaceæ* and thirty of *Leguminosæ*. The *Anacardiaceæ* are—*Cotinus Americanus*, a close congener of the well-known smoke-tree, or Venetian sumach; two of our common sumachs, *Rhus typhina* and *R. copallina;* the poisonous *R. Vernix*, or, as it has usually been named, *R. venenata;* the Floridian *R. Metopium*, nearly as poisonous, and the Californian *R. integrifolia*, locally called mahogany. The separation of *Cotinus* from *Rhus* seems to be based mainly on its production of the barren feathery pedicels which give its flower clusters the smoky look—a character which most systematists have not thought of generic importance, and which Bentham and Hooker have not even mentioned. *Cotinus* was proposed by Tournefort, and, though at first recognized by Linnæus, was later disregarded by him. In reviving it, Prof. Sargent has occasion to indulge in one of the vagaries of the modern school of priority-worshippers by using the double name of *Cotinus Cotinus* for the smoke-tree—a usage which finds its only parallel in such personal names as Cholmondeley-Cholmondeley or Jenkins-Jenkins. In the Northeastern States *Rhus glabra* is more nearly a tree than *R. copallina*, and would therefore seem better entitled to a place in this Silva, but, further south, the latter appears to attain a greater size, and to assume the true arboreal dignity.

Of the thirty trees here described which belong to the great order *Leguminosæ* (the pod-bearers), only one, *Gymnocladus dioicus*, the Kentucky coffee-tree, is native as far north as New York, having been found wild about some of the lakes in the central part of the State; but several other kinds have been long cultivated in the North and East—*Robinia Pseudacacia* and *R. viscosa*, the "locusts," *Gleditschia triacanthos*, the three-thorned acaci or honey-locust, *Cladrastis lutea*, the yellow-wood, often known as Virgilia, and the Judas-tree (*Cercis Canadensis*). The greater locust is indeed so abundant on Long Island as to be used for posts, fuel, etc., and has much the appearance of a native. Prof. Sargent suggests that it was often planted by the Indians for the sake of its elastic wood, one of the best for bows. He quotes from Catesby (*anno* 1763) the statement that the English in Virginia, "being obliged to run up with all the expedition possible such little houses as might serve them to dwell in, till they could find leisure to build larger and more convenient ones, they erected each of their little hovels on four only of these trees, pitched into the ground to support the four corners: many of these posts are yet standing, and not only the parts under ground, but likewise those above, are still perfectly sound." Large locusts and still larger honey-locusts are very common in New York and in the southern parts of New England, and, with their feathery foliage, often make a most graceful feature in the landscape.

The other twenty-five trees of this volume are Southern or Western. Perhaps the most interesting among them is the mesquite (*Prosopis juliflora*) of the far Southwest. It is a shrub, or at best a tree thirty or forty feet high, having feathery foliage like a locust, and bearing an abundant crop of long, somewhat jointed pods filled with a sweet spongy pulp. The Spanish settlers found the natives using these pods for food, and so they gave to the tree their own name (*Algarrobo*), for the old-world tree which produces the flat, blackish, edible pods commonly called St. John's bread. This name is evidently Arabic, *El karob*. Supposing the tree to be of an unnamed genus, Torrey and Gray called it *Algarobia glandulosa*. But De Candolle had already described it as *Prosopis juliflora* from specimens sent from Jamaica, whither it had been carried from the continent. The wood is heavy and hard and of a rich color: it is much used for parts of wagon-wheels, for furniture, sometimes for pavements, and is an excellent fuel. Moreover, the tree yields a gum much like gum arabic.

Mr. Faxon's drawings are as good as in the earlier volumes, and Prof. Sargent's descriptions and notes are rich and instructive. It is a great pity that he is under the influence of a perverse school of nomenclature. An instance of this unfortunate perversity in the present volume is the spelling *Gleditsia* for *Gleditschia*. *Gleditsia* is the original spelling of Linnæus, but as the genus was named in honor of *Gleditsch*, nearly all botanists have preferred the reformed orthography.

Mark Hopkins. By Franklin Carter, President of Williams College. [American Religious Leaders.] Boston: Houghton, Mifflin & Co.

IN length of identification with a single college, Dr. Hopkins's career was, and probably will remain, unique in American educational history: sixty-six years as student, tutor, professor, and president did he stand in his place in the Berkshire institution which he loved and served with all his strength. The college catalogue shows many a case of father and son sitting under his instruction, and might easily show, perhaps does show, a case of father, son, and grandson. For a generation his fame as a teacher was the riches of the college, long poor in buildings and equipment, and drew men, if not money, from all over the country. His success was that of a large and original nature. He was not a scholar, even according to the standard of fifty years ago. Most of his classes have heard from his own lips the naïve confession of his early but fruitless attempts to get a knowledge of German philosophy through English translations. He turned to books not for the material, but for the illustration and confirmation, of his native thought. His power as a teacher was that of stimulus, not information, and none of the long succession of his classes, down to the one he taught at eighty-

five, failed to catch the glow and enthusiasm of his ever youthful ardor. Nothing delighted him more than the gleam of mental awakening in his students, and away would go text-book and lecture that he might, with Socrates, "follow the argument." To the very end he made the impression of perfect frankness and zest for the truth as such, so that it could have been said of him, as it was said of Lewes by George Eliot, that he would stop short in the rush of an argument to admit that he was wrong—only, it was ordinarily the other disputant who had to do the admitting.

The first impression made by President Carter's biography is that it is surprisingly barren—that is, that it gives so little to mark and explain the becoming of this masterful man. We get meagre but perhaps sufficient details of his ancestry, which was right Puritan on both sides; but of his boyhood and youth, only a faint legend or two, of his student life little more than faded reminiscences. It is not even known whether a year of school-teaching which he did was spent in Massachusetts or Virginia. The biographer does not appear to be blameworthy for this disappointing vagueness and meagreness as respects Dr. Hopkins's early years. He lived to so great an age that it is now impossible to recover any memorials of his youth from his survivors; and diaries and letters, if there were any, all have vanished. Not even from his numerous children or his widow can anything be obtained to light up those blank years. We can only note this as a great misfortune, though in itself highly illustrative of the personal reserve which marked the man. He may have taken warning by the dreadful example of his brother Albert's published diaries and letters, and destroyed anything of the kind he himself had preserved.

For the too lifeless record of his prime and later years here given us, we cannot, however, free President Carter from the responsibility. It is not material, but judicious handling, that is lacking for that period. No critical analyses of Dr. Hopkins's various books, no formal estimates of him as "The Teacher," "The Administrator," "The Theologian"—analyses and estimates more in the tone of an article than a biography—can make good the absence of the man himself. One chapter is an exception—that entitled "The Friend." It consists of letters written by Dr. Hopkins to Ray Palmer in the course of twenty-five years. They are worth more than all the rest of the book, for in them the nature of the man is self-declared. Elsewhere the human touches are few, and in place of the man we are shown an idealized figure suited to a commemorative sermon. This cannot but prove disappointing to those who have come into contact with Dr. Hopkins's large humanity, and who look to this book for an adequate presentation of it. They will recall his immense native shrewdness, sharpened by long study of the genus college-student into something which was often very like guile, and will see with regret that this quality, with many others equally human, is almost entirely sublimed out of him in President Carter's pages. These give the go-by to many sides and aspects of his personality which a single glance at his portrait of about 1850 is enough to suggest. As a record of his external life—of the public positions he held and declined, the books and lectures with which he blazed his way, his religious and charitable activities, and the vicissitudes of Williams College during the years he knew it—nothing more could be asked; but as a biography it is certain to come to many as a pallid and etherialized representation of a thoroughly human personality.

General View of the Political History of Europe. By Ernest Lavisse, Professor at the Sorbonne. Translated by Charles Gross, Ph.D., of Harvard University. Longmans, Green & Co.

THIS is an admirable little book, and Dr. Gross, in selecting and translating it, has rendered good service to historical education. M. Lavisse, who is known by his recent work on the history of Prussia, brings to the difficult task here achieved accurate knowledge combined with a fine sense of proportion and value, and much skill in tracing the movements of great currents under the criss-cross play of local and momentary surface commotion. He writes for the most part quite simply and clearly, with a truly conversational ease, so that the reader comes to think the writing of philosophical history the easiest thing in the world; yet if any one will try to express in no more pages than suffice for M. Lavisse the nature of the Roman Empire, or the rise of Christianity, or the growth of Prussian power or French nationality, he may not be readily satisfied with the result. With all its ease the style has a nervous suggestiveness provocative of thought, so that the book is one of those that repay a second reading better than the first, and a third better than the second. If Prof. Lavisse lectures thus, his hearers must be accounted fortunate.

The author finds the interest of history to lie in watching the action of human nature in the gross, with its capacity for modification and its inherent unchangeableness, its practicality and its love of the ideal, in contest with geographical and ethnographical conditions, with the ever-growing pressure of greater numbers and new political entities, with the influence of an ever-growing past of experience and thought. The resultant is the development of nations out of races, and the appearance of conscious national individuality, self-centred and self-assertive. He closes the book with a balancing of causes that make for peace and for war, and his prognostications will seem to some readers too gloomy. We incline to admit their force as regards the immediate future, but the removal of the time-limit would probably bring some forces into the field which M. Lavisse has not here considered. The author claims, justly, we think, a reasonable, but not a denationalized impartiality, nor would we ask for more. Allowance can be made for perspective when the standpoint is known; it is the observer who has cut loose from earth who is dangerous.

Finally, it should be noted that this book is not an epitome of history; it gives few dates and but little narrative. It is a digestive to aid the assimilation of facts, and should be taken after, not before, a course of history as ordinarily written. One of its best uses will be in the hands of teachers who are leading classes through the common text-books of European history. The translation adheres closely to the original, which it represents in style as well as in meaning.

The Original Mother Goose's Melody, as issued by John Newbery of London, *circa* 1760; Isaiah Thomas of Worcester, Mass., *circa* 1785; and Munroe & Francis of Boston, *circa* 1825. Reproduced in facsimile, from the first Worcester edition, with introductory notes by William H. Whitmore, etc., etc. Boston: Damrell & Upham. 1892.

THIS bibliography already furnishes material itself to bibliography. We have before us first the Thomas facsimile alone (Albany: Munsell, 1889); next, the facsimile with Mr. Whitmore's introductory notes (same publisher and date); and now this cloth-bound work of 117 pages, enlarged by the 'Fairy Tales of Mother Goose' translated from Perrault by R. Samber, as found in the New York edition of 1795, together with a sketch of Perrault's life by Mr. Whitmore. If more is to come, it ought to be from English and French antiquarians incited by this industrious American example.

His researches during the past three years have necessitated comparatively little change in Mr. Whitmore's notes to the 'Melody.' He has discovered in the Boston *News-Letter* of 1739 evidence that Puritan children then counted among their recreations "The House that Jack Built"—accounted "a vulgar [*i. e.*, familiar] Play Song." He can also point to American reprints *à la* Newbery in 1768 and 1771, but not bearing the name of Mother Goose. He has come upon an English book of 1808 giving the name of "Mother Goose's Tales" to Perrault's collection. Of Thomas's edition of the 'Melody' he now knows a third edition, and produces a facsimile of the title-page with other particulars. From this date, 1799, there are no examples till the Munroe & Francis edition of 1825. Mr. Whitmore concludes this topic with a complete refutation of the "absurd claim" that the original Mother Goose was a Bostonian, "Mrs. Vergoose or Goose."

Next comes the 'Tales of Passed Times by Mother Goose, with Morals. Written in French by M. Perrault, and Englished by R. S. Gent. . . . The Seventh Edition, Corrected, and Adorned with fine Cuts. New-York: Printed for J. Rivington, Bookseller and Stationer, No. 56, Pearl-Street. 1795.' Mr. Whitmore identifies "R. S., gentleman," with Robert Samber, a hack writer of the second quarter of the eighteenth century, who did his work in this instance very well, if we may judge from Mr. Whitmore's annotations, following the French, for he has no errors to point out. Under "Little Thumb" he remarks that he cannot tell when the change to Tom Thumb ("an old personage in English nursery literature") took place, but leaves it to be inferred that it was possibly after 1808. Under "Riquet with the Tuft," he observes: "It is a coincidence that M. Riquet figures in Perrault's autobiography as an engineer whose ignorance he exposed on an important occasion."

The brief memoir of Perrault is entertainingly written from the rather meagre sources. He was a member of the French Academy, filling the twenty-third seat, in which he was succeeded by Gaston, Cardinal de Rohan, and which is now occupied by M. Mézières. From him dates the custom of public receptions at the Academy, with the new member's eulogy of his predecessor; and the practice of choice by ballot. He maintained the superiority of modern over ancient authors in a famous controversy. Perrault's 'Contes de ma mère l'Oye' have done more to make him remembered than his two splendid folio volumes of portraits, 'Les Hommes Illustres qui ont paru en France pendant ce siècle' (1696, 1700), from which Mr. Whitmore has transferred the frontispiece portrait of the author to the corresponding place in the present volume. Among other embellishments pertaining to the same person, we should mention the frontispiece of Perrault's rare first edition of the 'Contes,' and a curious engraving illustrating the taking of the French Academy under Louis XIV.'s protection, in which the Immortals are grouped on inscribed leaves of a laurel wreath cut by medallions of the former protectors, Richelieu and Séguier.

This entertaining monograph, which we could describe thoroughly only by repeating what we have said regarding the previous editions, is of course mainly for adult readers; but Mr. Whitmore recommends substituting the Samber version of the prose tales for the later forms now current.

BOOKS OF THE WEEK.

Ask Mamma. [The "Jorrocks" Edition.] Philadelphia: J. B. Lippincott Co. $2.25.
Ayer, Harriet H. My Lady's Dressing Room. Cassell. $1.50.

Late *Chef*, Delmonico's.

Exhaustion.

HORSFORD'S ACID PHOSPHATE.

A wonderful remedy, of the highest value in mental and nervous exhaustion.

Overworked men and women, the nervous, weak, and debilitated, will find in the Acid Phosphate a most agreeable, grateful, and harmless stimulant, giving renewed strength and vigor to the entire system.

Dr. Edwin F. Vose, Portland, Me., says: "I have used it in my own case when suffering from nervous exhaustion, with gratifying results. I have prescribed it for many of the various forms of nervous debility, and it has never failed to do good."

Descriptive pamphlet free.

Rumford Chemical Works, Providence, R. I.

Beware of Substitutes and Imitations.

CAUTION: Be sure the word "Horsford's" is on the label. All others are spurious. Never sold in bulk.

"The weary brain requires some nerve sustaining element as food."—HERBERT SPENCER.

Crosby's Vitalized Phosphites.

The vital principle of animal and vegetable life isolated from the ox brain and wheat germ.

The loss of memory, the tired and exhausted feeling, the dull, unrefreshed sleep, or nervous sleeplessness, brain weariness, depressed vitality, are simply the brain and nervous system calling for their necessary food. In this condition the Vitalized Phosphites give great relief. It restores the true protagon, the brain phosphoid, increases brain and nerve power by specially feeding the nerve centres. It reinvigorates brain and body.

For thirty years endorsed by leading physicians, and the world's best brain workers. Formula on the label. Pamphlet free to those who write for it. Druggists or by mail, $1.00. 56 W. 25th St., N. Y.

An Educational Directory.

I. THE NATION has the largest circulation of any literary and political journal published in this country. The 10,000 copies printed every week represent but a small part of the actual circulation, as THE NATION goes to all the principal libraries and reading-rooms, and into thousands of families.

II. The circulation is chiefly among the thinking and well-to-do classes—lawyers, physicians, bankers, and other professional men—and in the homes of cultivated people, where the education of children is a matter of careful consideration.
